§ 2. Savings Banks.

1. **General.**—The inauguration of Savings Banks in Australia dates from 1819, when a private Savings Bank was opened in Sydney. In 1832 the legislature created "the Savings Bank of New South Wales" under the control of trustees, and shortly after its establishment the funds of the private Savings Bank were transferred to the new institution. In the other States provision for placing deposits with Savings Banks dates from 1841 in Victoria ; 1854 in Queensland ; 1840 in South Australia ; 1863 in Western Australia (a Savings Bank was opened in 1856 but was closed a year later) ; 1835 in Launceston ; and 1845 in Hobart. These early banks functioned as Trustee Savings Banks, but, with the exception of the Hobart and Launceston institutions, were later absorbed by, or amalgamated with, Government Savings Banks.

Post Office Savings Banks were established in all States from 1864 onwards. These were separate Government institutions except in South Australia, where the Post Office acted as agent for the Savings Bank. Since the federation of the Australian States in 1900, post offices have been controlled by the Commonwealth Government, but they continued to act as savings bank agencies for the State institutions until the establishment of the Commonwealth Bank in 1912. They now act as agents for the Commonwealth Savings Bank.

Savings banks at present operating are the Commonwealth Savings Bank (all States and Territories); State Savings Bank of Victoria; Savings Bank of South Australia; and the two Trustee Banks—Hobart and Launceston.

2. **The Commonwealth Savings Bank.**—The Savings Bank Department of the Commonwealth Bank opened for business in Victoria on 15th July, 1912; in Queensland on 16th September, 1912; in the Northern Territory on 21st October, 1912; and in New South Wales, South Australia and Western Australia on 13th January, 1913. The Tasmanian State Savings Bank was absorbed by the Commonwealth Bank in January, 1913, the Queensland State Savings Bank was taken over in 1920 and the New South Wales and Western Australian State Savings Banks in 1931. The Savings Bank Department was separated from the General Bank on 9th June, 1928, and established as a separate institution known as the "Commonwealth Savings Bank". It has since then operated independently, publishing its own balance-sheets and profit and loss accounts. The Commonwealth Bank Act 1927, which provided for the establishment of the Commonwealth Savings Bank as a separate institution, provided for a Commission of three members to manage the Savings Bank. This Commission was never appointed and the Commonwealth Bank Act 1945 placed the control of the Commonwealth Savings Bank under the Governor of the Commonwealth Bank.

3. **Amalgamations.**—Particulars relating to the absorption by the Commonwealth Savings Bank of the Government Savings Banks of New South Wales, and the State Savings Bank of Western Australia are given in Official Year Book No. 29.

4. **Extension of Facilities.**—The prime object of the foundation of savings banks in Australia was the encouragement of thrift, deposits of one shilling and upwards being accepted; nevertheless the facilities offered, while preserving the original object, have led to developments in another direction. Although depositors may not operate on their accounts by means of cheques, they have practically all the other advantages of a current account and in addition receive interest on their minimum monthly balances. No charge is made by the banks for keeping the accounts.

5. **Classification of Depositors' Balances.**—The classification of deposits published by savings banks does not permit a fully detailed analysis with respect to Australia as a whole, but information supplied to the Royal Commission on Monetary and Banking Systems for all savings banks except the Hobart Trustee Savings Bank shows that at 30th June, 1936 the amount on deposit in accounts with balances of less than £100 represented 21 per cent. of the total deposits; balances of over £100 but under £250, 21 per cent.; over £250 but under £500, 23 per cent.; over £500 but under £1,000, 25 per cent.; while those of over £1,000 accounted for 10 per cent. School, penny bank and small inoperative accounts were excluded in determining these percentages.

A similar classification as at 30th June, 1936, 1939, 1945, 1946 and 1947, but relating only to the combined State Savings Banks of Victoria and South Australia, is shown below.

At 30th June—	£100 and Under.	£101–£300.	£301–£500.	£501–£1,000.	Over £1,000.
	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
1936	19.54	26.13	17.84	27.42	9.07
1939	20.27	27.15	17.90	26.14	8.54
1945	13.61	28.78	21.22	27.80	8.59
1946	11.77	25.84	21.46	30.71	10.22
1947	11.51	23.40	20.53	32.45	12.11

6. **Number of Accounts.**—At 30th June, 1947, the number of savings bank accounts in existence were as follows:—Commonwealth Savings Bank—operative, 3,665,193; inoperative, 1,662,744; State and Trustee Savings Banks—operative, 1,928,241; inoperative, 692,992. Generally, inoperative accounts are those with balances of less

than £1 which have not been operated on for a period of two years. It should be noted that the figures above relate to the number of accounts and not necessarily to the number of depositors.

7. **Rates of Interest on Deposits.**—The following tables show the rates of interest allowed at 30th June, 1938 to 1947 by State and trustee savings banks and by the Commonwealth Savings Bank. From 14th March, 1942 the rates of interest paid by savings banks on deposits have been subject to National Security (Economic Organization) Regulations.

STATE AND TRUSTEE SAVINGS BANKS : INTEREST RATES(a) ON DEPOSITS, 30th JUNE.

Savings Bank—	State Savings Bank of Victoria.			Savings Bank of South Australia.(b)			The Hobart Savings Bank.		The Launceston Bank for Savings.

1947	2	1	1	2¼	2¼	1¼	2¼	2¼	2¼	2¼

(a) Rates on ordinary accounts. On Friendly and other Society Accounts the rates at 30th June, 1947 were—State Savings Bank of Victoria, 2 per cent. on first £2,000, 1 per cent. on balance; Savings Bank of South Australia, 2¼ per cent. on first £500, 2 per cent. on next £1,500 and 1 per cent. on the balance. (b) Interest on deposits in accounts closed during the year is generally allotted at a lower rate than that applicable to accounts remaining open.

COMMONWEALTH SAVINGS BANK : INTEREST RATES(a) ON DEPOSITS, 30th JUNE.

Part of balance—	£1 to £500.	£501 to £1,300.(b)	Part of balance—	£1 to £500.	£501 to £1,300.(b)
	%	%		%	%
1938	2	1¾	1943	2	1½
1939	2	1¾	1944	2	1½
1940	2	1¾	1945	2	1¼
1941	2	1¾	1946	2	1
1942	2	1½	1947	2	1

(a) Rates on ordinary accounts. On Friendly and other Society Accounts the rates at 30th June, 1947 were 2 per cent. on first £2,000 and 1 per cent. on the balance. (b) Up to 1941 the interest-bearing limit in all States except Queensland was £1,300. In Queensland it was £2,000. The limit since 1942 has been £1,000 in all States.

Rates of interest on deposits were fixed under National Security Regulations from 7th April, 1942 in relation to the Savings Bank of South Australia, and from 1st April, 1942 in relation to every other savings bank. For the Commonwealth Savings Bank and the State Savings Bank of Victoria maximum rates were fixed at 2 per cent. on the first £500 and 1½ per cent. on any further balance up to £1,000. On balances in excess of £1,000 no interest was to be paid, except in respect of Friendly Societies and similar bodies where it had been the custom to pay interest on the full balance. The rate of 2 per cent. was allowed in these cases. However, by arrangement between the banks, maximum rates were not paid on balances in excess of £2,000 in these accounts. Maximum rates for other savings banks were fixed at one-quarter per cent. higher than those for the Commonwealth Savings Bank and the State Savings Bank of Victoria.

8. **Statistical Returns.**—Commencing with July, 1931, monthly returns have been furnished by savings bank authorities. The information given in the following paragraphs relates to the deposits at 30th June in each year. For convenience of reference the information has been grouped under the following headings :—

(i) All Savings Banks ; (ii) Commonwealth Savings Banks ; and (iii) State Savings Banks (including Trustee Banks in Tasmania).

9. **All Savings Banks.**—(i) *Particulars for Year* 1946–47. The following statement gives details of the business transacted by all savings banks for the year 1946–47 :—

ALL SAVINGS BANKS : PARTICULARS, 1946–47.

State or Territory.	Amount on Deposit at 30th June, 1946.	Excess of Deposits over Withdrawals during year.	Interest Added during year.	Amount on Deposit at 30th June 1947.
	£'000.	£'000.	£'000.	£'000.

1947	77 10 0	105 2 11	77 7 7	105 1 5	72 17 1	81 2 4	49 8 1	60 7 6	87 1 3

(*a*) Includes deposits transferred from Papua and the Territory of New Guinea branches. (*b*) Includes deposits transferred from Northern Territory. (*c*) Included with South Australia.

During the depression deposits remained about the low level of £193,000,000 until June, 1932, when, with the amount at £197,966,000, there began a steady upward trend, which continued, with minor regressions only, until February, 1940, when deposits amounted to £246,503,000. Two war loans and the war savings certificate scheme were launched during the next five months. These were instrumental in reducing the level of deposits to £236,562,000 in July, 1940. From then until August, 1946, there was a regular monthly increase broken occasionally by temporary declines coinciding with loan raisings. There was a fall of £16,600,000 between August, 1946 and May, 1947 but with interest additions in June, deposits again rose to over £660,000,000.

(b) *Deposits per head and Purchasing Power.* Particulars of the deposits per head of population, actual and adjusted to purchasing power by the application of retail price index-numbers, at 30th June in each year from 1938 to 1947, are given in the following table. In calculating the index-numbers in this table the average of deposits per head of population at 30th June, 1937, 1938 and 1939 has been used as a base and made equal to 1,000.

ALL SAVINGS BANKS: DEPOSITS PER HEAD OF POPULATION.

At 30th June—	Actual.		Adjusted to Purchasing Power.(a)	
	Deposits per head of population.	Index-Number.	Deposits per head of population.	Index-Number.
	£	1937–1939 = 1000	£	1937–1939 = 1000
1938	34.87	1007	34.84	1005
1939	35.28	1018	34.35	991
1940	33.70	973	31.55	911
1941	35.52	1025	31.71	915
1942	38.25	1104	31.59	912
1943	49.52	1430	38.69	1117
1944	64.63	1866	51.29	1480
1945	76.85	2219	60.99	1760
1946	89.09	2572	69.49	2005
1947	87.06	2513	66.21	1911

(a) On the basis of the All Items ("C") Series of Retail Price Index-numbers (6 capitals) for June quarter in each year. (Base: average of June quarters, 1937, 1938 and 1939 = 1,000.)

In interpreting the above figures it should be remembered that savings bank accounts are used to some extent by institutions and business people, as well as by individuals for the investment of personal savings. The relative extent to which savings bank accounts are used for business purposes, etc., may, and probably does fluctuate considerably from time to time.

10. **War Savings and Savings Certificates.**—The War Savings Certificate Scheme was inaugurated on 18th March, 1940. Certificates were sold in denominations of £1, £5, £10 and £50, at prices of 16s., £4, £8, and £40 respectively. The date of full maturity was seven years after that of issue, but certificates could be cashed at any time, the amounts ranging, in the case of the £1 certificate, from 16s. 6d. at the end of the first year and before the end of two years to £1 at the end of seven years. Coinciding with the maturity of the first certificates issued, the original seven years series was replaced by a new five years series of savings certificates on 1st March, 1947. These certificates have a currency of five years and are issued at par in denominations of £1, £5, £10 and £50. They may be redeemed at any time with interest. At the end of five years the redemption values are £1 3s., £5 15s., £11 10s. and £57 10s. respectively.

The total amount contributed, less amounts repaid, at 30th June of each of the years 1940 to 1947 was £6,100,000, £17,380,000, £26,171,000, £35,146,000, £43,721,000, £52,534,000, £54,677,000 and £59,526,000.

11. **Commonwealth Savings Bank.**—(i) *Particulars for Year* 1946–47. Particulars for the States and Territories for the year 1946–47 are shown in the table below :—

COMMONWEALTH SAVINGS BANK : PARTICULARS, 1946–47.

State or Territory.	Amount on Deposit at 30th June, 1946.	Excess of Deposits over Withdrawals during year.	Interest Added during year.	Amount on Deposit at 30th June, 1947.

In 1945–46 total receipts were £5,903,000 and expenditure, £5,257,000. Net profits amounted to £646,000.

C. COMPANIES.

NOTE.—Statistics available in regard to registered companies relate to (*a*) Trustees, Executors and Agency Companies ; (*b*) Registered Building and Investment Societies ; and (*c*) Registered Co-operative Societies.

§ 1. Trustees, Executors and Agency Companies.

The following table shows, for the years 1939 and 1944 to 1946, particulars of the assets and liabilities of certain trustee companies transacting business in Australia and New Zealand. Figures for the year 1939 have been obtained from returns supplied to the Commonwealth Bureau of Census and Statistics, while those for the years 1944 to 1946 have been extracted from a summary of the last published balance-sheets as shown in the *Australasian Insurance and Banking Record*. Individual items are therefore not entirely comparable. Details of assets of trust funds administered are shown for the year 1939, but for the years 1944 to 1947 totals for nine only of the 23 offices are available.

TRUSTEES, EXECUTORS AND AGENCY COMPANIES, AUSTRALIA.

§ 3. Co-operative Societies.

1. **General.**—Returns relating to co-operative societies are divided into three classes—(i) those engaged in the manufacture and marketing of primary products and trade requirements; (ii) those engaged in retailing general household requirements and (iii) those engaged in activities covered by both classes (i) and (ii). The first class may be described briefly as Producers' Co-operative Societies and the second as Consumers' Co-operative Societies. The particulars given for New South Wales relate to societies registered under the Co-operation Act 1923–1945. A summary of the business of co-operative societies for the year 1945 for all States except Western Australia is given in the following table. For Western Australia details of the business during 1940–41 (the lastest year available) is given.

D. INSURANCE.

§ 1. Insurance—General.

1. **Legislation.**—Section 51 of the Commonwealth Constitution confers the necessary powers on the Commonwealth Parliament to legislate in regard to "insurance other than State insurance; also State insurance extending beyond the limits of the State concerned". Legislation by the Commonwealth Parliament includes the Life Assurance Companies Act 1905 limiting the amount of assurance payable on the death of children, the Marine Insurance Act 1909 defining the limits of marine insurance and regulating the terms of contracts, etc., the Insurance Act 1932–1937, requiring the lodgment of deposits by insurance companies, and the Life Insurance Act 1945, generally regulating life insurance business in Australia. These laws have limited application, and except for life insurance business, which is regulated by the Life Insurance Act 1945, insurance business is conducted under State laws.

2. **Insurance Act 1932-1937.**—Companies, persons or associations of persons carrying on insurance business in Australia or in any Territory of Australia are required to deposit money or approved securities with the Commonwealth Treasurer to the extent specified in the schedule.

Money deposited is invested by the Treasurer in prescribed securities according to the selection of the depositor, and all interest accruing on deposits or securities is paid to depositors. Deposits remain as security against liability to policy holders, and are available to satisfy judgments obtained in respect of policies.

If the value of money and approved securities deposited has depreciated below the value required by the Act, the Treasurer may require the depositor to lodge additional deposits to bring the total to the prescribed value.

After this Act became law, State laws governing insurance deposits ceased to operate. Deposits held by States on 1st February, 1932, could, however, remain with the States subject to the conditions embodied in the laws of the States. Whilst deposits so remained with the State, the depositors, to the extent of the value of their deposits, were exempt from liability to make deposits under the Commonwealth Act, and the conditions of State laws continued to apply to the deposits until the Commonwealth Treasurer required their return to depositors who immediately had to make deposits with the Commonwealth Government to the prescribed extent.

The following are not regarded as insurance businesses under the Act :—

Staff superannuation schemes; schemes of religious organizations solely for insurance of their property; and Friendly Society, Union and Association schemes involving superannuation or insurance benefits to employees.

This Act does not apply to State insurance within the limits of the State concerned and under the Life Insurance Act 1945 ceased to apply to life insurance business.

The following statement shows particulars of deposits under the Insurance Act 1932–1937 and Life Insurance Act 1945 at 30th June, 1947 :—

DEPOSITS UNDER INSURANCE ACTS, 30th JUNE, 1947.

Class of Insurance.	Deposited with Government of—		Total.
	Commonwealth.	States.	
	£	£	£
Life	1,305,775	..	1,305,775
Other	1,006,749	1,772,620	2,779,369
Total	2,312,524	1,772,620	4,085,144

The deposits comprise cash £553,045, government, municipal and other securities £2,997,239, fixed deposits £5,000, bank guarantees and undertakings £143,810, titles and mortgages £386,050.

3. **Life Insurance Act 1945.**—(i) *Objects.* In his speech on the introduction of the Bill for the Life Insurance Act 1945 the Treasurer stated that the objects of the legislation were as follows :—(*a*) To replace all State legislation on the subject of life insurance and to provide a uniform basis for applying the requirements of those Acts to the whole of Australia ; (*b*) to incorporate existing Commonwealth Acts with minor amendments ; (*c*) to appoint an Insurance Commissioner who shall exercise active supervision of the activities of life insurance companies, with a view to securing the greatest possible protection for policy owners ; (*d*) to set up adequate machinery for dealing with any company that fails to maintain a required minimum standard of solvency.

In addition, it was proposed to provide for the establishment of a Commonwealth Government Insurance Office, if and when the establishment of such an office was thought to be in the public interest.

The Act was assented to on 16th August, 1945, and came into operation on 20th June, 1946.

(ii) *Provisions.* The main provisions of the Act are as follows :—(*a*) *General.* The Act provides for uniform control of life insurance business throughout Australia and in such Australian Territories as are proclaimed. The Life Assurance Companies Act 1905 is re-enacted with minor amendments, and the Insurance Act 1932–1937 ceases to apply to life insurance companies. Its main provisions are, however, continued in this Act. State Acts relating to the control of life insurance business cease to operate. State life insurance business confined to the limits of the State concerned, business in relation to benefits provided by a friendly society or trade union, any scheme or arrangement for the provision of superannuation benefits, and pensions or payments to employees or their dependants and the issue of life insurance policies to employees are excluded from the application of the Act. (*b*) *Administration.* An Insurance Commissioner appointed by the Governor-General is, subject to the directions of the Treasurer, responsible for the administration of the Act. (*c*) *Registration of Companies.* No company can carry on life insurance business unless it has been registered by the Insurance Commissioner. The Commissioner may refuse registration to any company only with the approval of the Treasurer. (*d*) *Deposits.* Companies carrying on life insurance business in Australia must lodge with the Treasurer a deposit in money or approved securities. The amount of the deposit is as follows :—Companies existing prior to the commencement of the Act—£1,000 for each £5,000 of net liability to policy owners as shown by the latest valuation report, with a maximum deposit of £50,000 : new foreign companies —£50,000 ; new Australian companies—£5,000, plus £5,000 per annum (£1,000 per annum in the case of a mutual company) up to a maximum of £50,000 or the amount to be deposited by companies existing prior to the commencement of the Act, whichever is the greater. Money deposited is to be invested by the Treasurer in securities selected by the company and all interest accruing on the deposits is to be paid to the company. The deposits are to be held by the Treasurer as security for the policy-owners and cannot be released until adequate provision has been made for the company's liabilities to Australian policy-owners. (*e*) *Statutory Funds.* A company carrying on life insurance business must establish a "statutory fund" for that business. All amounts received in respect of its life insurance business must be paid to, and form part of, the assets of that fund. The fund can only be used to meet liabilities or expenses of the life insurance business for which the fund has been established. Separate funds can be established by a company for different classes of life insurance business. (*f*) *Accounts, Balance-sheets and Audit.* Separate accounts must be kept for industrial and ordinary life insurance business. Statements of these accounts must be prepared in accordance with prescribed forms and delivered to the Commissioner. The accounts must be audited by a person approved by the Commissioner. (*g*) *Actuarial Investigation.* An actuarial investigation into the financial condition of each Statutory Fund must be made at least once in every five years. The basis of valuation must not be less than a prescribed minimum. A company cannot distribute a dividend to shareholders or a new bonus to policy-holders unless a surplus is revealed in the fund by the valuation. Not more than 20 per cent. of any surplus can be paid to shareholders. (*h*) *Documents to be furnished to the Commissioner.* Provision is made for copies of all accounts, balance-sheets, valuation reports and certain statistical information to be furnished to the Commissioner. These documents can be inspected by members of the public. (*i*) *Investigations by the Commissioner.* The Commissioner may make an investigation into the affairs of any company. Provision is made to compel the company to furnish any information required by the Commissioner for the purposes of an investigation. On completion of an investigation the Commissioner must advise the company of the result of his investigation and may issue any directions to the company which he thinks necessary to deal with the position disclosed. (*j*) *Judicial Management and Winding-up.* If investigations into a Company's business reveal a serious state of affairs, the Commissioner may apply to the High Court for an order for the company to be placed under judicial management or for an order for the winding-up of the company. If the Court orders that the company be placed under judicial management it shall appoint a judicial manager who shall manage the company in accordance with directions he receives from the Court. If the Court orders the winding-up of the company it shall appoint a liquidator, and the winding-up will be carried out in accordance with the laws of the State in which the company is incorporated. (*k*) *Issue of Policies.* The Commissioner may require a company to discontinue the use of any form of proposal, policy or other written matter describing its policy contracts if he considers it to be misleading. Premium rates charged must be approved by an actuary and a company cannot allow a rebate or commission in excess of the allowance for rebates or commission taken into account by the actuary in fixing the rates of premium. An insurable interest is defined. The effect of a mis-statement by a policy-owner in his proposal is limited. If the mis-statement relates to age, an equitable method of adjustment is provided. In other cases of mis-statement the company cannot make any adjustment to or avoid the policy unless the statement was fraudulently untrue or relates to a material fact, and is discovered within three years of the date on which it was made. (*l*) *Assignment and Mortgage of Policies.* Rules are provided for the assignment or mortgage of policies. The consent of the company liable under the policy is necessary before an industrial insurance policy can be assigned. (*m*) *Protection of Policies.* Life insurance policies are protected against the policy-owner's creditors in the case of the bankruptcy of the policy-owner. (*n*) *Paid-up Policies, Surrender Value and Non-forfeiture.* A policy-owner is, on application, entitled to a paid-up policy after paying three years' premiums, or to a surrender value in cash after the policy has been in force for six years. Rules for determining the value of a paid-up policy or surrender value of a policy are laid down. In addition, there are provisions that a policy will not lapse immediately if a premium is not paid. (*o*) *Payment of Policy Moneys.* Payments of claim moneys under policies assuring not more than £500 may be made without the production of probate or letters of administration. (*p*) *Payments on Death of Children under Ten Years of Age.* The amounts payable from all life insurance companies and friendly societies on the death of a child under the age of 10 years of age are limited. (*q*) *Children's Advancement Policies.* Unless expressly stated in the policy, a child's advancement policy shall become the property of the child on attaining the vesting age. (*r*) *Other Provisions relating to Policies.* A company is required to keep a register of policies in each State in which it does business and to register any policy issued in such register as is agreed upon between the company and the policy-owner. A special policy may be issued in place of an original policy which has been lost or destroyed. (*s*) *Industrial Insurance Business.* In addition to the other provisions of the Act which relate to industrial insurance business, special provisions are included to protect industrial policy-owners from misrepresentation by agents of the company. These provisions give the policy-owner the right to object to a policy within 28 days of receiving it and to claim a refund of premiums paid. Each industrial policy issued must contain a statement showing—(i) whether the policy is or is not a participating policy, (ii) the rights of the policy-owner to a paid-up policy or to receive the surrender value of his policy, and (iii) the conditions of forfeiture. (*t*) *Commonwealth Government Insurance Office.* Provision is made for the establishment of a Commonwealth Government Insurance Office. Policies issued by this office are to be guaranteed by the Commonwealth. (*u*) *Miscellaneous.* Within one year after the commencement of the Act all mutual companies shall make provision for a system of voting by its members by post on any contested election of directors or on any alteration of the company's constitution.

§ 2. Life Assurance.

1. **General.**—Statistical returns have been collected from life assurance institutions since 1907. The figures in the succeeding paragraphs refer to Australian business only, except where otherwise indicated.

2. **Institutions Transacting Business.**—(i) *General.* The number of institutions transacting life assurance business in Australia during 1946 was 26, including three oversea companies. Of the twenty-three Australian institutions, six are purely mutual, including one which transacts general business in respect of which share capital is used, and fifteen are public companies. Two offices are State Government institutions.

(ii) *Ordinary and Industrial Business.* Of the total institutions, thirteen transacted both ordinary and industrial business and one industrial business only. Ordinary and industrial business has, where possible, been kept separate.

3. **Australian Business.**—(i) *Ordinary.* The following table shows particulars of policies in existence at the end of the years 1939 and 1943 to 1946 inclusive :—

ORDINARY LIFE ASSURANCE : AUSTRALIAN BUSINESS—POLICIES IN EXISTENCE.

At End of Year—	Assurance and Endowment Policies.				Annuities.	
	No.	Amount.	Average per Policy.	Annual Premiums.	No.	Amount per Annum.
		£'000.	£	£'000.		£

1944	3,157,977	152,841	48	8,982	(*b*)	(*b*)
1945	3,279,086	163,459	50	9,537	(*b*)	(*b*)
1946	3,428,669	178,284	52	10,279	(*b*)	(*b*)

(*a*) Annual premium income. (*b*) Not available.

4. **Receipts and Expenditure.**—(i) *Ordinary Business.* The following table shows for the five years 1939 and 1943 to 1946 the aggregate Australian receipts in respect of ordinary business of all the institutions doing business in Australia. In the latest year, premiums—new, renewal and annuity—amounted to over 69 per cent., and interest, dividends and rent to nearly 30 per cent. of the Australian receipts.

ORDINARY LIFE ASSURANCE : AUSTRALIAN RECEIPTS.

Particulars.	1939.	1943.	1944.	1945.	1946.
	£	£	£	£	£
Premiums—New ..	1,613,219	1,274,935	1,759,887	2,148,060	2,962,100
Renewal	12,341,172	15,340,003	16,313,075	17,815,743	19,357,972
Annuity Premiums ..	183,866	216,526	248,878	275,289	458,718
Interest, dividends and rents	7,546,589	8,625,088	8,996,839	9,202,940	9,653,812
Other receipts ..	13,192	27,677	17,298	13,591	41,929
Total Receipts ..	21,698,038	25,484,229	27,335,977	29,455,623	32,474,531

In the following table details are given of Australian expenditure in respect of ordinary business for the five years 1939 and 1943 to 1946.

In 1946 claims accounted for 64 per cent. of the total expenditure; surrenders 8 per cent.; expenses of management 9 per cent.; commission 10 per cent.; and licence fees and taxes 4 per cent.

ORDINARY LIFE ASSURANCE : AUSTRALIAN EXPENDITURE.

Particulars.	1939.	1943.	1944.	1945.	1946.
	£	£	£	£	£
Claims	7,935,462	10,323,163	9,880,576	11,196,834	11,672,585
Surrenders	1,842,516	1,050,455	930,389	1,094,201	1,498,889
Annuities	219,473	247,928	246,711	234,183	247,353
Commission ..	1,007,721	874,903	1,061,555	1,242,449	1,835,653
Expenses of management	1,178,073	1,148,472	1,186,922	1,232,351	1,595,332
Licence fees and taxes	316,335	594,463	591,229	633,420	684,450
Shareholders' dividends	101,437	68,947	69,765	70,920	73,586
Cash bonuses paid to policy-holders ..	260,435	105,529	85,175	102,978	112,224
All other expenditure (*a*)	1,185,284	1,040,883	845,407	416,773	504,658
Total Expenditure	14,046,736	15,454,743	14,897,729	16,224,109	18,224,730

(*a*) Includes provision for taxation and other special purposes.

The excess of receipts over expenditure during the five years above was as follows:—1939, £7,651,302; 1943, £10,029,486; 1944, £12,438,248; 1945, £13,231,514; and 1946, £14,249,801. During the same years the proportions that expenditures bore to receipts were as follows:—1939, 65 per cent.; 1943, 61 per cent.; 1944, 54 per cent.; 1945, 55 per cent.; and 1946, 56 per cent.

(ii) *Industrial Business.* The aggregate Australian receipts in respect of industrial business for the years 1939 and 1943 to 1946 were as follows :—

INDUSTRIAL LIFE ASSURANCE : AUSTRALIAN RECEIPTS.

Particulars.	1939.	1943.	1944.	1945.	1946.
	£	£	£	£	£
Premiums—New and Renewal	6,490,164	8,213,501	8,715,578	9,369,928	9,879,196
Interest, dividends and rents	1,751,531	2,079,214	2,177,347	2,291,382	2,389,060
Other receipts ..	46,402	42,654	41,883	17,177	2,416
Total Receipts ..	8,288,097	10,335,369	10,934,808	11,678,487	12,270,672

Expenditure during 1946 totalled £8,364,536, of which claims amounted to 58 per cent., commission to 21 per cent., and expenses of management to 11 per cent. The aggregate Australian expenditure in respect of industrial business for the five years 1939 and 1943 to 1946 was as follows :—

INDUSTRIAL LIFE ASSURANCE : AUSTRALIAN EXPENDITURE.

Particulars.	1939.	1943.	1944.	1945.	1946.
	£	£	£	£	£
Claims	3,132,459	4,028,612	4,395,405	4,699,839	4,833,580
Surrenders	498,932	151,947	152,867	210,907	367,802
Annuities	33	36	36	75	60
Commission ..	1,353,938	1,436,756	1,492,195	1,581,526	1,734,246
Expenses of management	717,794	808,480	800,654	832,099	933,279
Licence fees and taxes	83,259	216,347	211,285	218,137	235,146
Shareholders' dividends	56,476	44,486	35,026	35,880	38,158
All other expenditure (*a*)	243,786	242,270	168,828	248,044	222,265
Total Expenditure	6,086,677	6,928,934	7,256,296	7,826,507	8,364,536

(*a*) Includes provision for taxation and other special purposes.

The excess of receipts over expenditure for each of the five years above was :—1939, £2,201,420 ; 1943, £3,406,435 ; 1944, £3,678,512 ; 1945, £3,851,980 ; and 1946, £3,906,136.

The proportions that expenditures bore to receipts were—1939, 73 per cent. ; 1943. 67 per cent. ; 1944, 66 per cent. ; 1945, 67 per cent. ; and 1946, 68 per cent.

5. **Liabilities and Assets.**—(i) *General.* The liabilities of the Australian institutions consist mainly of their assurance funds, but in the case of public companies there is a further liability on account of the shareholders' capital. The assets consist chiefly of government and municipal securities, mortgages, loans on policies, landed and house property, etc. Loans on personal security are granted by very few of the Australian institutions.

(ii) *Australian Liabilities and Assets.* For various reasons several institutions do not attempt the dissection of liabilities and assets between the industrial and ordinary branches, and, therefore, the figures in the following tables relate to the ordinary and industrial branches combined. Assets and liabilities of the Liverpool and London and Globe Insurance Company Ltd. are excluded, as separate details of the Australian business are not available. Details of Australian liabilities are not available for years subsequent to 1941.

ORDINARY AND INDUSTRIAL LIFE ASSURANCE: AUSTRALIAN LIABILITIES.

6. **New Policies issued in Australia.**—(i) *Ordinary Business.* During 1946 (1945 in brackets), 214,921 (138,113) new policies were issued for £104,351,000 (£63,973,000). The average amount per policy was £486 (£463), as compared with an average of £365 per policy for all ordinary policies which were in existence at the end of 1945.

(ii) *Industrial Business.* New policies to the number of 358,695 (290,622) were issued during the year 1946 (1945 in brackets) for a total of £26,620,000 (£19,648,000). The average per policy was £74 (£68) as compared with the average of £50 for all industrial policies current at the end of 1945.

7. **Policies Discontinued in Australia.**—(i) *Ordinary Business.* The volume of business which from various causes becomes void in each year is always large. The number and amount of policies, excluding annuities, discontinued in the three years 1939, 1945 and 1946 and the reasons for discontinuance are given in the following table:—

ORDINARY LIFE ASSURANCE : POLICIES(*a*) DISCONTINUED IN AUSTRALIA.

Cause of Discontinuance.	1939.		1945.		1946.	
	No. of Policies.	Amount.	No. of Policies.	Amount.	No. of Policies.	Amount.
		£'000.		£'000.		£'000.
Death or maturity ..	22,529	5,612	31,259	8,613	30,655	8,895
Surrender	18,409	5,863	17,151	7,445	24,678	9,686
Forfeiture	39,382	13,414	11,925	4,319	18,475	7,926
Other	−128	−103	−2,608	496	−3,004	1,207
Total	80,192	24,786	57,727	20,873	70,804	27,714

(*a*) Excludes annuities.

Minus sign (−) denotes excess of transfers to Australian registers over transfers from Australian registers.

During 1946 the number of policies discontinued because of death or maturity constituted 43 per cent. of the total, because of surrender 35 per cent. and because of forfeiture 26 per. cent.

(ii) *Industrial Business.* The number of policies discontinued each year in this branch also is very large. Of the number of policies discontinued during 1946, 47 per cent. was due to death or maturity, 14 per cent. to surrender and 39 per cent. to forfeiture.

§ 3. Fire, Marine and General Insurance.

1. **Australasian Companies.**—(i) *General.* The statistical information in this paragraph has been extracted from the *Australasian Insurance and Banking Record.* The following tables show particulars of revenue and expenditure, assets and liabilities, and investments of certain insurance companies having their head offices either in Australia, New Zealand or Fiji.

(ii) *Revenue and Expenditure.* The most important items of revenue and expenditure for the years 1938–39 and 1942–43 to 1945–46 are given below.

FIRE, MARINE AND GENERAL INSURANCE COMPANIES: SUMMARY OF REVENUE AND EXPENDITURE.

Particulars.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46
No. of companies ..	40	42	42	42	43

(*c*) Trade surplus ..	13.36	17.39	14.26	13.45	11.95

(iii) *Liabilities and Assets.* The liabilities and assets for the period 1935–36 to 1939–40 are set out in the following table. Comparison of the results for 1939–40 (41 companies), with those for 1935–36 (40 companies) shows that paid-up capital constituted 20 per cent. of the total liabilities in 1939–40, as compared with 25 per cent. in 1935–36. Reserves constituted 46 per cent. and 45 per cent. for 1939–40 and 1935–36 respectively. Of the total assets for the same years, Government securities and other investments constituted 67 per cent. and 66 per cent. Figures for years later than 1939–40 are not available.

FIRE, MARINE AND GENERAL INSURANCE COMPANIES.

(*a*) Some of the companies transact life business. (*b*) Included with Government securities, etc.

2. **Aggregate Australian Business.**—(i) *States.* While the foregoing statements relate only to those companies whose head offices are located in Australia, New Zealand or Fiji, the following particulars, which are somewhat restricted in the range of information, are in respect of all companies operating in Australia. During 1946–47 (1945–46 in brackets) revenue from premiums amounted to £25,252,488 (£21,130,809) and from the net interest on investments, etc., to £1,244,227 (£1,096,560), totalling £26,496,715 (£22,227,369). Expenditure on losses amounted to £12,572,747 (£9,536,515), contributions to Fire Brigades £673,319 (£587,938), commission and agents' charges £2,619,662 (£2,200,695), expenses of management £4,654,384 (£3,724,330), and taxation £1,625,403 (£1,989,281), a total of £22,145,515 (£18,038,759).

The following table shows, for each State, the aggregate premium income less reinsurances and returns, and claims paid less reinsurances, together with the proportions of losses on premiums for all classes of insurance other than life for the years 1945–46 and 1946–47.

FIRE, MARINE AND GENERAL INSURANCE : PREMIUMS AND LOSSES.

State.	Premiums, less reinsurances and returns.		Losses, less reinsurances.		Proportion of losses on premiums.	
	1945–46.	1946–47.	1945–46.	1946–47.	1945–46.	1946–47.
	£	£	£	£	%	%
New South Wales ..	9,509,575	11,280,382	4,728,256	5,992,909	49.72	53.13
Victoria	5,785,433	7,114,616	2,225,397	3,009,729	38.47	42.30
Queensland	2,513,437	2,787,013	1,290,648	1,806,930	51.35	64.83
South Australia ..	1,331,808	1,666,543	512,800	675,089	38.50	40.51
Western Australia ..	1,444,946	1,751,278	611,433	868,571	42.32	49.60
Tasmania	545,610	652,656	167,981	219,519	30.79	33.63
All States ..	21,130,809	25,252,488	9,536,515	12,572,747	45.13	49.79

(ii) *Classes of Insurance.* The following statement shows premiums and losses in respect of the principal classes of risks, with the proportions of losses on premiums, for the years 1945–46 and 1946–47 :—

FIRE, MARINE AND GENERAL INSURANCE : PREMIUMS AND LOSSES, PRINCIPAL CLASSES OF RISK.

Class of Risk.	Premiums, less reinsurances and returns.		Losses, less reinsurances.		Proportion of Losses on Premiums.	
	1945–46.	1946–47.	1945–46.	1946–47.	1945–46.	1946–47.
	£	£	£	£	%	%
Fire	7,008,210	7,775,221	1,730,442	2,101,029	24.69	27.02
Workers' Compensation	5,976,861	7,128,805	4,436,596	5,610,173	74.23	78.70
Motor Vehicle—						
Compulsory Third Party	1,074,861	1,143,536	692,420	1,059,686	64.42	92.67
Other	2,089,520	2,864,587	1,196,137	1,953,701	57.24	68.20
Marine	1,637,193	2,367,362	407,359	638,309	24.88	26.96
All other	3,344,164	3,972,977	1,073,561	1,209,849	32.10	30.45
Total	21,130,809	25,252,488	9,536,515	12,572,747	45.13	49.79

The volume of business measured by the amount of premium income shows that fire insurance represented about 33.2 per cent. of the total business during 1945–46 and 30.8 per cent. during 1946–47, while next in importance were workers' compensation 28.3 per cent. during 1945–46 and 28.3 per cent. during 1946–47, and motor vehicles (including compulsory third party insurance) 15.0 per cent. in 1945–46 and 15.9 per cent. in 1946–47. Marine insurance constituted 7.7 per cent. in 1945–46 and 9.4 per cent. in 1946–47.

During the three years 1932–33 to 1934–35 less than 45 per cent. of the premium income was required on the average to meet losses. Up to 1939–40 the proportion of losses on premiums did not move much from the 50 per cent. mark, but between 1940–41 and 1943–44 it had dropped to 41.32 per cent. In 1944–45 it increased to 46.87 per cent. and in 1945–46 and 1946–47 it was 45.13 per cent. and 49.79 per cent. respectively.

3. **Commonwealth Marine War Risks Insurance Board.**—Information given in the two preceding paragraphs excludes the transactions of the Commonwealth Marine War Risks Insurance Board. With a view to stabilizing premium rates, the Commonwealth Government, in February, 1941, set up this Board to undertake marine war risk insurance. At the outset, the Board confined its activities to the insurance of Australian ships (the majority of which were previously insured in Great Britain) against war risks, and, during its early months, practically the whole of the Australian mercantile fleet was covered. From the end of 1941 to the middle of 1943, however, vessels which had been requisitioned by the Shipping Control Board were not insured with the Insurance Board as the Shipping Control Board made its own internal arrangements to insure these vessels This internal arrangement continued until 1st July, 1943, after which date the Shipping Control Board insured all the requisitioned vessels with the Insurance Board. With the worsening of the war situation in 1942, the Board extended its activities from March, 1942, to cover the insurance of certain essential imported cargoes, and, from July, 1942, to cover all coastal cargoes. The cover provided by the Board was confined to the insurance against war risks, and ordinary marine cover was not generally provided. Transactions of the Board for the years 1940–41 to 1946–47 are shown in the following table.

COMMONWEALTH MARINE WAR RISKS INSURANCE BOARD: SUMMARY OF TRANSACTIONS.

Year.	Net Premiums Received.	Expenditure.		
		Claims Paid.	Other Expenses.	Total
	£	£	£	£
1940–41	154,853	..	15	15
1941–42	443,820	80,103	632	80,735
1942–43	2,086,824	1,333,687	48,654	1,382,341
1943–44	2,685,780	855,172	48,670	903,842
1944–45	1,634,770	281,385	23,684	305,069
1945–46	428,393	30,321	6,901	37,222
1946–47	92,984	50,232	2,757	52,989

E. FRIENDLY SOCIETIES.

1. **General.**—Friendly societies are an important factor in the social life of the community, as probably more than one-third of the total population of Australia comes either directly or indirectly under their influence. Their total membership is over 620,000, but, as certain benefits, such as medical attendance and free medicines, and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must, even when due allowance is made for young and unmarried members, be more than doubled to arrive at an estimate of the number of persons who receive some direct benefit from these societies. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its proposed rules conform to the law, and that the scale of contribution is sufficient to provide the promised benefits. Societies are obliged to forward annual returns as to their membership and their finances to the Registrar, and reports are published in most of the States dealing with the returns received. The figures in the following tables are for the year 1945–46 in respect of all States except Tasmania, where they relate to the calendar year 1946; Queensland, where they relate to 1944–45; and New South Wales, where they relate to the year 1938–39. In New South Wales particulars for later years have not been tabulated because of staff shortages.

2. **Number of Societies, Lodges and Members.**—The number of different societies and lodges, the total number of benefit members at the end of the year, and their average number during the year are shown in the following table :—

FRIENDLY SOCIETIES: SOCIETIES, LODGES AND MEMBERS.(*a*)

State.	Number of Registered Friendly Societies.	Number of Branches.	Benefit Members at End of Year.	Average Number of Benefit Members during the Year.
New South Wales (*b*)	33	2,402	211,170	211,653
Victoria (*c*)	109	1,463	204,513	205,520
Queensland	26	570	73,594	73,452
South Australia (*d*)	17	(*e*) 873	80,419	80,411
Western Australia (*d*)	13	320	30,345	29,605
Tasmania	20	174	23,728	(*f*) 23,676

(*a*) See par. 1 for years covered. (*b*) Excludes twenty-one miscellaneous societies consisting of Medical Institutes, Dispensaries, and Burial Societies. (*c*) Excludes Dispensaries and Juvenile branches. (*d*) Excludes Juvenile branches. (*e*) Societies containing male and female branches counted as two branches. (*f*) Estimated.

3. **Sickness and Death Returns.**—Sick pay is generally granted for a number of months at full rates, then for a period at half rates, and in some societies is finally reduced to quarter rates. The following table shows the total number of members who received sick pay during the year, the number of weeks in the aggregate for which they received pay, and the average per member sick, and, further, the number of benefit members who died during the year, together with the proportion of deaths per thousand average members :—

FRIENDLY SOCIETIES : SICKNESS AND DEATH RETURNS.(*a*)

State.	Number of Members who received Sick Pay.	Total Number of Weeks Sick Pay Granted.	Average Number of Weeks per Member Sick.	Benefit Members.	
				Deaths.	Proportion of deaths per 1,000 (Average).
New South Wales ..	52,340	522,174	9.98	2,708	12.82
Victoria	47,711	482,535	10.11	2,759	13.42
Queensland	(*b*) 12,786	(*b*)136,575	10.68	993	13.49
South Australia	17,433	194,788	11.17	1,145	14.24
Western Australia ..	5,993	59,686	9.96	411	13.88
Tasmania	4,185	45,073	10.77	346	14.61

(*a*) See par. 1 for years covered. (*b*) Females counted as half-members in these totals.

4. **Revenue and Expenditure.**—(i) *Revenue.* The financial returns are not prepared in the same way in each State, but an attempt has been made in the following table to group the revenue under the main headings :—

FRIENDLY SOCIETIES : REVENUE.(*a*)

State.	Entrance Fees, Members' Contributions and Levies.	Interest, Dividends and Rents.	All other Revenue.	Total Revenue
	£	£	£	£
New South Wales	767,621	208,651	29,769	1,006,041
Victoria	868,310	286,697	81,545	1,236,552
Queensland	244,501	91,269	(*b*)	335,770
South Australia	263,630	145,812	24,179	433,621
Western Australia	114,626	29,992	4,205	148,823
Tasmania	89,420	22,345	29,263	141,028

(*a*) See par. 1 for years covered. (*b*) Included in interest, dividends and rents.

(ii) *Expenditure.* The returns relating to expenditure are in greater detail than those for revenue and particulars of the major items are shown below.

FRIENDLY SOCIETIES : EXPENDITURE.(*a*)

State.	Sick Pay.	Medical Attendance and Medicine.	Sums Payable at Death of Members and Members' Wives.	Administration.	All other Expenditure.	Total Expenditure.
	£	£	£	£	£	£
New South Wales ..	278,738	306,029	89,368	164,570	27,931	866,636
Victoria	288,436	380,917	69,693	160,433	145,778	1,045,257
Queensland	85,050	104,734	43,858	49,379	(*b*)	283,021
South Australia ..	100,700	108,801	50,203	51,236	50,230	361,170
Western Australia ..	33,121	48,172	19,454	25,411	4,353	130,511
Tasmania	25,997	35,618	24,047	20,382	10,115	116,159

(*a*) See par. 1 for years covered. (*b*) Included in administration.

5. **Funds.**—The funds of friendly societies in each State at the end of the year covered by the statistics available were :—New South Wales, £4,908,463 ; Victoria, £7,568,888 ; Queensland, £2,333,717 ; South Australia, £3,524,616 ; Western Australia, £818,846 ; Tasmania, £591,840.

F. PROBATES.

1. **Probates and Letters of Administration.**—The following particulars give some idea of the number and value of estates of deceased persons in each State for the latest year for which information is available. Later particulars are not available in some States because the compilation of these statistics was discontinued for the duration of the war and has not yet been resumed. Owing to differences in legislation in the various States the figures are not entirely comparable. The details for each State are shown in the table hereunder :—

PROBATES AND LETTERS OF ADMINISTRATION.

(*a*) Not included above in the table of Probates and Letters of Administration granted. Particulars for New South Wales are not available. (*b*) Not available. (*c*) Paid to Unclaimed Moneys Fund.

CHAPTER XV.

PUBLIC FINANCE.

NOTE.—The subject of " Public Finance " is dealt with in this Chapter under the two major divisions of Commonwealth Finance and State Finance. The close financial relations between the Commonwealth and States, however, particularly since the Financial Agreement has been in operation, demand a combination of these two divisions under the heading of Commonwealth and State Finance. In view of their importance a separate division relating to taxes on income has been included.

A. COMMONWEALTH FINANCE.

§ 1. General.

1. **Financial Provisions of the Constitution.**—The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are contained in Sections 81 to 105A of the Commonwealth Constitution (*see* pages 20–23 of this issue). Two other sections which have a most important bearing on questions of Commonwealth finance are Sections 69 and 51.

Section 69 provides for the transfer to the Commonwealth from the States of certain specified departments, and Section 51, in outlining the powers of the Commonwealth Parliament, implies the transfer or creation of other departments. Section 87 deals with the financial relations between the Commonwealth and the States. These matters have been treated in previous issues of the Official Year Book and on pages 633–639 of this issue a *résumé* is given of the constitutional obligations upon the Commonwealth regarding payments to the States.

The majority of the tables relating to Commonwealth Finance have been compiled from the annual Budget Papers as presented to Parliament by the Treasurer of the Commonwealth.

2. **Accounts of Commonwealth Government.**—The Commonwealth Government, like the State Governments, bases its accounts upon three funds, the Consolidated Revenue Fund, the Trust Fund and the Loan Fund, the last-mentioned fund coming into existence in the financial year 1911–12.

§ 2. Consolidated Revenue Fund.

Division I.—Nature of Fund.

1. **Provisions of the Constitution.**—The provisions made for the formation of a Commonwealth Consolidated Revenue Fund, and the means to be adopted for operating on the fund, are contained in Sections 81 to 83 of the Constitution (*see* page 20 of this issue).

2. **Annual Results of Transactions.**—The following statement shows, for the period 1927–28 to 1946–47, the receipts, expenditure and excess receipts or deficiency for each year, together with the accumulated result and the payments made from the excess receipts.

The receipts and expenditure on account of the balance of interest on States' Debts payable by the States to the Commonwealth under the Financial Agreement have been excluded.

COMMONWEALTH CONSOLIDATED REVENUE: RECEIPTS, EXPENDITURE, ETC.

Year.	Receipts.	Expenditure.	Ordinary Transactions.		Payments from Excess Receipts.	Accumulated Result.

1946–47 ..	431,256,307	431,256,307	..	..	..	..	15,658,588

(*a*) Met by temporary advance from loan fund. (*b*) Naval construction and defence reserve, £2,250,000; science and industry investigation, £250,000; civil aviation, £200,000; purchase of radium, £100,000; and geophysical survey of Australia, £20,000. (*c*) *See* table following.

3. **Payments from Excess Receipts.**—Particulars of the excess receipts, accumulated balances and allocation of excess receipts since 1934–35 are shown in the following table:—

COMMONWEALTH CONSOLIDATED REVENUE: EXCESS RECEIPTS.

Particulars.	1934–35.	1935–36.	1936–37.	1937–38.	1938–39.	1939–40.	1940–41
	£	£	£	£	£	£	£
Accumulated balance ..	6,162,269	713,474	3,567,720	1,276,558	3,494,733	627,309	2,928,375
Excess receipts	711,205	3,567,720	1,276,558	3,494,733	627,309	2,928,375	..
Total for year .	6,873,474	4,281,194	4,844,278	4,771,291	4,122,042	3.555,684	2,928,375
Expenditure from excess receipts—							
Grants to States ..	2,000,000	500,000	500,000	..	..	..	..
Defence equipment ..	4,160,000	..	2,000,000	..	3,494,733	627,309	2,928,375
Post Office works provision	..	..	..	1,000,000	..		..
Reduction of deficit ..	..	213,474	1,067,720	276,558	..	..	..
Total	6,160,000	713.474	3,567,720	1,276,558	3,494,733	627,309	2,928,375
Accumulated balance ..	713,474	3,567,720	1,276,558	3,494,733	627,309	2,928.375	..

The Consolidated Revenue Fund for the financial years 1940–41 to 1946–47 was exactly balanced, as all available revenue after charging expenditure on ordinary services was used for war purposes and post-war charges. There were no transactions in respect of excess receipts during the years 1931–32 to 1933–34.

Division II.—Revenue.

1. **General.**—The following table furnishes details of the revenue from each source and the amount per head of population under each of the main headings during the years 1938–39 and 1943–44 to 1946–47 :—

COMMONWEALTH CONSOLIDATED REVENUE : SOURCES.

Source.	1938–39.	1943–44.	1944–45.	1945–46.	1946–47

(*a*) Includes Australian Capital Territory. (*b*) Includes Northern Territory.

(iv) *Other Taxation.* (*a*) *General.* Other taxes are, in general, assessed and collected by the Commissioner of Taxation. The organization comprises an office in each State assessing the returns of taxpayers whose interests are restricted to that State only, and a Central Office assessing taxpayers whose interests are in more than one State. Taxes, however, may be paid to any office, so that the sums actually received by any office do not correspond to the assessments made by that office and frequently differ by very large amounts. Consequently the actual receipts by any State office, e.g., of income tax by the Queensland office, may include tax in respect of Central Office or New South Wales assessments, and, therefore, may not be a proper measure of income tax paid on account of income derived in Queensland.

The actual receipts by the various offices are the figures of necessity used by the Treasury for accounting purposes, and may be called the " Treasury " figures. In order to show a more significant picture of the taxation in each State, figures furnished by the Commissioner of Taxation, which refer strictly to the assessments made by the State office concerned, are used in the following tables. The totals of these figures do not quite agree with the total Treasury figures shown on page 610, owing to certain technicalities of accounting. The Taxation Office figures present a fair comparison between States, e.g., in taxation paid per head, but do not give the absolute measure of taxation, because the Central Office collections, which include taxation on account of all States, have not been allocated to the States. In the absence of precise information, it may be assumed, as a rough approximation, that Central Office collections may be divided among States in proportion to State office collections. It is probable, however, that a somewhat larger share is derived from the more populous States, New South Wales and Victoria.

(*b*) *Land Tax.* Commonwealth Land Tax was first imposed on the unimproved value of land in 1910–11. The following table shows the rates of Land Tax imposed for each assessment year from 1933–34 to 1947–48 :—

LAND TAX : RATE OF TAX PER £1 OF TAXABLE VALUE.

(T = Taxable Value.)

Assessment Year.	Residents.			Absentees.(*a*)				
	If the Taxable Value is from £1 to £75,000—	If the Taxable Value is over £75,000—		If the Taxable Value is from £1 to £80,000—		If the Taxable Value is over £80,000—		
		On £75,000–	On excess over £75,000–	On £5,000–	On excess over £5,000—	On £5,000–	On next £75,000–	On excess over £80,000–
	d.	*d.*	*d.*	*d.*	*d.*	*d.*	*d.*	*d.*
1933–34 to 1937–38	$\frac{45}{100}\left(1+\frac{T}{18.750}\right)$	2.25	4.05	0.45	$\frac{45}{100}\left(2+\frac{T-5{,}000}{18{,}750}\right)$	0.45	2.7	4.5
1938–39 to 1939–40	$\left(\frac{1}{2}+\frac{T}{37{,}500}\right)$	2.5	4.5	0.5	$\left(1+\frac{T-5{,}000}{37{,}500}\right)$	0.5	3.0	5.0
1940–41 to 1947–48 (*b*)	$\left(1+\frac{T}{18{,}750}\right)$	5.0	9.0	1.0	$\left(2+\frac{T-5{,}000}{18{,}750}\right)$	1.0	6.0	10.0

(*a*) Absentees are not allowed an exemption of £5,000 granted to residents. (*b*) In addition, if the taxable value exceeds £20,000, there is payable for 1941–42 and subsequent years a super tax equal to the lesser amount of the following :—(i) twenty per cent. of the amount of land tax ; or (ii) one per cent. of the amount by which the taxable value of the land exceeds £20,000.

Under the National Security (Values for Land Tax) Regulations the revaluations of land for the purposes of the Land Tax Assessment Act 1910–1940 were postponed until after the war. Thereby the values of land, or of interests in land, as assessed for the financial year 1939–40, were adopted for the financial year 1940–41 and subsequent years for the duration of the war. An amendment to the regulations permitted the application of lower values in cases of assessments at a lower value prior to 13th March, 1942, or after that date in consequence of objections or protests lodged previously.

In addition, where a taxpayer had furnished a full and complete return of land owned at 30th June in any year prior to 1942, the lodgment of further returns was dispensed with. There is an exception in respect of changes in ownership of land. Under section 12 of the Defence (Transitional Provisions) Act 1946 the provisions of the National Security (Values for Land Tax) Regulations were incorporated in the Land Tax Assessment Act 1910–1946 and revaluations of land for purposes of the Act were postponed until after the assessment year commencing on 1st July, 1947.

Land Tax receipts in each State and Central Office for the years 1938–39 and 1943–44 to 1946–47 were as follows. The receipts referred to in this table differ slightly from the collections shown on page 610 because some refunds credited before 30th June were not paid until after that date.

(c) *Estate Duty*. The Estate Duty Act 1914 and Estate Duty Assessment Act 1914–1928 imposed a duty on the estates of deceased persons the net value of which exceeded £1,000. The rate of tax, where the value of the estate for duty did not exceed £2,000, was £1 per cent. Where the value of the estate for duty exceeded £2,000, the rate was increased by one-fifth of £1 for each £1,000 or part thereof in excess of £2,000, to a maximum rate of £15 per cent. on estates over £71,000. Where the estate passed to a widow, children or grand-children, duty was payable at two-thirds of the ordinary rate.

By the Estate Duty Assessment Act 1940 the Estate Duty Assessment Act 1914–1928 was amended to allow the following statutory exemption, namely :—(*a*) where the whole of the estate passes to the widow, children or grand-children of the deceased, the sum of £2,000 decreasing by £1 for every £10 by which the value exceeds £2,000 up to £10,000, and thereafter decreasing by £1 for every £2 by which the value exceeds £10,000 ; (*b*) where no part of the estate passes to the widow, children or grand-children, the sum of £1,000 decreasing by £1 for every £10 by which the value exceeds £1,000 up to £6,000, and thereafter decreasing by £1 for every £8 by which the value exceeds £6,000 ; and (*c*) where part only of the estate passes to the widow, children or grand-children, the statutory exemption is to be calculated proportionately under (*a*) and (*b*).

Under the Estate Duty Act 1940 the following new rates were imposed :—£1 to £10,000, 3 per cent. ; £10,001 to £20,000, 3 per cent. to 6 per cent. ; £20,001 to £100,000, 6 per cent. to 18 per cent. ; £100,001 to £500,000, 18 per cent. to 20 per cent. ; over £500,000, 20 per cent. By the Estate Duty Act 1941 these rates were amended to the following :—£1 to £10,000, 3 per cent. ; £10,001 to £20,000, 3 per cent. to 6 per cent. ; £20,001 to £120,000, 6 per cent. to 26 per cent. ; £120,001 to £500,000, 26 per cent. to 27.9 per cent. ; over £500,000 27.9 per cent.

Under the Estate Duty Assessment Act 1914–1940 provision was made for the exemption of the estates of members of the Forces who died on active service or within one year after its termination from injuries received or disease contracted on active service, provided the value of the estate did not exceed £5,000. In June, 1942, an amendment provided for an exemption of £5,000 in respect of the estates of those persons who were members of the Forces and who died during the war or within three years of its termination. The exemption was restricted to estates passing to the widow, children, grand-children, parents, brothers, sisters, nephews or nieces of the deceased.

Particulars of the collections in each State and Central Office for the years 1938–39 and 1943–44 to 1946–47 are shown in the following table. These figures differ slightly from the figures on page 610 as some refunds were credited before 30th June and not paid until after that date.

Average duty per estate	£	207	357	341	409	385

(*d*) *Gift Duty.* The Gift Duty Assessment Act 1941–1947 and the Gift Duty Act 1941–1947 impose a gift duty on all gifts made after the 29th October, 1941. A gift has been defined as any disposition of property, which is made otherwise than by will, without adequate consideration in money or money's worth.

There is a liability on both the donor and the donee to furnish a return, and both are jointly and severally liable for payment of the duty.

The following rates of duty have been fixed by the Gift Duty Act 1941–1947 :—

Value of all Gifts made within Eighteen Months.	Rate of Duty.
Not exceeding £2,000 (*a*)	Nil
£2,001 (*a*) to £10,000	3%
£10,001 to £20,000	3% to 6%
£20,001 to £120,000	6% to 26%
£120,001 to £500,000	26% to 27.9%
£500,001 and over	27.9%

(*a*) Prior to 3rd June, 1947, no duty was payable if the value of all gifts as defined above did not exceed £500. If the value of all gifts exceeded £500 but did not exceed £10,000 the rate of duty was 3 per cent.

The receipts from gift duty in each State for the years 1942–43 to 1946–47 are shown in the following table. The figures shown in the table differ from those shown on page 610 because certain refunds credited before 30th June were not paid until after that date.

GIFT DUTY.

Total	144,155	220,695	325,277	391,828	537,678

(*e*) *Income Taxes.* Details of Commonwealth and State taxes on income are given in Section "D" of this Chapter.

(*f*) *Pay-roll Tax.* The Pay-roll Tax Assessment Act 1941–42 and the Pay-roll Tax Act 1941 imposed a pay-roll tax of 2½ per cent. on all wages in excess of £20 per week paid by an employer after 30th June, 1941. These measures formed part of the Commonwealth scheme of child endowment, the revenue from the tax being designed to provide the main part of the money required.

Pay-roll tax is collected in a similar manner to sales tax. Employers are required to register and to furnish a monthly return of all wages paid.

The following table shows the receipts from pay-roll tax in each State for the years 1942–43 to 1946–47. The figures shown vary slightly from the collections shown on page 610 because some refunds which were credited before 30th June were not paid until after that date.

PAY-ROLL TAX.

State.	1942–43.	1943–44.	1944–45.	1945–46.	1946–47.

Total	10,448,615	10,882,531	11,079,769	11,492,732	13,554,117

(*g*) *Gold Tax.* The Gold Tax Collection Act 1939–1940 and the Gold Tax Act 1939 imposed a tax on all gold delivered to the Commonwealth Bank of Australia or to an agent of that Bank, on and after 15th September, 1939, of 50 per cent. of the amount by which the price payable by the Bank for each fine ounce of gold delivered exceeded £9. This tax was suspended from 20th September, 1947, by the Gold Tax Suspension Act 1947. The amounts of tax collected during the five years 1942–43 to 1946–47 were as follows :—1942–43, £524,694 ; 1943–44, £317,720 ; 1944–45, £342,457 ; 1945–46, £383,552 ; and 1946–47, £556,435.

(*h*) *Entertainments Tax.* The Entertainments Tax Assessment Act 1942–1946 and Entertainments Tax Act 1942–1946 came into force on 1st October, 1942, following the agreement of the State Governments to the request of the Commonwealth to suspend their entertainments tax legislation for the duration of the war and one year after, thereby enabling the Commonwealth Government to re-enter this field of taxation. Until 1945–46 the Commonwealth recompensed the States by annual payments of £765,787, an amount equal to that collected by the States during the year 1941–42. Thereafter these payments were discontinued and the agreement that the States should not levy a tax on entertainments was terminated. The tax imposed commences with 3d. on an admission price of 1s., and increases thereafter by 2d. for every 6d. or part thereof in excess of 1s. up to 5s. Thereafter the rate increases by 3d. for every 6d. or part thereof. Special rates, approximately 25 per cent. less than those stated above, are imposed in respect of performances on the legitimate stage and similar types of entertainment.

The Entertainments Tax Assessment Act 1944 amended the Entertainments Tax Assessment Act 1942 to bring into the taxable field such places as amusement parks, etc., where the charges for admission to individual entertainments were less than 1s. The rate of tax imposed for these entertainments commences at 1d. on admissions costing 3d. and 4d., and rises to 3d. on admissions costing more than 7½d. but not more than 1s. Thereafter the rate is the same as for other entertainments.

Entertainments tax received during the five years 1942–43 to 1946–47 is shown in the following table. The figures shown in the table differ from those shown on page 610 because certain refunds credited before 30th June were not paid until after that date.

(*i*) *Sales Tax.* The sales tax was first imposed in August, 1930. The operation of the tax is controlled chiefly by a system of registration of taxpayers whereby all manufacturers and wholesale merchants, who are the taxpayers under the Act in respect of goods sold in Australia, must be registered with the Department. The tax on imports subject to sales tax is collected by the Customs Department at ports of entry.

Since the inception of the tax certain exemptions have been allowed. These exemptions, which have been extended from time to time, relate mainly to goods of an essential nature or for use in primary production. Certain of these exemptions were withdrawn as from 3rd June, 1940, 22nd November, 1940 and 30th October, 1941. There have since been partial restorations of former exemptions, and from 13th September, 1945, 10th April, 1946, 15th November, 1946 and 20th September, 1947, additional goods, previously taxable, were exempted.

The following are the rates of sales tax imposed since its inception in August, 1930; 2½ per cent. to 10th July, 1931; 6 per cent. to 25th October, 1933; 5 per cent. to 10th September, 1936; 4 per cent. to 21st September, 1938; 5 per cent. to 8th September, 1939; 6 per cent. to 2nd May, 1940; 8⅓ per cent. to 21st November, 1940; 5 per cent., 10 per cent. and 15 per cent. to 29th October, 1941; 5 per cent., 10 per cent. and 20 per cent. to 30th April, 1942; 12½ per cent. and 25 per cent. to 14th November, 1946; and 10 per cent. and 25 per cent. from 15th November, 1946.

The differential rates applicable as from 22nd November, 1940 related to different classes of goods specified in schedules of the Sales Tax (Exemptions and Classifications) Act 1935–1947. The rate of 5 per cent. applied to goods, formerly exempt, which were brought into the taxable field. The rates of 15 and 20 per cent. applied to goods which may be described as being of a non-essential nature, while 10 per cent. was the general rate. Of the May, 1942, rates the 12½ per cent. was the general rate, and included some of those goods previously rated at 5 per cent. The remainder of the 5 per cent. class was again classified as exempt. From 21st July, 1943, the rate on rationed clothing was reduced to 7½ per cent. and from 15th November, 1946, these goods were exempted. From 15th November, 1946, the general rate was reduced to 10 per cent.

Particulars of the net amount of sales tax payable, and the sales of taxable, non-taxable and exempt goods in each State for 1946–47 are given in the following table. The figures for "Tax Collected" are in respect of the periods 1st July to 30th June of each year, adjusted on account of rebates of tax allowed as deductions in returns of taxpayers, while those relating to sales are in respect of the periods 1st June to 31st May.

1945–46	268,773	341,759	383,151	248,679	32,559	1,152	33,711
1946–47	294,483	416,469	472,856	277,003	34,641	1,739	36,380

In the foregoing tables exempt sales relate to goods exempted from sales tax under the Sales Tax (Exemptions and Classifications) Act 1935–1947, while non-taxable sales relate to goods on which tax is not payable at the time of sale. In this latter case the sale has been made to a registered taxpayer who has quoted his certificate. These sales, however, become taxable before passing into consumption, unless used for a purpose exempted under the Act.

The figures given in the foregoing tables do not represent the total sales of all commodities, as vendors trading in exempt goods only, are not required to be registered and consequently the volume of their sales is not included in the statistics above.

(*j*) *Flour Tax.* A flour tax of £4 5s. per ton operated from 4th December, 1933 to 31st May, 1934, and of £2 12s. 6d. per ton from 7th January, 1935 to 24th February, 1936. On 5th December, 1938, the Flour Tax was again imposed in a more or less permanent form. The new legislation provided for a tax on flour (not exceeding £7 10s. per ton) varying as the price of wheat varies from 5s. 2d. a bushel at Williamstown. The commencing rate was £5 15s. per ton, since when there have been 22 variations, the highest rate being that reached in August, 1939, £6 2s. 9d., and the lowest in December, 1939, £1 12s. 3d. From 22nd October, 1940 to 21st December, 1947 the rate was £2 8s. 10d. per ton. The rate was declared to be nil as from 22nd December, 1947 because of the rise in wheat prices.

Net receipts after allowing for refunds and tax outstanding are shown in the following table for the years 1938–39 and 1943–44 to 1946–47. The figures vary slightly from the collections shown on page 610 because some refunds were credited before 30th June, but not paid until after that date.

(*k*) *Wool Levy.* The Wool Tax Act 1936 and Wool Tax Assessment Act 1936 provided for a levy on all wool grown in Australia and shorn on or after 1st July, 1936. The levy is collected through wool-brokers and dealers who furnish quarterly returns on which the levy is assessed. On wool, not previously taxed in the hands of a broker or dealer, the levy is payable prior to export. The rates fixed by the Wool Tax Act 1936 were: 6d. per bale; 3d. per fadge or butt; and 1d. per bag. By the Wool Tax Act 1945 these rates were increased from 1st June, 1945 to 2s. per bale; 1s. per fadge or butt; and 4d. per bag. Proceeds are devoted to publicity and research in connexion with the wool industry. This levy has been suspended for any period during which the Wool (Contributory Charge) Act 1945 is in operation. The Wool Contributory Charge was levied from 1st July, 1946. The amounts collected from wool levy during the years 1938–39 and 1943–44 to 1946–47 were as follows:—

WOOL LEVY.

State.	1938–39.	1943–44.	1944–45.	1945–46.	1946–47.
	£	£	£	£	£

South Australia	8,243	9,168	8,063	21,070	715
Western Australia ..	5,795	7,955	6,695	26,118	842
Tasmania	1,525	1,310	1,309	4,708	41
Total	74,396	84,629	75,192	269,755	11,628

(*l*) *Wool Contributory Charge.* The Wool (Contributory Charge) Act 1945 and the Wool (Contributory Charge) Assessment Act 1945 imposed a charge on all wool produced in Australia and sold, manufactured or exported after a date fixed by proclamation. Wool sold by the Australian Wool Realization Commission is not liable to the charge. The rate of the charge is to be such a percentage of the sale value of the wool as is necessary to provide the following amounts :—

(*a*) The amounts required to meet the share of the industry in the operating expenses of the Joint Organization for the disposal of wool stocks ;

(*b*) the amounts required for payment of interest on the amount spent by the Commonwealth in purchase of wool under the disposals plan ; and

(*c*) the amount of the wool levy.

The Acts came into operation on 1st July, 1946, and the rate fixed was 5 per cent. on the sale value of the wool. From 1st August, 1947 the rate was reduced to 0.75 per cent. Collections in each State during 1946–47 were as follows :—New South Wales, £1,554,997 ; Victoria, £1,315,834 ; Queensland, £747,298 ; South Australia, £399,372 ; Western Australia, £389,879 ; and Tasmania, £89,727, making a total of £4,497,107.

(*m*) *Wheat Export Charge and Wheat Tax.* The Wheat Export Charge Acts 1946 imposed an export charge on wheat (including the content of wheat products) harvested after 30th September, 1945 and exported from the Commonwealth after 30th November, 1945. The rate fixed by the Act is 50 per cent. of the amount by which the export price of fair average quality wheat free on rail at the port of export exceeds 5s. 2d. per bushel. This rate may be reduced by regulation. The Act did not apply to wheat harvested between 1st October, 1945 and 1st October, 1947 and exported by the Australian Wheat Board, but provision was made in the Wheat Tax Act 1946 to collect an amount equivalent to the charge that would have been collected on this wheat, by imposing a tax on all such wheat acquired by the Board. An amount equivalent to the collections under the Wheat Export Charge Acts 1946 and the Wheat Tax Act 1946 is to be paid to the Wheat Prices Stabilization Fund to be used for the purpose of guaranteeing a minimum price to the grower. During 1946–47 collections amounted to £5,500,000.

3. **Business Undertakings.**—(i) *Postmaster-General's Department.* Particulars of net receipts for each of the financial years 1938–39 and 1943–44 to 1946–47 are contained in the following table :—

POSTMASTER-GENERALS' DEPARTMENT : NET RECEIPTS.

Further particulars of the Postmaster-General's Department's receipts to 1945–46 are given in Chapter V. "Transport and Communication" (part I. Posts, Telegraphs and Telephones).

(ii) *Commonwealth Railways.* The Commonwealth Government is responsible for four railways—the Trans-Australian, the Central Australia, the North Australia and the Australian Capital Territory. The following table shows the amounts paid to the credit of the Consolidated Revenue Fund on account of each of these railways for the years 1938–39 and 1943–44 to 1946–47 :—

COMMONWEALTH RAILWAY REVENUE.

Railway.	1938–39.	1943–44.	1944–45.	1945–46.	1946–47.
	£	£	£	£	£
Trans-Australian ..	330,643	1,027,401	989,194	768,885	691,740
Central Australia.. ..	137,521	1,736,783	1,045,423	710,648	395,377
North Australia	50,471	822,582	819,884	174,371	58,140
Australian Capital Territory	7,275	14,922	11,334	10,496	9,260
Total	525,910	3,601,688	2,865,835	1,664,400	1,154,517

Further particulars to 1945–46 are given in Chapter V. " Transport and Communication " (part B, Railways).

4. **Other Sources of Revenue.**—Of other sources of revenue, amounting in 1946–47 to £14,113,101, the following are noteworthy ; Interest, £1,091,976 ; Civil Aviation, £961,295 ; Net Profit on Australian Note Issue, £3,792,384 and Wool Committee Operations Surplus, £7,075,000.

Division III.—Expenditure.

1. **Nature of Commonwealth Expenditure.**—The disbursements by the Commonwealth Government of the revenue collected by it fell naturally, under the " book-keeping "* system, into three classes, namely :—

(*a*) Expenditure on transferred services ; (*b*) expenditure on new services ; and (*c*) payments of surplus revenue to the States.

Of these three, only the first two were actual expenditure, the last being merely a transfer, the actual expenditure being incurred by the States. In accordance with the provisions of the Constitution, the expenditure on transferred services was, under the " book-keeping " system, debited to the several States in respect of which such expenditure was incurred, while the expenditure on new services was distributed *per capita*. Surplus Commonwealth revenue was paid to the States monthly. Until the end of the year 1903–4, new works, etc. for transferred departments were treated as transferred expenditure, and were charged to the States on whose behalf the expenditure had been incurred. In subsequent years all such expenditure was regarded as expenditure on new services, and distributed amongst the States *per capita*. Under the arrangement which superseded the "book-keeping" system, a specific subsidy of 25s. per head of population was made annually by the Commonwealth to the States, and there was no further debiting of expenditure to the several States. The States Grants Act 1927 provided for the abolition of the *per capita* payments as from 30th June, 1927. From 1st July, 1928 the temporary provisions of the agreement between the Commonwealth and the several States under the Financial Agreement Act 1928 were operative, and on 1st July, 1929 the Commonwealth Government took over the debts of the States under this agreement which was ratified by all Governments concerned. For further particulars of Commonwealth payments to States and of the Financial Agreement see pages 633–9 and Section C.—Commonwealth and State Finance, paragraph 4 of this issue.

---

* For an exposition of the " book-keeping system " *see* Official Year Book No. 6, p. 780.

2. **Details of Expenditure from Consolidated Revenue.**—(i) *General.* The following table gives details of the expenditure from Consolidated Revenue during the years 1938–39 and 1943–44 to 1946–47.

Per Head of Population ..	13 12 8	47 2 11	51 7 9	52 14 4	56 17 9

(*a*) For details, *see* § 5, pp. 651–2. (*b*) For details, *see* § 6, pp. 653–5. (*c*) Departments of Navy, Army, Air, and Supply and Shipping. (*d*) Includes External Territories. (*e*) Includes Works and Housing, and Immigration. (*f*) Included with Interior. (*g*) Included with Prime Minister. (*h*) Included under Defence, War (1939–45) Services and Post-war Charges. (*i*) For details *see* table, page 629. (*j*) Expenditure met from National Welfare Fund. (*k*) Excludes Defence, War (1939–45) Services and Post-war Charges. (*l*) Excludes balance of interest payable on States' Debts (recoverable from States). (*m*) Income and Entertainments Tax Reimbursements Grants were replaced by Tax Reimbursement Grants from 1946–47, *see* pp. 635–7. (*n*) In addition the following amounts were provided under War Services expenditure—1943–44, £12,321,820; 1944–45, £14,280,284; 1945–46, £19,755,385; and 1946–47, £7,719,605. (*o*) Excludes amounts expended from excess receipts of previous years (*see* page 609).

Particulars for each department include interest, sinking fund, superannuation charges, etc., but do not include the expenditure on new works which is given in (iii), page 632 nor that on Defence War (1939–45) and Post-war Services which is given in § 6, pages 653–5. Details of expenditure of each department are given in paragraph (ii) below.

(ii) *Total Cost of Departments.* (*a*) *Introductory.* Under the heading "Total Cost of Departments" are included (i) particulars of expenditure on the estimates of departments in respect of salaries and general expenses, and (ii) particulars of expenditure from special appropriations in respect of salaries of the Governor-General, Ministers, Judges, etc., Government contributions for superannuation, and interest and sinking fund charges, etc., allocated to departments. Expenditure from appropriations for Defence, War (1939–45) Services and Post-war Charges is not included. For these details *see* § 6, pages 653–5.

Information on the functions of the several departments and the acts administered by the Ministers of Departments will be found in Chapter III.—General Government, § 4, pp 76–86.

(*b*) *Governor-General.* Section 30 of the Constitution enacts that, until the Commonwealth Parliament otherwise provides, there shall be payable out of the Consolidated Revenue Fund for the salary of the Governor-General an annual sum of ten thousand pounds, and a proviso is made that the salary of the Governor-General shall not be altered during his continuance in office. The expenditure in connexion with the Governor-General and establishment for the five years 1938–39 and 1943–44 to 1946–47 was as follows :—

EXPENDITURE : GOVERNOR-GENERAL AND ESTABLISHMENT.

Details.	1938–39.	1943–44.	1944–45.	1945–46.	1946–47.
	£	£	£	£	£
Salary	10,000	10,000	10,000	10,000	10,000
Government Houses, maintenance, etc.	12,305	13,895	18,584	16,530	23,956
Governor-General's office (*a*)	5,381	4,030	16,125	3,340	8,565
Interest and Sinking Fund	5,079	4,318	4,412	4,667	4,082
Total	32,765	32,243	49,121	34,537	46,603

(*a*) Represents official services outside the Governor-General's personal interests, and carried out mainly at the instance of the Government.

(*c*) *Parliament.* Under this head have been grouped all the items of expenditure connected with the Commonwealth parliamentary government of Australia for the five years 1938–39 and 1943–44 to 1946–47. Although the administration of the Electoral Act and the conduct of elections come within the functions of the Department of the Interior, the expenditure in connexion therewith is fundamentally incurred on account of the parliamentary government system and for that reason is included herein.

EXPENDITURE : COMMONWEALTH PARLIAMENT.

Details.	1938–39.	1943–44.	1944–45.	1945–46.	1946–47.

Total	444,873	599,208	603,491	550,326	735,576

In Section 66 of the Constitution provision is made for the payment from Consolidated Revenue of an annual sum for the salaries of Ministers, and Section 48 specifies the amount of the allowance to each Senator and each Member of the House of Representatives. These details, together with subsequent increases, will be found on pages 14 and 18 of this volume, while details of the cost of parliamentary government of the Commonwealth and each State for 1945–46 will be found on page 87.

(*d*) *Prime Minister's Department.* External territories were administered by this department until June, 1941, when the Department of External Territories was created. Particulars of expenditure relating to the administration of external territories for the years 1942–43 to 1946–47 are shown under the heading of that department. The expenditure of the Prime Minister's Department for the years 1938–39 and 1943–44 to 1946–47 is shown in the following table :—

EXPENDITURE : PRIME MINISTER'S DEPARTMENT.

(*h*) *Department of the Interior.* With the formation of the new departments of Works (later expanded to include Housing) in February, 1945, and Immigration in July, 1945, the administration of Commonwealth Public Works and Immigration was transferred to the new departments. The costs relating to these activities for the years 1943–44 to 1946–47 are shown under the new departments. The Commonwealth Railways and the Northern and Australian Capital Territories, which are administered by the Department of the Interior, are for convenience included respectively under Railways (*w*) and Territories (*x*) below. Expenditure in connexion with the Electoral Office, which is administered by the Department of the Interior, is included under Parliament, in (*c*) above.

Particulars of the expenditure for the years 1938–39 and 1943–44 to 1946–47 on other services under the control of this Department are as follows :—

EXPENDITURE : DEPARTMENT OF THE INTERIOR.(*a*)

(*r*) *Department of Labour and National Service.* This Department was set up during the 1939–45 War for the purpose of mobilizing the nation's man-power and to deal with matters affecting industrial relations, welfare and training, and war housing. For details of the existing functions of the Department see Chapter III.—General Government, § 4.

Expenditure during 1946–47 amounted to £1,127,430. Prior to 1946–47, expenditure on this Department was included under Defence, War (1939–45) Services and Post-war Charges.

(s) *Department of Transport.* This Department was set up in 1941–42 to control, regulate and direct all land transport services for the carriage of goods and passenger, within the Commonwealth. Expenditure by this Department during 1946–47 was £57,422, expenditure in previous years being provided under Defence, War (1939–45) Services and Post-war Charges. For details of the existing functions of the Departments see Chapter III.—General Government, § 4.

(t) *Department of Information.* This Department was set up during the 1939–45 War, its functions relating, *inter alia*, to the direction and control of the publication of information on the war, and to publicity censorship. For existing functions see Chapter III.—General Government, § 4. Expenditure of this Department during 1946–47 was £342,280, expenditure in previous years being provided under Defence, War (1939–45) Services and Post-war Charges.

(u) *Department of Post-war Reconstruction.* The Department of Post-war Reconstruction was set up during the 1939–45 War to prepare for the conversion from war to peace-time activities. It administers the Commonwealth Reconstruction Training Scheme and the Office of Education. For further information regarding its functions see Chapter III.—General Government, § 4. Expenditure during 1946–47 was as follows:—administrative and general expenses, £216,301 ; Office of Education, £105,539 ; financial assistance to university students, £204,488 , rent, repair and maintenance of buildings, £33,388 ; total, £559,716. Expenditure prior to 1946–47 was included under Defence, War (1939–45) Services and Post-war Charges.

(v) *Postmaster-General's Department.* Details of the expenditure of this department for the five years 1938–39 and 1943–44 to 1946–47 are given in the following table :—

EXPENDITURE : POSTMASTER-GENERAL'S DEPARTMENT.

Details.	1938–39.	1943–44.	1944–45.	1945–46.	1946–47.

Total	1,351,041	3,068,686	2,794,796	2,189,262	1,921,172

(*a*) Includes loans, redemption and conversion expenses, £54,648.

Additional details of the financial operations of the Commonwealth Railways to 1945–46 are given in Chapter V. " Transport and Communication " (part B, Railways).

(*x*) *Territories.* The following table shows the expenditure on account of territorial services for the five years 1938–39 and 1943–44 to 1946–47. The internal territories are administered by the Department of the Interior, and the Department of External Territories controls the external territories. The expenditure has been grouped in one table for convenience. Information in greater detail will be found in the *Finance Bulletin* No. 38, issued by this Bureau.

EXPENDITURE : TERRITORIES.

(iii) *New Works.* The expenditure on additions, new works, etc., during the five years 1938–39 and 1943–44 to 1946–47 was as follows :—1938–39, £6,565,268 (excluding £3,494,733 provided from excess receipts for Defence equipment) ; 1943–44, £4,677,278 ; 1944–45, £5,705,351 ; 1945–46, £6,659,952 ; and 1946–47, £15,157,463. Particulars for the last four years exclude expenditure in connexion with Defence, War (1939–45) Services and Post-war Charges.

(iv) *Defence, War and Repatriation Services.* Full details concerning the expenditure from Consolidated Revenue upon War and Repatriation (1914–18) Services and Defence, War (1939–45) Services and Post-war Charges will be found in §§ 5 and 6, pages 651–5

Division IV.—Payments to or for the States.

1. **Introductory.**—In some previous issues of the Official Year Book particulars were given of the obligations imposed on the Commonwealth by the Constitution Act with reference to the payments to be made to the States, and the following statement includes a brief outline of the principal financial provisions of the Constitution in regard to the distribution of revenue received by the Commonwealth. Details of payments to the States under other agreements are included in more detail.

2. **Uniform Customs Duties.**—Prior to Federation, State revenues were largely derived from Customs and Excise Duties and as the Commonwealth Constitution (Sections 86 and 90) transferred exclusively to the Commonwealth this source of revenue it was essential that the Constitution should provide adequate compensation for this loss to the States. Section 88 directed that uniform duties of customs must be imposed within two years after the establishment of the Commonwealth. This section was complied with on 8th October, 1901, by the introduction of the first Customs Tariff Bill. Section 95 of the Constitution, however, authorized the Western Australian Government, for a period of five years after the imposition of the uniform customs duties, to impose limited customs duties on goods passing into that State and not originally imported from beyond the limits of the Commonwealth, such duties to be collected by the Commonwealth.

3. **Distribution of Commonwealth Revenue.**—Broadly, the requirements of the Commonwealth Constitution in regard to the financial relationship between the Commonwealth and the States may be divided into three phases covering definite periods.

(*a*) 1901 *to* 1910. This period was covered by Section 87 (known as the "Braddon Clause") which provided that:—

> "During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth shall be applied annually by the Commonwealth towards its expenditure.
>
> The balance shall, in accordance with this Constitution, be paid to the several States, or applied towards the payment of interest on the debts of the several States taken over by the Commonwealth."

The scheme outlined in the Constitution for determining the amount to be paid to the several States is contained in Sections 89 and 93, the former of which relates to the period prior to the imposition of uniform duties of customs (as provided in Section 88), the latter to the first five years after the imposition of such duties and thereafter until Parliament otherwise provides. The principle involved was that of crediting each State with the Commonwealth revenue collected in respect of that State, and of debiting it with the expenditure incurred on its behalf in connexion with transferred departments, as well as its share on a *per capita* basis of the "new" expenditure of the Commonwealth. On this account the method of allocation provided by the Constitution became very generally known as the "book-keeping system". As the imposition of uniform duties of customs and excise throughout the Commonwealth took place on 9th October, 1901, the five years provided for in Section 93 expired on 8th October, 1906, and consequently the "book-keeping system" could then be changed at any time by the Commonwealth Parliament.

Section 93 provided that the duties of customs chargeable on goods imported into and duties of excise paid on goods produced or manufactured in one State and consumed in another should be credited to the consuming State. The balance in favour of any State was paid monthly by the Commonwealth.

The Surplus Revenue Act 1908 continued the "book-keeping system" but provided that any excess receipts over expenditure should be distributed monthly to each State in proportion to their respective populations. This Act more clearly defined "transferred" and "new" expenditure.

(*b*) 1911 *to* 1927 (*Surplus Revenue Acts*). The provisions of Section 87 of the Constitution were terminated by the passing of the Surplus Revenue Act 1910 which provided for the following scheme of payments to operate from 1st July, 1910 :—

- (i) the Commonwealth to pay by monthly instalments or apply to the payment of interest on debts of the States taken over by the Commonwealth an annual sum amounting to twenty-five shillings per head of the number of people of the State;
- (ii) in addition to the payments above, all surplus revenue (if any) to be paid to the States in proportion to the number of people; and
- (iii) a special payment to be made to Western Australia in monthly instalments of an annual sum of £250,000 in the first year, thereafter progressively diminishing by £10,000 each year. One half of the payments so made to be debited to all of the States (including Western Australia) on a population basis and the amount so debited to be deducted from the amount otherwise payable to each State.

After 1920 and until 1927 the provisions of the several Surplus Revenue Acts continued to govern the payments by the Commonwealth to the States.

(*c*) 1928 *to date* (*Financial Agreement Act*). An Amendment to the Constitution embodied in Section 105A gave effect to the powers conferred on the Commonwealth in Section 105. This amendment included provisions for :—

- (i) taking over the debts of the several States by the Commonwealth;
- (ii) the payment by the Commonwealth of a fixed annual sum in respect of the interest on such debts and for certain sinking fund contributions;
- (iii) the indemnification of the Commonwealth by the States in respect of debts taken over from the States;
- (iv) the borrowing of money by the States or by the Commonwealth or by the Commonwealth for the States; and
- (v) certain other matters connected with the management, consolidation, renewal, conversion and redemption of such debts.

4. **Special Grants.**—The Constitution provides in Section 96 for the granting of special financial assistance to the States. Reference has already been made to the special grant to Western Australia in the Surplus Revenue Act 1910. This State has continued to receive financial assistance each year since 1910–11. In 1912 a grant under similar conditions was made to Tasmania, the amount payable in the first year, 1912–13, being £95,000, which was to be progressively reduced by £10,000 in each successive year. The Tasmania Grant Act 1913 provided for an addition to this grant, bringing the amount payable to £85,000 per annum to the year 1921–22, after which annual grants of varying magnitude were made.

South Australia received £360,000 in 1929–30 and further grants in each successive year.

Other direct grants to the States from consolidated revenue include contributions towards the payment of interest and sinking fund on loans expended by Local Government authorities on public works. Grants which have been made from loan fund are indicated in the statement of loan expenditure on page 640.

From the accumulated excess receipts since 1931–32, special assistance to the States was provided as follows :—

State.	1934–35.	1935–36.	1936–37.
	£	£	£
New South Wales	786,000	205,000	197,000
Victoria	550,000	140,000	137,000
Queensland	286,000	75,000	72,000
South Australia	176,000	45,000	44,000
Western Australia	133,000	35,000	33,000
Tasmania	69,000	..	17,000
Total	2,000,000	500,000	500,000

5. **Commonwealth Grants Commission.**—In 1933 the Commonwealth Government appointed the Commonwealth Grants Commission of three members to inquire into and report upon claims made by any State for a grant of financial assistance and any matters relevant thereto.

Applications were received from South Australia, Western Australia and Tasmania during each year from 1933 and the recommendations of the Commission in respect of the years 1938–39 and 1944–45 to 1947–48 were as follows :—

State	Grant Recommended.				
	1938–39.	1944–45. (a)	1945–46. (a)	1946–47. (b)	1947–48 (b)
	£	£	£	£	£
South Australia	1,040,000	1,200,000	1,400,000	2,000,000	2,318,000
Western Australia	570,000	904,000	950,000	1,873,000	2,977,000
Tasmania	410,000	742,000	646,000	875,000	747,000
Total	2,020,000	2,846,000	2,996,000	4,748,000	6,042,000

(a) Excludes Special Grants recommended under Section 6 (2) of the State Grants (Income Tax Reimbursement) Act 1942 : 1944–45, South Australia, £553,172 ; 1945–46, South Australia, £1,101,365. Western Australia, £912,559 and Tasmania. £118,996, total £2,132,920. (b) Includes additional grants recommended : 1946–47. South Australia, £400,000, Western Australia, £628,000 and Tasmania, £50,000, total, £1,078,000 ; 1947–48, Western Australia, £1,000,000.

6. **States Grants (Income and Entertainments Tax Reimbursement) Acts.**—(i) *States Grants (Income Tax Reimbursement) Act.* As compensation to the States for vacating the income tax field to the Commonwealth Government, the States Grants (Income Tax Reimbursement) Act 1942 provided for the payment to the States of the following amounts, less amounts equal to any arrears of State Income Tax collected during each year that the Act remained in operation :—

	£
New South Wales	15,356,000
Victoria	6,517,000
Queensland	5,821,000
South Australia	2,361,000
Western Australia	2,546,000
Tasmania	888,000
Total	33,489,000

Amounts equal to the arrears collected were to be paid, with interest at a rate not less than 3 per cent., immediately prior to the expiration of the Act.

In section 6 of the Act provision was made for the Treasurer of any State to inform the Commonwealth Grants Commission if he considered that the payments made under the Act were insufficient to meet his revenue requirements. The Commission, after inquiry into the matter, was to advise the Treasurer as to the justice of granting additional assistance. The Treasurer of Tasmania availed himself of this provision to apply for an increase of the Income Tax Reimbursement Grant for the years 1942–43, 1943–44 and 1944–45, but in each case the Commonwealth Grants Commission did not consider that an additional grant was just. Following an application in 1944–45 by the Treasurer of South Australia, an additional grant of £553,172 was recommended by the Commonwealth Grants Commission. In 1945–46 three States applied for additional financial assistance and the following grants were recommended :—South Australia, £1,101,365 ; Western Australia, £912,559 ; and Tasmania, £118,996 ; total £2,132,920.

(ii) *States Grants (Tax Reimbursement) Act* 1946. The States Grants (Income Tax Reimbursement) Act 1942 came into operation on 1st July, 1942, and was repealed by the State Grants (Tax Reimbursement) Act 1946.

The States Grants (Tax Reimbursement) Act 1946 revised the basis of determining the reimbursement grants for 1946–47 and subsequent years. This Act provided for the following reimbursement grants to be paid to the States.

(*a*) 1946–47 and 1947–48—	£
New South Wales	16,477,000
Victoria	8,860,000
Queensland	6,601,000
South Australia	3,458,000
Western Australia	3,384,000
Tasmania	1,220,000
Total	40,000,000

(*b*) 1948–49 and subsequent years.—An amount is to be determined by increasing the aggregate grants paid in 1947–48 (£40,000,000) by the same proportion as the aggregate population of the six States at the beginning of the financial year increases over the aggregate population of the six States at 1st July, 1947. This amount is to be further increased by a percentage equal to half the percentage increase in average wages per person employed in the financial year preceding the year in which the reimbursement grants are to be paid over the average wages per person employed in 1946–47. The amount so determined will be the aggregate of the reimbursement grants and is to be distributed to the States in the following proportions :—

(i) 1948–49 to 1956–57—The weighted mean of—

(*a*) the proportion indicated by the " adjusted " population* for each State, and

(*b*) the proportions indicated by the distribution of the aggregate reimbursement grant in 1946–47 and 1947–48,

giving the latter a weight of 9/10 in 1948–49, 8/10 in 1949–50 and thus decreasing each year to 1/10 in 1956–57.

(ii) 1957–58 and subsequent years—the proportion indicated by the " adjusted " population for each State.

It is provided that, if the application of the foregoing formula for distribution of the aggregate grants causes the amount of the reimbursement grant for any State to fall below the grant for 1946–47, the grant payable will be the same as that for 1946–47 and the balance of the aggregate grant is to be distributed between the remaining States in the proportions above.

An amount equal to arrears of State income taxes collected by the States in any year is to be deducted from the reimbursement grants for that year. The aggregate amount so deducted less any refunds of State income taxes made by the Commonwealth is to be repaid in the event of uniform taxation ceasing to operate. This amount bore interest at 3 per cent. up to 30th June, 1946, but thereafter, under the new arrangement, will bear no interest.

---

* In the "adjusted" population allowances are made for differences in the proportion of school children in the population and the density of the population in each State.

The provisions relating to additional grants in the State Grants (Income Tax Reimbursement) Act 1942 were repealed.

The payment of the tax reimbursement grant in any year to any State is subject to the condition that that State does not impose a tax on incomes in that year.

Under the State Grants (Tax Reimbursement) Act 1947 an additional grant of £5,000,000 was made for the year 1947–48 and provision was made to increase the aggregate grant for subsequent years to a minimum of £45,000,000.

The reimbursement grants provided in the State Grants (Tax Reimbursement) Act 1946–47 are intended to replace the grants previously made on account of both Income and Entertainments taxes.

(iii) *States Grants (Entertainments Tax Reimbursement) Act.* The following amounts were paid to the States by the Commonwealth for the years 1942–43 to 1945–46, following the withdrawal of the States from the entertainments tax field :—

ENTERTAINMENTS TAX REIMBURSEMENT GRANTS.

State.	1942–43.	Each year 1943–44 to 1945–46.
	£	£
New South Wales	120,623	160,830
Victoria	279,944	373,259
South Australia	72,782	97,043
Western Australia	73,640	98,186
Tasmania	27,352	36,469
Total	574,341	765,787

No compensation was payable in respect of Queensland because a State entertainment tax was not levied in that State.

The Act ceased to operate after 30th June, 1946, when the reimbursement grant on account of entertainments tax was included with the tax reimbursement grant. Although the Commonwealth will continue to collect an entertainments tax, payment of this grant is not conditional on any State not imposing an entertainments tax.

7. **Grants for Road Construction.**—(i) *Main Roads Development Acts.* Grants amounting in the aggregate to £1,750,000 were made to the States in 1922–23, 1924–25 and 1925–26 for the purpose of reconditioning certain main roads. Of this amount £1,500,000 was granted on the condition that the States spent an equivalent amount.

(ii) *Federal Aid Roads.* The Federal Aid Roads Act 1926 made provision for the construction and re-construction of roads in the several States out of moneys provided by the Commonwealth and States respectively. The original arrangement provided for a grant by the Commonwealth of £2,000,000 per annum for ten years from 1st July, 1926. The allocation to the States was based on three-fifths according to population and two-fifths according to area.

Expenditure was made in the proportion of 15s. by the States to £1 by the Commonwealth. The original agreement was varied in certain respects, the most important of which operated from 1st July, 1931, when, in lieu of the £2,000,000 per annum, the Commonwealth agreed to contribute an amount equivalent to 2½d. per gallon customs duty, and 1½d. per gallon excise duty on petrol entered for home consumption during each year, and the States were not required to make any contribution as formerly agreed upon.

The 1926 agreement, which was originally intended to remain in operation for ten years, was continued until 30th June, 1937, when a new agreement was entered into. The latter provided for the continuation of the Federal Aid Roads Agreement for a further period of ten years from 1st July, 1937, increased the amount payable to the States to 3d. a gallon customs duty and 2d. a gallon excise on petroleum and shale products (except benzol, on which the excise is only 1½d.), and stipulated that the proceeds of the extra ½d. per gallon should be expended on the construction, reconstruction, maintenance or repair of roads, or other works connected with transport. The allocation of the amount payable was in the proportion of 5 per cent. to Tasmania and the remaining 95 per cent. to the other States on the basis of three-fifths according to the population at 30th June, 1936, and two-fifths according to area. At the request of the Commonwealth Government the States will, up to a limit of one-twelfth of this additional amount, attend to the maintenance or repair of roads of approach to or adjoining Commonwealth properties. A further variation was the reduction from 3 to 2½ per cent. of the sinking fund contribution of the States on loan moneys provided by them between 1926 and 1931.

(iii) *Commonwealth Aid Roads and Works.* The Federal Aid Roads and Works Agreement expired on 30th June, 1947, and was replaced by the Commonwealth Aid Roads and Works Act 1947, which provided for the following grants to be made to the States for the three years commencing on 1st July, 1947 :—

(*a*) An amount equal to 3d. a gallon customs duty and 2d. a gallon excise duty on petroleum and shale products (except benzol, on which the proportion of excise duty is 1½d. a gallon) entered for home consumption. Petroleum and shale products used in civil aircraft are to be excluded.

(*b*) £1,000,000 in each year.

These grants are to be distributed to the States in the following proportion :—

(1) 5 per cent. to Tasmania,

(2) 95 per cent. to be distributed between the remaining States as to three-fifths according to population at 30th June, 1947, and two-fifths according to area.

The amount of the grant received by the States under (*a*) above is to be expended on the construction, reconstruction, maintenance and repair of roads and (not exceeding one-sixth) on other works connected with transport. The grant under (*b*) above is to be expended on construction and maintenance of roads in sparsely populated areas, timber country and rural areas or on purchase of road-making plant for use in those areas.

The Act also provides £500,000 per annum to be expended by the Commonwealth on strategic roads and roads of access to Commonwealth property and £100,000 for the promotion of road safety practices.

8. **Amount paid.**—(i) 1901 *to* 1947. The following table shows particulars of the amounts paid to each of the States since Federation, divided into three periods, with separate details for Special and Roads Grants. Special Commonwealth grants for the relief of primary producers are not included in this table. Details of these grants will be found in Chapter XX. " Agricultural Production ".

PAYMENTS BY THE COMMONWEALTH TO OR FOR THE STATES TO 30th JUNE, 1947.(*a*)

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Total.

(a) Excludes relief to primary producers and other payments for medical research, etc. (b) Paid to National Debt Sinking Fund. (c) Under Section 6 (2) of the State Grants (Income Tax Reimbursement) Act 1942—to assist State finances, 1945–46. (d) Paid to Trust Fund.

§ 3. Trust Funds.

The Trust Fund balances at 30th June, 1947 amounted to £171,134,502, as compared with £132,273,483 at 30th June, 1946.

§ 4. Commonwealth Loan Funds and Public Debt.

1. **General.**—Although it was not until 1915 that the Commonwealth Government came into the loan market as a borrower, there had previously existed a Commonwealth Public Debt which included several items such as the balance of the debt taken over from South Australia and the amount owing to the States for transferred properties. In view of the large expansion of the Public Debt, and its present importance in Commonwealth public finance, the different items are treated *seriatim* in the following paragraphs.

2. **Loans taken over from South Australia.**—The first portions of the debt were contracted at the beginning of 1911, when the Commonwealth assumed responsibility for the payment of interest on transferred properties (further dealt with in par. 4 below) and for the administration and the liabilities of the Northern Territory and the Port Augusta–Oodnadatta Railway. At 30th June, 1911, the debt on account of the former was £3,657,836, and on account of the latter, £2,274,486—a total of £5,932,322. The remaining indebtedness was redeemed during 1940–41.

3. **Loan Fund Expenditure.**—Up to the year 1911 the Commonwealth Government had met its public works expenditure out of revenue. In that year, however, in view of the prospective heavy cost of the Trans-Australian Railway and the Australian Capital Territory, a Loan Fund similar to those of the States was established. The initiation of this fund was greatly assisted by the fact that the Treasury at that time held a large quantity of gold, principally on behalf of the Australian Notes Account. Up to 30th June, 1914, the money required for loan expenditure was obtained mainly from this source, and 3½ per cent. inscribed stock of an equivalent value was created. During the 1914–18 War, in order to raise considerably larger amounts for war purposes, it was necessary to approach the public market. The money required during this period and thereafter was obtained mainly by the issue of Treasury Bills and other securities in London, New York and Australia. Annual expenditure on works, etc. up to 1919–20 did not exceed £3,000,000. From 1920–21 it rose to almost £9,500,000 in 1926–27 and declined to about £2,000,000 in 1930–31. For the years 1931–32 to 1938–39 expenditure fluctuated between £520,000 and £4,550,000. During the last eight years, owing to the inclusion of expenditure on Defence, War (1939–45) Services and Post-war Charges, the total expenditure from loan has risen considerably.

(*a*) In addition, £13,045,408 was expended from War Loan Fund prior to 1923–24. (*b*) Includes Administration and other Public Buildings, Australian Capital Territory. (*c*) Adjustment of credits in previous years.

4. **Properties Transferred from States.**—At the time of Federation, when the Commonwealth took over the control of several departments previously administered by the States, a large amount of property was handed over to the Commonwealth Government, which paid interest to the States at the rate of 3½ per cent. on the value of the properties so transferred. (Particulars of the valuation of the properties are given in Official Year Book No. 14, p. 694.) The temporary provisions of the Financial Agreement between the Commonwealth Government and the Governments of the several States provided, *inter alia*, that the Commonwealth Government would, for the period of two years from 1st July, 1927, pay to each State interest at the rate of 5 per cent. per annum on the agreed value of transferred properties as follows :—New South Wales, £4,788,005 ; Victoria, £2,302,862 ; Queensland, £1,560,639 ; South Australia, £1,035,631 ; Western Australia, £736,432 ; and Tasmania, £500,754 ; a total of £10,924,323.

From 1st July, 1929, the Commonwealth Government assumed all liability for so much of the public bebt of the States maturing in London bearing interest at the rate of 5 per cent. per annum as was equivalent to the agreed value of the transferred properties shown above. The Commonwealth Government received the freehold or equivalent title to the transferred properties consisting of land or interests in land, and all liability of the Commonwealth to the State in respect to transferred properties was extinguished from that date.

5. **1914–18 War Loan from the British Government.**—On the outbreak of the 1914–18 War, the Commonwealth Government obtained a loan from the British Government for the purpose of financing the prospective large military expenditure. At first, the arrangement was that the British Government should advance the sum of £18,000,000. Subsequently, further loans amounting to £31,500,000 were negotiated. In addition to this capital indebtedness of £49,500,000, a further sum of £42,696,500 was due to the British Government for the maintenance of Australian troops.

Early in 1921 an arrangement was concluded with the British Government, by which almost the entire debt (upwards of £92,000,000) was consolidated. The Commonwealth Government undertook to extinguish the debt in about 35 years by annual payments representing 6 per cent. on the original debt, providing for interest at approximately £4 18s. 4d. per cent., and a sinking fund contribution of approximately £1 1s. 8d. per cent. By a later arrangement with the British Government, however, principal and interest repayments for 1931–32 and subsequent years were suspended. The principal outstanding on 30th June, 1947, was £79,724,000. Debt outstanding and interest payable on account of this loan are excluded from tables of the public debt outstanding and interest payable in subsequent paragraphs of this section.

6. **Flotation of 1914–18 War Loans in Australia.**—In addition to the advances from the British Government, the Commonwealth Government raised large amounts of money in Australia. Full details of the seven War Loans are given in Official Year Book No. 14, pages 695 and 696.

7. **New Loans Raised 1939–40 to 1946–47.**—Under the Financial Agreement between the Commonwealth and the States, the Commonwealth is responsible for raising all loan moneys required by both the Commonwealth and the State Governments. Details of loan transactions given in this and the next two paragraphs relate, therefore, to all loans raised for the Commonwealth and the States. During the eight years 1939–40 to 1946–47 new public loans raised in Australia totalled £1,241,922,000. Of this, £1,115,596,000 was raised for Defence, War and Rehabilitation purposes, £17,810,000 for purposes of the Commonwealth–States Housing Agreement, £7,318,000 for public works and other purposes of the Commonwealth, £58,180,000 for public works and other purposes of the States, and £43,018,000 for funding short-term debt on account of States' revenue deficits Except for £12,000,000 borrowed from the United Kingdom Government in 1940–41 and redeemed in 1943–44, no new loans were raised in London or New York during this period

(a) Includes loans raised for redemption of Treasury Bills, but excludes conversion loans, loans for redemption of debt maturing in London, short-term debt and certain miscellaneous debt (*see* below). (b) Special issue (taken up by Commonwealth Bank of Australia). (c) Debentures issued for purpose of retiring Commonwealth Treasury Bills originally issued to meet revenue deficits of the States between 30th June, 1927, and 1st July, 1935.

In addition to the amounts included in the table above, at 30th June, 1947, £78,770,000 had been subscribed for War Savings and Savings Certificates (Five and Seven Years' Series), £1,792,000 for National Savings Bonds, £225,000 by War and National Savings Stamps and £10,769,000 for advance loan subscriptions.

After allowing for repurchases the net subscriptions to War Savings and Savings Certificates at 30th June, 1947, was £59,526,000.

"Over the Counter Sales," which are small amounts borrowed by the States by virtue of certain statutory rights, are also excluded from the above table. During the eight years these amounted to £16,437,000.

8. Conversion and Redemption Loans, 1939–40 to 1946–47.—(i) *Australia.* Particulars of conversion loans raised in Australia during the eight years 1939–40 to 1946–47 are given in the following table :—

(ii) *London.* Particulars of conversion loans raised in London prior to 1939–40 are shown on pages 820 and 821 of Official Year Book No. 34 and in previous issues. During the eight years 1939–40 to 1946–47 conversion loans raised in London amounted to £173,183,000. In addition, loans maturing in London amounting to £53,147,000 were repatriated to Australia. Details of these loans are shown in the following table :—

(*a*) No account has been taken of cost of issuing the conversion loans at a discount. Exchange calculated at £A.125.375 = £stg. 100. (*b*) Loan raised in London. (*c*) Loan raised in Australia

(iii) *New York.* During 1946–47 the Queensland 6 per cent. loan in New York became due for redemption and the option of redeeming other loans bearing interest at 5 per cent. and 4½ per cent. occurred. In order to take advantage of lower rates of interest, the Commonwealth gave notice that it intended to redeem the latter loans and three loans totalling $90,000,000 were raised to provide the money for redemption. Particulars of these loans are given in the following table. These operations are the first conversion operations undertaken in New York.

(*a*) Includes loans raised for redemption of Treasury Bills. (*b*) "Over the Counter Sales" and net increase in debt on account of Citizens' National Emergency Loans, War Savings and Savings Certificates and Stamps, National Savings Bonds and Stamps, and Advance Loan subscriptions. Debt in London includes Citizens' National Emergency Loans and debt to United Kingdom Government.

NOTE.—Minus sign (−) denotes decrease.

10. **Public Debt for Commonwealth Purposes.**—(i) *General.* In the Public Debt tables which follow, the units of currency are, for debt maturing and interest payable in Australia, £ Australian, in London £ sterling, in New York £ sterling. The New York debt is payable in dollars, but for the purposes of the tables dollars have been arbitrarily converted to £ sterling at the rate of 4.8665 dollars to £stg.1. Details of Commonwealth debt in Australian currency are given in section C, Commonwealth and State Finance, paragraph 3 of this Chapter (see page 682).

(ii) *Total Debt.* Reference has already been made to the development of the Commonwealth public debt and the following table shows the debt of the Commonwealth (excluding that of the States) at 30th June, 1947 :—

(a) Excludes War (1914–18) Debt due to United Kingdom Government, £79,724,220; *see* para. 5, page 641. (b) Based on population of Australia at 30th June, 1947.

(iii) *Place of Flotation.* Since 1931–32 few new loans have been raised overseas. The only loans raised in New York since 1927–28 have been those for the purpose of redeeming loans carrying a high rate of interest, on which an option of redemption occurred in 1946 and 1947. Loans raised in London have been almost exclusively conversion loans. Particulars of these loans are given on pages 643–4 of this issue and in previous issues.

(*a*) Excludes War (1914–18) Debt due to United Kingdom Government, £79,724,220.

(iv) *Amount of Debt at Various Rates of Interest.* The first debt taken over from South Australia consisted mainly of securities bearing interest varying from 3 per cent. to 4 per cent., the average rate of interest for the first year being £3 12s. 4d. per cent. For the first three years the increase in the debt was due almost entirely to the expansion of the 3½ per cent. stock of the Loan Fund, consequently the average rate of interest fell until on 30th June, 1914, it stood at £3 11s. 10d. per cent. With the loans raised for war and repatriation purposes interest rates rose until the National Debt Conversion Loan (July–August, 1931) reduced interest rates on internal loans by 22½ per cent. Conversion loans in London reduced the average rate of interest on debt maturing in London by more than £1 per cent. from £4 18s. 11d. per cent. in 1931 to £3 17s. 10d. per cent. in 1942. During the next three years the average rate rose to £4 0s. 10d. in 1945. Large conversion loans in July, 1945 were responsible for a further reduction in the average rate and at 30th June, 1947, it was £3 8s. 11d. per cent. The average rate of interest on internal loans at 30th June, 1947 was £2 14s. 0d. per cent. as compared with £5 9s. 10d. per cent. at 30th June, 1931. The average rate of interest payable on the total debt decreased from £5 4s. 11d. per cent. in 1931 to £2 14s. 10d. per cent. at 30th June, 1947.

The accompanying table gives particulars of the amounts of debt for Commonwealth purposes at 30th June, 1947, according to the various rates of interest :—

PUBLIC DEBT FOR COMMONWEALTH PURPOSES AT 30th JUNE, 1947 : AMOUNTS AT EACH RATE OF INTEREST.

Information regarding the transactions of the States' Account of the National Debt Sinking Fund is published in the State Finance section of this issue, and, in greater detail, in the *Finance Bulletin* issued by this Bureau.

§ 5. Cost of 1914-18 War and Repatriation.

In view of the importance of the subject, a further reference is here made to the cost of the 1914–18 War. The general policy of the Commonwealth Government has been to pay from Consolidated Revenue all charges for interest, sinking fund, pensions and other recurring charges consequent upon the War, and part of the expense of repatriation. On the other hand, the whole direct cost of the War and the larger proportion of the cost of repatriation were paid from loans. Detailed particulars relating to Repatriation, War and Service Pensions appear in Chapter XXVII.—"Repatriation" of this issue. The total cost from both sources to 30th June, 1947, is set out in the following table :—

COMMONWEALTH 1914–18 WAR EXPENDITURE.

Period.	From Consolidated Revenue Fund.			War Loan Expenditure. (b)
	War and Repatriation Services, including War Pensions.	Interest and Sinking Fund. (a)	Total.	
	£'000.	£'000.	£'000.	£'000.

1946–47	10,320	8,939	19,259	..
Discounts and Flotation Expenses on Loans, including Redemption and Conversion Loans	(c)	..	..	5,999
Indebtedness to the Government of the United Kingdom for payments made, services rendered, and goods supplied during the War	..	..	..	(d) 43,398
War Gratuities paid in cash ..	452	..	452	27,063
Total to 30th June, 1947	277,815	(e) 406,827	684,642	372,990

NOTE.—For particulars of expenditure relating to the 1939–45 War, *see* § 6, pages 653–5.

(a) Excludes interest on amounts raised for the States for Soldier Land Settlement. (b) Excludes expenditure on War Service Homes from 1923–24. (*See* page 640.) (c) Included above. (d) The total indebtedness to the Government of the United Kingdom involved in the Funding Arrangements Act 1921 was £92,480,000, the balance, £49,082,000, for cash supplied, being included above. At 30th June, 1947, the amount outstanding had been reduced to £79,724,000. Repayment of this debt and payment of interest were suspended in 1931, by arrangement with the United Kingdom Government. (e) Interest, £340,325,000; Sinking Fund, £66,502,000.

§ 6. Cost of Defence, War (1939-45) Services and Post-war Charges.

Details of the expenditure on Defence and War Services by the Departments of Defence, Navy, Army, Air, Munitions, Aircraft Production, Supply and Shipping, and Home Security are shown in the following table. Expenditure on defence and war services by other departments, including Labour and National Service, Information, Post-war Reconstruction, etc., is included under the heading of Other War Services.

The table hereunder shows, for the last eight years, particulars of the combined expenditures from revenue, trust and loan funds on Defence, War Services and Post-war Charges including works. Details of expenditure for the years 1940–41 to 1946–47 were not allotted to the various funds, and the total expenditure only was apportioned.

EXPENDITURE FROM REVENUE, TRUST AND LOAN FUNDS : DEFENCE, WAR (1939–45) SERVICES AND POST-WAR CHARGES.

(*f*) Includes expenditure from excess receipts of previous years appropriated for Defence Equipment Trust Account and from National Defence Contributions Trust Account from 1941–42.

§ 7. Commonwealth Public Service Superannuation Fund.

This Fund, which was inaugurated on 20th November, 1922, is maintained by contributions of officers of Parliament, of employees of the Commonwealth Public Service, the Defence Departments, and other Commonwealth authorities, and by payments from Consolidated Revenue, the latter being made when the officers retire on pension. Full particulars as to the benefits, etc., will be found in Official Year Book, No. 18, p. 383. In September, 1937, legislation was passed extending superannuation rights to approximately 1,600 employees of the Repatriation Commission, the War Services Homes Commission, the High Commissioner's Office, London, and the Council for Scientific and Industrial Research. By the same legislation a Provident Account, forming part of the Superannuation Fund, was established, providing for compulsory contributions in respect of those employees who, through physical disabilities or failure to pass the required medical examination, are ineligible to contribute to the Superannuation Fund. Any other employee, whose contribution to the Superannuation Fund for the first two units of pension is in excess of the rate for age 45 years and above 5 per cent. of his salary, may elect to transfer to the Provident Account.

An amendment to the Act in 1942 extended superannuation rights to certain temporary employees and to the employees of semi-governmental authorities set up by the Commonwealth. This amending Act also increased the rates of contribution for new contracts in accordance with the recommendation of the actuaries in their report on the Third Quinquennial Investigation of the Fund. In 1945 an amending Act made special provisions in relation to certain former State employees, extending to them benefits equivalent to those to which they would have been entitled if they had continued to contribute to the State fund.

As a result of a further amending Act in 1947, the rate of existing pensions was increased by one quarter, and the maximum number of units for which an employee may contribute was increased from 16 units at a salary exceeding £832, to 26 units at a salary exceeding £1,664. By the same Act, a contributor may elect to contribute for reserve units up to a maximum of four units above the amount prescribed for his salary scale. These reserve units may be transferred to the Superannuation Fund when the contributor becomes eligible to contribute for additional units.

The number of contributors to the fund at 30th June, 1946, was 46,213 (39,928 males and 6,285 females) and the average pension for which contributions were being made was 6.008 units or £156 4s. 2d. per annum.

The income for the year 1945–46 was £1,433,740, of which officers' contributions represented £915,891 and interest on investments, etc. (including accrued interest). £509,376. The expenditure for the year was £536,932, of which £267,796 represented pension payments. At 30th June, 1946, the total funds invested amounted to £14,318,913 (at cost). The average rate of interest on investments at 30th June, 1946 was £3 15s. 9d. per cent.

Pensions in force on 30th June, 1946, including contributory and non-contributory but excluding commuted pensions, numbered 9,554, with a net annual liability of £901,248, of which £630,197 represented the share payable from the Consolidated Revenue Fund.

B. STATE FINANCE.

§ 1. General.

1. **Functions of State Governments.**—In comparing the financial returns of the States, allowances must be made for the various functions discharged by the respective Governments, and for local conditions in each case. Direct comparisons of the revenue, expenditure and debt of the individual States are difficult, owing to the fact that functions which in one State are assumed by the Central Government are in another relegated to municipal or semi-governmental bodies which are vested with certain defined borrowing powers and whose financial transactions are not included with those of the Central Government. Care, therefore, is needed in making comparisons, and the particulars contained in this Chapter should be read with those contained in Chapter XIII.,

"Local Government". In many respects, moreover, the budgets of the Australian Governments differ materially from those of most European countries, owing to the inclusion therein of the revenue and expenditure of departments concerned in rendering public services, such as railways, tramways, water supply, etc., which in other countries are often left to private enterprise.

2. **Accounts of State Governments.**—The various financial transactions of the States are in each case mainly concerned with one or other of three Funds—the "Consolidated Revenue Fund", the "Trust Fund", and the "Loan Fund". All revenue (except certain items paid into special funds) collected by the State is paid into its Consolidated Revenue Fund, from which payments are made under the authority of an Annual Appropriation Act passed by the Legislature, or by a permanent appropriation under a Special Act.

Figures relating to New South Wales represent the transactions of the *Consolidated Revenue Fund* and the Business Undertakings included in the Annual Budget Papers. These latter are as follows:—Railways, Tramways, and Omnibuses, Sydney Harbour Trust Section of the Maritime Services Board, and Road Transport and Traffic Fund. Deductions have been made from the Budget figures, however, in order to obviate duplications caused by inter-fund payments and to maintain uniformity from year to year in the presentation of statistics. Particulars for all other States relate to the transactions of the Consolidated Revenue Fund.

In Tasmania the separation of the Transport Commission's financial transactions from the Consolidated Revenue Fund from 1st July, 1939, has occasioned considerable decreases in the figures since 1939-40 as compared with those for the previous years.

The *Trust Fund* comprises all moneys held in trust by the Government, and includes such items as sinking funds, insurance companies' deposits, etc.

The *Loan Fund* is debited with all loan moneys raised by the State, and credited with the expenditure therefrom on public works or other purposes.

3. **Inter-relation of Commonwealth and State Finances.**—A statement in some detail, covering the inter-relation of Commonwealth and State Finances during the period from the inception of Federation to the passing of the Financial Agreement Act 1928, was published in Official Year Book, No. 22, pages 379–80. On pages 633–9 of this issue details of the constitutional and other requirements for the distribution of Commonwealth revenues are given, and in section C.—Commonwealth and State Finance, par. 4, will be found a summary of the original Financial Agreement and subsequent agreements affecting it.

§ 2. State Consolidated Revenue Funds.

Division I.—Revenue.

1. **General.**—The principal sources of State revenue are:—

(*a*) Taxation; (*b*) the Business Undertakings controlled by the State Governments; (*c*) Sale of and Rental from Crown lands; (*d*) Payments by Commonwealth Government under the Financial Agreement, Special Grants and Tax Reimbursement Acts; (*e*) Interest on advances; and (*f*) Miscellaneous sources, comprising Fines, Fees, etc.

Of these sources, that yielding the largest revenue for the States as a whole is the group of Business Undertakings, the principal contributors being the Government Railways and Tramways. Next in magnitude are Commonwealth payments under the Tax Reimbursement Acts, followed in order by Taxation, the Commonwealth Payments under the Financial Agreement and Special Grants, and Interest Receipts. Since the introduction in 1942–43 of the Uniform Tax Scheme, Commonwealth payments under the Income and Entertainments Tax Reimbursement Acts and, from 1946–47, under the Tax Reimbursement Act, have replaced revenue previously received from Income and Entertainments taxes.

2. **Revenue Received.**—The following table shows particulars of the total amounts and the amounts per head of consolidated revenue received by the several States during the years 1938–39 and 1943–44 to 1946–47.

(*a*) *See* § 1 par. 2. page 657. (*b*) In all States certain taxation collections are not paid into Consolidated Revenue Fund. For total collections see next page. (*c*) Based on mean population of the financial year.

In comparing the revenue of the States, it should be borne in mind that business undertakings which in one State may be controlled by the Government are, in another State, controlled by a board or trust. For example, in New South Wales and Western Australia the tramway systems are controlled by the Government, while in the other States ownership is largely vested in trusts. Harbour and river services and water supply and sewerage are also controlled in some cases by the State and in others by trusts. All the Tasmanian transport facilities are controlled by a commission.

(ii) *Revenue from Taxation.* (*a*) *General.* The following table shows, for the year 1946–47, particulars of all State taxation collections irrespective of whether such moneys have been paid into the Consolidated Revenue Funds or not. For this reason the particulars hereunder differ from those given in the tables relating to the Consolidated Revenue Funds and represent a comprehensive statement of all taxation collections by the Government in each State. In this and the succeeding statements of taxation the collections have been grouped according to the nature of the tax rather than the method of collection. For example, stamp duties on betting tickets and bookmakers' licences have been included under "Entertainments Tax" instead of under "Stamp Duties" and "Licences" respectively. Commonwealth payments under the State Grants (Tax Reimbursement) Act are included because these grants have replaced revenue received by the States from Income and Entertainments taxes prior to the introduction of the Uniform Tax Scheme in 1942–43 :—

Prior to Federation, duties of Customs and Excise constituted the principal source of revenue from taxation. Thereafter, until the introduction of the Uniform Income Tax Scheme the most productive State taxes were the various Income Taxes, which, in 1941–42, included Unemployment Relief, State Development and Hospital Taxes.

The total amounts and the amounts per head raised from all sources of taxation by the several State Governments, including amounts not paid into the Consolidated Revenue Fund and tax reimbursements received from the Commonwealth, during the five years 1938–39 and 1943–44 to 1946–47, are shown in the following table :—

STATE REVENUE FROM TAXATION.

(a) Includes Commonwealth Tax Reimbursements. (b) Based on mean population of each financial year.

(*b*) *Probate and Succession Duties.* Probate duties have been levied for many years in all the States, but the provisions of the Acts governing the payment of duty differ widely both in regard to the ordinary rates and those which apply to special beneficiaries. A table showing the values of the estates in which probates and letters of administration were granted is given in Chapter XIV. " Private Finance ".

The duties collected for the five years 1938–39 and 1943–44 to 1946–47 are as follows :—

STATE PROBATE AND SUCCESSION DUTIES : NET COLLECTIONS.

State.	1938–39.	1943–44.	1944–45.	1945–46.	1946–47.

Total	3,465,517	3,042,420	3,348,531	4,138,802	5,278,548

(*d*) *Land Tax.* All the States impose a land tax, Queensland, the last State to fall into line, collecting its first levy in 1915–16. In the other States the impost is of long standing. In New South Wales the State land tax is levied on the unincorporated portion of the Western Division of the State only.

The following table shows the amounts collected by means of such taxes during the years 1938–39 and 1943–44 to 1946–47 :—

STATE LAND TAX : NET COLLECTIONS.

State.	1938–39.	1943–44.	1944–45.	1945–46.	1946–47.
	£	£	£	£	£
New South Wales ..	2,154	3,140	2,283	2,326	2,180

Total	1,407,346	1,262,241	1,242,471	1,189,847	1,250,242

(*e*) *Income Taxes.* State taxes levied on incomes prior to the introduction of the Uniform Tax Scheme in 1942–43 were as follows :—

New South Wales—Income Tax, Super Tax and Further Tax on Undistributed Income of Companies ;
Victoria—Income Tax, Special Income Tax, and Unemployment Relief Tax ;
Queensland—Income Tax, Super Tax, Additional Tax and Income (State Development) Tax ;
South Australia—Income Tax ;
Western Australia—Income Tax, Hospital Tax and Gold Mining Profits Tax ;
Tasmania—Income Tax.

Some details of these taxes are given in earlier issues of this Year Book.

When the Uniform Tax Scheme was introduced in 1942–43 these taxes, together with the Commonwealth War Tax, were discontinued, and the Commonwealth Income Tax rates were increased to raise the revenue previously raised by these taxes. The States are reimbursed by the Commonwealth for the revenue lost to them by the discontinuance of these taxes. Details of these reimbursement grants are given on page 635.

In the following table total State collections of the taxes mentioned above are shown for the year 1938–39. For the years 1943–44 to 1946–47 the total of Commonwealth Reimbursements and arrears of State taxes collected are shown.

STATE INCOME AND DIVIDEND TAXES : NET COLLECTIONS.

Queensland	939,757	807,844	834,153	960,698	1,068,979
South Australia	715,944	571,928	601,896	650,946	737,371
Western Australia ..	453,053	380,780	358,672	393,068	429,009
Tasmania	175,591	214,750	225,986	247,805	280,690
Total	6,960,712	5,883,927	6,046,308	6,717,795	7,547,384

Except in the case of South Australia, the proceeds of motor tax and motor registration fees are paid into special funds and the amounts do not appear in the Consolidated Revenue Funds.

(iii) *Business Undertakings.* (*a*) 1946–47. A very large proportion of State gross revenues is made up of receipts from business undertakings under the control of the Governments. The principal of these are railways and tramways, harbour works, water supply and sewerage and electricity supply, and, in addition, State batteries for the treatment of auriferous ores are included for Western Australia, and various minor revenue-producing services are rendered by the Governments of all States. For the year 1946–47 the revenue from these sources was £78,433,777 or 45.5 per cent. of the revenue from all sources. Details of revenue are as follows :—

STATE REVENUE FROM BUSINESS UNDERTAKINGS, 1946–47.

(iv) *Lands.* The revenue from the sale and rental of Crown lands has, with few exceptions, been treated from the earliest times as forming part of the Consolidated Revenue Funds, and has been applied to meet ordinary expenses. The following table shows the revenue from sales and rentals of Crown lands for the year 1946–47 :—

STATE LAND REVENUE, 1946–47.

(v) *Commonwealth Payments.* Commonwealth Payments to the States represent a considerable proportion of the States' Revenue. In 1946–47 the total amount (excluding sundry minor items) paid to the Consolidated Revenue Funds of the States was £51,796,760 (30 per cent.). This was made up of the contribution towards interest on States' debts under the Financial Agreement, £7,584,912, special grants to the States of South Australia, Western Australia and Tasmania, £4,748,000 and Tax Reimbursement Grants £39,463,848. The latter item has been included under State taxation above as it is paid to the States as a reimbursement for vacating the field of income taxation.

In addition to these, the States receive a number of other payments which are paid to Trust Funds. The main items in this class are the contribution towards the sinking fund on States' debts (£1,636,120 in 1946–47) paid to the National Debt Sinking Fund and grants for Federal Aid Roads and Works (£4,805,290 in 1946–47) paid to State Trust Funds.

More detailed information concerning Commonwealth payments to the States is given under part A of this Chapter, Division IV., page 633.

(vi) *Interest and Miscellaneous.* In addition to the foregoing, there are in each State several miscellaneous sources of revenue, including such items as interest, fines, fees, etc. In 1946–47 interest, mainly from loans to local governing bodies and on public account balances, supplied £4,525,312 whilst "Miscellaneous" revenue which includes fines of the courts and fees for services amounted to £11,144,679.

Division II.—Expenditure.

1. **General.**—The principal heads of State expenditure from Consolidated Revenue Funds are :—

> (*a*) Interest, sinking fund and exchange charges in connexion with public debt ; (*b*) Working expenses of railways, tramways and other business and industrial undertakings ; (*c*) Education ; (*d*) Health and charitable expenditure ; (*e*) Justice ; (*f*) Police ; (*g*) Penal establishments ; and (*h*) all other expenditure, under which heading is included Public Works, Lands and Surveys, Agriculture and Forestry, Legislative and General Administration. Pensions and Miscellaneous.

In earlier years the working expenses of Railways and Tramways were the most important item of State Governmental expenditure, but, for a period prior to 1941–42 Public Debt charges were the heaviest item. Since then, however, Railways and Tramways expenditure has again taken the major place. In the year 1946–47 the working expenses of the Railways and Tramways and Omnibuses were 36.4 per cent. of the total expenditure from the State Consolidated Revenue Funds; next in importance were Public Debt Charges, 23.1 per cent.; Education, 11.8 per cent.; Charitable, Public Health and Hospitals, 8.3 per cent.; and Law, Order and Public Safety, 4.9 per cent.

2. **Total Expenditure.**—The total expenditure from the Consolidated Revenue Funds of the several States and the expenditure per head of population during each of the five years 1938–39 and 1943–44 to 1946–47 are shown in the following table :—

STATE EXPENDITURE : CONSOLIDATED REVENUE FUNDS.

(a) Special Deposits Account and Special Accounts.

§ 4. State Loan Funds.

Division I.—Loan Expenditure.

1. **General.**—As far back as 1842 revenue collections were supplemented by borrowed moneys, the earliest loan being raised by New South Wales for the purpose of assisting immigration, at rates of interest varying from 2¾d. to 5¼d. per £100 per diem, or

approximately from 4½ per cent. to 8 per cent. per annum. Australian public borrowing, however, is mainly due to the fact that the State Governments, in addition to ordinary administrative duties, undertake functions which in other countries are usually entrusted to local authorities or left to private enterprise. Foremost amongst these are the construction and control of the railway systems. Loan moneys have also been largely used for improvements to harbours and rivers, and for the construction of roads, water supply and sewerage works. The State loan expenditure and public debt thus differ very materially from those of most European countries, and from those of the Commonwealth, where such expenditure was very largely incurred for defence or war purposes. As shown above, the State debts consist chiefly of moneys raised and expended with the object of assisting the development of the resources of the country, and are to a very large extent represented by tangible assets.

Statements relating to Loan Expenditure are given below for both "gross" and "net" expenditure. The gross expenditure represents the amounts disbursed during each year, whereas the net expenditure represents the gross expenditure less any credits to the Loan Fund during the year on account of repayments of advances to local governing bodies, settlers, etc., the sale of assets, and transfers from other funds. Such moneys are credited to the Loan Fund in the year of repayment irrespective of when the advance was made.

2. **Details of Loan Expenditure.**—(i) *Gross Loan Expenditure*, 1946–47. Particulars of the gross loan expenditure on Works, Services, etc., for the year 1946–47 are given in the following table :—

STATE GROSS LOAN EXPENDITURE ON WORKS, SERVICES, ETC. 1946–47.

(a) *See* footnotes (a) and (b) to table in par. 2 (ii) above.

The four tables in this paragraph and paragraph 2 do not include particulars of expenditure on loan discounts and flotations, the funding of deficits, the retirement of treasury bills, and similar items of a nature other than works, services, etc. The aggregate net expenditure on those items to 30th June, 1947, is shown in paragraph 4 following. Summaries of the gross and net expenditure and repayments for the years 1944–45 to 1946–47 are shown in paragraph 5 following.

4. **Total Net Loan Expenditure to 30th June, 1947.**—The total net loan expenditure including revenue deficits, etc., of the States from the initiation of borrowing to 30th June, 1947 amounted to £1,102,308,033. The purposes for which this sum was expended are shown in the following table :—

STATE NET LOAN EXPENDITURE TO 30th JUNE, 1947.

(*a*) Aggregate *Gross* Loan Expenditure. (*b*) Loans to Municipal Tramways Trust. (*c*) Not available separately. Distributed under various particular headings. (*d*) Expenditure from Commonwealth Loans under Commonwealth-State Housing Agreement has been excluded. (*e*) Includes Industrial Undertakings and Immigration. (*f*) Under Prickly Pear Land Act. (*g*) Includes advances for Rabbit-proof Fencing. (*h*) Included with Advances to Settlers. (*i*) Includes Grain elevators, New South Wales and Victoria. (*j*) Includes £1,710,032 State Bank. Expenditure on stores for public works amounting to £1.4 million, previously included under this item, is now included under the works concerned. (*k*) Contribution to Sinking Fund.

The figures in the foregoing table show the amounts actually expended from loan fund, and differ from those given later in the statements relating to the public debt, which represent the amount of loans still outstanding. The statement above includes all expenditure, whether the loans have been repaid or are still in existence. As in the earlier tables on net loan expenditure, allowance has been made, however, for credits on account of repayments of advances to local government bodies, settlers, etc., the sale of assets, and transfers from other funds. In the public debt statement, on the other hand, loans repaid are not included, and in the case of loans still outstanding, each is shown according to the amount repayable at maturity, and not according to the amount originally available for expenditure.

5. **Total Loan Expenditure, 1944–45 to 1946–47.**—The following table gives particulars, in summary form, of the total loan expenditure in each State during each of the years 1944–45 to 1946–47.

(*a*) Includes exchange, discounts and flotation expenses, revenue and general cash deficits. (*b*) From Consolidated Revenue Fund.

Division II.—State Public Debts.

1. **General.**—The first government loan raised in Australia was obtained by New South Wales in 1842. This and nine other loans prior to 1855 were all raised locally. In 1855 New South Wales approached the London market for the first instalment of a 5 per cent. loan for £683,300. Victoria first appeared as a borrower in 1854, and made its first appearance on the London market in 1859. The first public loans were raised by the other States in the following years :—Queensland 1861, South Australia 1856, Western Australia 1845, and Tasmania 1867.

In the public debt tables which follow, the units of currency are, for debts maturing and interest payable in Australia, £ Australian ; in London, £ sterling ; in New York, £ sterling. The New York debt is payable in dollars, but for the purposes of the tables dollars have been arbitrarily converted to £ sterling at the rate of $4.8665 to £ stg. 1.

Particulars of State debt in Australian currency are given in Section C, Commonwealth and State Finance, par. 3 of this Chapter (see page 682.)

2. **State Debts 1938–39 and 1943–44 to 1946–47.**—The table hereunder shows the State public debts and the amounts outstanding per head of population at 30th June, 1939, and 1944 to 1947 inclusive.

Under the Financial Agreement the Commonwealth Government on 1st July, 1929 assumed the liabilities of the States to bondholders in respect of the debts of the States existing at 1st July, 1929, and taken over by the Commonwealth. The following figures represent the total " face " or " book " values of the debts of the States leaving out of account currency changes since the loans were floated :—

(a) Based on population at 30th June in each year.

The public debt of the whole of the States increased during the period under review by £28.5 million. The debt per head of population decreased, however, during the period by £6 11s. 1d. to £122 12s. 8d. per head. During 1946–47 the total State debt increased by £20.9 million. In some States certain public utilities such as Tramways, Water Supply and Sewerage, and Harbour Services, etc., are controlled by Boards or Trusts, which, in addition to receiving advances from the Central Government, raise loans by public borrowing on their own behalf, while in other States these services are controlled by the Central Governments. Comparison of the debts of the States is therefore difficult, but on page 685 figures showing the aggregate debts of the States, including these local and semi-governmental bodies, are given for the years 1938–39, 1939–40, 1940–41 and 1946–47. Local and semi-governmental debt statistics are not available for the years 1941–42 to 1945–46.

3. **Place of Flotation of Loans.**—Early loans, usually for comparatively small amounts, were raised locally, but, with the increasing demand for loan funds and the more favourable terms offering in the London market, the practice of raising loans in London came into vogue, and for many years local flotations, except for short terms or small amounts, were comparatively infrequent. In more recent years, however, the accumulating stocks of money in Australia available for investment led to the placing of various redemption and other loans locally, with very satisfactory results. Loans have also been placed in New York on account of all States. The following table gives particulars of loans outstanding at 30th June, 1947, according to the place of flotation :—

STATE PUBLIC DEBTS AT 30th JUNE, 1947 : PLACE OF FLOTATION OF LOANS.

Particulars of the aggregate debts of the States for the five years 1938–39 and 1943–44 to 1946–47 showing the amounts which will mature overseas and in Australia, are shown on page 731.

4. **Interest.**—(i) *Amounts Payable and Average Rate.* The highest rate of interest paid for the earliest State loans was 5¼d. per £100 per diem, or, approximately, 8 per cent. per annum. At 30th June, 1947, the rates varied from 5.25 per cent. to 1 per cent The average rate payable on the aggregate indebtedness was £3 6s. 4d. per cent. For the separate States the average varied, being lowest for Western Australia (£3 5s. 2d.) and highest for Victoria (£3 8s. 2d.). The following table gives particulars of the amount of interest payable, together with the average rate of interest payable at 30th June, 1947. with separate information for London, New York and Australian maturities.

The average rate of interest on debt maturing in Australia has been reduced from £5 4s. 11d. per cent. in 1931 to £3 4s. 11d. per cent. in 1947. For debt maturing in London the average rate increased from £4 12s. 7d. per cent. in 1931 to £4 13s. 3d. per cent. in 1932, but, as a result of the conversions effected in London between 1932 and 1934 fell to £4 2s. 8d. per cent. in 1934, and subsequent conversions have reduced the rate to £3 7s. 9d. per cent. in 1947. New York loans have decreased from £5 2s. 6d. per cent. in 1931 to £4 0s. 7d. per cent. in 1947.

(ii) *Indebtedness at each Rate.* The following table shows, for the States combined, particulars of the total debt at each rate of interest and according to the domicile of the debt.

5. **Dates of Maturity.**—Securities like the British Consols are interminable, but Australian debts have in most cases a fixed date for repayment, there being a few exceptions which are included in the following table under the headings " Interminable ", " Treasurer's option ", and " Indefinite ". Those terminable at " Treasurer's option " include amounts which are payable by the respective Governments after giving a specified notice, and those " indefinite " consist of certain amounts owing to the Commonwealth Government. Generally, renewal is effected at date of maturity in respect of the greater portion of the loan. In order to avoid application to the market at an unfavourable time, the practice has been adopted of specifying a period prior to the date of maturity within which the Government, on giving notice, has the option of redeeming the loan. The Government can, therefore, take advantages of opportunities that may offer during the period for favourable renewals. Particulars concerning the due dates of latest maturity of the State loans outstanding on 30th June, 1947 are given in the following table, the various maturities being grouped according to years ended 30th June.

Under the Financial Agreement Act 1944, Treasury Bills issued to meet State revenue deficits accruing between 1st July, 1928 and 30th June, 1935 were retired on 31st December, 1944. In place of those not redeemed, one per cent. debentures amounting to £43,018,000 were issued. One of these debentures will mature in each year up to 1983. Particulars of these debentures are included under their respective years of maturity in the tables above. For further details see par. 4, Section C.—Commonwealth and State Finance.

6. **Sinking Funds.**—Prior to the passing of the Financial Agreement Act 1928, the practice by the States of providing sinking funds had been consistently followed in Western Australia only. This Act contains provisions for the establishment of a sinking fund on States' debts (see p. 688). Some particulars of the transactions of the National Debt Sinking Fund (States' Account) for 1946–47 are shown below, and further details are given in the *Finance Bulletin* issued by this Bureau.

C. COMMONWEALTH AND STATE FINANCE.

1. **Revenue and Expenditure.**—(i) *Consolidated Revenue Funds.* The following tables show the aggregate revenue and expenditure of the Consolidated Revenue Funds of the Commonwealth and States for each of the five years 1938–39 and 1943–44 to 1946–47. Figures are shown for the total revenue and expenditure of the Commonwealth and the States, as shown in other sections of this Year Book, and also unadjusted and adjusted figures for the aggregate revenue and expenditure. The adjusted figures are obtained by deducting from the totals, payments made by the Commonwealth to the States on account of tax reimbursements, interest under the Financial Agreement and special grants. An estimate of pay-roll tax paid by the States to the Commonwealth is also deducted.

COMMONWEALTH AND STATE CONSOLIDATED REVENUE FUNDS: REVENUE.

Year ended 30th June—	Commonwealth.	State.	Total.

(*a*) The nominal amount and average rate of interest payable taking no account of exchange, *see* footnote (*a*) above.

(iii) *Public Debt and Interest Payable in Australian Currency.* In the foregoing tables relating to Commonwealth and State Public Debt the debt outstanding in London is expressed in sterling, and debt outstanding in New York is expressed in sterling converted from dollars at the rate of $4.8665 to £stg 1. This method of showing the debt gives no indication of the amount that the Australian Government would have to find to repay the debt. In the following tables the public debt and the interest payable are shown in terms of Australian currency throughout. Debt in London and in New York has been converted to Australian currency at the selling rate of exchange on 30th June, 1947

(*a*) Excludes Overdrafts and Internal Treasury Bills. (*b*) Treasury Bills issued to finance State deficits between 1st July, 1928 and 30th June, 1935 were retired on 31st December, 1944, and debentures having a currency of from 1 to 39 years were issued in their place (*see* pages 678 and 689).

(*b*) *Interest Rates.—London.* The rates of interest payable on Treasury Bills and Debentures in London during the following periods were: 1938–39 to 1940–41—minimum rate, 2 per cent., maximum rate, 2¼ per cent.; 1941–42 to 1943–44—minimum rate, 2 per cent., maximum rate, 3 per cent.; 1944–45 to 1946–47—minimum rate, 2 per cent., maximum rate, 2¼ per cent.

Australia. The Treasury Bill rates in Australia were as follows:—

5½ per cent. from 10th October, 1929.
6 per cent. from 1st October, 1930.
4 per cent. from 31st July, 1931.
3½ per cent. from 27th October, 1932.
3¼ per cent. from 21st January, 1933.
2¾ per cent. from 18th February, 1933.
2½ per cent. from 1st June, 1933.
2¼ per cent. from 1st April, 1934.
2 per cent. from 15th October, 1934.
1¾ per cent. from 1st January, 1935
1½ per cent. from 1st May, 1940.
1¼ per cent. from 1st May, 1943.
1 per cent. from 1st March, 1945.

(v) *Debts of States and Municipal and Semi-governmental Bodies.* For the reasons indicated on page 673 direct comparisons of the debts of the several States should be made with caution. The table following shows for 1938–39 to 1940–41 and 1946–47 particulars of the debts of the States and the debts due to the Public Creditor by municipal and semi-governmental bodies in each State. This affords a more reliable comparison, but as complete records are not available over a long period, particulars showing comparisons of the growth of the debt cannot be made.

(a) Includes amounts due by municipal and semi-governmental bodies.

Details of the debt of local and semi-governmental authorities were not compiled for the years 1941–42 to 1945–46.

4. **The Financial Agreement between the Commonwealth and the States.**—(i) *Details of the Agreement.* The original Financial Agreement between the Commonwealth and the States was made on 12th December, 1927. It was later affected by the following agreements made under the powers conferred by Section 105A of the Constitution :—

Debt Conversion Agreement—Made 21st July, 1931.
Debt Conversion Agreement (No. 2)—Made 22nd October, 1931.
Agreement relating to Soldier Settlement Loans—Made 3rd July, 1934.
Financial Agreement 1944—Made 15th November, 1944.

The Debt Conversion Agreements did not affect the wording of the main agreement, but contained provisions stating that where their provisions were not in accordance with any contained in the Financial Agreement the former should prevail. An Agreement was made between the Commonwealth and Tasmania only on 1st July, 1928. This was not an amendment, but was made under the authority of Part III., Clause 3 (*l*) of the original Agreement.

A summary of the original Agreement as affected by the subsequent Agreements is given below.

(i) *Australian Loan Council.* Under the Agreement, an Australian Loan Council was set up to co-ordinate the public borrowings of the Commonwealth and the States It consists of the Prime Minister of the Commonwealth as Chairman and the Premier of each State, or in their absences Ministers nominated by them in writing.

Each of the Governments submits annually to the Loan Council a programme setting forth the amount it desires to raise by loans during each financial year for purposes other than the conversion, renewal or redemption of existing loans, or for temporary purposes. Any revenue deficit to be funded must be included in the loan programme Loans for defence purposes are not subject to the Agreement, and therefore the Commonwealth is not required to include borrowing for that purpose in its programme for submission to the Loan Council.

If the Loan Council decides that the total amount of the loan programmes for the year cannot be borrowed at reasonable rates and conditions, it then decides the amount which shall be borrowed and may, by unanimous decision, allocate that amount between the Commonwealth and the States. In default of a unanimous decision, the Commonwealth is then entitled to one-fifth of the total amount to be borrowed and each State to a proportion of the remainder equal to the ratio of its net loan expenditure in the preceding five years to the net loan expenditure of all States during the same period.

In questions decided by a majority vote of the Council members, the member representing the Commonwealth has two votes and a casting vote and each member representing a State has one vote.

(ii) *Borrowings of the Commonwealth and the States.* (*a*) Subject to the decisions of the Loan Council, the Commonwealth arranges for all borrowings for or on behalf of the Commonwealth or any State, and for all conversions, renewals, redemptions, and consolidations of the Public Debts of the Commonwealth and of the States.

(*b*) If the Loan Council unanimously decides, however, a State may borrow outside Australia in the name of the State, and may issue securities for the amount so borrowed. The Commonwealth then guarantees that the State will fulfil all its obligations to bondholders in respect of the money so borrowed and the money is deemed to be borrowed by the Commonwealth for and on behalf of the State.

(*c*) Subject to any maximum limits decided upon by the Loan Council for interest, brokerage, discount and other charges, the Commonwealth or any State may—

(i) Borrow within its own territory, for any purpose, money from any authorities, bodies, funds or institutions (including Savings Banks) constituted or established under Commonwealth or State law or practice ;
(ii) Borrow from the public by means of counter sales of securities ; and
(iii) Use any available public moneys.

However, any securities issued for money so borrowed or used must be Commonwealth securities on terms approved by the Loan Council.

(*d*) Where such borrowings are not solely for temporary purposes, they are treated as loans under the Agreement and, if the amount together with the amount of loan money raised for the Government concerned by the Loan Council exceeds the limit (if any) of the amount to be raised for or by that Government, the excess is deemed to be money received by the Government in the following year on account of its loan programme for that year.

(*e*) The Commonwealth or any State may use for temporary purposes any public moneys available under the laws of the Commonwealth or a State and may, subject to terms approved by the Loan Council, borrow money for temporary purposes by way of overdraft, or fixed, special or other deposit. The conditions as to sinking fund, etc., do not apply to such temporary borrowing.

(iii) *Taking over of State Public Debts.* Subject to the provision of the Financial Agreement, the Commonwealth took over on 1st July, 1929—

(*a*) the balance then unpaid of the gross public debt of each State existing on 30th June, 1927; and

(*b*) all other debts of each State existing on 1st July, 1929, for money borrowed by that State deemed by the Agreement to be money borrowed by the Commonwealth for and on behalf of the State—

and in respect of these debts assumed, as between the Commonwealth and the States, the liabilities of the States to bond holders.

The net public debt of each State existing on 30th June, 1927, was as follows :—

	£
New South Wales	234,088,501
Victoria	136,949,942
Queensland	101,977,855
South Australia	84,834,364
Western Australia	61,060,675
Tasmania	22,434,060
Total	641,345,397

These amounts have been varied in accordance with the terms of the "Agreement relating to Soldiers Settlement Loans" made on 3rd July, 1934. The amended figures are—

	£
New South Wales	233,153,779
Victoria	136,348,982
Queensland	101,840,622
South Australia	84,029,376
Western Australia	61,060,675
Tasmania	22,314,180
Total	638,747,614

These amounts represent the gross debt less—

(*a*) the values of properties transferred by the States to the Commonwealth as shown below;

(*b*) the balances of the State sinking funds at 30th June, 1927.

(iv) *Transferred Properties.* In respect of State properties transferred to the Commonwealth under Section 85 of the Constitution, the States, as from 1st July, 1929, are discharged from any liability in respect of principal, interest or sinking fund on so much of the debts bearing interest at 5 per cent. per annum, taken over by the Commonwealth, as amounts to the agreed value of these properties, namely £10,924,323, apportioned to the several States as follows :—

	£
New South Wales	4,788,005
Victoria	2,302,862
Queensland	1,560,639
South Australia	1,035,631
Western Australia	736,432
Tasmania	500,754
Total	10,924,323

(v) *Payment of Interest.* The Commonwealth will, in each year during a period of 58 years from 1st July, 1927, contribute the sum of £7,584,912 towards the interest payable on the State debts, the States paying the balance to the Commonwealth. After that period, the States will pay to the Commonwealth the whole of the interest due.

The distribution among the States of the contribution of the Commonwealth is as follows :—

	£
New South Wales	2,917,411
Victoria	2,127,159
Queensland	1,096,235
South Australia	703,816
Western Australia	473,432
Tasmania	266,859
Total	7,584,912

These amounts are equal to the sums paid by the Commonwealth to each State in the year 1926–27 at the rate of 25s. per head of population, the rate at which the Commonwealth had contributed annually to the States since 1st July, 1910, as compensation for the States relinquishing, after Federation, the right to levy customs and excise duties.

(vi) *Sinking Funds.* (*a*) A sinking fund at the rate of 7s. 6d. per annum for each £100 of the net public debts of the States existing on 30th June, 1927, and conversions thereof, was established under the terms of the Agreement. The Commonwealth contributes annually from revenue 2s. 6d. per cent. on the net public debts of the States existing at 30th June, 1927 and each State contributes annually 5s. per cent. on the net public debt of such State at 30th June, 1927. The payments of the Commonwealth and of all States except New South Wales will continue for a period of 58 years from 1st July, 1927, and those of New South Wales for a similar period from 1st July, 1928.

(*b*) On new borrowings after 1st July, 1927 (except those for redemptions or conversions, or funding a State deficit) a sinking fund at the rate of 10s. per cent. per annum was established and the State and the Commonwealth contribute from revenue equal shares for a period of 53 years from the date of raising. (New South Wales did not commence sinking fund contributions in respect of new loans raised in the financial year 1927–28 until 1st July, 1928.)

(*c*) Any State may increase its contribution in respect of loan funds expended on wasting assets in order to redeem a loan within a shorter period than 53 years. When this shorter period has expired, the State contributions cease but the Commonwealth contributions continue until the full period of 53 years has elapsed. State contributions in respect of other loans are reduced by the amount of these Commonwealth contributions during the period remaining.

(*d*) Where loan moneys have been advanced by a State under terms providing for their repayment, the State may credit such repayments either to the loan account or to the sinking fund and, in addition, it must provide from revenue its sinking fund contributions in respect of the loan from which the money so advanced was provided. However, advances repaid to the State from the revenue of Public or Local Authorities may be used by the State to meet sinking fund contributions in respect of the loans concerned.

(*e*) In respect of any loan (except any of the loans referred to in par. (*f*) below) raised after 30th June, 1927 by a State to meet a revenue deficit accruing after that date, no sinking fund contribution is made by the Commonwealth, but the State makes a sinking fund contribution at the rate of not less than 4 per cent. per annum of the loan for a period sufficient to provide for the redemption of the loan, the contributions being deemed to accumulate at the rate of 4½ per cent. per annum compound interest.

(*f*) In respect of loans raised by a State or by the Commonwealth on behalf of a State, on the security of Commonwealth Treasury Bills, to meet a revenue deficit accruing after 30th June, 1927 and before 1st July, 1935, the Commonwealth and the State shall in each year during the period commencing on 1st July succeeding the date of raising the loan and ending on 30th June, 1944, pay from revenue a sinking fund contribution at the rate of 5s. for each £100 of the total amount of the Commonwealth Treasury Bills which have been issued in respect of these loans and which are current on 30th June preceding the commencement of the year in which the sinking fund contribution is payable.

The National Debt Commission shall apply the following amounts to the repurchase or redemption of the Commonwealth Treasury Bills issued as above :—

	£
New South Wales	1,970,000
Victoria	260,000
Queensland	125,000
South Australia	300,000
Western Australia	335,000
Tasmania	10,000
Total	3,000,000

The provisions requiring the States to make a further sinking fund contribution of 4½ per cent. per annum on cancelled securities do not apply to the securities redeemed as above.

In each year during a period of 39 years commencing on 1st July, 1944, the Commonwealth and the State concerned shall each pay from revenue a sinking fund contribution of 5s. per cent. and 15s. per cent. respectively in respect of the following amounts which represent the gross total of the deficit loans mentioned above less the amount to be redeemed by the National Debt Commission (£3,000,000) and the amounts which the States have undertaken to apply to the redemption of these loans, viz. :—

	£
New South Wales	26,120,000
Victoria	3,995,000
Queensland	2,148,000
South Australia	4,920,000
Western Australia	5,390,000
Tasmania	445,000
Total	43,018,000

(*g*) The sinking funds established are controlled by the National Debt Commission which may arrange with any State to act as its agent in connexion with payments due to bondholders. Except where the conditions relating to sinking funds, redemption funds, and funds of a like nature, held by a State on 30th June, 1929, precluded such transfer, all such funds were transferred to the National Debt Commission.

(*h*) Sinking fund contributions made in respect of the debts of a State, and funds of that State transferred to the National Debt Commission, are not accumulated but must be applied, whenever expedient, to the redemption and repurchase of loan securities. When such a loan security is repurchased or redeemed by the National Debt Commission, it is cancelled, and the State, in addition to sinking fund contributions otherwise payable, pays a further annual sinking fund contribution at the rate of 4½ per cent. on the face value of the cancelled security.

(*i*) A State may pay to the National Debt Commission a sum in addition to sinking fund contributions for the repurchase or redemption of securities issued in respect of the public debt of the State. Upon the cancellation of such securities the State shall not be required to make any further sinking fund contribution as provided for in paragraph (*h*) above. The National Debt Commission may also accept an amount from a State for the repurchase or redemption of particular securities with the condition that the sinking fund contributions in respect of that amount by both the State and Commonwealth shall cease as from the date of cancellation of those securities.

(*j*) Where, upon the conversion or partial conversion at a discount of any loan, sinking fund moneys are applied to the redemption of any amount of the converted loan the State shall repay to the National Debt Commission from revenue so much of the sinking fund moneys so applied as does not exceed the aggregate amount of the discounts allowed to subscribers to the loan.

(*k*) Sinking fund contributions in respect of oversea debt shall be calculated at the mint par of exchange prevailing on 1st July, 1927.

(ii) *Enforcement of the Agreement.* Consequent on the failure of the State of New South Wales to provide certain interest payments on its public debts in accordance with the Financial Agreement, the Commonwealth Parliament passed a Financial Agreement Enforcement Act (No. 3 of 1932). The State of New South Wales contended that the Commonwealth could not simply by Commonwealth Act deprive a State of revenue without the interposition of some judicial tribunal. The High Court by a majority decision of four to two held that this was a valid law and dismissed the action, subsequently refusing leave to appeal to the Privy Council.

(iii) *Borrowing by Semi-Governmental Bodies.* It was realized at the inception of the Loan Council that, in the interests of co-ordinated borrowing, the Council should be advised of borrowings of large amounts by semi-governmental bodies. In May, 1936, all resolutions passed by the Loan Council in connexion with semi-governmental borrowings were consolidated into one set of rules, which superseded all previous resolutions. This set of rules is regarded as the " Gentlemen's Agreement ", and provides, *inter alia*, for the submission of annual loan programmes in respect of semi-governmental authorities proposing to raise £100,000 or more in a year, for the consideration of such programmes in conjunction with the loan programme of the Government concerned, and for the fixing of the terms of individual semi-governmental loans coming within the scope of the annual programme.

D.—TAXES ON INCOME.

1. **General.**—A description of the development of income taxes in Australia appeared in Official Year Book, No. 35, p. 926. Since July, 1943, the Commonwealth, under the uniform tax arrangement, has been the only authority imposing taxes on income.

2. **Present Taxes.**—At the present time two taxes on incomes of individuals are imposed by the Commonwealth—Income Tax and Social Services Contribution. Both taxes are based on the same definition of assessable income and both are assessed and collected concurrently. Several taxes are imposed on the income of companies for which assessable income is defined in the same way as for individuals.

3. **Assessable Income.**—Income taxes in Australia are levied, primarily, on all income derived from Australian sources by any person, rather than on income derived from all sources by Australian residents. Thus a non-resident is taxed on all income derived from Australia while a resident is, in general, not taxed on income other than dividends derived from overseas (provided the income is taxed in the country in which it is derived).

Certain types of Australian income are exempt from tax in Australia, the most important being income from gold-mining and a small amount of tax-free interest on Commonwealth Government securities. No amount is included in assessable income on account of a house occupied by its owner. Profits derived from the sale of property are not assessable income if such property was not purchased with a view to resale at a profit.

Assessable income is divided into two main groups—personal exertion and property. Personal exertion income includes all wage, salary, business and professional incomes, while property income includes all rents, dividends and interest. Property income is taxed for individual income tax at higher rates than personal exertion income in all cases where the total taxable income exceeds £250. No distinction in rates is made for companies.

Expenses incurred in earning income, certain subscriptions to business associations, and trade union dues, are allowable deductions. Losses incurred in previous years may be carried forward as a deduction.

Because of uncongenial climatic conditions, isolation and high cost of living, taxpayers living in certain areas are allowed an additional deduction. Two zones have been prescribed and the allowances are Zone A, £120 (£40 in 1946–47) and Zone B, £20.

Income Tax and Social Services Contribution are levied on the taxable income (known as " contributable income " for Social Services Contribution) remaining after making these deductions.

4. **Taxes on Individuals.**—Two income taxes, Social Services Contribution, which was introduced from 1st January, 1946, and Income Tax, are levied on individuals. Social Services Contribution is payable by all persons without dependants whose contributable income exceeds £104 per annum. Persons with dependants are exempt from Social Services Contribution if their annual income does not exceed the minimum as set out in paragraph 10 following. For the income year 1947–48, Income Tax is payable by all persons whose income exceeds £250. Rebates of income tax are allowed to taxpayers on account of dependants, and certain medical expenses, taxes and life insurance premiums, etc. paid.

5. **Rebates of Tax.**—No deductions from taxable income are made for dependants but rebates of tax are allowed against income tax assessed. The rebates of tax for dependants are calculated by multiplying the amount specified in the following table for each dependant by the personal exertion rate of tax applicable to the income plus eighteen pence. The rebate for any dependant cannot exceed the maximum rebate shown in the following table.

DEPENDANTS : CONCESSIONAL ALLOWANCES AND MAXIMUM REBATES.(*a*)

Dependant (Resident).	Income Year 1946–47.		Income Year 1947–48.	
	Rebate of Tax on—	Maximum Rebate.	Rebate of Tax on(*b*)—	Maximum Rebate.
	£	£	£	£
Spouse or female relative (*c*) having care of taxpayer's children under 16 years of age	(*d*) 100	45	150	45
Daughter-housekeeper (*c*)	100	45	150	45
Housekeeper (*c*) having care of taxpayer's children under 16 years of age.. ..	100	45	150	45
Parent	(*e*) 100	(*e*) 45	150	45
First child under 16 years of age	75	45	100	45
Other children under 16 years of age ..	30	8	50	15
Invalid child, brother or sister over 16 years of age	(*f*) 75	(*f*) 45	100	45
Child 16 to 19 years receiving full-time education	(*g*) 75	(*g*) 45	100	45

(*a*) If the dependant is not wholly maintained by the taxpayer or was maintained for part only of the year a partial rebate is allowed. (*b*) If the taxpayer is entitled to a rebate for a dependant, an additional rebate of tax on £50 reduced by £1 for every £2 by which the income exceeds £250 is allowed. (*c*) Of a widower or widow. (*d*) If income is between £200 and £250 the concessional allowance is half the income. If between £250 and £300 the concessional allowance is £100 plus half the difference between the income and £300. (*e*) Mother only. (*f*) Invalid child only. (*g*) Child 16 to 18 years.

Rebates at the same rate are allowed on the actual expenditure of the taxpayer on life assurance, superannuation and friendly society contributions (amount limited to £100); medical, hospital, pharmaceutical, optical and dental expenses; remuneration of an attendant on a blind or invalid person; expenditure on artificial limbs, artificial eyes or hearing aids; funeral expenses (amount limited to £20); rates and land taxes on non-income producing property (including an owner-occupied house); and gifts to charitable, benevolent or patriotic funds. The amount allowed for dental expenses is limited to £10 for the taxpayer or any one of his dependants and for the whole group medical, hospital, dental, etc., expenses to £50 for the taxpayer or any one of his dependants.

No rebates are allowed against Social Services Contribution, but a concessional rate of contribution is provided where the contributable income does not exceed the sum of the concessional allowances by more than £180 in 1946–47 or £250 in 1947–48.

A rebate of tax is also allowed on the amounts paid as calls to gold-mining, forestry, and oil prospecting companies at one-third of the normal rebate rate.

Interest on Commonwealth Loans issued prior to 1st January, 1940 is subject to the condition that it shall not be taxed at rates higher than those for 1930–31 and, since present rates are higher in all cases, tax at those rates only is imposed. Interest on Commonwealth Loans issued after 1st January, 1940 and interest on certain State semi-governmental loans issued free of State income tax receive a rebate of 2s. in the £1.

6. **Members of Forces.**—The following concessions in tax were given to members of the Forces :—

(*a*) Deferred pay in respect of services up till 30th June, 1947, was exempt from tax, either as credited or when actually earned ;

(*b*) Dependants' allowances (but not the member's allotment to dependants) were exempt from tax until 30th June, 1947. At the same time the member received the concessional rebate for dependants ;

(*c*) Active pay of members who served outside Australia was exempt from tax until 30th June, 1947. Until 13th February, 1946, these members also received retrospective exemption of income previously received in the year of departure and of income received during the whole of the previous year ; exemption was also granted of income received during the three months following their return to Australia. After 13th February, 1946, these exemptions (for income earned in Australia) could only be claimed by members who were outside Australia or who had departed or volunteered to depart with the Interim Forces on that date. As from the same date service in sea-going ships in Australian waters and in air squadrons operating from Australia no longer qualified as service outside Australia ;

(*d*) Members serving within Australia were exempt from tax if their income did not exceed £250. If their income exceeded £250 the members received a special deduction of £146 which diminished as the income increased and vanished at £587. These exemptions and deductions ceased after 30th June, 1947.

The income of a member of the Forces serving in Australia was the sum of his active pay and £44 per annum (the assumed value of food, clothing and quarters supplied).

Merchant seamen received the special deduction allowed to members of the Forces serving in Australia.

7. **Lodgment of Returns and Assessment of Tax.**—All persons with incomes in excess of £104 are required to lodge returns by the 31st July each year (31st August for business incomes). Tax and contribution payable are assessed and assessment notices showing the amount payable are issued during the year following the year of income (in most cases from October to June following the lodgment of the return). The approximate amount payable, however, has already been collected during the income year—from employees by deductions from wages and from non-employees by provisional tax and contribution. The amount shown on the assessment notice is therefore adjusted against the amount already collected and any difference either collected or refunded.

8. **Deductions from Wages and Salaries.**—Employers are required to deduct tax and contribution from each payment of wages and salary to an employee at the appropriate rate in accordance with a deduction scale. This scale shows the amount to be deducted according to the number of dependants the employee has, and makes an average allowance for other concessional rebates.

Under the group scheme of deduction, which covers most employers of over ten persons, the amount deducted is remitted to the Taxation Department, and after 30th June each year each employee is given a group certificate by his employer showing the amount of deductions made during the year. The employee then uses the group certificate for that year to meet, in full or in part, the assessment on that year's income when it is received.

Under the stamp scheme, used by small employers, a stamp deduction card in two parts is used. Each four weeks the employer purchases stamps (also in two parts) for the amount of the deductions made each pay day and sticks one part on each half of the card. At the end of the year the employer gives the employee one half of the card and sends the other half to the Taxation Department. The employee's half is then used in the same way as a group certificate.

9. **Provisional Tax.**—For non-employees collection of tax and contribution for the current year is made at the same time as collection and assessment for the previous year is adjusted. The notice of assessment shows an amount of provisional tax and contribution for the current year. This provisional amount is an approximation to the tax and contribution which will prove to be payable after the return of income for the current year has been lodged. It is ascertained by assuming that the income of the current year will be the same as that for the previous year (for which a return has already been lodged) but the rates for the current year are applied to the income and not the rates for the year in which it was derived. The assessment notice shows the provisional tax and contribution paid in the previous year as a credit against the tax and contribution assessed on the basis of the return for that year.

Employees with more than £50 income from sources other than wages and salaries are also required to pay provisional tax in respect of that income.

10. **Effective Exemptions from Tax.**—In 1947–48 taxpayers without dependants are exempt from Social Services Contribution if their income does not exceed £104 and are exempt from Income Tax if their income does not exceed £250. The effect of rebates for dependants is to exempt taxpayers up to the incomes shown below in the years 1946–47 and 1947–48 :—

Taxpayer with—	Social Services Contribution.		Income Tax	
	1946–47. Income.	1947–48. Income.	1946–47. Income.	1947–48. Income.
	£	£	£	£
No dependants	104	104	200	250
Wife	156	200	280	396
„ and one child	175	283	345	513
„ „ two children	211	317	378	572
„ „ three children	257	350	412	630
„ „ four children	277	400	447	689

11. **Rates of Tax on Individuals.**—The following table shows the rates of income tax in respect of 1946–47 and 1947–48 incomes.

(T = *Taxable Income in Pounds.*)

Rates.	Personal Exertion.		Property.	
	Taxable Income.	Tax in Pence.	Taxable Income.	Tax in Pence
1946–47 Income—	£201– £300	$.06T^2 + 12T - 4,800$	£201– £300	$.1T^2 + 7T - 5,400$
	£301–£1,000	$.02T^2 + 36T - 8,400$	£301–£1,000	$.02T^2 + 55T - 12,600$
	£1,001–£2,000	$.025T^2 + 26T - 3,40$	£1,001–£2,000	$.029T^2 + 37T - 3,600$
	£2,001–£3,000	$.014T^2 + 70T - 47,400$	£2,001–£5,000	$.0035T^2 + 139T - 105,600$
	£3,001–£5,000	$.005T^2 + 124T - 128,400$		
	Over £5,000	$174T - 253,400$	Over £5,000	$174T - 193,100$
1947–48 Income—	£251–£1,000	$.032T^2 + 9T - 4,250$	£251– £500	$.052T^2 + 9T - 5,500$
			£501–£1,000	$.032T^2 + 29T - 10,500$
	£1,001–£2,500	$.018T^2 + 37T - 18,250$	£1,001–£2,500	$.018T^2 + 57T - 24,500$
	£2,501–£5,000	$.007T^2 + 92T - 87,000$	£2,501–£5,000	$.003T^2 + 132T - 118,250$
	Over £5,000	$162T - 262,000$	Over £5,000	$162T - 193,250$

In 1946–47 the basic rate of Social Services Contribution was 3d. in the £1 plus one-eighth of a penny for every £1 by which the contributable income exceeded £100. The maximum basic rate was 1s. 6d. in the £1 which was reached at an income of £220 and applied to all incomes over that amount. If the contributable income did not exceed the sum of the concessional allowances by more than £180 a concessional rate was provided. The concessional rate was the basic rate multiplied by the ratio of the excess of the contributable income over the sum of the concessional allowances to the lesser of the contributable income or £180.

Commencing with the income year 1947–48 the basic rate of Social Services Contribution was altered to 3d. in the £1 plus one-tenth of a penny for every £1 by which the contributable income exceeds £100. The maximum basic rate remains at 1s. 6d. in the £1 but is reached at an income of £250. If the contributable income does not exceed the sum of the concessional allowances by more than £250 a concessional rate is applied. The concessional rate is the basic rate multiplied by the ratio of the excess of the contributable income over the sum of the concessional allowances to the lesser of the contributable income or £250.

No Social Services Contribution is payable if the contributable income is less than £105, and if the contributable income is less than £113 the contribution payable shall not exceed half the excess of the contributable income over £104.

The rate of tax for farmers and pastoralists is determined by the average taxable income of the five years up to the current year, but the rate is applied to the taxable income of the current year.

The minimum amount payable is 10s. and the amount payable and rebates are calculated to the nearest shilling.

12. **Taxes on Sample Individual Incomes.**—The following tables show the Income Tax and Social Services Contribution payable by taxpayers with varying incomes and numbers of dependants on income derived in 1946–47 and in 1947–48 :—

COMMONWEALTH TAXES ON INCOME.

Income.	1946–47 Income Year.			1947–48 Income Year.		
	Income Tax.	Social Services Contribution.	Total.	Income Tax.	Social Services Contribution.	Total
INCOME FROM PERSONAL EXERTION.—TAXPAYER WITH NO DEPENDANTS.						
£	£	£	£	£	£	£

13. **Company Income Taxes.**—(i) *General.* For taxation purposes, companies are divided into two main groups—public companies and private companies. A private company is defined as a company which is under the control of not more than seven persons, and which is not a company in which the public are substantially interested or a subsidiary of a public company. Ordinary income tax is imposed on both groups of companies, but other taxes on companies are imposed according as to whether a company is public or private. Pay-as-you-earn taxation and Social Services Contribution have not been applied to companies.

(ii) *Public Companies.* (*a*) *Ordinary Income Tax.* The income of companies is assessed for Commonwealth Income Tax on the same principles as for individuals. Tax is, however, assessed at a flat rate on the whole taxable income. Dividends received are assessable income both for companies and individuals, but companies receive a rebate at the company rate on the amount of dividends included in the taxable income. This rebate is not allowed to non-resident companies. The rate of ordinary income tax is 6s. in the £1. For mutual life assurance companies this rate is reduced to 5s. in the £1. The rate on Commonwealth Loan Interest subject to 1930–31 rates is 1s. 4d. in the £1.

(*b*) *War-time (Company) Tax.* The War-time (Company) Tax, first imposed in 1940–41 on income derived in 1939–40, was discontinued after 1946–47. The tax was levied on the taxable profit of a company in relation to capital employed. Taxable profit was obtained by deducting from taxable income :—

(*a*) Commonwealth ordinary income tax payable in respect of that taxable income ; and

(*b*) any dividend included in taxable income.

Capital employed excluded shareholdings in other companies.

The tax was imposed on the excess of the taxable profit over 5 per cent. of capital employed. The rates of tax varied from 6 per cent. of the excess to 78 per cent. of the excess (where the excess was over 12 per cent. of capital employed).

Private companies, co-operative companies, mutual life assurance companies, companies in which little or no capital was required and whose profits were derived from commissions, etc., and companies other than subsidiaries whose taxable profits did not exceed £1,000 were exempt from the tax.

(*c*) *Super Tax.* In conjunction with the War-time (Company) Tax, a Super Tax of 1s. in the £1 on the excess of the taxable income over £5,000 was imposed. All companies receive a rebate of 1s. in the £1 on the amount of dividends (from companies which have already paid super tax) included in super tax income.

Commonwealth Loan Interest subject only to 1930–31 rates of tax is excluded from super tax income since the full 1930–31 rate of 1s. 4d. in the £1 is already paid as ordinary income tax. The interest was, however, included in taxable profit for the purposes of War-time (Company) Tax where it had the effect of reducing the War-time (Company) Tax payable because of the low yield on capital.

If a company was liable to both Super Tax and War-time (Company) Tax, the taxes were alternative and, in effect, only the higher of the two and not both taxes were payable. This was achieved by allowing a rebate against War-time (Company) Tax of the lesser of the following amounts :—

(*a*) the amount of War-time (Company) Tax assessed, or

(*b*) the net amount of Super Tax payable.

(*d*) *Undistributed Income Tax.* Since 1940–41 a tax has been imposed at the rate of 2s. in the £1 on the undistributed income of a public company. The undistributed income is the taxable income less :—

(*a*) Commonwealth Income Tax, Super Tax and War-time (Company) Tax and tax paid outside Australia on the taxable income ;

(*b*) dividends paid out of the taxable income before the expiration of six months (nine months if the company is a non-resident) after the close of the year of income ;

(*c*) the net loss incurred in carrying on the company's business outside Australia ; and

(*d*) the portion of Commonwealth Loan Interest subject to 1930–31 rates remaining in the undistributed income.

Mutual life assurance companies and non-resident companies not carrying on business in Australia are exempt from the tax.

(iii) *Private Companies.* Private companies are not liable for War-time (Company) Tax, Super Tax or the normal Undistributed Income Tax. An additional tax on the undistributed income is imposed, this tax being based on the close relationship between a private company and a partnership.

The undistributed income is calculated in approximately the same way as for a public company, but, instead of a flat rate of 2s. in the £1 being imposed, the additional Income Tax and Social Services Contribution which would have been payable by the shareholders, if all the income had been distributed, is calculated, and this amount is charged to the company as additional tax on undistributed income. The tax so charged is allowed with other taxes as a deduction in determining the undistributed income for the following year. In this way the shareholders of a private company are required to pay approximately the same tax as if they were a partnership or sole traders.

14. **Yield of Income Taxes.**—(i) *Collections from all Income Taxes.* The following table shows the collections of taxes of all types imposed on income for the years 1938–39 and 1942–43 to 1946–47 :—

INCOME TAX COLLECTIONS.

(*a*) Year in which assessment was made. Incomes relate to previous year. (*b*) As a result of the introduction of the pay-as-you-earn system, the amount of tax assessed in 1944–45 on income derived in 1943–44 was reduced to approximately one-quarter of the amount which otherwise would have been payable. (*c*) Grade £601–£750. (*d*) Grade £751–£1,000. (*e*) Grade £15,001–£25,000 (*f*) Grade £25,001–£50,000.

CHAPTER XVI.

POPULATION.

Note.—The figures shown throughout this Chapter for the Census of 30th June, 1947, are the preliminary results only, and population estimates shown for the intercensal period 1933–47 are revised figures which have been adjusted in accordance with these results. Both sets of figures are subject to revision on completion of the detailed tabulation of the 1947 Census results.

§ 1. Population Statistics.

Australian population statistics comprise two types—firstly, those derived from Census counts, and, secondly, those derived between Census dates by the application of vital and migration statistics to the numbers recorded at the last Census. These intercensal estimates are subsequently revised in the light of the next Census results.

The results obtained at the Census attain a very high degree of accuracy and may generally be accepted without reservation.

Since the establishment of the Commonwealth Bureau of Census and Statistics attention has been given to the improvement of intercensal estimates. The principal source of error lay in the migration records and efforts were directed towards their improvement. The 1911 Census disclosed an error in the precensal estimates of an amount equal to a percentage on the recorded oversea departures from Australia of 14.5 per cent. for males and 10 per cent. for females. These percentages were used as adjusting factors for recorded oversea departures during the intercensal period 1911–21. These adjusting factors were reduced after the 1921 Census to 1 per cent. for males and 4.5 per cent. for females and were finally discontinued after the 1933 Census. From the results of the 1947 Census it would again appear that the accuracy of the records of oversea migration is such that in future little adjustment to the recorded figures for Australia as a whole will be necessary. It should be noted, however, that the figures for oversea migration relate to passenger traffic and do not include crews of oversea vessels.

It is improbable that the same degree of accuracy as has been attained in the record of oversea migration can be reached in the case of interstate movements. Records are made of interstate passengers by sea, by rail, and by air, but it is impracticable to record the movements by road.

§ 2. The Census.

1. **Census-taking.**—Although "musters" of the population were carried out at least annually from 1788 to 1825 the first regular Census in Australia was not taken until 1828 when a count of the population of the Colony of New South Wales was made. Subsequent Censuses were taken sporadically in the various colonies until 1881 when a Census was taken on the same date throughout Australia.

In 1891 and 1901 Census-taking was still in the hands of the Government Statisticians of the States but, in 1911, under the provisions of the Commonwealth Census and Statistics Act, which provides for the enumeration to be made from one centre instead of by each State as formerly, the Commonwealth Statistician undertook the first Census for the Commonwealth of Australia. The second was taken in 1921.

In accordance with the provisions of the Commonwealth Census and Statistics Act 1905–1920, the third Commonwealth Census would have been taken in 1931, but, owing to the necessity for economy in governmental expenditure, it was decided to defer the Census, and the date was subsequently fixed for 30th June, 1933.

Owing to the 1939–45 War the fourth Census, due to be taken in 1941, was deferred until June, 1947, the Census for the whole of Australia being taken as for the night between 29th and 30th June, 1947.

2. **Results of the Censuses.**—The results of the Censuses taken over the period 1828 to 1947 are shown in the following table :—

POPULATION : AUSTRALIAN CENSUSES, 1828 TO 1947.

3. **Increase since 1881 Census.**—(i) *Australia.* The increase of population during the fourteen years between the 1933 Census and the 1947 Census (preliminary count) was 950,981 of which 432,042 were males and 518,939 were females, as compared with an increase of 1,194,105, comprising 604,241 males and 589,864 females, for the preceding intercensal period of 12¼ years. The population enumerated at each Census from 1881 to 1947 was as follows :—

POPULATION OF AUSTRALIA AT EACH CENSUS, 1881 TO 1947.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

Date.	Males.	Females.	Persons.	Masculinity.(*a*)
3rd April, 1881	1,214,913	1,035,281	2,250,194	117.35
5th April, 1891	1,704,039	1,470,353	3,174,392	115.89
31st March, 1901	1,977,928	1,795,873	3,773,801	110.14
3rd April, 1911	2,313,035	2,141,970	4,455,005	107.99
4th April, 1921	2,762,870	2,672,864	5,435,734	103.37
30th June, 1933	3,367,111	3,262,728	6,629,839	103.20
30th June, 1947(*b*)	3,799,153	3,781,667	7,580,820	100.46

(*a*) Number of males per 100 females. (*b*) Preliminary count.

(ii) *States and Territories.* The postponement till 1933 and 1947 of the Censuses which ordinarily would have been taken in 1931 and 1941 respectively destroyed the continuity of the decennial intercensal period which had obtained in Australia since 1881, and consequently, with the exception of the percentage increases per annum shown for Australia, which have been included to give a true comparison of the rate of growth during each intercensal period for Australia as a whole, the increases shown in the following table for the periods 1921–33 (12¼ years) and 1933–47 (14 years) are not directly comparable with each other nor with the results shown for the earlier periods.

The increases in the population of the several States and Territories during the last six intercensal periods have been as follows :—

POPULATION : INTERCENSAL INCREASES.

State or Territory.		1881–1891.	1891–1901.	1901–1911.	1911–1921.	1921–1933. (12¼ years)	1933–1947. (14 years) (c)

	Per cent. per annum	3.50	1.74	1.67	2.01	1.63	0.96

(a) Including Australian Capital Territory. (b) Part of New South Wales prior to 1911. (c) Subject to revision; based on preliminary count for 1947 Census.

NOTE.—Minus sign (−) denotes decrease.

The numerical increase during the period 1933–47 (14 years) was less by 243,124 than that for the period 1921–33 (12¼ years) and the percentage increase declined from 21.97 for 1921–33 to 14.34 for 1933–47. During the earlier period the increase corresponds to 1.63 per cent. per annum, and in the latter to 0.96 per cent. per annum.

§ 3. Distribution and Fluctuation of Population.

1. **Present Numbers.**—The population of Australia on 31st December, 1946, was estimated at 7,519,246 persons of whom 3,768,255, or 50.11 per cent., were males and 3,750,991 or 49.89 per cent., were females. These estimates are revised figures adjusted in accordance with the preliminary results of the 1947 Census. The increase during 1946, excluding deaths of defence personnel, was 88,479, equal to 1.19 per cent., males having increased by 45,534, or 1.22 per cent., and females by 42,945, or 1.14 per cent. On recorded figures, this increase was entirely due to the excess of births over deaths, namely, 101,718, there being a net loss by migration of 15,148 persons. The balance of 1,909 persons represents an unrecorded gain in population disclosed by the preliminary results of the 1947 Census. Recorded deaths of defence personnel numbered 531 of whom 522 were males and 9 females. The net increase in the population for 1946 has therefore been taken as 87,948—45,012 males and 42,936 females.

2. **Growth and Distribution.**—The abridged table which follows shows the growth in the population of the various States and Territories from 1788 to 1946. Details as to sex for the years 1788 and 1790 are not available.

ESTIMATED POPULATION : 1788 TO 1946.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

(a) Part of New South Wales prior to 1911. (b) Previously included with South Australia in which Northern Territory was incorporated prior to 1911. (c) Adjusted in accordance with the preliminary results of the Census of 30th June, 1947 and subject to further revision. (d) Includes all defence personnel enlisted in Australia irrespective of movements subsequent to enlistment.

Estimates of population for intercensal years are obtained by applying the vital and migration statistics for those years to the numbers recorded at the Census. Figures for interstate migration are liable to error owing to the impracticability of tracing movements of motor traffic. The estimates of populations of the Australian Capital Territory and the Northern Territory are particularly affected by this difficulty. In view of the uncertainty of war-time records of interstate migration, the populations of the States subsequent to 30th June, 1943, have been estimated on the basis of natural increase, deaths of defence personnel and oversea migration.

The extent of the unrecorded movement of population during the preceding intercensal period is determined when a Census is taken and it is the custom to adjust these intercensal estimates on the basis of the Census results. Estimates of population previously published for the period 1st July, 1939, to 30th June, 1943, had been revised in the light of data obtained from the Civilian Register of June, 1943, but these interim adjustments have now been excluded and a general revision has been made of population estimates for the complete intercensal period.

The results of the 1947 Census of the Australian Territories will be found in § 11 of this chapter.

A comparison of annual rates of growth of population of Australia and other countries will be found in § 4 par. 4 of this chapter.

The growth of the population of Australia and of each State and Territory thereof is illustrated by the graph accompanying this chapter on page 711.

3. **Mean Population.**—(i) *Method of Calculation.* From 1901 onwards the mean population for any year has been calculated by the formula :—

$$\text{Mean Population} = \frac{a + 4b + 2c + 4d + e}{12}$$

where a, b, c, d and e, respectively, are the populations at the end of the quarter immediately preceding the year and at the end of each of the four succeeding quarters, e.g., in the case of a calendar year, 31st December of the preceding year and 31st March, 30th June, 30th September and 31st December of the year under consideration. This formula gives a close approximation to the mean of a theoretical population. Prior to 1901 the mean population was calculated only for calendar years and was obtained by taking the arithmetic mean of the populations at the end of the previous year and the year in question progressing smoothly through the five values a, b, c, d, e.

In view of the tentative nature of the interstate population estimates subsequent to 30th June, 1943, the mid-year estimates were adopted in the previous issue of the Year Book as the mean of years covering periods which follow that date. Following the general revision of intercensal population estimates in accordance with the preliminary results of the Census of 30th June, 1947, however, mean populations for the calendar years 1943 onwards and for the financial years 1943–44 onwards have been computed on the customary basis and are shown in the following tables.

(ii) *Calendar Years.* The following table shows the mean population, adjusted in accordance with the preliminary results of the 1947 Census, for each State and Territory for the calendar years 1933 to 1946 :—

MEAN POPULATION : CALENDAR YEARS, 1933 to 1946.(*a*)

(*a*) Subject to revision. (*b*) Includes all defence personnel enlisted in Australia irrespective of movements subsequent to enlistment.

4. **Proportion of Area and Population, Density and Masculinity.**—A previous table showed the estimated number of persons in each of the States and Territories on 31st December, 1946. In the following table the percentages of the total area and of the total population represented by each State or Territory are given, together with the density and the masculinity of population :—

DENSITY AND MASCULINITY OF POPULATION, 1946.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

State or Territory.	Percentage of Total Area.	Percentage of Estimated Population, 31st December, 1946.			Density. (*a*)	Masculinity. (*b*)
		Males.	Females.	Persons.		
	%	%	%	%		
New South Wales	10.40	39.31	39.50	39.40	9.58	99.96
Victoria	2.96	26.72	27.55	27.13	23.22	97.45
Queensland	22.54	14.94	14.23	14.59	1.64	105.52
South Australia	12.78	8.42	8.61	8.52	1.69	98.23
Western Australia	32.81	6.78	6.44	6.61	0.51	105.71
Tasmania	0.88	3.40	3.38	3.39	9.71	101.17
Northern Territory ..	17.60	0.19	0.09	0.14	0.02	215.14
Australian Capital Territory ..	0.03	0.24	0.20	0.22	17.45	116.52
Australia	100.00	100.00	100.00	100.00	2.53	100.46

(*a*) Number of persons per square mile. (*b*) Number of males per 100 females.

Additional information regarding density and masculinity of population appears in later sections of this chapter.

5. **Urban and Rural Distribution.**—At the 1947 Census, information was obtained regarding the distribution of the population amongst metropolitan, provincial and rural areas. Metropolitan Divisions relate to the capital cities of the States and adjoining urban municipal areas within boundaries used for Census purposes at the dates of the respective Censuses. At the 1947 Census the Metropolitan Division of Victoria included areas (with a population of 30,490 persons) not included in that division at the 1933 Census when the population was 991,934. No changes occurred in boundaries of Metropolitan Divisions in other States.

Urban Provincial Divisions comprise the capital cities of the Territories and, in States other than Tasmania, cities and towns outside the Metropolitan Divisions which are separately incorporated. In Tasmania, where most of the towns included are not separately incorporated, boundaries were determined for Census purposes. In New South Wales a number of towns which in 1933 were separately incorporated have since been included in shires.

Rural Divisions comprise the remaining portion of each Territory and State and are affected by the intercensal changes in the areas of the Metropolitan and Urban Provincial Divisions. Figures for Rural Divisions represent therefore only a broad general classification based on administration principles rather than geographical. For instance, in New South Wales most of the increase in population shown for "Rural Division" was due to abolition of municipalities which in 1933 were classified as Urban Provincial; in Victoria a large part of the decrease in population shown for "Rural Division" was due to transfer in 1947 to the Metropolitan Division of adjoining urban parts of shire areas

Persons on board ships in Australian ports or travelling on long-distance trains or planes throughout Census night were classed as migratory.

The results obtained at the Census for each State and Territory are shown in the following table :—

URBAN AND RURAL POPULATION : 1947 CENSUS.

Total ..	3,799,153	3,781,667	7,580,820	100.00	100.00	14.34

NOTE.—Minus sign (−) denotes decrease.

At 30th June, 1947, the Metropolitan Divisions contained 50.72 per cent. of the total population of Australia as compared with 46.87 per cent. at the 1933 Census. Victoria had the largest percentage of population residing in the metropolitan area (59.70) but was closely followed in this respect by South Australia (59.21) During the intercensal period, however, the highest rates of increase in metropolitan population were experienced in Queensland and Western Australia.

A feature of the metropolitan population is its high femininity. In 1933, 52.5 per cent. of the metropolitan population was composed of females; in 1947 the proportion had fallen slightly to 51.9 per cent., being highest in Tasmania at 52.3 per cent.

6. **Metropolitan Population : Australia and Other Countries.**—In Australia there is an abnormal concentration of population in the capital cities, which are the only cities of outstanding importance in the various States. A comparison with the capitals of the more important countries is given in the following table. There is some doubt as to the comparability of the figures because of the abnormal conditions during the war and immediately following the war.

METROPOLITAN POPULATION : AUSTRALIA AND OTHER COUNTRIES.

State or Country.	Metropolis.	Year.	Metropolitan Population.
New South Wales	Sydney	1947	1,484,434(*a*)
Victoria	Melbourne	1947	1,226,923(*a*)

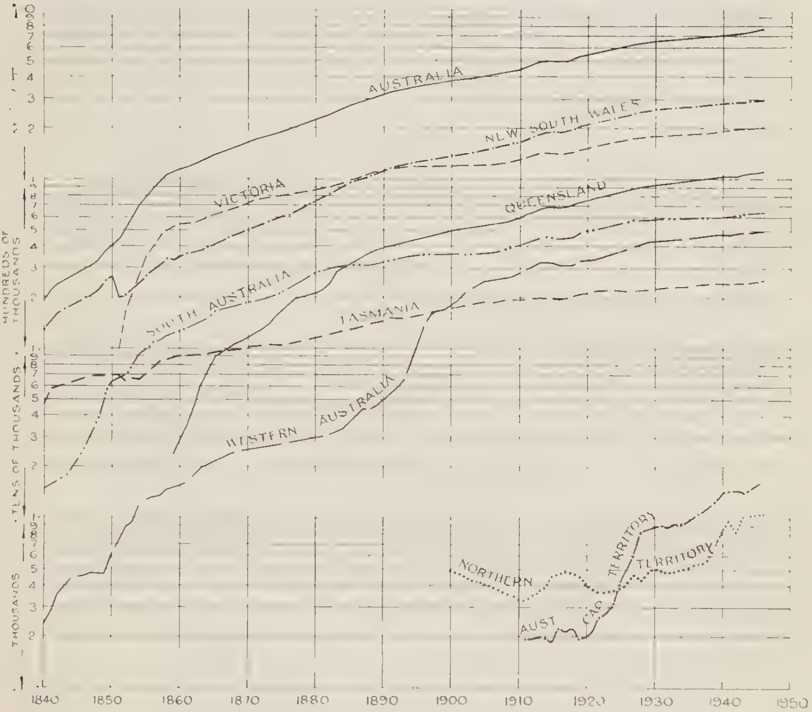
NOTE.—The population of Canberra in 1947 was 15,156.

POPULATION OF AUSTRALIA, 1840 TO 1946 (RATIO GRAPH).



(See page 704.)

EXPLANATION.—This is a ratio graph, the vertical scale being logarithmic, and the curves rise and fall according to the rate of increase or decrease. Actual numbers are indicated by the scale at the side of the graph.

The curves represent the estimated population of each State at 31st December each year.

(*a*) Comprises municipalities of Geelong, Geelong West, and Newtown and Chilwell. (*b*) Comprises municipalities of Ballaarat and Sebastopol. (*c*) Comprises municipalities of Bendigo and Eaglehawk. (*d*) Exclusive of urban population in any contiguous shire. (*e*) Includes Fremantle and suburbs, 27,926.

8. **Provincial Urban Areas.**—In par. 5, page 707, the percentage of the total population of each State which was located in incorporated urban provincial areas at the 1933 and 1947 Census is shown. In the following table, however, the aggregate population of all cities and towns, outside the metropolitan area of each State, with 2,000 or more and 3,000 or more inhabitants is shown, irrespective of whether such centres are incorporated separately or not. In addition, the percentage of the aggregate population of these cities and towns to the total population of the State is shown. These details are available so far only in respect of the 1933 Census. Similar particulars for the 1947 Census will be included in the next issue of the Year Book.

AGGREGATE POPULATION OF CITIES AND TOWNS OF SPECIFIED SIZE: 1933 CENSUS.

§ 4. Elements of Increase.

1. **Natural Increase.**—(i) *General.* The two factors which contribute to the growth of a population are the "natural increase," i.e., excess of births over deaths, and the "net migration," i.e., the excess of arrivals over departures. In earlier issues of the Official Year Book particulars of the natural increase from 1861 are given for each sex and State (see No. 22, page 899). In the following table particulars for each sex are given in States for each quinquennium from 1901 to 1945 and for the ten years 1937–46. The natural increase for Australia from 1861 to 1946 inclusive was 5,039,314, consisting of 2,342,593 males and 2,696,721 females, and represented 79.06 per cent. of the total increase in population. During the present century the rate of natural increase grew until it reached the maximum rate of 17.44 per thousand of population in 1914, but it steadily declined after that year to 7.07 in 1934. The figure rose to 7.99 per thousand in 1937 following small gains during each of the previous three years, fell slightly to 7.71 in 1939 but rose sharply during the war and in the post-war period, reaching the level of 13.62 in 1946.

In connexion with the two last-mentioned rates it should be particularly noted that from September 1939 "natural increase" has been regarded as excess of births over civilian deaths, i.e., no account has been taken of deaths of defence personnel.

POPULATION : NATURAL INCREASE (EXCESS OF BIRTHS OVER DEATHS) 1901 to 1946.

(*a*) Excess of births over deaths per 1,000 mean population. (*b*) Part of New South Wales prior to 1911. (*c*) Excess of births over civilian deaths per 1,000 mean population as from September 1939.

Note.—Minus sign (—) denotes excess of deaths over births.

The table above shows the decline which has taken place in the rate of natural increase in all States of Australia since the beginning of the century. The decline is evident notwithstanding the stepping-up of the rate occasioned by increased births since the commencement of the 1939–45 War and the overstatement due to the omission of deaths of defence personnel. During the first five years of the present century the average increment to the population of Australia by this means was 56,886 persons per annum. The increment rose to a maximum of 81,693 persons per annum in 1921–25, but thereafter fell to 52,650 persons per annum in the quinquennium 1931–35, increasing during 1936–40 to 54,489. During 1941–45 the average excess of births over civilian deaths was 74,750, which rose in 1946 to a record high level of 101,718.

(ii) *Comparison with other Countries.* Notwithstanding its low birth-rate, Australia has a higher rate of natural increase than most European countries, owing to the fact that its death-rate is very low. The following table gives a comparison between the rates of natural increase in 1946 for the several States of Australia and for the Dominion of New Zealand, with those of some of the principal countries for which such information is available. Corresponding annual rates for the period 1909–13 have also been appended. Comparisons with the earlier period show how general has been the fall in the rate of natural increase.

NATURAL INCREASE OF POPULATION: VARIOUS COUNTRIES.

INCREASE PER ANNUM PER 1,000 MEAN POPULATION.

State or Country.	1909–13.	1946.
Australasia—		
Tasmania (*a*)	18.8	17.0
New Zealand (*b*)	17.1	15.5
Queensland (*a*)	17.9	15.0
Western Australia (*a*)	18.1	14.9
South Australia (*a*)	16.8	14.7
Australia (*a*)	16.7	13.6
New South Wales (*a*)	18.0	13.1
Victoria (*a*)	13.6	12.4
Europe—		
Netherlands	15.1	21.7
Norway	12.4	13.3
Denmark	13.9	13.2
Italy	12.8	10.6
Northern Ireland	6.3	10.1
Sweden	10.4	9.1
Eire	6.3	8.9
Switzerland	9.3	8.7
Spain	9.3	8.5
Europe—*continued.*		
Germany	12.8	(*c*) 8.0
England and Wales	10.7	7.6
France	0.8	7.3
Scotland	10.7	7.2

Asia—		
Japan	13.1	7.7
Africa—		
Union of South Africa (whites only)	(*d*)	18.2
America—		
Canada	(*d*)	17.5
United States	(*d*)	13.3

(*a*) Excludes full-blood aboriginals. (*b*) Excludes Maoris. (*c*) Rate for year 1943 based on frontiers of 1937. (*d*) Not available.

2. **Net Migration.***—The other factor of increase in the population, namely, the excess of arrivals over departures, known as "net migration," is, from its nature, much more subject to variations than is the factor of "natural increase".

Particulars of the increase by net migration are given below for quinquennial periods from 1901 to 1945 and annually for the ten years 1937–46. Disturbances in the migration records were caused by interstate troop movements, which prevented accurate count of civilians travelling interstate. Interstate passenger traffic has, for this reason, been excluded from migration records since 30th June, 1943. The figures included in the table below from 1933 onwards have been adjusted to agree with the population estimates revised in accordance with the preliminary results of the Census of 30th June, 1947.

---

* The subject of migration is dealt with at some length later in this chapter.

(*a*) Part of New South Wales prior to 1911. (*b*) Excludes troop movements as from September, 1939. (*c*) Excludes interstate migration as from 1st July, 1943.

NOTE.—Minus sign (—) indicates excess of departures over arrivals.

There was a loss of population by migration in the first five years of the present century; in the next five quinquennial periods there were varying gains which averaged about 115,000 per quinquennium.

In the five years ended 1935 there was a net emigration of 10,886 and in the five years ended 1940 the net immigration was 43,128, which during the war period 1941–45 fell to 7,809 persons. A large net loss by migration of 15,148 persons in 1946 was due mainly to the departure of refugees and evacuees, and also fiancées, wives and children of British and Allied servicemen.

3. **Total Increase.**—The total increase of the population is obtained by the combination of the natural increase with the net migration, and, in the case of the years 1939 to 1946, with deaths of defence personnel.

The total increment to the population from the beginning of 1861 to the end of 1946 was 6,373,661 while that from 1901–46 was 3,753,907. The annual results for the last ten years are shown below, together with quinquennial figures from 1901 to 1945.

(*a*) Part of New South Wales prior to 1911. (*b*) Includes recorded deaths of defence personnel as from September, 1939. *See* letterpress page 702. (*c*) Excludes interstate migration as from 1st July, 1943.

NOTE.—Minus sign (−) denotes decrease.

Differences between the figures above and totals of figures for natural increase and net migration shown in preceding tables, represent, after taking into account deaths of defence personnel, unrecorded movement of population from 1st July, 1933, to 31st December, 1946, as disclosed by the preliminary results of the 1947 Census. Particulars of total increase have been adjusted for this discrepancy but no separate adjustment has been applied to individual elements of increase. Intercensal discrepancies disclosed by previous Censuses were adjusted on recorded oversea departures.

4. **Percentage Rates of Increase.**—(i) *Australia.* The annual percentage rates of increase of population in Australia during each of the years 1940 to 1946 were as follows :—1940, 1.04 ; 1941, 0.93 ; 1942, 0.81 ; 1943, 0.96 ; 1944, 1.07 ; 1945, 1.14 ; 1946, 1.18. These rates are based on the preliminary results of the 1947 Census. Rates based on final Census results will be found in the Appendix.

(ii) *Various Countries.* The table hereunder gives approximate percentage rates of increase of the population of Australia and its component States, in comparison with those for other countries :—

(*a*) Revised in accordance with the preliminary results of the 1947 Census. (*b*) Includes Australian Capital Territory. (*c*) Includes Northern Territory. (*d*) Excludes armed forces overseas at 31st December, 1941. (*e*) Not available. (*f*) Excludes war losses.

NOTE.—Minus sign (−) denotes decrease.

(iii) *Variations in the Rates.* The annual rate of increase of the population during the present century has averaged 1.51 per cent., but the results from year to year have deviated widely from this figure. In the following table the period 31st December, 1900, to 31st December, 1945 has been arranged into certain defined groups of years according to the occurrence of influences seriously affecting the growth of population :—

POPULATION : PERIODICAL PERCENTAGE RATES OF INCREASE.

Period from 31st December—	Interval.	Increase during Period.	Average Annual Increase.	Average Annual Percentage Rate of Increase.		
				Natural Increase.	Net Migration.	Total.
	Years.	Million.	Thousand.	%	%	%
1900 to 1913 ..	13	1.13	87	1.59	0.53	2.04
1913 to 1923 ..	10	0.86	86	1.50	0.15	1.64
1923 to 1929 ..	6	0.68	113	1.27	0.64	1.88
1929 to 1939 (*a*)..	10	0.57	57	0.82	0.03	0.85
1939 to 1945 (*a*)..	6	0.43	71	0.92	0.05	0.97

(*a*) Revised in accordance with the preliminary results of the Census of 30th June, 1947. The figures include Australian defence forces overseas as from September, 1939.

Up to 1913 the rate of natural increase was rising, and this factor, coupled with the impetus given to immigration from 1911 onwards, was responsible for the comparatively high annual rate of 2.04 per cent. during this period. The 1914–18 War was a dominating influence in the decade 1914–23, and its effects can be seen in the reduction of the rate from 2.04 to 1.64 per cent. In the next span 1924–29 a more settled and prosperous era was experienced; migration was resumed on a large scale and, despite a further decline in the rate of natural increase owing to the persistent fall in the birth-rate, the annual rate of growth rose to 1.88 per cent. After 1929 came the economic depression, and immigration ceased—in fact Australia actually lost people through an excess of departures over arrivals in 1930, 1931, 1932 and 1935. The rate of natural increase also fell, and the rate of growth of the population receded to 0.85 per cent. per annum. With the outbreak of war in 1939, Australia entered a new phase in her demographic history the full effects of which will not be seen for some time to come. The immediate effect of the war was to increase the number of marriages and to reverse the downward trend in fertility. The number of births increased each year from 1940 to 1945 and these increases more than offset the rise in deaths due to war casualties and higher civilian death rates. As might be expected, migration over these years was negligible.

If the population increased at the average rate of the present century, namely, 1.51 per cent. per annum, it would double itself in 46 years. It has been estimated, on the assumptions that the 1932–34 birth and death rates remain unchanged and that no increment to the population results from migration, that the average annual rates of natural increase would be for the period, 1933–53, 0.64 per cent.; 1933–63, 0.55 per cent. and 1933–73, 0.46 per cent. In this respect the experience in Australia would be very similar to that of many other countries as the result of the low birth-rate.

Rates of increase from 1860 to 1946 may be found for each State and Territory of Australia in *Demography Bulletin*, No. 64, 1946.

§ 5. Density.

1. **General.**—From certain aspects population may be less significant in respect of its absolute amount than in its relation to the area of the country. Australia, with an area of 2,974,581 square miles, and a population on 31st December, 1946, of approximately 7,519,246 excluding about 47,000 full-blood aboriginals, has a density of only 2.53 persons to the square mile, and is, therefore, the most sparsely populated of the civilized countries of the world. For the other continents the densities are approximately as follows:—Europe, 122; Asia, 73; Africa, 14; North and Central America, 21; and South America, 13. The population of Australia has thus about one-fifth of the density of South America and of Africa; about one-eighth of that of North and Central America; about one-thirtieth of that of Asia; and about one-fiftieth of that of Europe.

On account of the enormous area of Australia and the unsuitability for settlement of much of the country, the density of population must necessarily increase slowly. In Australia as a whole the figure has increased from 1.29 per square mile in 1901 to 2.53 in 1946. Victoria's density, however, has grown from 13.77 to 23.22 and that of New South Wales from 4.43 to 9.58 in the same period.

A map showing the density of population throughout Australia at the 1933 Census appears on page 712 of this chapter. When comparing the density of population of the several States consideration should be given to the average annual rainfall distribution in each State as an indication of the climatic influence upon probable population numbers. The area of New South Wales receiving less than 10 inches of rainfall is 20 per cent.; Victoria, nil; Queensland, 13 per cent.; South Australia, 83 per cent.; Western Australia, 58 per cent.; Tasmania, nil; and Australia, 38 per cent.

Particulars concerning the number and density of the population of the most important countries of the world at 31st December, 1939, are given in the following table. These figures have been taken from the *Statistical Year Book of the League of Nations*, 1942–44. In some instances, more particularly in the cases of Asia and Africa, the numbers must be considered as rough approximations only.

POPULATION OF THE WORLD : NUMBER AND DENSITY, 1939.

Country.	Population. ('000 omitted).	Density. (a)

(a) Number of persons per square mile. (b) Includes Austria and Sudeten Territory. (c) Includes Albania. (d) Includes Dutch New Guinea. (e) Excludes European Territory—1,330,000. (f) Includes British Cameroons. (g) Subsequently revised in accordance with the preliminary results of the 1947 Census, to 7,057,000. Includes 52,000 full-blood aboriginals.

2. **Position of the British Empire.**—The approximate relationship of the British Empire to the world as a whole in regard to its area and population is given hereunder :

AREA AND POPULATION : BRITISH EMPIRE AND WORLD.(a)

Particulars.	The World.	British Empire.
Area in square miles (excluding Polar Circles) ..	51,235,000	12,502,127
Population	2,168,638,000	560,095,000
Population per square mile	42.33	44.80

(a) *Statistical Year Book of the League of Nations*, 1942–44, and *The Stateman's Year Book*, 1945

§ 6. General Characteristics.

1. **Sex Distribution.**—(i) *States.* The number of males to each hundred females has been adopted as a measure of the "masculinity" of the population. On pp. 163–5 in the second issue of the Official Year Book a table was included showing the masculinity of the population of each of the States for each year from 1796 to 1907. In the fifth issue, on p. 123, the figures in this table for the years 1901 to 1907 were modified in accordance with the results of the 1911 Census.

With the exception of some dislocation arising from the 1914–18 War there has been a continuous diminution of the masculinity of the population. In 1900, the masculinity was 110.55; in 1910, 107.87 and in 1920, 103.47. After 1921, however, the masculinity tended to rise until 1927 (104.54), since when it has gradually fallen to 100.46 in 1946.

A reduction in the masculinity of a population may be expected where persons in the higher age-groups constitute an increasing proportion of the total population. This is a direct consequence of the greater longevity of females. A falling birth-rate tends to reduce masculinity while a rising birth-rate tends to increase it.

The following table shows the masculinity of the population at quinquennial intervals from 1901 to 1940 and for each year from 1941 onwards :—

POPULATION : MASCULINITY, 1901 to 1946.

(Number of Males per 100 Females.)

As at 31st December—	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Nor. Terr.	Aust. Cap. Terr.	Aust.
1901	110.12	101.16	125.78	102.71	155.69	107.90	593.32	(*a*)	110.15

(*a*) Part of New South Wales prior to 1911. (*b*) Revised in accordance with the preliminary results of the 1947 Census.

(ii) *Various Countries.* The difference between young and old countries in the masculinity of their population is clearly illustrated by the comparisons furnished in the following table. For countries which were belligerents at the outset of the 1939–45 War the latest available figures up to 1939 are given and for other countries figures for 1939 or the nearest year thereto. There is some doubt as to the comparability of figures for subsequent years.

POPULATION : MASCULINITY IN VARIOUS COUNTRIES.

Country.	Year.	Number of Males to each 100 Females.	Country.	Year.	Number of Males to each 100 Females.
Canada	1938	106.5	Norway	1939	96.3
Eire	1936	105.0	Spain	1940	95.9
Union of South Africa(*a*)	1939	102.8	Germany	1939	95.8
New Zealand(*b*) ..	1939	102.3	Hungary	1939	95.7
Australia(*c*)	**1939**	**102.1**	Poland	1938	95.3
United States of America	1940	100.7	U.S.S.R. (Russia) ..	1939	94.8
Japan	1939	100.4	Northern Ireland ..	1939	94.7

Sweden	1939	98.2	France	1939	93.0
Belgium	1938	98.0	Scotland	1938	92.9
Denmark	1939	97.4	England and Wales	1938	92.4

(*a*) White population only. (*b*) Excludes Maoris. (*c*) Excludes full-blood aboriginals.

2. **Age ; Conjugal Condition ; Birthplace ; Nationality ; Race ; Religion : Industry ; and other General Characteristics.**—Particulars of the general characteristics of the population as published in paragraphs 2 to 14 of the previous issue of this publication are obtained only at a Census. The latest available information, recorded at the Census of 30th June, 1947, will be found in the Appendix.

§ 7. Dwellings.

Most of the questions on the Census Schedule related to the individual members of the household, but other important questions referred to the dwellings in which the people were living at the date of the Census. From the replies to these questions much valuable information was obtained concerning housing conditions. Detailed tables summarizing the information obtained at the 1933 Census concerning class of dwelling, number of rooms, nature of occupancy, and rentals may be found on pages 493–9 of Official Year Book No. 36. Similar particulars for the 1947 Census are not yet available. The two tables following, however, summarize the preliminary information relating to dwellings in Urban and Rural Divisions and in each State and Territory at the Census of 30th June, 1947.

For Census purposes a " dwelling " is defined as a collection of rooms occupied by a household group living together as a family unit, whether comprising the whole or only part of a house or other building (including temporary structures). The Census definition of a dwelling includes private houses, tenements, flats, hotels, boarding-houses, hospitals, other institutions and any other structure used for the purpose of human habitation, but excludes dwellings occupied solely by full-blood aboriginals, and wagons, vans, etc., in which persons were camping out on the night of the Census. Where two or more separate buildings in one place are used by a single family for dwelling purposes, the whole is regarded as one dwelling. On the other hand, where a building is subdivided into tenements or flats which are occupied as separate units, each unit is counted as a dwelling. A flat has been defined as a self-contained dwelling unit which can be completely closed off and which includes both cooking and bathing facilities.

Since the 1933 Census, the number of dwellings in Australia occupied, unoccupied and being built increased by 377,236 or 23.31 per cent., a much higher rate of increase than that of 14.3 per cent. for the population during the same period. At the previous Census there was one private dwelling occupied for every 4.4 persons in Australia but at 30th June, 1947, this ratio had increased to one dwelling for every 4.0 persons.

DWELLINGS : AUSTRALIA, 1947 CENSUS.

(EXCLUDING DWELLINGS OCCUPIED SOLELY BY FULL-BLOOD ABORIGINALS.)

(Preliminary figures—Subject to revision.)

Division.	Occupied.	Unoccupied. (a)	Being Built. (b)	Total.	Percentage of Total Dwellings.
Urban—					%
Metropolitan	985,931	7,397	17,871	1,011,199	50.67
Provincial	332,861	7,363	6,679	346,903	17.38
Rural	595,145	32,281	10,208	637,634	31.95
Total	1,913,937	47,041	34,758	1,995,736	100.00

(a) Including "week-end" and holiday dwellings and other dwellings temporarily unoccupied on the night of the Census. (b) Relates substantially to unoccupied dwellings of all types being built at 30th June, 1947, and is not identical with the number of houses under construction at the time of the Census.

Details for each State and Territory are as follows :—

DWELLINGS : STATES, 1947 CENSUS.

(EXCLUDING DWELLINGS OCCUPIED SOLELY BY FULL-BLOOD ABORIGINALS.)

(Preliminary figures—Subject to revision.)

State or Territory.	Occupied.	Unoccupied. (a)	Being Built. (b)	Total.
New South Wales	747,666	17,392	12,981	778,039
Victoria	530,579	11,412	11,328	553,319
Queensland	272,843	9,647	4,175	286,665

Northern Territory	2,705	34	22	2,761
Australian Capital Territory ..	3,620	52	316	3,988
Total	1,913,937	47,041	34,758	1,995,736

(a) Including "week-end" and holiday dwellings and other dwellings temporarily unoccupied on the night of the Census. (b) Relates substantially to unoccupied dwellings of all types being built at 30th June, 1947, and is not identical with the number of houses under construction at the time of the Census.

§ 8. Oversea Migration.

1. **Oversea Migration during Present Century.**—Earlier issues of the Official Year Book contain in summary form tables showing the increase of population by net migration from 1861 to the latest date, while the Demography Bulletins issued by this Bureau give this information for the individual years. On pp. 721–2 of this chapter will be found a summary showing, in quinquennial groups from 1901 to 1945 and in single years from 1937 to 1946, the increase by net migration to the population of the States. The following table shows for Australia the arrivals and departures and the net migration since 1901 :—

OVERSEA MIGRATION : AUSTRALIA.

Period.	Arrivals.			Departures.			Net Migration.		
	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.

(*a*) Includes movements of defence personnel. (*b*) Excludes movements of defence personnel as from September, 1939.

NOTE.—Minus sign (−) indicates excess of departures over arrivals.

Net migration has varied greatly during the foregoing periods, reaching a maximum in the five years 1921–25. The 1914–18 War, during which 331,781 members of the Australian Imperial Forces embarked for service overseas, was responsible for a very large increase in the departures during the years 1914–18. Immigration increased rapidly from 1910 to 1912, the gain during the latter year being the greatest in any one year in the present century (with the exception of 1919, when the troops were returning to Australia).

Owing to the depressed economic conditions in Australia the gain by migration decreased rapidly during 1928 and 1929 and there were actual losses of population during the next three years. There was little variation in the figures for arrivals and departures from 1933 to 1936, but in 1938 the arrivals exceeded the departures by 9,137 and in 1939 the excess was 13,891, the greatest gain to the population by migration since 1928. The excess of arrivals over departures in 1940 was 13,400, but with the outbreak of War in the Pacific area, the figure fell to 5,184 for 1941, 6,166 for 1942, 1,271 for 1943 and in 1944, 1945 and 1946 there were net losses by migration of 2,183, 2,629 and 15,148 persons respectively.

The influence of the Commonwealth immigration policy is clearly reflected in the figures above. The average annual number of nominated and selected immigrants who arrived in Australia during the periods specified was as follows :—

IMMIGRATION : NUMBER OF NOMINATED AND SELECTED PERSONS.

Period.	Average Annual Number.	Year.	Recorded Number.
1901–05	Not available	1933	72
1906–10	7,945	1934	159
1911–15	30,111	1935	100
1916–20	2,326	1936	9
1921–25	23,090	1937	141
1926–30	19,881	1938	852
1931–35	156	1939	2,686
1936–40	766	1940	140
		Total to end of 1940	1,068,311

The number of nominated and selected immigrants reached its peak in 1926, when 31,260 arrivals were recorded. Assisted migration was discontinued for the duration of the war. For information on post-war policy see § 9 (A) following.

2. **Country of Embarkation and Disembarkation.**—The countries from which the migrants arrived or to which they departed are shown for 1945 and 1946 in Demography Bulletin Nos. 63 and 64 respectively. Annual averages for the period 1925–29 appear in Official Year Book No. 25.

3. **Racial Origin.**—The majority of migrants to and from Australia are of British race, while only a small proportion are of non-European race.

During the period 1926–30 there was such a considerable influx of Italian, Greek and Yugoslav settlers, that, despite considerable concurrent emigration they provided a large permanent addition to the population of Australia. In the following quinquennium 1931–35, there was a considerably reduced increment to the Italian population by migration whilst there was actually an excess of departures of most other races. The five years 1936–40, however, saw a resumption of immigration of Southern Europeans, while refugees were responsible for the heavy increase in net immigration of German nationals. The net movement of non-Europeans is generally small, although with the influx of considerable numbers of evacuees of non-European race a marked excess of arrivals over departures was recorded during the war period. In 1946, the first post-war year, many of these war-time evacuees were repatriated. The numbers of arrivals and departures and the net gain or loss by migration during the five years 1936–40 and the years 1945 and 1946 classified according to racial origin are shown in the following table :—

RACIAL ORIGIN OF ARRIVALS AND DEPARTURES : AUSTRALIA.

Racial Origin.	Arrivals.			Departures.			Net Migration.		
	1936–40.	1945.	1946.	1936–40.	1945.	1946.	1936–40.	1945.	1946.

(*a*) Includes Maltese and Cypriote. (*b*) Includes Austrian.

NOTE.—Minus sign (−) indicates an excess of departures over arrivals.

Although the title of this table has been changed, the term " Racial Origin " being substituted for " Nationality or Race ", there has been no variation in the method of compilation. The particulars shown are directly comparable with tables previously published under the heading of " Nationality or Race ". The figures should not, however, be regarded as a completely accurate record of " Racial Origin " as they are based on the passenger's own statement as to race, which in many cases may incorrectly express the country of his nationality or birthplace rather than actual race. So far as available information permits, however, migrants are classified according to race. This applies particularly in cases where a person's nationality differs from race through naturalization or marriage.

Over 81 per cent. of the net migration in 1926–30 consisted of persons of British nationality and the remaining 19 per cent. were other Europeans. In the quinquennium, 1931–35, there was a loss by migration of persons of British nationality and a gain of those of Italian nationality. Non-Europeans, with the exception of Indians and Cingalese, also showed an excess of departures. During 1936–40 migrants of all nationalities except Japanese showed a gain. In 1944, 1945 and 1946 the net losses were due in large measure to the departure for the United States of America of Australian wives and children of American servicemen, and, when conditions permitted after the war, the departure of Australians to Papua and New Guinea and of large numbers of war evacuees who were returned to their home countries.

4. **Classes of Arrivals and Departures.**—Since 1st July, 1924, the arrivals and departures have been classified according to the declared intention of the migrant in regard to residence. The figures for the five-year periods 1931–35, 1936-40 and 1941–45, and for the years 1945 and 1946 are as follows :—

MIGRANTS CLASSIFIED ACCORDING TO INTENDED RESIDENCE : AUSTRALIA.

Classification.	1931–35.	1936–40.	1941–45.	1945.	1946.
Permanent new arrivals ..	54,444	88,712	32,624	7,512	18,217
Australian residents returning from abroad ..	84,554	104,870	11,150	3,760	6,330
Temporary visitors ..	100,325	127,730	20,151	4,104	10,343
Total Arrivals ..	239,323	321,312	63,925	15,376	34,890
Australian residents departing permanently ..	71,670	51,006	22,399	10,785	29,806
Australian residents departing temporarily ..	79,426	94,650	9,163	2,788	6,702
Temporary visitors ..	99,108	132,528	24,554	4,432	13,530
Not Stated	5	..	..	..	..
Total Departures ..	250,209	278,184	56,116	18,005	50,038

NOTE.—The figures for permanent new arrivals include evacuees arriving in Australia during the war years as follows :—1940 : 1,404 males, 3,139 females ; 1941 : 600 males, 1,670 females ; 1942 : 4,033 males, 4,105 females ; 1943 : 1,167 males, 591 females ; 1944 : 23 males, 28 females ; 1945 : 216 males, 153 females.

Although permanent new arrivals increased during each of the eight years prior to 1939 the number in the latter year was considerably below the annual average for the quinquennium 1926–1930 while the war caused a large drop in the number from 1940. Permanent departures were far more numerous in the years 1928 to 1931 than in earlier years but they declined during each of the six years ended 1937, the number in the latter year being the lowest recorded until the outbreak of war in 1939. Up to and including 1929 there was a considerable gain of permanent residents, but during 1930 and 1931 there was a heavy loss. The loss was very much reduced in 1932, 1933 and 1934, whilst during the five years up to and including 1939 there was a net gain in permanent residents of more than 28,000.

In the table above "permanent" residence means residence of a year or more, travellers being classified under this definition according to information supplied by them at the time of arrival or departure. For various reasons the intentions of travellers are subject to subsequent modification, and the figures quoted in the table must therefore be accepted as a record of intention only.

§ 9. Immigration.

(A) Assisted Migration into Australia.

1. **Joint Commonwealth and States' Scheme.**—In 1920 an arrangement was arrived at between the Commonwealth and State Governments whereby the Commonwealth Government became responsible for the selection and medical inspection of British migrants from the United Kingdom, and for their transport to Australia. The State Governments advised the Commonwealth from time to time as to the numbers and classes of migrants they were prepared to receive, and became responsible for their subsequent settlement. In addition, personal and group nominations were accepted by the States, the nominators undertaking responsibility for their settlement and aftercare.

In 1930 owing to the financial and industrial depression it was decided to confine the grant of assisted passages to the wives and dependent children of men who arrived in Australia prior to 1st January, 1930.

On 4th March, 1938, the Commonwealth Government decided, in co-operation with the Government of the United Kingdom, to resume assisted migration, and provision was made for the grant of assisted passages from the United Kingdom in favour of—

- (*a*) persons (relatives and friends) resident in the United Kingdom nominated by individuals or approved organizations;
- (*b*) migrants specially requisitioned for by any State; and
- (*c*) persons of British stock resident in the United Kingdom, who would be in possession of—
    - (1) in the case of a married man, not less than £300 capital on arrival in Australia, or alternatively, a pension or other income of not less than £100 per annum;
    - (2) in the case of a single man not less than £50 capital on arrival.

It was also decided that the Commonwealth Government would co-operate with any State to the extent that the migration policy of that State coincided with the policy of the Commonwealth, provided that the Commonwealth would itself deal with nominations which did not fall within the ambit of the policy of any particular State, but which were acceptable under the Commonwealth policy.

2. **Number of Persons Assisted.**—The number of British assisted migrants for the years 1931 to 1940 inclusive, and the total from the earliest years up to the end of 1940 (when immigration ceased) are given in the following table :—

IMMIGRATION : NUMBER OF PERSONS ASSISTED.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust	W. Aust.	Tas.	A.C.T.	Total.
1931	76	45	43	6	99	5	1	275
1932	21	3	23	..	123	5	..	175
1933	11	3	1	1	56	..	..	72
1934	11	4	1	..	143	..	..	159
1935	1	..	1	..	98	..	..	100
1936	4	2	1	..	2	..	..	9
1937	60	33	6	3	39	..	..	141
1938	410	179	19	43	161	38	2	852
1939	1,309	544	376	126	304	24	3	2,686
1940	92	20	16	4	5	3	..	140
Total from earliest years to end of 1940.. ..	347,705	256,090	236,413	115,994	87,015	25,022	72	1,068,311

3. **Suspension of Assisted Passage Scheme during War.**—After the outbreak of hostilities in 1939 it was decided to discontinue the grant of assisted passages for the duration of the war. Resumption of assisted migration was the subject of recent negotiations between the Commonwealth and United Kingdom Governments.

4. **Free and Assisted Passage Agreement, March, 1945.**—(i) *General.* An agreement was signed in March, 1945, between the Commonwealth and British Governments for free and assisted passages for British residents desirous of migrating to Australia. As from the opening date, 31st March, 1947, the Commonwealth Government will undertake to accept eligible persons provided they are medically fit and otherwise regarded as suitable for settlement. Information concerning conditions and opportunities for employment will be provided by the Australian High Commissioner for the guidance of all prospective settlers. Expenses incurred in the selection of applicants will be borne by the Commonwealth Government, which has also undertaken to provide free transportation from the port of disembarkation to the ultimate destination in Australia, and accommodation for a limited period wherever necessary. In this connexion, the Commonwealth has undertaken to make adequate administrative arrangements with the States in regard to the reception, placement and aftercare of all migrants upon arrival, and to secure the co-operation of approved voluntary organizations.

Substantial rights, including health, medical services, sickness and unemployment benefits, maternity allowances and child endowment under the Australian Social Security Services Scheme will be extended to settlers as from the date of arrival; but it has not been possible to extend employment preference to British ex-servicemen and women. Intended settlers will not, however, be granted a passage unless there is a reasonable assurance that they will obtain employment on arrival.

Persons already established in Australia may nominate for assisted passages friends or relatives resident in the United Kingdom who are eligible for consideration.

It is intended that the scheme will remain operative only so long as favourable conditions for settlement are known to exist.

(ii) *Free Passages.* This part of the scheme will be financed by the United Kingdom as part of its re-settlement programme. Persons eligible for consideration are British ex-servicemen and women, wherever demobilized (together with their dependents) if they were resident in the British Isles or were in the United Kingdom Forces overseas on 1st September, 1938, and have served in a full-time capacity in the Armed Forces or Merchant Navy of the United Kingdom during any period after 25th May, 1939.

(iii) *Assisted Passages.* Assisted passages will be granted under the Empire Settlement Acts of the United Kingdom to suitable British subjects normally resident in the United Kingdom and who do not come within the scope of (ii) above. However, the Commonwealth normally will not be prepared to accept single persons or married persons without children if they are over 45 years of age. Married persons, if they are accompanied by one or more children, may be accepted irrespective of age, and in the case of parents who are joining children already established in Australia, no age limit is imposed. Each settler, male or female, of 19 years of age and over will be required to contribute £10 (English currency) toward the cost of a passage, and each juvenile of 14 but not more than 18, £5 (English currency). Children under 14 years of age will travel free. The cost of the latter and the remainder of the cost of the others will be borne equally by the two Governments. A migrant not remaining in Australia for a minimum of two years will be liable for repayment of the amount of free grant.

(B) The Regulation of Immigration into Australia.

1. **Powers and Legislation of the Commonwealth.**—(i) *Constitutional.* Under Section 51, xxvii. and xxviii. of the Commonwealth Constitution, the Parliament of the Commonwealth is empowered to make laws with respect to immigration and emigration and the influx of criminals.

(ii) *Legislation.* A summary of the provisions of the Immigration Act 1901–1925 and the Contract Immigrants Act 1905 (except the provisions of the Amending Immigration Acts of 1920, 1924 and 1925, which will be found in Official Year Book No. 21, p. 927), containing particulars regarding the admission of immigrants, prohibited immigrants, the liabilities of shipmasters and others, and kindred matters will be found in preceding issues of the Official Year Book (see No. 12, pp. 1166–8).

The Immigration Act 1930.—Under this Act it is provided that Section 5, sub-section (1) of the Immigration Act 1901–1925 applies to any person, who, since the commencement of the Immigration Restriction Act 1901, evaded an officer when entering Australia, or gained admission or re-admission by fraudulent means. Steps can be taken to deal with such persons as prohibited immigrants at any time after they have landed in Australia.

The Immigration Act 1932.—This Act provides (*a*) that any alien who fails to satisfy an officer that he holds a landing permit, or that his admission has been authorized, may be prohibited from landing; (*b*) for the increase from three to five years of the period during which a person may be declared a prohibited immigrant; (*c*) that a person not a British subject and who has been convicted of a crime of violence against the person may be deported pursuant to an order of the Minister without his being subjected to a dictation test; (*d*) for the deportation of a person who has been convicted of a criminal offence or who has become an inmate of an insane asylum or public charitable institution within five years from the date of arrival instead of three years as hitherto; and (*e*) that where the wife of a person whom it is proposed to deport so desires, her name and the names of her dependent children may be included in her husband's deportation order. This would of course apply only to wives and children who were themselves immigrants.

The Immigration Act 1933.—This Act provides that Section 8A, as amended by the Immigration Act 1932—see (*d*) above—shall apply to persons who arrived in Australia since the commencement of the Section, i.e., since 2nd December, 1920. It also makes statutory provision for the taking of securities for compliance with the provisions of the Act.

The Immigration Act 1935.—The main purpose of this Act was to add a penalty clause to Section 5 of the principal Act, to overcome a legal difficulty which had arisen in regard to relying on Section 7 for the imposition of penalties on persons convicted under Section 5 on charges of being prohibited immigrants offending against the Act.

The Immigration Act 1940.—This Act provides (*a*) that the holder of a landing permit shall on demand satisfy an officer that he is able to comply with the conditions specified in the permit; (*b*) for the issue of, and extensions of, certificates of exemption; (*c*) that a non-British person who is convicted of a crime of violence against the person or of extorting any money or thing by force or threat, or of any attempt to commit such a crime or who is convicted of any other criminal offence for which he is sentenced to imprisonment for one year or longer may be deported; (*d*) for the exercise of discretion by the Minister in enforcing an order for the deportation of a person; and (*e*) for the provision and enforcement of maintenance guarantees in relation to persons seeking to enter Australia.

2. **Conditions of Immigration into Australia.**—(i) *Immigration of Non-European or Coloured Persons.* In pursuance of the established policy, the general practice is not to permit Asiatics or other coloured immigrants to enter Australia for the purpose of settling permanently.

Special arrangements were made with India, Japan and China under which facilities were afforded for subjects of those countries who were bona fide merchants, students, or tourists to enter and remain in Australia under exemption whilst they retained their status. Following on the outbreak of war, however, the entry of Asiatics other than the temporary admission of some refugees from Far Eastern countries and the Pacific Islands was suspended.

(ii) *Immigration of White Aliens.* Aliens seeking to enter Australia for permanent residence are required to obtain landing permits or special authority for admission from the Department of Immigration.

Following the outbreak of war, alien immigration into Australia was severely restricted and the admission of aliens from European countries was virtually suspended.

An interim immigration policy now in force provides for the admission of the following classes whose maintenance and accommodation have been guaranteed by persons resident in Australia :—(*a*) friendly aliens ; (*b*) displaced and persecuted persons of ex-enemy nationality : and (*c*) the wives and unmarried children of ex-enemy nationals whose husbands or fathers are resident in the Commonwealth.

Ex-enemy nationals other than the wives and minor children of persons resident here are not eligible for admission.

It is intended to revise this policy as soon as circumstances permit.

A report has been made on the availability of European migrants by the committee representing the Commonwealth Parliament and employers' and employees' organizations which visited Europe in 1945 to attend the International Labour Office Conference, and was commissioned to act as an Australian Immigration Advisory Committee.

(iii) *General Information.* General information as to conditions of entry into Australia may be obtained from the following officers :—

(*a*) In Australia: The Secretary, Department of Immigration, Canberra, A.C.T., (*b*) In Great Britain : the Official Secretary, High Commissioner's Office, Australia House, Strand, London, (*c*) in other British Dominions : the High Commissioner for Australia, (*d*) in other countries where Australia is represented : the Secretary, Australian Legation.

For details of the Dominions and countries included see the section entitled "Diplomatic and other Representatives Overseas and in Australia " in Chapter XXVIII.

3. **Persons Admitted Without Dictation Test.**—The following table shows the number and nationalty of persons admitted during 1945 and 1946 without passing the dictation test. Persons who are permitted to land pending transhipment to another country are excluded.

PERSONS ADMITTED WITHOUT DICTATION TEST : NATIONALITIES, AUSTRALIA, 1945 AND 1946.

Nationality or Race.	1945.	1946.	Nationality or Race.	1945.	1946.

Swedish	16	23	Total	18,501	35,123

(*a*) Includes Javanese. (*b*) Included with Indonesian.

4. **Departures of Persons of Non-European Races.**—The following figures in common with the other statistics in this sub-section have been compiled by the Department of Immigration and exclude transhipments. They are not therefore in agreement with departures. compiled in this Bureau and published elsewhere, which include transhipments. The number of persons of non-European race who left Australia during 1945 and 1946 were 8,142 and 7,319 respectively, distributed among the various nationalities as follows (1945 figures shown in parenthesis) :—American Negroes, nil (28); Chinese 1,495 (2,029); Indonesians including Javanese, 806 (2,210); Indians and Cingalese, 4,459 (3,455); Malays 80 (113); Pacific Islanders, nil (20); Papuans and New Guinea Natives, 63 (73); Timorese, nil (9); other coloured 416 (205).

(C) Passports.

Provision is made in the Immigration Act 1901–1940 for the production of a passport by each person over 16 years of age who desires to enter Australia. Under the Passports Act 1920, it was compulsory also for each person over 16 years of age to be in possession of a passport or other document authorizing his departure. This Act has now been superseded by the Passports Act 1938, which repealed the compulsory provisions and is now simply a machinery measure governing the issue of passports and the grant of other passport facilities. The Act extends to the Territories of Australia, including Papua, Norfok Island and the Mandated Territory of New Guinea.

Although not compulsory under the 1938 Act to be in possession of a passport when leaving Australia, it is very desirable in their own interests that Australians proceeding abroad should provide themselves with a passport as a means of establishing their identity and nationality. The possession of a passport is necessary for admission into most countries overseas, and the holder of an Australian passport also has no difficulty in landing on return to Australia. The charge for an Australian passport is £1; for an ordinary visa 8s. and for a transit visa, 2s.

§ 10. Naturalization.

1. **Commonwealth Legislation.**—Naturalization in Australia is governed by the Nationality Act 1920–1946. The qualifications necessary for naturalization are :—(*a*) Residence in Australia continuously for not less than one year immediately preceding application for naturalization and previous residence either in Australia or in some other part of His Majesty's dominions for a period of four years within the last eight years before the application; (*b*) good character and an adequate knowledge of the English language; and (*c*) intention to settle in the British Empire.

The amending Act of 1930 provided for the charge of a prescribed fee for a certificate of naturalization. The fee is £5, except in the case of a certificate granted to a woman who was a British subject prior to her marriage to an alien, in which case the amount is 5s. An applicant who served with a good record in the Commonwealth Naval or Military Forces during the 1914–18 War or in the Defence Forces in the 1939–45 War, or the widow of a person who so served is exempt from the payment of any fee. In the case of indigent persons the Minister may reduce the fee payable for a certificate of naturalization to 10s.

The amending Act of 1936 provided for certain alterations in the law dealing with the national status of married women, and vested in the Minister for the Interior certain powers and functions hitherto exercised by the Governor-General. These are now vested in the Minister for Immigration.

The amending Act, which came into operation on 1st April, 1937, provided for the following exceptions to the general principle that the wife of a British subject shall be deemed to be a British subject, and the wife of an alien deemed to be an alien :—

(*a*) a woman who was a British subject prior to her marriage to an alien does not cease to be a British subject unless by reason of her marriage she acquires her husband's nationality;

(*b*) if a man, during the continuance of his marriage, ceases to be a British subject, his wife does not lose her British nationality unless she acquires her husband's new nationality;

(*c*) if a man, during the continuance of his marriage, ceases to be a British subject and his wife acquires his new nationality she may, within one year from the date on which she acquired her husband's new nationality, or within such further time as the Minister in special circumstances allows, make a declaration that she desires to retain her British nationality;

(*d*) if after 31st March, 1937, a certificate of naturalization is granted to an alien, his wife, if she is not already a British subject, shall not be deemed to be a British subject, unless, within one year from the date of such certificate, or within such further time as the Minister in special circumstances allows, she makes a declaration that she desires to acquire British nationality;

(*e*) where an alien is a subject of a State at war with His Majesty, his wife, if she was a natural-born British subject, may, upon making a declaration that she desires to resume British nationality, be granted a certificate of naturalization.

Provision was also made in the amending Act whereby a woman who was a British subject prior to her marriage and who acquired her husband's nationality may make a declaration that she desires to retain, while in Australia or in a Territory to which the Act applies, the rights, powers and privileges of a British subject.

Two amending Acts, Nos. 9 and 28, were passed in 1946.

No. 9 provided that, notwithstanding any other provisions of the Act, a woman who, at the time of her marriage to an alien, was resident in Australia, and was a British subject, shall while in Australia continue to be a British subject.

No. 28 provided that the Act should extend to the Territory of New Guinea, thus enabling aliens resident in that Territory to apply for naturalization.

A summary of the main provisions of the principal Act appears in Official Year Book No. 22, pp. 934-5.

2. **Certificates Granted.**—(i) *Australia.* Particulars regarding the previous nationalities of the recipients of certificates of naturalization issued under the Act during the years 1945 and 1946, and the countries from which such recipients had come, are given in the following table :—

NATURALIZATION ; CERTIFICATES GRANTED, 1945 and 1946.

(ii) *States.* The certificates of naturalization granted in 1946 (1945 figures in parenthesis) were issued in the various States and Territories as follows :—New South Wales, 2,193 (1,706) ; Victoria, 2,548 (1,135) ; Queensland, 884 (389) ; South Australia, 585 (212) ; Western Australia, 846 (403) ; Tasmania, 24 (14) ; Northern Territory, 28 (19) ; and Australian Capital Territory, 5 (11) ; Total, 7,113 (3,889).

§ 11. Population of Territories.

At the Census of 30th June, 1947, arrangements were made to obtain complete information concerning not only the two internal territories of Australia—Northern Territory and Australian Capital Territory—but also the external Territories under the control of Australia, namely :—Norfolk Island ; Papua ; Trust Territory of New Guinea, and Nauru (Trusteeship)

The preliminary figures respecting population and number of dwellings in each Territory at the Census of 1947 are summarized in the following table :—

POPULATION AND DWELLINGS : TERRITORIES, 30th JUNE, 1947.

EXCLUDING INDIGENOUS POPULATION.

Territory.	Population.			Dwellings.			
	Males.	Females.	Persons.	Occupied.	Unoccupied.	Being Built.	Total.
Northern Territory ..	7,378	3,490	10,868	2,705	34	22	2,761
Australian Capital Territory	9,092	7,813	16,905	3,620	52	316	3,988
Norfolk Island	505	433	938	279	43	5	327
Papua (*a*)	2,057	1,182	3,239	769	(*b*)	(*b*)	(*b*)
Trust Territory of New Guinea (*a*)	4,369	1,831	6,200	1,391	(*b*)	(*b*)	(*b*)
Nauru (Trusteeship) ..	1,413	63	1,476	54	9	10	73

(*a*) Includes temporary dwellings constructed of iron, sisalcraft, native materials, canvas, etc. in war-devastated areas. (*b*) Not available.

Particulars concerning the indigenous populations of these Territories are included in Chapter X. " The Territories of Australia ".

§ 12. The Aboriginal Population of Australia.

In Official Year Book No. 17, pp. 951–61, a brief account is given of the Australian aboriginal population, its origin, its numbers as estimated from time to time, and the steps taken for its protection. On pp. 914–16 of Official Year Book No. 22, particulars are shown for each of the States and Territories of Australia at successive periods, while a special article dealing with the estimated number and distribution of the native population at the date of first settlement of the white race in the continent appears on pp. 687–96 of Official Year Book No. 23.

The aboriginals are scattered over the whole of the mainland, but the majority are concentrated in Western Australia, Queensland and the Northern Territory. At a Census of aboriginals taken on 30th June, 1944, in all States except New South Wales, the following particulars were disclosed :—

ABORIGINAL CENSUS, 30th JUNE, 1944.

State or Territory.	Full-blood.					Half-caste.					Total Full-blood and Half-caste
	Nomadic.	In Employment.	In Supervised Camps. (*a*)	Other.	Total.	Nomadic.	In Employment.	In Supervised Camps. (*a*)	Other.	Total.	
New South Wales *b*	40	112	314	128	594	505	2,057	3,403	4,057	10,022	10,616

(*a*) This figure does not include those living in supervised camps who were in regular employment. (*b*) At 30th June, 1941. (*c*) Excludes Torres Strait Islanders (1,064 in regular employment, 2,754 in supervised camps, and 82 other).

CHAPTER XVII.

VITAL STATISTICS.

[NOTE.—1. In the Vital Statistics chapter of Official Year Book No. 35 tables covering a single year related to 1941. In the last issue these tables covered 1944 and, where possible, 1942 and 1943. In the present issue these tables cover 1946 and, where possible, 1945. In some cases, however, space does not permit of the inclusion of figures for 1945. These figures will be found in *Demography Bulletin*, No. 63 unless otherwise specifically indicated.

2. Figures for Australia throughout are exclusive of full-blood aboriginals.]

§ 1. Marriages.

1. **Number, 1946.**—The number of marriages registered in Australia during the year ended 31st December, 1946, was 79.496, giving a rate of 10.64 per 1,000 of the mean population for the year. In 1942 both the number and the rate were the highest on record. A summary of the number of marriages registered in each State and Territory since 1861 is given in the following table :—

MARRIAGES.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

1946(*d*) ..	10.76	10.57	10.70	10.55	10.49	10.51	5.97	9.88	10.64

(*a*) Number of marriages (not persons married) per 1,000 of mean population. (*b*) Included with South Australia prior to 1901. (*c*) Part of New South Wales prior to 1911. (*d*) Revised in accordance with the preliminary results of the Census of 30th June, 1947.

As the marriage-rates in some international tabulations are based on the unmarried population aged 15 years and over, the corresponding rates have been calculated for Australia for the last six census periods. The period in each case comprises the census year with the year immediately preceding and the year immediately following, and the figures are as follows :—1880–82, 48.98 ; 1890–92, 45.74 ; 1900–02, 42.14 ; 1910–12, 50.44 ; 1920–22, 56.02 ; and 1932–34, 42.88. These rates refer, of course, to persons married, and not to marriages as is the case in the preceding table.

3. **Crude Marriage-rates of Various Countries.**—The following table gives the crude marriage-rate for Australia and each State thereof in comparison with the rates for various other countries.

CRUDE MARRIAGE-RATES (*a*) : VARIOUS COUNTRIES.

Country.	1908–13.	1921–25.	1926–30.	1931–35.	1946.

Mexico	(*e*)	(*e*)	(*e*)	6·1	6·1
Eire	5·2	4·9	4·6	4·6	5·9

(*a*) Number of marriages per 1,000 of mean population. (*b*) Excludes Maoris. (*c*) White population only. (*d*) Excludes full-blood aboriginals. (*e*) Not available. (*f*) 1938 (*g*) 1939. (*h*) 1943. (*i*) 1944.

4. **Age and Conjugal Condition at Marriage.**—(i) *General.* Age at marriage in single ages and previous conjugal condition of bridegrooms and brides in 1945 and 1946 will be found in *Demography Bulletin*, Nos. 63 and 64. A summary in age-groups is given hereunder for these years. There were 5,090 males aged less than twenty-one years married during 1946 while the corresponding number of females was 20,896. At the other extreme there were 80 bachelors, and 29 spinsters in the age-group 65 years and over.

Information regarding the percentage distribution of bridegrooms and brides is shown for 1907–10, in five-year periods thereafter until 1945 and for each of the years 1944, 1945 and 1946.

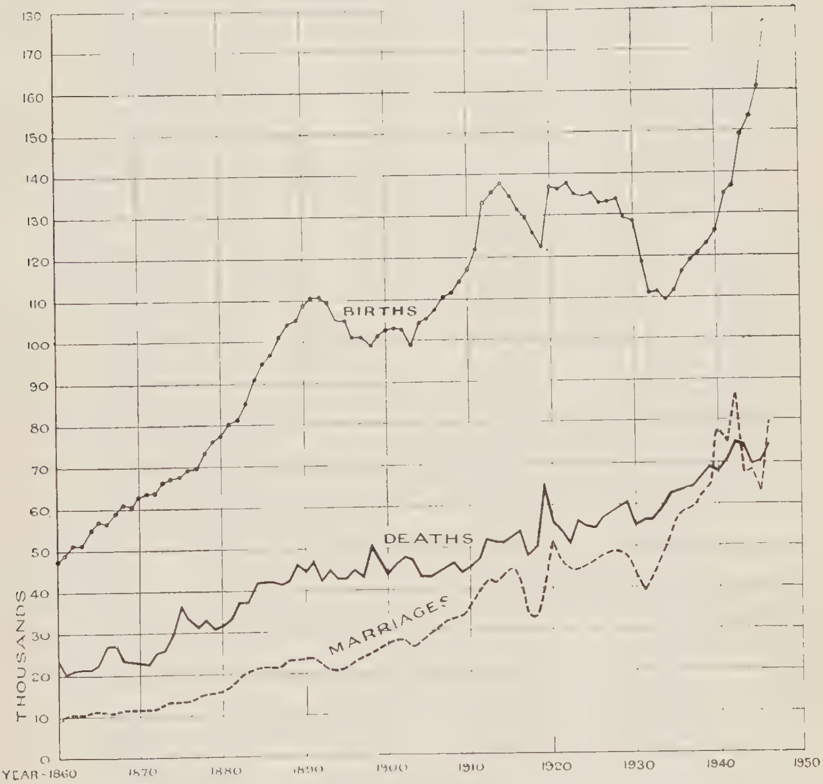
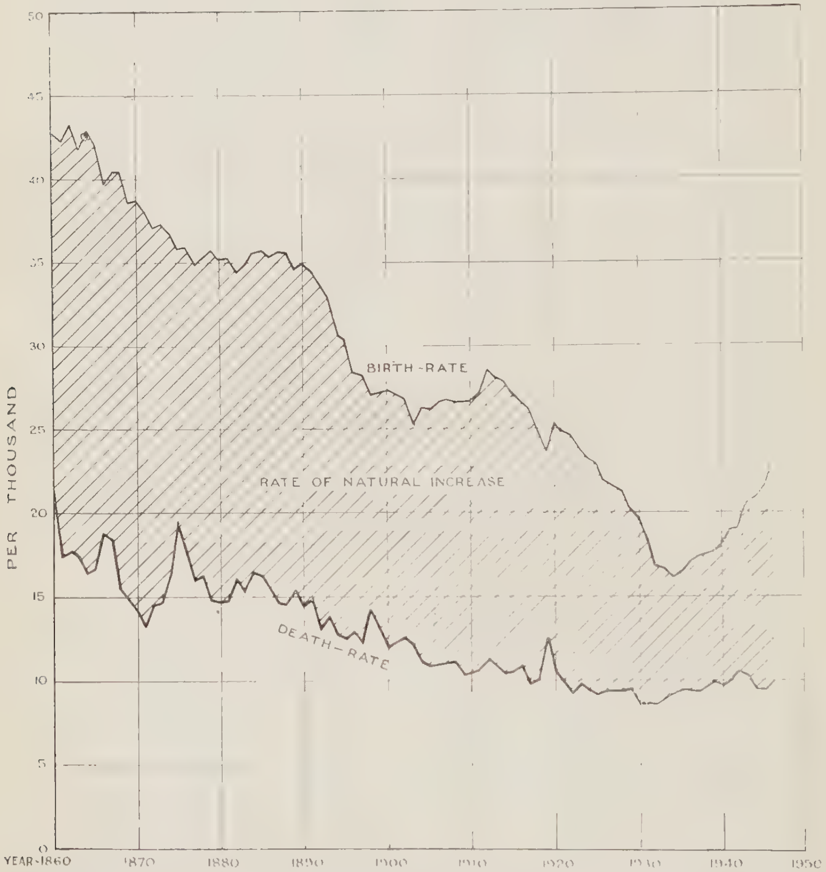
(*a*) Excludes one bridegroom the age of whose bride was not stated.

(iii) *Average Ages of Bridegrooms and Brides.* The age at marriage of brides declined slightly during recent years to an average of about 25½ years, although in the period 1937–39 this decline was temporarily arrested and the average rose to almost 26 years. The ages for the past six years were :—1941, 25.75 ; 1942, 25.55 ; 1943, 25.62 ; 1944, 25.57 ; 1945, 25.93 ; and 1946, 25.51. For the following five-yearly periods the average ages were :—1911–15, 25.76 years ; 1916–20, 26.05 years ; 1921–25, 25.76 years ; 1926–30, 25.57 years ; 1931–35, 25.50 years ; 1936–40, 25.72 years ; and 1941–45, BIRTHS, DEATHS, AND MARRIAGES—AUSTRALIA, 1860 TO 1946.

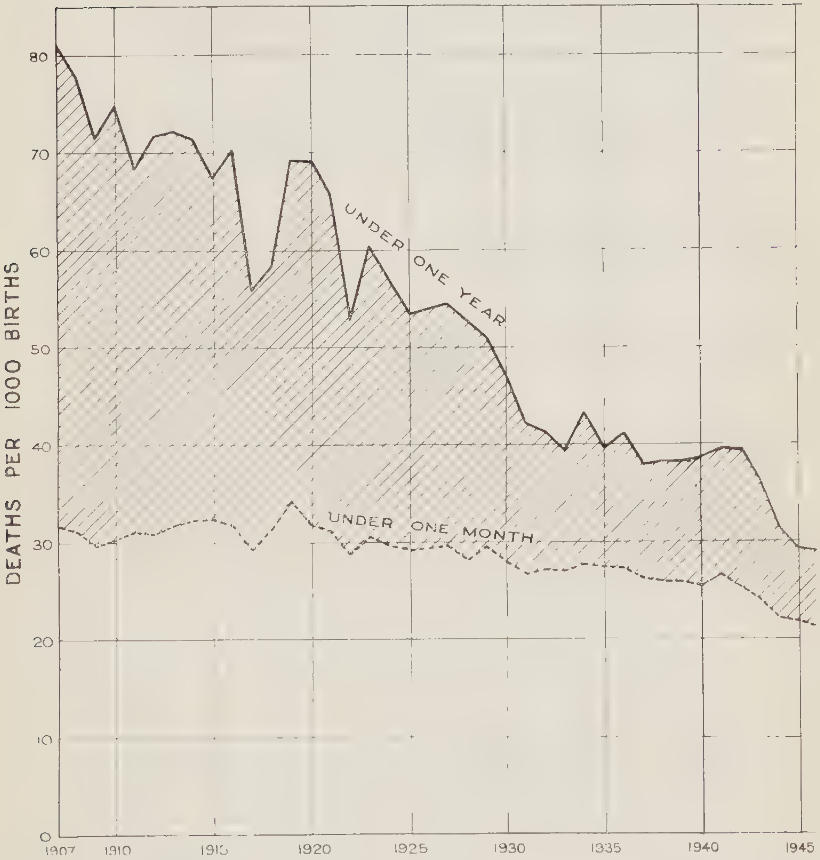


RATES OF BIRTHS, DEATHS, AND NATURAL INCREASE—AUSTRALIA, 1860 TO 1946.



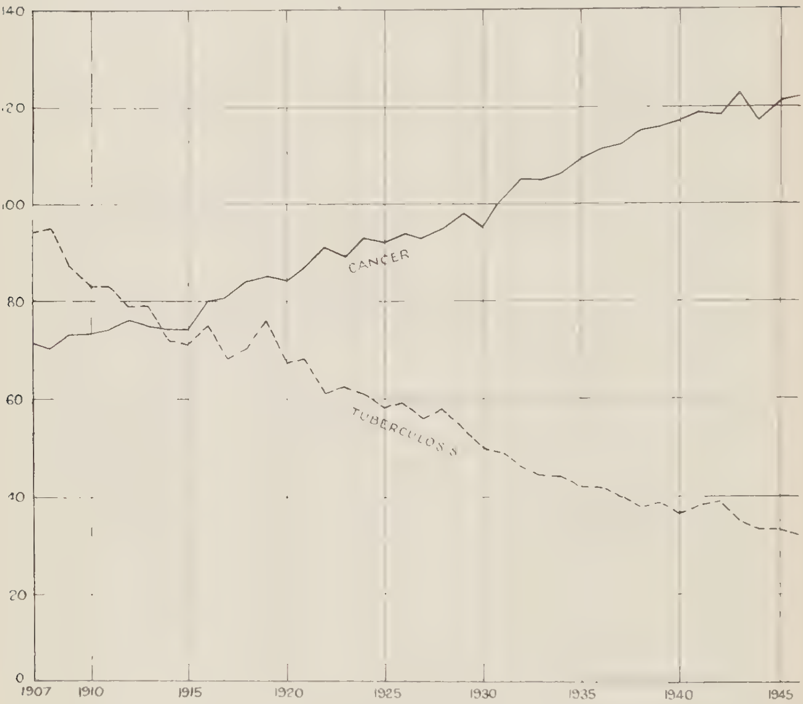
EXPLANATION.—The upper curve represents the number of births per 1,000 persons, while the lower curve represents the corresponding death-rate. The distance between the two curves is the rate of natural increase

INFANTILE MORTALITY RATES—AUSTRALIA, 1907 TO 1946.



EXPLANATION.—This graph shows the marked improvement in infantile mortality rates over the past 40 years. The improvement has been confined mainly to children over one month, very little change having occurred in the first month of life (see page 773)

DEATH-RATES—CANCER AND TUBERCULOSIS—AUSTRALIA, 1907 TO 1946.



(See page 795).

Explanation.—The vertical scale represents the number of deaths per 100,000 of the population.

25.68 years. The average age of bridegrooms was 29.04 in 1941, 28.80 in 1942, 28.99 in 1943, 28.85 in 1944, 29.29 in 1945, and 28.73 in 1946. It follows, therefore, that brides are, generally speaking, three and one-quarter years younger than bridegrooms. The average age of brides and bridegrooms for the years 1940–46 shows the effects of war-time conditions. The proportion of young persons marrying during those years increased, thereby causing decreases in the average ages of both brides and bridegrooms. The difference in age between brides and bridegrooms was 3.29 years in 1941, 3.25 in 1942, 3.37 in 1943, 3.28 in 1944, 3.36 in 1945, and 3.22 in 1946.

5. **Previous Conjugal Condition.**—The number of bachelors and spinsters, widowed and divorced persons, who were married during 1946 has already been given. The following table shows the conjugal condition of the contracting parties. Corresponding figures for 1945 may be obtained from *Demography Bulletin*, No. 63.

PREVIOUS CONJUGAL CONDITION OF PERSONS MARRIED: AUSTRALIA, 1946.

Conjugal Condition of Bridegrooms.	Total Bridegrooms.	Conjugal Condition of Brides.		
		Spinsters.	Widows.	Divorced.
Bachelors	71,491	66,423	2,147	2,921
Widowers	3,625	1,967	1,120	538
Divorced	4,380	2,968	488	924
Total Brides ..	79,496	71,358	3,755	4,383

6. **Birthplace of Persons Marrying.**—A table showing birthplace of persons marrying in 1911, 1921 and 1940 may be found on p. 326 of Official Year Book No. 34. In *Demography Bulletin*, Nos. 63 and 64, the relative birthplaces of bridegrooms and brides marrying in 1945 and 1946 will be found tabulated in detail. No such tabulations were made for the years 1941 to 1944.

7. **Occupation and Age of Bridegrooms.**—For 1938 the average ages at marriage of bridegrooms in the larger classes of occupations were as follows:—Professional, 30.8 years; Domestic, 30.5 years; Commercial, 29.6 years; Transport, 29.8 years; Industrial, 28.9 years; and Primary Producers, 30.9 years. Tabulation of this information was discontinued during the war years.

8. **Celebration of Marriages.**—In all the States marriages may be celebrated either by ministers of religion who are registered for that purpose with the Registrar-General, or by certain civil officers—in most cases district registrars. Most of the marriages are celebrated by ministers of religion. The registered ministers in 1946 belonged to more than forty different denominations, some of which, however, can hardly be regarded as having any valid existence. A number of these have been bracketed under the heading "Other Christian." The figures for 1946 are shown in the following table. Corresponding figures for 1945 may be obtained from *Demography Bulletin*, No. 63.

§ 2. Fertility and Reproduction.

1. **Introductory.**—Of the two elements of increase in the population, namely natural increase and net migration, the former has been by far the more important over the past few decades. The level of natural increase depends on the excess of births over deaths and the relation between fertility and mortality determines the rate of reproduction or replacement of the population.

2. **Number of Live Births.**—(i) *Year*, 1946. There are various methods of measuring the fertility of the population by relating the number of births to the numbers in the population. In each the basic data are, of course, the number of live births.

The number of live births registered in Australia during 1946 is shown in the table below. The table shows also the number of confinements resulting in one or more live births. The figures exclude cases where the births were of still-born children only. Corresponding figures for 1945 may be obtained from *Demography Bulletin*, No. 63.

(*a*) Included with South Australia prior to 1901.

(*b*) Part of New South Wales prior to 1911.

3. **Crude Birth-rates.**—The oldest and most popular method of measuring fertility is to relate the number of births to the total population, thus obtaining the crude birth-rate. The crude birth-rate measures the rate per thousand persons (irrespective of age or sex) at which the population has added to its numbers by way of births during a given period.

Crude birth-rates for each five-year period from 1861 to 1945 and for each year from 1942 to 1946 for each State and Territory are set out below :—

CRUDE BIRTH-RATES.(a)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Annual Average—									
1861–1865	42.75	43.53	43.37	43.30	35.68	33.99	..	..	42.44
1866–1870	40.85	39.50	44.42	40.21	32.35	30.08	..	..	39.60

1926–1930	21.79	19.67	21.92	19.42	21.55	22.29	15.70	14.65	21.00
1931–1935*d*	17.29	15.60	18.49	14.89	18.37	19.95	15.99	15.81	16.95
1936–1940*d*	17.51	16.20	19.48	15.82	19.16	20.57	19.84	18.50	17.51
1941–1945*d*	19.78	19.25	22.26	20.41	21.71	22.23	11.36	26.84	20.26
Year—									
1942(*d*) ..	18.59	18.33	20.43	18.51	20.77	22.00	10.30	27.56	19.05
1943(*d*) ..	20.04	19.82	22.19	21.43	21.98	23.04	8.37	27.57	20.63
1944(*d*) ..	20.65	19.78	23.10	21.49	22.57	21.17	8.53	27.05	20.98
1945(*d*) ..	21.13	20.53	24.81	22.37	21.88	23.27	8.57	26.98	21.73
1946(*d*) ..	22.83	23.05	24.79	24.89	24.56	27.15	12.50	32.61	23.62

(*a*) Number of births per 1,000 of mean population. (*b*) Included with South Australia prior to 1901. (*c*) Part of New South Wales prior to 1911. (*d*) Revised rates based on mean populations adjusted in accordance with the preliminary results of the Census of 30th June, 1947.

NOTE.—The birth-rates in the table above are based on live births registered in the respective States and Territories. Some years ago a large proportion of births in respect of which the mother's usual residence was the Australian Capital Territory took place in Queanbeyan, just over the New South Wales border, but with improved hospital facilities in the Territory the movement to outside hospitals rapidly diminished and has been reversed since 1939. The following rates, based on births in respect of which the mother's usual residence is the Australian Capital Territory, are a truer measure of birth-rates in the Australian Capital Territory :—

Annual Average.		Year.	
1921–1925 ..	.. 17.07	1942	.. 24.11
1926–1930 ..	.. 22.45	1943	.. 22.95
1931–1935 ..	.. 19.53	1944	.. 21.41
1936–1940 ..	.. 19.29	1945	.. 22.58
1941–1945 ..	.. 23.06	1946	. 26.00

The variations similarly caused in the birth-rates for the States and Northern Territory by referring the birth registrations to the State or Territory in which the mother was usually resident are shown by the following corrected rates for 1946 :—New South Wales, 22.85 ; Victoria, 23.00 ; Queensland, 24.92 ; South Australia, 24.86 ; Western Australia, 24.57 ; Tasmania, 27.22 ; and Northern Territory, 13.16.

The preceding table shows a marked reduction in the crude birth-rate since 1861. The average annual rate, which for the five years ended 1865 was 42.44, fell to 27.68 for the five years ended 1900. In the earlier years of the present century the rate fluctuated somewhat but from 1912, when 28.60 was recorded, there was an almost continuous decline to the very low figure of 16·39 in 1934. The decline in the depression years was to some extent occasioned by the postponement of marriages but with subsequent improvement in economic conditions the rate rose. Since 1940 the rate has increased quite appreciably due both to a continued improvement in the economic welfare of the community and the war-time boom in marriages. The latter has resulted in an abnormal number of first births but investigation indicates that rates for births other than first were generally slightly higher than might have been expected from pre-war experience.

4. **Crude Birth-rates of Various Countries.**—The following table gives the crude birth-rates for Australia and each State in comparison with the rates for various other countries.

CRUDE BIRTH-RATES (*a*) : VARIOUS COUNTRIES.

Country.	1908–13.	1921–25.	1926–30.	1931–35.	1946

Spain	32.1	29.8	28.5	27.1	(*h*) 16.5

(*a*) Number of births per 1,000 of mean population. (*b*) White population only. (*c*) Not available. (*d*) 1911–13. (*e*) 1915. (*f*) 1922–25. (*g*) 1933–35. (*h*) 1939. (*i*) 1943 (*j*) Excluding Maoris. (*k*) Excluding full-blood aboriginals.

5. **Fertility-rates.**—The principal demographic factors affecting the level of crude birth-rates are the proportion of women of child-bearing age in the population and the proportion of such women who are married. These factors may vary considerably at different periods and for different countries, and a population with a high percentage of married women of child-bearing age will have a much higher crude birth-rate than one with a low percentage, although the fertilities of the two populations may be identical.

In order to overcome this difficulty births are sometimes related to the number of women of child-bearing age or, alternatively, nuptial births are related to the number of married women of child-bearing age. Thus births are related to potential mothers, giving the fertility-rate.

The following table sets out for certain periods commencing with 1880–82 the number of births per thousand of mean population, the number of births per thousand women of child-bearing age and the number of nuptial births per thousand married women of child-bearing age. For purposes of this table the child-bearing age has been taken to be 15–44 years inclusive, but births to mothers who were stated to be under 15 or over 44 years have been included in the compilations.

CRUDE BIRTH-RATES AND FERTILITY-RATES : AUSTRALIA.

Period.	Average Annual Rates.			Index Nos. (Base : 1880–82 = 100).		
		Fertility-rates.			Fertility-rates.	
	Crude Birth-rate. (*a*)	Births per 1,000 Women aged 15–44 Years.	Nuptial Births per 1,000 Married Women aged 15–44 Years.	Crude Birth-rate. (*a*)	Births per 1,000 Women aged 15–44 Years.	Nuptial Births per 1,000 Married Women aged 15–44 Years.
1880–82 ..	35.3	170	321	100	100	100
1890–92 ..	34.5	159	332	98	94	103
1900–02 ..	27.2	117	235	77	69	73
1910–12 ..	27.2	117	236	77	69	74
1920–22 ..	25.0	107	197	71	63	61
1932–34 ..	16.7	71	131	49	42	41
1941–43 ..	19.5	84	141	55	49	44

(*a*) Number of births per 1,000 of mean population.

The table above shows how increasing proportions both of women of child-bearing age and of married women of child-bearing age inflate the crude birth-rate. Thus while the nuptial birth-rate for married women increased by only 8 per cent. over the period 1932–34 to 1941–43 the crude birth-rate rose by 17 per cent. due principally to the greatly increased number of marriages during that period.

6. **Specific Fertility-rates.**—So long as customary ages at marriage do not change drastically, the main demographic factor affecting the number of births is the age composition of the potential mothers in the population. Within the child-bearing group the fertility of women of different ages varies considerably and a clearer view of the fertility of the population can be obtained from an examination of what are known as its specific fertility-rates, that is, the number of births to women of specified ages per thousand women of those particular ages.

Specific fertility-rates are usually calculated on the basis of female births rather than total births and are frequently expressed in age-groups as well as in single ages. The following table sets out specific fertility-rates for Australia over the period 1921 to 1946 in five-yearly age-groups.

SPECIFIC FERTILITY-RATES(*a*) : AUSTRALIA.

Age-group (Years).	1921.	1926.	1931.	1936.	1941.	1942.	1943.	1944.	1945.	1946.
15–19 ..	12.83	14.02	13.08	12.18	11.90	11.77	11.86	11.02	11.41	12.63
20–24 ..	65.45	60.23	53.08	50.33	59.42	59.01	65.01	62.49	64.40	73.52
25–29 ..	82.24	76.82	62.47	62.02	70.78	70.41	76.29	78.25	81.17	89.51
30–34 ..	68.50	61.90	51.25	46.33	49.72	50.67	56.46	59.48	61.47	65.03
35–39 ..	49.48	43.55	33.23	28.89	28.69	29.07	31.27	35.01	36.60	37.43
40–44 ..	21.66	17.63	13.61	10.19	9.52	9.55	9.72	10.69	11.42	11.87
45–49 ..	2.10	1.90	1.45	1.11	0.80	0.79	0.78	0.88	0.91	1.03

(*a*) Number of female births per 1,000 women in each age-group.

The table above indicates that the most fertile age-group is 25–29 years. The decline in fertility between 1921 and 1936 was general but was more pronounced in the older age-groups. During the period 1936 to 1946 a rise in fertility occurred in all but the oldest age-group.

7. **Gross and Net Reproduction Rates.**—A single measure of fertility known as the gross reproduction rate is obtained by adding together the specific fertility-rates for each single age in the child-bearing group. This measure indicates the number of female children who would be born on the average to women living right through the child-bearing period, if the fertility conditions on which the rate is based continue. The rate is unaffected by the age composition of the potential mothers of the population and is to be preferred to the crude birth-rate for measuring and making comparisons of fertility.

The gross reproduction rate measures fertility, but, because it does not take mortality into account, it does not measure the rate at which the population is replacing or reproducing itself. A measure of this nature is obtained by multiplying the specific fertility-rates by the number of females in the corresponding age-group of the stationary or life table population and summing the products. Allowance is thus made for the effect of mortality and the result is known as the net reproduction rate. The net reproduction rate for a specified period indicates the average number of female children who would ultimately be born to newly-born girls of the period, if the fertility and mortality conditions remain unchanged. It represents the rate at which women replace themselves in the population, i.e., the rate at which the population will multiply itself each generation if the current conditions of fertility and mortality continue. A net reproduction rate of unity for a period indicates that the population will ultimately become stationary if the fertility and mortality of the period remain unchanged. If it is greater than unity, the population will ultimately increase, if less than unity, it will ultimately decrease.

The following table gives the gross and net reproduction rates for Australia from 1881 to 1946.

GROSS AND NET REPRODUCTION RATES : AUSTRALIA.

Year.	Gross Reproduction Rate.	Net Reproduction Rate.	Year.	Gross Reproduction Rate.	Net Reproduction Rate.
1881 (*a*).. ..	2.65	(*b*) 1.88	1937(*g*) ..	1.075	0.981
1891 (*a*).. ..	2.30	(*b*) 1.73	1938(*g*) ..	1.069	0.976
1901 (*a*).. ..	1.74	(*c*) 1.39	1939(*g*) ..	1.080	0.986
1911	1.705	(*d*) 1.421	1940(*g*) ..	1.100	1.004
1921	1.511	(*e*) 1.313	1941(*g*) ..	1.154	1.053
1932	1.061	(*f*) 0.967	1942(*g*) ..	1.156	1.056
1933(*g*)	1.052	0.959	1943(*g*) ..	1.257	1.148
1934(*g*)	1.030	0.939	1944(*g*) ..	1.289	1.176
1935(*g*)	1.032	0.941	1945(*g*) ..	1.337	1.220
1936(*g*)	1.060	0.967	1946(*g*) ..	1.455	1.328

(*a*) Approximate only. (*b*) 1881–1890 mortality experience used. (*c*) 1891–1900 mortality experience used. (*d*) 1901–1910 mortality experience used. (*e*) 1920–1922 mortality experience used. (*f*) 1932–1934 mortality experience used for 1932 and subsequent years. In so far as mortality has decreased since then, the net reproduction rates tend to underestimate the true position. (*g*) The numbers of females of child-bearing age on which rates for these years are based have not been adjusted in accordance with the results of the Census of 30th June, 1947.

Since 1881 there has been a substantial downward trend in both rates, but the gross rate has fallen considerably more than the net, showing that the decline in fertility has been offset to some extent by a decline in mortality. The net reproduction rate was below unity over the period 1932 to 1939, and if the low fertility of those years were to continue, ultimate population decline would be certain. However, the rate increased considerably over the war years owing principally to the war-time marriage boom, and increased further in the immediate post-war period, mainly as a result of demobilization. The main flaw in these rates is that fluctuations in the marriage-rate affect them quite substantially, but sufficient data are lacking to completely eliminate the effects of fluctuations in marriages. However, consideration is given below to the fertility of marriages.

8. **Gross and Net Reproduction Rates of Various Countries.**—In the following table a comparison is given of the gross and net reproduction rates recorded for various countries. It will be observed that Australia occupies a relatively low position in the scale.

GROSS AND NET REPRODUCTION RATES: VARIOUS COUNTRIES.

Country.	Period.	Reproduction Rate. Gross.	Reproduction Rate. Net.
Japan ..	1937	2.14	1.44
Union of South Africa (*b*) ...	1939	1.50	1.35
Eire	1935–37	1.48	1.22
Bulgaria ..	1933–36	1.67	1.19
Portugal ..	1939	1.66	(*a*)
Canada ..	1939	1.32	(*a*)
Netherlands ..	1939	1.29	1.17
Hungary ..	1939	1.22	(*a*)

(*a*) Not available. (*b*) White population only. (*c*) Excluding Maoris.

9. **Fertility of Marriages.**—In issues of the Official Year Book prior to No. 35 estimates of the fertility of marriages were published. These were calculated by relating the births of one five-yearly period to the marriages in the preceding five years (see Official Year Book No. 35, p. 329). Since the publication of that issue, an improved method has been formulated for measuring current marriage fertility by relating nuptial confinements in each year to the marriages from which they could have resulted. Confinements of women of a certain number of years duration of marriage are related to the number of marriages taking place that number of years previously. The table below sets out this index of current marriage fertility for the years 1933 to 1946.

FERTILITY OF MARRIAGES: AUSTRALIA.

Year.	Nuptial Confinements per Marriage.	Year.	Nuptial Confinements per Marriage.	Year.	Nuptial Confinements per Marriage.
1933	2.36	1938 ..	2.22	1943 ..	2.21
1934	2.30	1939 ..	2.20	1944 ..	2.28
1935	2.27	1940 ..	2.18	1945 ..	2.36
1936	2.28	1941 ..	2.19	1946 ..	2.55
1937	2.27	1942 ..	2.12		

The figure for a particular year gives the estimated number of children which a marriage would produce according to the fertility conditions of that year. It will be noted that there was an almost continuous decline to 1942, but a pronounced increase from 1943 onwards. Comparing this index with the net reproduction rate it is evident that the rise in the latter since 1935 has been caused by an increasing number of marriages, due firstly to the postponed depression marriages, and secondly to war-time marriages, and only in the last four years to any increase in the fertility of marriages.

10. **Masculinity of Live Births.**—(i) *General.* The masculinity of live births, i.e., the number of males born for every 100 female births, has remained fairly stable for Australia at about 105. But when the number of births for which masculinity is being calculated is small (for example State totals), considerable variation is shown. For 1946 the figures ranged from 96.21 in Australian Capital Territory to 108.31 in Tasmania. The averages for the last intercensal period 1933–47 were as follows:—New South Wales, 105.05; Victoria, 105.52; Queensland, 105.15; South Australia, 105.93; Western Australia, 104.16; Tasmania, 105.76; Australia, 105.21. The following table shows the figures for Australia for each ten-year period from 1901 to 1940 and for each year 1943 to 1946:—

MASCULINITY(a) OF LIVE BIRTHS REGISTERED: AUSTRALIA.

Particulars.	1901–10.	1911–20.	1921–30.	1931–40.	1943.	1944.	1945.	1946.
Total Births ..	105.22	105.27	105.55	105.12	104.68	104.45	105.57	106.51
Ex-nuptial Births ..	104.08	105.25	105.16	105.36	107.30	106.86	107.77	110.42

(a) Number of males born for every 100 female births.

(ii) *Masculinity of Nuptial and Ex-nuptial Births—Various Countries.* A table showing the masculinity of nuptial and ex-nuptial births for various countries appears on p. 942 of Official Year Book No. 22.

11. **Ex-nuptial Live Births.**—(i) *General.* The number of ex-nuptial live births reached a peak, 7,438, in 1913, but it fell considerably to 4,775 in 1940. Since 1940, however, the number has risen sharply to 7,613 in 1946. The average number of ex-nuptial live births in Australia during the five years 1911–15 was 7,209, and for the period 1941–45 it was only 6,201, a decline of 14.0 per cent., whereas the annual average total live births for the same period increased by 10.6 per cent., from 132,769 to 146,886; hence a comparison between the results for these two periods shows that the proportion of ex-nuptial births has fallen from 5.43 to 4.23 per cent. of all births.

The variations of the ex-nuptial birth-rates as between the individual States and Territories for 1946 are shown below. Corresponding figures for 1945 may be obtained from *Demography Bulletin*, No. 63.

EX-NUPTIAL LIVE BIRTHS AND BIRTH-RATES, 1946.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Number ..	2,950	1,708	1,611	503	529	282	24	6	7,613
Percentage of Total Births	4.39	3.66	5.96	3.18	4.37	4.12	18.18	1.16	4.32

The numbers of births and the rates at intervals from 1901 to 1946 are as follows:—

EX-NUPTIAL LIVE BIRTHS AND BIRTH-RATES: AUSTRALIA.

Particulars.	Annual Averages—				1941.	1942.	1943.	1944.	1945.	1946.
	1901–10.	1911–20.	1921–30.	1931–40.						
Number of Ex-nuptial Births	6,408	6,836	6,238	5,133	5,167	5,282	6,505	6,905	7,195	7,613
Percentage of Total Births	6.05	5.22	4.66	4.40	3.84	3.86	4.36	4.50	4.48	4.32

It is, of course, possible that the number of ex-nuptial births is somewhat understated owing to diffidence in proclaiming the fact of ex-nuptiality, and it is not unlikely that the majority of unregistered births are ex-nuptial.

(ii) *Rate of Ex-nuptiality.* A further comparison is obtained by calculating the number of ex-nuptial births per thousand of the single and widowed female population between the ages of 15 and 45 years. The number of ex-nuptial births per 1,000 unmarried women of ages 15 to 45 has been found to be as follows :—1880–82, 14.49; 1890–92, 15.93; 1900–02, 13.30; 1910–12, 12.53; and 1920–22, 10.50. The estimated number for the years 1930–32 was 7.87. The comparative results for various countries given on p. 944 of Official Year Book No. 22 were taken from the *Annuaire International de Statistique*, Vols. II. and V., and showed that ex-nuptial births varied from 38 per 1,000 unmarried women aged 15 to 49 years in Hungary (1906–15) to 4 in Ireland (1909–12) and Bulgaria (1910–11). The rate for Australia was 12 per thousand for the years 1906–15.

(iii) *Comparison of Rates.* The following table, showing the relative proportions of ex-nuptial and nuptial births to the total population, discloses a much greater proportional reduction in the ex-nuptial birth-rate than in the nuptial rate :—

CRUDE EX-NUPTIAL, NUPTIAL, AND TOTAL BIRTH-RATES(*a*) : AUSTRALIA.

Birth-rate.	Annual Averages—				1943.	1944.	1945.	1946.
	1901–10.	1911–20.	1921–30.	1931–40.				
Ex-nuptial ..	1.60	1.39	1.04	0.76	0.90	0.95	0.98	1.02
Nuptial	24.91	25.18	21.40	16.47	19.73	20.03	20.75	22.60
Total ..	26.51	26.57	22.44	17.23	20.63	20.98	21.73	23.62

(*a*) Number of births per 1,000 of mean population.

12. **Legitimations.**—In the several States Acts have been passed to legitimize children born before the marriage of their parents, provided that no legal impediment to the marriage existed at the time of birth. On registration in accordance with the provisions of the Legitimation Acts, any child who comes within the scope of their purposes, born before or after the passing thereof, is deemed to be legitimate from birth by the post-natal union of its parents, and entitled to the status of offspring born in wedlock. During 1945 and 1946 the number of children legitimized in Australia was 942 and 943 respectively, compared with 883 in 1939.

13. **Multiple Births.**—Among the total number of 176,379 live births registered in Australia in 1946, there were 172,392 single births, 3,917 twins and 70 triplets. The number of cases of twins was 2,014 and of triplets 25, there being 111 still-born twins and 5 still born triplets. The total number of mothers was, therefore, 174,431, the proportion of mothers of twins being one in every 86, of mothers of triplets one in every 6,977, and of mothers of all multiple births one in every 86 mothers. Multiple births occurred in 1.17 per cent. of confinements.

The proportion of multiple births to total births does not vary greatly from year to year and exhibits no tendency towards increase or decrease :—

MULTIPLE BIRTHS : AUSTRALIA.

Particulars.	Annual Averages—			1943.	1944.	1945.	1946.
	1911–20.	1921–30.	1931–40.				
Mothers of Multiple Births ..	1,387	1,420	1,220	1,627	1,796	1,803	2,039
Percentage on Total Mothers ..	1.06	1.07	1.06	1.10	1.18	1.14	1.17

14. **Ages of Parents.**—The relative ages of the parents of children registered in 1945 and 1946 have been tabulated separately for male and female births, multiple births being distinguished from single births. For total births and for multiple births the relative single ages of parents are shown in *Demography Bulletin*, Nos. 63 and 64. In the

present work the exigencies of space allow only the insertion of a table for 1946 showing the relative ages of parents in respect of all confinements in groups of five years :—

ALL CONFINEMENTS : RELATIVE AGES OF PARENTS, AUSTRALIA, 1946.

15. **Birthplaces of Parents.**—A table showing birthplaces of parents of children whose births were registered during 1946 appears in *Demography Bulletin*, No. 64.

16. **Occupation of Fathers.**—A table showing occupations of the fathers of all nuptial children registered in 1946 appears in *Demography Bulletin*, No. 64.

17. **Age, Duration of Marriage and Issue of Mothers.**—(i) *General.* The total number of nuptial confinements resulting in live births in 1946 was 166,872, comprising 164,890 single births, 1,958 cases of twins and 24 cases of triplets. The tables exclude the previous issue of former marriages and still-born children. On the other hand, they include children by the same father which were born to the mother prior to the marriage. Children born during the current year are included in the total issue shown.

The tables are shown in summarized form, more complete details being given in *Demography Bulletin*, No. 64.

(ii) *Duration of Marriage and Issue of Mothers.* The following table shows that the duration of marriage of mothers of nuptial children ranged from less than one year up to 31 years, and that the average family increased fairly regularly with the duration of marriage. The average issue of married mothers who bore children in 1946 was 2.35 compared with 2.40 in 1945, 2.41 in 1944, 2.34 in 1943, and 2.38 in 1942.

NUPTIAL CONFINEMENTS : DURATION OF MARRIAGE AND ISSUE OF MOTHERS, AUSTRALIA, 1946.

Duration of Marriage. (Years.)	Total Married Mothers.	Total Issue.	Average Issue.
0–1 ..	21,155	21,395	1.01

Total ..	166,872	392,279	2.35

(iii) *Age and Average Issue of Mothers.* The following table shows the average number of children born to mothers of different ages. In the younger ages there is, naturally, little difference in the average number of children to each mother, but with the increase of the age of the mother the number of issue has fallen in comparison with past years. The average issue of mothers of all ages recorded for 1946 (namely 2.35) is 27.7 per cent. below the average of 3.25 for the years 1911–20.

AGE AND AVERAGE ISSUE OF MOTHERS : AUSTRALIA.

Period.	Age of Mothers (Years). Under 20.	20–24.	25–29.	30–34.	35–39.	40–44.	45 and Over.	All Ages.
1911–20 ..	1.21	1.75	2.61	3.74	5.11	6.69	8.16	3.25

Total Married Mothers	6,000	44,151	52,515	38,351	19,926	5,481	448	166,872

(v) *Previous Issue of Mothers of Twins and Triplets.* Figures regarding the previous issue of married mothers of twins in 1946 show that 630 mothers had no previous issue either living or deceased, 548 had one child previously, 359 had two previous issue, 177 three, 90 four, 65 five, 27 six, 20 seven, 12 eight, 10 nine, 12 ten, 3 eleven, 2 twelve, 2 thirteen and 1 fourteen previous issue.

Of the 24 cases of nuptial triplets registered during 1946, 6 mothers had no previous issue, 7 had one, 6 had two, 2 had three and 3 had four previous issue.

18. Interval Between Marriage and First Birth.—(i) *Interval.* The following table shows the interval between marriage and first birth for 1911–20, 1921–30, 1931–40, 1943, 1944, 1945 and 1946. Twins and triplets are included, the eldest only being enumerated.

The masculinity of first births in 1946 was 106.46 compared with 106.51 for total births.

(ii) *Age of Mother and Interval.* Previous issue of mothers of ex-nuptial children is not recorded and for purposes of the following table all ex-nuptial births are regarded as first births. The table shows in condensed form for 1944, 1945 and 1946 the numbers of births of ex-nuptial children, of children born less than nine months after marriage and of all first-born children according to the age of mothers. Over the past few years about one-quarter of all first births were either ex-nuptial or occurred less than nine months after marriage. Of the first-born children of mothers under 20 years, however, over two-thirds came into this category. The percentage diminishes rapidly to about 15 per cent. for mothers aged 25 to 34 years and then rises perceptibly for mothers in older age-groups.

It must be remembered, of course, that a certain number of premature births is unavoidably included among the births which took place less than nine months after marriage, and they are not necessarily due to ante-nuptial conception. However, information in connexion therewith is not available and the figures in the table must be accepted with this reservation. Tabulations showing single ages of mothers of nuptial first-born children and interval after marriage are given for 1944, 1945 and 1946 in *Demography Bulletin*, Nos. 62 to 64, respectively.

(*a*) For purposes of this table all ex-nuptial births are regarded as first births. (*b*) Excludes 3 births, age of mother not stated. (*c*) Excludes 5 births, age of mother not stated. (*d*) Excludes 1 birth, age of mother not stated.

NOTE.—In cases of multiple first births, only one child is included.

19. **Interval between Birth and Registration of Birth.**—Detailed information for the years 1911 to 1921 regarding the period which elapsed between birth and registration of birth is contained in *Demography Bulletins* issued by this Bureau for those years. The average interval for 1921 was over 14 days for all children.

20. **Still-births.**—Reliable statistics of the number of children born dead in Australia are not available as registration of these births is not compulsory in all States. In previous issues of the Year Book estimated numbers of still-births have been given. Pending the results of investigations being made into the records of such births which may affect the accuracy of these estimates, figures for 1945 and 1946 are not available.

§ 3. Mortality.

1. **Number of Deaths.**—(i) *Year*, 1946. The following table shows the number of deaths, male and female, registered in each State during the year :—

DEATHS, 1946.

Sex.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

1946(*c*) ..	28,579	21,534	10,648	6,461	4,753	2,549	55	82	74,661

(*a*) Northern Territory figures included with South Australia prior to 1901. (*b*) Part of New South Wales prior to 1911. (*c*) Excludes deaths of defence personnel and of internees and prisoners of war from overseas.

2. **Crude Death-rates.**—The commonest measure of mortality is to relate the number of deaths for a given period to the mean population for that period, thus obtaining the crude death-rate. This rate for a given period measures the numbers per thousand of population by which the population is depleted through deaths during that period. Crude death-rates for each State and Territory from 1861 to 1946 are shown in the following table :—

CRUDE DEATH-RATES.(*a*)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust
Annual Average—									
1861–1865 ..	16.88	17.48	20.60	15.39	15.15	15.30	..	..	17.04

Persons ..	9.70	10.63	9.77	10.17	9.61	10.11	5.21	5.16	10.00

(*a*) Number of deaths per 1,000 of mean population. (*b*) Northern Territory figures included with South Australia prior to 1901. (*c*) Part of New South Wales prior to 1911. (*d*) Revised rates based on mean populations adjusted in accordance with the preliminary results of the Census of 30th June, 1947. (*e*) Excludes deaths of defence personnel and of internees and prisoners of war from overseas.

3. **Standardized Death-rates.**—(i) *General.* The death-rates quoted above are crude rates, i.e., they simply show the number of deaths per thousand of mean population without taking into consideration differences in the sex and age composition of the population. Other conditions being equal, however, the crude death-rate of a community will be low if it contains a large percentage of young people (not infants), and conversely it will be relatively high if the population includes a large proportion of elderly people. The foregoing table of crude death-rates, therefore, does not indicate comparative incidence of mortality either as between States in the same year or in any one State over a period of years. In order to obtain a comparison of mortality rates on a uniform basis as far as sex and age constitution are concerned, "standardized" death-rates may be computed. These are computed by selecting a particular distribution of age and sex as a standard, and then calculating what would have been the general death-rate if the death-rates in each sex and age-group were as recorded, but the age and sex distribution the same as in the standard population. For the standardized rates which follow, the standard population compiled by the International Institute of Statistics has been used. This standard is based upon the age distribution according to sex of nineteen European countries at their Censuses nearest to the year 1900. Full details of the "Standard Population" are given in Official Year Book No. 22, p. 962.

(ii) *Death-rates in Age-groups.* The following table provides a comparison of death-rates in age-groups in each State for the latest Census year (1933) in which the ages of population in each State were accurately ascertained.

DEATH-RATES(*a*) IN AGE-GROUPS, 1933.

65 and over	64.78	62.85	66.87	61.18	60.49	65.43	77.47	40.91	63.85
Crude Death rate (all ages) ..	8.58	9.59	8.84	8.44	8.64	9.60	12.55	4.19	8.92

(*a*) Number of deaths per 1,000 of mean population at ages shown.

It will be observed that in this particular year, while the crude death-rates for Victoria and Tasmania were substantially higher than in other States, the rates at individual ages were lower than for Queensland and not appreciably higher than in New South Wales or Western Australia.

(iii) *Comparison of Crude and Standardized Death-rates.* The relative incidence of mortality as between individual States and as between the years 1921 and 1933 is illustrated in the following statement of crude and "standardized" death-rates. These years have been chosen for comparisons because the Census data give essential information as to sexes and ages of the State population. Crude death-rates are shown to indicate the degree to which they disguise the true position.

CRUDE AND STANDARDIZED DEATH-RATES.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Crude Death-rate(*a*)—							
1921	9.50	10.52	9.37	10.02	10.42	10.30	9.91
1933	8.58	9.59	8.84	8.44	8.64	9.60	8.92
Standardized Death-rate(*b*)—							
1921	10.35	10.79	10.24	10.38	11.88	10.83	10.58
1933	8.52	8.74	9.10	7.66	8.74	8.86	8.62

(*a*) Total deaths per 1,000 of mean population. (*b*) See explanation of standardized death-rates in par. 3 (i) above.

The above comparisons relate to individual years which happened to be Census years and should not be used as the bases for general conclusions as to changes in incidence of mortality for other than those years.

(iv) *Standardized Death-rates, Australia,* 1933 *to* 1941. It is not possible to continue the index of mortality formerly published. As indicated in letterpress previously published the index of mortality was an unsatisfactory basis for comparison. The more reliable standardized death-rates for Australia for 1933 and later years were as follows :—1933, 8.62 ; 1934, 8.92 ; 1935, 8.83 ; 1936, 8.70 ; 1937, 8.58 ; 1938, 8.59 ; 1939, 8.73 ; 1940, 8.51 ; and 1941, 8.55. Rates for later years have not been calculated as it has been impossible to obtain a satisfactory estimate of the age distribution of the population. Rates will be calculated for 1947 when the final Census results are available.

4. **True Death-rates.**—The main objections to standardized death-rates are that the choice of a standard population is arbitrary and that the standardized rates have little value except for comparative purposes, and even then variation of the standard population may make appreciable differences. A correct measurement of the mortality of the

population can be obtained, however, from life tables. A life table represents the number of survivors at each age from an original batch of newly-born children who are subject to given mortality conditions, and from such a table the complete expectation of life at birth can be calculated. The reciprocal of this figure is known as the true death-rate, since, if the complete expectation of life of a person at birth is 50 years, say, then each person will on the average die 50 years after birth, so that in the standard population one person in 50 or 20 per thousand will die each year. The true death-rate for a given period is unaffected by the particular age distribution of that period and is determined solely by the mortality experience of the period as manifested in the rate of survivorship from each year of age to the next. The table below sets out complete expectation of life at birth and true death-rates for the periods covered by Australian life tables.

COMPLETE EXPECTATION OF LIFE AT BIRTH AND TRUE DEATH-RATES : AUSTRALIA.

Period.	Complete Expectation of Life at Birth.		True Death-rate.	
	Males.	Females.	Males.(*a*)	Females.(*b*)
	Years.	Years.		
1881–1890	47.20	50.84	21.19	19.67
1891–1900	51.08	54.76	19.58	18.26
1901–10	55.20	58.84	18.12	17.00
1920–22	59.15	63.31	16.91	15.80
1932–34	63.48	67.14	15.75	14.89

(*a*) Number of deaths per 1,000 males in life tables or stationary population. (*b*) Number of deaths per 1,000 females in life table or stationary population.

5. **Crude Death-rates of Various Countries.**—The following table gives the crude death-rate for Australia and each State thereof in comparison with the rates for various other countries. Figures for the years 1940 to 1945 inclusive are not shown as they are based on population estimates whose comparability is open to doubt because of the abnormal distribution of population during war-time.

CRUDE DEATH-RATES (*a*) : VARIOUS COUNTRIES.

Canada	1930–32	17.0	16.5				
Union of South Africa (*e*)	1935–37	17.0	15.9	U.S.S.R. (Europe)	1926–27	23.9	21.4

(*a*) Number of deaths per 1,000 males in life table or stationary population (*see* explanation on page 769). (*b*) Number of deaths per 1,000 females in life table or stationary population (*see* explanation on page 769). (*c*) Excluding Maoris. (*d*) Excluding full-blood aboriginals. (*e*) White population only.

7. **Australian Life Tables.**—Official Year Book No. 20, pp. 962 and 969–73, contains a synopsis of the various Australian life tables and comparisons with other countries of the expectation of life at various ages. In connexion with the Census of 1933, life

tables have been constructed in respect of each sex for Australia as a whole, and these, together with monetary tables on single and joint lives based thereon, have been published as separate Census publications. A specially contributed article by F. W. Barford, M.A., A.I.A., on the results of the tables for single lives appears in Official Year Book, No. 29, p. 928.

8. **Infantile Deaths and Death-rates.**—(i) *Australia*, 1901 *to* 1946. The universal experience that during the first few years of life the higher death-rate of male infants tends to counteract the excess of male births is confirmed by the fact that out of 398,347 male infants born from 1942 to 1946, 14,502 (36.41 per 1,000) died during the first year of life, while of 377,939 female infants only 10,950 (28.97 per 1,000) died during the first year. Still-births are not included in any of the tables relating to deaths.

INFANTILE DEATHS AND DEATH-RATES : AUSTRALIA.

Period.	Number of deaths under one year.			Rate of Infantile Mortality.(*a*)		
	Males.	Females.	Total.	Males.	Females.	Total.
Annual Average—						
1901–05 ..	5,499	4,448	9,947	104.25	88.83	96.91

1946 ..	8.25	6.94	6.96	8.22	9.91	7.16	..	3.86	7.76

(*a*) Number of deaths of children aged one month and under one year per 1,000 live births registered. (*b*) Not available. (*c*) Part of New South Wales prior to 1911. (*d*) Based on death of infants born in the Australian Capital Territory. *See* footnote, page 755.

These tables indicate the striking decrease in infantile mortality in Australia since the beginning of the century, the number of deaths of children aged under one year per thousand births for 1946 being less than one-third of the average rate for 1901–05. The two lower tables reveal the fact that this improvement was due almost entirely to the decrease in deaths from preventable causes, the mortality rate for children aged one month but under one year declining by 88 per cent. while that for children aged under one month declined by only 36 per cent.

A further indication of the considerable improvement in the infantile mortality rate may be obtained from the following figures. During the years 1944 to 1946, of 490,283 children born 479,660 survived the first month of life and 475,644 the first year of life. Had the high infantile mortality rate of 1901 to 1905 obtained during this period only 473,878 children would have survived the first month of life and only 442,770 the first year of life.

(iii) *Districts.* The total number of births and of deaths of children under one year of age for 1946 are shown in *Demography Bulletin*, No. 64, for each of the sixty-five districts for which vital statistics have been tabulated.

(iv) *Various Countries and Cities.* Compared with other countries Australia occupies a very favourable position in regard to infantile mortality. In 1946, only New Zealand recorded a lower rate than Australia.

A study of the respective rates shows that a high birth-rate is often, though not invariably, accompanied by a high infantile death-rate.

In 1939 the Australian cities Melbourne, Brisbane and Adelaide were among the ten cities having the lowest rates in the following list. The list is headed by Oslo (28), Auckland (29), and Amsterdam (29), the next seven cities being San Francisco, Stockholm, Melbourne, Chicago, Copenhagen, Brisbane and Adelaide. Of the cities named Madras had the highest rate, 238.

(v) *Causes of Deaths of Children under one Year.* The following table shows for 1946 the ages of all children who died under one year of age from each of twenty-three causes. Corresponding figures for 1945 may be obtained from *Demography Bulletin*, No. 63. The infantile mortality rates for all births are shown for 1911, 1921, 1931, 1941 and 1946 and for ex-nuptial births for 1925, 1931, 1941 and 1946. Full particulars of the causes of death of all children who died in 1946 under one year and also of those under one month are given for each State and Territory in *Demography Bulletin*, No. 64. This contains in addition detailed information for Australia as to the age at which children died from each cause of death.

In 1946, pre-natal influences, such as congenital malformations, congenital debility and premature birth, together with injuries at birth and other diseases of early infancy accounted for 3,753 or 73 per cent. of all deaths under one year; and of these 3,753 deaths, 3,020 or 80 per cent., occurred less than a week after birth. Among the survivors of the first week, broncho-pneumonia caused the greatest number of deaths attributable to a specific disease. This disease was responsible for 341 deaths, representing 7 per cent. of all deaths under one year, or 1.93 per 1,000 births. Diarrhoea and enteritis caused 177 deaths and other pneumonia 178.

(a) Included in figures for all children. (b) Includes Icterus and Sclerema prior to 1931.

(vi) *Deaths of Ex-nuptial Children under one Year.* The deaths of ex-nuptial children were tabulated by this Bureau for the first time in 1925. The causes of death of these children in 1946 and the rates in respect of 1925, 1931, 1941 and 1946 are shown in the preceding table. Corresponding figures for 1945 may be obtained from *Demography*

Bulletin, No. 63. Full particulars of the causes of death of ex-nuptial children who died in 1946 aged under one year and also of those under one month are given for each State and Territory in *Demography Bulletin*, No. 64. This contains in addition detailed information for Australia as to the age at which ex-nuptial children died from each cause of death.

Pre-natal influences, such as congenital malformations, congenital debility and premature birth, together with injuries at birth and other diseases of early infancy accounted for 183 or 61 per cent., broncho-pneumonia for 33 or 11 per cent., and diarrhœa and enteritis for 19, or 6 per cent. of the total deaths of ex-nuptial children under 1 year.

9. **Deaths in Age-groups.**—A distribution into age-groups has been made of the 364,165 deaths which occurred in Australia during the five years ended 1946, and the results are shown in the following table :—

AGGREGATE DEATHS IN AGE-GROUPS : AUSTRALIA, 1942 TO 1946.

Age-group (Years).	Number of Deaths.			Percentage of Total.		
	Males.	Females.	Persons.	Males.	Females.	Persons.
				%	%	%
Under 1	14,502	10,950	25,452	7.26	6.66	6.99
1–4	3,731	3,083	6,814	1.87	1.87	1.87
5–19	5,447	3,600	9,047	2.73	2.19	2.48

40–59	41,212	28,981	70,193	20.64	17.62	19.28
60–64	20,338	13,014	33,352	10.18	7.91	9.16
65 and over ..	103,830	93,373	197,203	52.00	56.77	54.15
Age unspecified ..	41	5	46	0.02	..	0.01
Total ..	199,679	164,486	364,165	100 00	100.00	100.00

A table showing the corresponding percentages for earlier periods from the year 1901 has been added to show the movement over a longer term. The most striking change is the substantial decrease in the group " under 1 year ". At the other end of the table, the group " 65 years and over " has increased considerably. The percentages in all age-groups under 40 have fallen and those in all age-groups from 40 onwards have risen. These changes are due partly to improvement in the efficiency of medical science and partly to changes in the age distribution of the population. The latter changes are themselves in part due to increased length of life made possible by medical science, and in part to changes in the volume of migration and the falling birth-rate :—

DEATHS IN AGE-GROUPS : PERCENTAGES, AUSTRALIA.

10. **Deaths at Single Ages and in Age-Groups.**—(i) *General.* The deaths registered in Australia in 1945 and 1946 will be found tabulated in groups of five years for each State and Territory and in single ages for Australia in *Demography Bulletin*, Nos. 63–64, respectively. The deaths during the first fifteen years of life have been tabulated there in single ages and for the first year of life in shorter periods. A summary for Australia for 1946 is given in the following table :—

DEATHS AT SINGLE AGES AND IN AGE-GROUPS : AUSTRALIA, 1946.

(ii) *Rates.* The following table gives the average annual death-rates in age-groups per 1,000 living for the period 1932 to 1934, i.e., the Census year 1933 and the years immediately preceding and following. Deaths in the Northern Territory and the Australian Capital Territory are included in the total for Australia but not in any of the States. Similar details for the years 1920 to 1922 are given in Official Year Book No. 22, p. 975.

11. **Deaths of Centenarians.**—In previous years, up to and including Official Year Book No. 33, particulars are given concerning persons aged 100 years and upwards who died each year. However, while the Registrars-General of the various States verify the ages as far as possible, absolute reliance cannot be placed on the accuracy of the information owing to the well-known tendency of very old people to overstate their ages, and it is considered advisable to discontinue publication of this table. In connexion with this question it may be noted that while parish registers in the United Kingdom often date very far back, compulsory registration of births dates practically from 1874 only, the Act of 1836 having left many loopholes for those unwilling to register the births of their children.

12. **Length of Residence in Australia of Persons who Died.**—The length of residence in Australia of all persons whose deaths were registered in 1940 is shown in the following table. Tabulations for subsequent years were discontinued but will be revived for 1947

LENGTH OF RESIDENCE IN AUSTRALIA OF PERSONS WHO DIED IN 1940.

Length of Residence.	Male Deaths.	Female Deaths.	Total Deaths.	Length of Residence.	Male Deaths.	Female Deaths.	Total Deaths.

13. **Birthplace of Persons who Died.**—A table giving a summary of birthplaces of persons whose deaths were registered in 1911 and 1940 will be found in Official Year Book No. 34, p. 337. More detailed information will be found in *Demography Bulletin*, No. 58 Tabulations were discontinued for the years 1941 to 1945 inclusive but were revived for 1946, details of which appear in *Demography Bulletin*, No. 64.

14. **Occupation of Males who Died.**—A table showing occupations of males who died during 1946 appears in *Demography Bulletin*, No. 64.

15. **Causes of Deaths.**—(i) *General.* The classification adopted by this Bureau is that of the International Institute of Statistics, as amended by the Committees of Revision which met in Paris in 1909, 1920, 1929 and 1938.

(ii) *Mortality Statistics for* 1907 *and Subsequent Years.* The statistics relating to causes of death in Australia from 1907 onward have been tabulated in this Bureau in accordance with the above-mentioned classification, and the system is employed also in the State statistical offices. Particulars from 1940 onward have been tabulated on the 1938 revision of the International List.

(iii) *Classification of Causes of Death, according to the Intermediate and the Abridged International Classifications.* An abridged classification, which enumerates forty-three diseases and groups of diseases according to the revised classification, has been in use in many European countries and American States until recently, and a table has been given in past issues of the Official Year Book showing the causes of death according to the abridged classification, so that the results may be compared with those of other countries which used the abridged index.

As the result of an international treaty signed in London in 1934, the intermediate classification of causes of death, or the "minimum nomenclature" covering 87 main causes or groups of causes, has now been adopted in most countries for the purpose of making international comparisons. This classification appears in the pages following and shows the number of deaths during 1946 in Australia for each cause enumerated. To preserve continuity with former statistics, particulars for 1946 have been compiled in the abridged form and are shown on p. 787 in conjunction with those for the previous four years, and averages over five-yearly periods to 1941–45 are shown in the same form on p. 788.

The compilations for the years 1942 to 1946 will be found in full detail in *Demography Bulletins*, Nos. 60 to 64. In the following tables in which the intermediate classification has been employed, tables A, B and C show deaths of males, females and persons, respectively, for 1946. Table D shows in the abridged form, on the basis of the 1938 revision of the International List, the number of persons who died in each of the years 1942 to 1946 and gives the rate per million of population for the last-named year.

Since death-rates are subject to continual fluctuation, it is unsafe to base deductions on the figures relating to a single year. In order, therefore, to furnish a valid basis for comparison, three five-yearly periods have been shown in table E giving the number of deaths and the rates per million persons. While the absolute number of deaths has increased, the death-rate has shown a very satisfactory decrease, which is reflected in the great majority of the causes specified in the table.

A.—CAUSES OF DEATH : MALES, 1946.

NOTE.—All causes of death have been classified in accordance with the 1938 revision of the International List.

16. **Deaths from Principal Specific Causes.**—(i) *General.* In the preceding tables particulars have been given for each of the causes of death comprising the Intermediate and the Abridged Classifications. The more important of these causes are treated in detail hereunder. The Intermediate Classification number is indicated in parenthesis for each cause or group of causes.

(ii) *All Forms of Tuberculosis* (6, 7).—(*a*) *General.* The total number of deaths in 1946 was 2,393, consisting of 1,550 males and 843 females.

(*b*) *Age at Death.* The following table shows the age-groups of males, females and persons who died from this disease in 1946, together with comparable figures for 1921, 1931 and 1941.

(*g*) *Death-rates, Various Countries.* The following table shows the death-rates from tuberculosis for Australia and each State in comparison with the rates for various other countries. Figures for years later than 1939 are not given as they are based on population estimates whose comparability is open to doubt because of the abnormal distribution of population during war-time. The table indicates that Australia occupies a very favourable position as regards the death-rate from this disease.

(*a*) Number of deaths per 100,000 of mean population. (*b*) Excluding full-blood aboriginals. (*c*) Excluding Maoris. (*d*) Not available. (*e*) In towns with over 100,000 inhabitants.

(iii) *Cancer and other Malignant Tumours* (18 *to* 23).—(*a*) *General.* The number of deaths from cancer increased continuously to 6,256 in 1929, declined slightly to 6,120 in 1930, but rose again progressively to 9,118 in 1946.

(*b*) *Type and Seat of Disease.* Tables showing the type and seat of disease, in conjunction with age and with conjugal condition of the persons dying from cancer in 1945 and 1946, will be found in *Demography Bulletin*, Nos. 63 to 64. A summary regarding type and seat of disease for 1946 is given below. It may be pointed out that the significance of the number of deaths shown for the various types of cancer enumerated hereunder is doubtful, owing to the fact that, in the absence of a post-mortem, it is impracticable for the certifying doctor in the majority of cases to make an accurate diagnosis as to type in the detail required for the following classification.

(c) *Age at Death.* The ages of persons who died from cancer in 1921, 1931, 1941 and 1946 are given below. Inferences drawn from the great increase in the number of deaths from cancer in 1946 compared with 1921, need qualification in view of the altered age constitution of the population since the earlier year. The number of people reaching the older ages at which cancer risks are greatest has more than doubled in the last twenty years, and it is only in the extreme old age-groups from 75 onwards that the rate of mortality has definitely increased. For groups up to age 75 there has been no increase in mortality rates since 1921. In the higher age-groups the increase in the rate for females has been relatively greater than that in the rate for males. It is also probable that a proportion of the increased number of deaths from cancer recorded in recent years has been due to more correct diagnosis and certification on the part of medical practitioners rather than to any actual increase in the disease itself.

(*a*) Number of deaths per 100,000 of mean population. (*b*) In towns with over 100,000 inhabitants. (*c*) Excluding full-blood aboriginals. (*d*) Excluding Maoris.

(*h*) *Comparison with Tuberculosis.* In recent years the death-rate from tuberculosis has shown a tendency to decrease, while that from cancer has displayed an almost continuous increase. The table hereunder shows that for each of the periods under review the decline in the death-rate from tuberculosis has been accompanied by an almost equal increase in the rate for cancer. Thus in the forty-five years comprised in the five-yearly averages shown below the death-rate for tuberculosis declined by 57 while the rate of cancer increased by 57 per 100,000 persons. This equal but opposite tendency may be demonstrated by stating that the death-rate from tuberculosis and cancer combined remained almost constant in each period, the figures being :—1901–05, 152 deaths per 100,000 persons ; 1906–10, 145 ; 1911–15, 152 ; 1916–20, 154 ; 1921–25, 153 ; 1926–30, 152 ; 1931–35, 150 ; 1936–40, 154 ; 1941–45, 152 ; and 1946, 157.

(*a*) Number of deaths per 100,000 of mean population.

(iv) *Diseases of the Heart* (42 *to* 46). The number of deaths in 1946 was 23,022, namely, 13,602 males and 9,420 females. Details for each individual disease of the heart may be obtained from *Demography Bulletin*, No. 64. The sex and territorial distribution of the deaths will be found in the table below. This class is the largest among causes of death, the death-rate having grown from 1,019 per million in 1911–15 to 2,705 in 1939–43 and 3,083 in 1946. The increase in the number of deaths recorded from heart diseases has been particularly pronounced during the past sixteen years. The rapid increase in mortality is partly a reflection of the ageing of the population, but the figures have been influenced mainly by improved diagnosis and certification by medical practitioners. Many deaths of elderly people, formerly attributed to senility or other indefinite causes, are believed to be now more frequently certified as associated with some form of heart disease, usually myocardial degeneration. The improvement in diagnosis has been particularly evident in the case of diseases of the coronary arteries. As a result of a change of classification adopted in 1931, all forms of this disease have been included since that year among heart diseases. Although deaths recorded from diseases of the coronary arteries were not numerically important in 1931, this type of disease has since become prominent in medical science, and in 1946 the number of deaths assigned to this cause was 6,609, an increase of 6,045, or over 970 per cent., since 1931. The number of deaths, death-rates and proportions per 10,000 deaths in 1946 are given in the following table. Corresponding figures for 1945 may be obtained from *Demography Bulletin*, No. 63.

DISEASES OF THE HEART : DEATHS, DEATH-RATES AND PROPORTION PER 10,000 TOTAL DEATHS, 1946.

(*a*) Number of deaths from diseases of the heart per 100,000 of mean population.

(v) *Diarrhœa and Enteritis (Children under two years of age)* (54). The number of deaths due to these causes was 214 in 1946, which is a substantial decrease on the average of 350 for the previous five years. During 1946, 5,627 children died before reaching their second birthday, and of these 3.8 per cent., died from diarrhœa and enteritis. The ages of children dying from these diseases during the first year of life will be found on page 776.

The number of deaths under 2 years of age due to diarrhœa and enteritis, the death-rates, and proportions per 10,000 deaths for 1911–15, 1921–25, 1931–35, 1936–40, 1941–45 and 1946 are given in the following table. Corresponding figures for 1945 may be obtained from *Demography Bulletin*, No. 63. Reference to the last five lines of the table will reveal the very satisfactory decrease in the number of deaths due to these diseases. In view of changed birth-rates, however, the death-rates per 100,000 of mean population are not true measures of changes in the force of mortality. A better measure would be the estimated number of children in every 1,000 born who died from these diseases before reaching their second birthday. The numbers are estimated to be as follows :—

Period—	1911–15	Males,	24.6	Females,	20.9	Total,	22.8
„	1921–25	„	16.5	„	13.3	„	14.9
„	1931–35	„	3.7	„	2.8	„	3.3
„	1936–40	„	3.4	„	2.7	„	3.0
„	1941–45	„	2.7	„	2.1	„	2.4

DIARRHŒA AND ENTERITIS (UNDER 2 YEARS OF AGE) : DEATHS, DEATH-RATES AND PROPORTION PER 10,000 TOTAL DEATHS.

(*a*) Number of deaths from these diseases per 100,000 of mean population.

(vi) *Puerperal Causes* (68 to 72). The 327 deaths in 1946 from puerperal causes correspond to a death-rate of 9.0 per 100,000 females. The rate is also equivalent to 1.85 deaths per 1,000 live births. The death-rate may be expressed in other terms by stating that 1 of every 533 women giving birth to a live child in 1946 died from puerperal causes ; the corresponding ratios for married women were 1 of every 551, and for single women 1 in every 315. More detailed information will be found in a series of tables in *Demography Bulletin*, No. 64.

The following table shows the death-rate per 1,000 live births from puerperal causes in various countries. Care is needed in comparing the Australian rates with the figures for other countries. In the rates for the States and Australia deaths from criminal abortion have been excluded from puerperal infection but included with deaths from other puerperal causes and in the total. Definite information is not available as to the practice in other countries but it is very probable that the rates for many of the countries given hereunder totally exclude deaths from criminal abortion.

CHILD-BIRTH : DEATHS PER 1,000 LIVE BIRTHS, VARIOUS COUNTRIES.

Country.	Year.	Rates per 1,000 Live Births from—

(*a*) Excluding full-blood aboriginals. (*b*) Excluding Maoris. (*c*) Localities having Health Bureaux.

A tabulation of puerperal causes for Australia according to age at death for married and single women separately will also be found in *Demography Bulletin*, No. 64.

The total number of children left by the 303 married mothers who died from puerperal causes in 1946 was 658, an average of 2.2 children per mother.

Thirteen of the mothers who died had been married less than one year, 38 between one and two years, and 28 between two and three years. The duration of marriage ranged up to 28 years. Tabulations distinguishing the ages at marriage and at death will be found in *Demography Bulletin*, No. 64, which also includes a table showing in combination the duration of marriage and previous issue.

(vii) *Congenital Malformation, Debility, Premature Birth, etc.* (75 to 79). The deaths under this heading in 1946 numbered 3,881 of which 3,753 were of children under one year of age. Of all deaths of children under one year of age 73 per cent. were due to these causes. The number of deaths for 1946 is given in the following table. Corresponding figures for 1945 may be obtained from *Demography Bulletin*, No. 63.

DEATHS FROM CONGENITAL MALFORMATION, DEBILITY, ETC., 1946.

State or Territory.	Congenital Malformation.			Premature Birth and Injury at Birth.			Congenital Debility and other Diseases peculiar to the First Year of Life.

(*e*) *Occupation at Death, Males.* A table showing main groups of occupations of males who committed suicide during 1946 appears in *Demography Bulletin*, No. 64.

(*f*) *Death-rates, Various Countries.* The following table shows the death-rate from suicide for Australia and each State in comparison with the rates for various other countries. Figures for years later than 1939 are not given as they are based on population estimates whose comparability is open to doubt because of the abnormal distribution of population during war-time. The table indicates that Australia occupies a fairly favourable position as regards the death-rate from suicide.

SUICIDE : DEATH-RATES (*a*), VARIOUS COUNTRIES.

Country.	Year.	Rate.	Country.	Year.	Rate.
Egypt	1936	2.0	New Zealand (*d*) ..	1939	11.7

Accidental mechanical suffocation	44	22	66
Accidental drowning	291	73	364
Accidental injury by firearms	66	7	73
Accidental injury by cutting or piercing instruments	11	1	12
Accidental injury by fall, crushing, landslide, etc.—			
Fall, not otherwise specified	437	485	922
Other crushings	22	2	24
Injuries by animals (n.e.i.)	7	2	9
Hunger or thirst	2	..	2
Excessive cold	2	..	2
Excessive heat	30	22	52
Lightning	1	..	1
Electricity (lightning excepted)	41	4	45
Attack by venomous animals—			
Snakebite	4	1	5
Other	1	..	1
Other accidents—			
Vaccinia and other sequelæ of vaccination	..	1	1
Other accidents due to medical or surgical intervention	14	15	29
Lack of care of the new-born	6	3	9
Other and unspecified accidents	172	49	221
Legal executions	2	..	2
External Violence, excluding Suicide and Homicide	2,731	1,083	3,814
Total Deaths from External Violence	3,297	1,339	4,636

(*a*) Other than collisions with trains, trams or motor-cars.

The following table of death-rates per million of mean population reveals a decrease in 1921–25 for External Violence, excluding Suicide and Homicide, but an increase in the rates for 1926–30 to which the growth of automobile accidents contributed very largely. A decreased death-rate was recorded during 1931–35, but the rate rose again during 1936–40. The sharp decline during 1941–45 may be attributed to the decrease in number of automobile accidents which resulted from the war-time restrictions of travel.

DEATH-RATES, ETC., EXTERNAL VIOLENCE : AUSTRALIA.

Period.	Death-rates(*a*) from Homicide.			Death-rates(*a*) from External Violence, excluding Suicide and Homicide.			Death-rates(*a*) from all External Violence.			All External Violence Proportion per 10,000 Deaths.

(*a*) Number of deaths per 1,000,000 of mean population.

(xi) "*Other Diseases*". The intermediate and the abridged classifications of causes of death used in Tables A to E in the preceding pages differ from those used in issues of the Official Year Book previous to No. 25 in that no residue of "other diseases" is shown at the foot. The items are ranged in classes or groups of classes and each class or group of classes is made complete by the addition of an "other diseases" item for that class or group of classes. These "other diseases" items of the intermediate classification are expanded into their constituent causes in the following table :—

F.—DEATHS FROM "OTHER DISEASES" : AUSTRALIA, 1946.

Causes.	General Classification Number.	Males.	Females	Persons.
17. Other Infective and Parasitic Diseases.				
Cerebro-spinal meningococcal meningitis	6	42	32	74
Malignant pustule and anthrax	7	1	..	1
Erysipelas	11	3	3	6
Tetanus	12	55	16	71
Leprosy	23	2	2	4
Gonococcal infections	25	2	..	2

17. **Causes of Deaths in Classes.**—The figures in the preceding sub-sections relate to specific causes of death, and are of greater value in medical statistics than a mere grouping under general headings. The classification under eighteen general headings adopted by the compilers of the International Nomenclature is, however, shown in the

following table for 1946, together with the death-rates and proportions of total deaths pertaining to those classes. A further table furnishes the death-rates for the five-year periods 1921–25, 1931–35 and 1941–45. Figures for 1945 corresponding to the first table may be obtained from *Demography Bulletin*, No. 63.

(*a*) Number of deaths per 100,000 of mean population.

18. **Age at Death of Married Males and Females, and Issue.**—*Demography Bulletin*, No. 64, contains a number of tables showing, in combination with the issue, the age at marriage, age at death and occupation of married persons who died in Australia in 1946. Deaths of married males in 1946 numbered 28,937, and of married females, 25,193. The tabulations which follow deal, however, with only 28,530 males and 24,989 females, the information regarding issue in the remaining 615 cases being incomplete. The total number of children in the families of the 28,530 males was 104,566, and of the 24,989 females, 98,911. The average number of children is shown for various age-groups in the following table :—

AGE AT DEATH, AND AVERAGE ISSUE OF MARRIED MALES AND FEMALES : AUSTRALIA.

Age-group (Years).	Average Issue.									
	Males.					Females.				
	1911.	1921.	1931.	1941.	1946.	1911.	1921.	1931.	1941.	1946.

20. **Birthplace of Deceased Married Males and Females, and Issue.**—A table showing the birthplaces of married males and females who died in 1911 and 1940, together with the average issue, may be found in the Official Year Book, No. 34, p. 366.

21. **Occupation of Deceased Married Males and Issue.**—A summary of the main groups of occupations of married males who died during 1946 appears in *Demography Bulletin*, No. 64.

§ 4. Registration of Births, Deaths and Marriages in the Australian Capital Territory.

To the end of 1929 the provisions of the Registration of Births, Deaths and Marriages Act of 1899 and the Marriage Act of 1899 of New South Wales applied to the Australian Capital Territory. Births, deaths and marriages occurring within the Territory were registered by the District Registrars at Queanbeyan and Nowra, and were incorporated in the New South Wales records.

In 1929, however, the Registration of Births, Deaths and Marriages Ordinances were enacted, providing for the assumption by the Commonwealth Government of the function of registration within the Territory as from 1st January, 1930. All registrations are made at the Registrar's Office, Civic Centre, Canberra.

Marriages within the Territory are celebrated according to the conditions prescribed by the Marriage Ordinance 1929–1938. This Ordinance, which closely follows the provisions of the Marriage Act of New South Wales, which it supersedes as regards the Australian Capital Territory, came into operation on 1st January, 1930.

CHAPTER XVIII.

MINERAL INDUSTRY.

§ 1. The Mineral Wealth of Australia.

1. **Place of Mining in Australian Development.**—The value of production from the mineral industry is now considerably less than that returned by the agricultural, the pastoral or the dairying industry ; nevertheless it was the discovery of gold in payable quantities that first attracted population to Australia in large numbers and thus accelerated its national development.

2. **Extent of Mineral Wealth.**—The extent of the total mineral wealth of Australia cannot yet be regarded as completely ascertained, as large areas of country still await systematic prospecting. More detailed reference to this matter will be found in preceding issues of the Official Year Book. (See No. 22, p. 755.)

During the years 1934 to 1940 a survey of certain areas in Australia north of the 22nd parallel of south latitude was undertaken by the Governments of the Commonwealth, Queensland and Western Australia. This survey is referred to in § 16 below.

3. **Quantity and Value of Production in 1945.**—The quantities (where available) and the values of certain of the principal minerals produced in each State, and in Australia as a whole, during 1945, are shown in the tables immediately following. It must be clearly understood that the figures quoted in these tables refer to the quantities and values of the various minerals in the form in which they were reported to the State Mines Departments, and represent amounts which the Mines Departments consider may fairly be taken as accruing to the mineral industry as such. They are not to be regarded as representative of Australia's potentiality as a producer of *metals*, this matter being dealt with separately in § 17 below. New South Wales is, of course, in normal times, a large producer of iron and steel from ironstone mined in South Australia. As the table shows, the latter State receives credit for this ironstone in its mineral returns. The iron and steel produced therefrom cannot be assigned to the mineral industry of New South Wales, but the value of the transformation from ore to metal is credited to the manufacturing industry of that State. Similarly, lead, silver-lead, cadmium, cobalt and zinc are credited in the form reported to the State of origin—chiefly New South Wales—although the actual metal extraction is carried out principally in South Australia and Tasmania.

The quantities of cadmium and cobalt recovered in Tasmania from zinc ores mined in New South Wales during 1945 are shown in § 8, par. 2 (page 831.)

(*a*) For items excluded see letterpress below. (*b*) See letterpress preceding this table. (*c*) Incomplete. (*d*) Damourite. (*e*) Not available.

The figures in the foregoing table exclude certain commodities, such as stone for building and industrial uses, sand, gravel, brick and pottery clays, lime, cement and slates, which might be included under the generic term "mineral". Particulars of the production of some of these items are given in par. 6, Quarries, below. Items excluded, such as cement, carbide and sulphuric acid, are included in manufacturing production, and, in any case, only the raw material could properly be included in mineral production. The items excluded from the total for New South Wales in 1945 consisted of—lime, £58,532; building stone, £36,409; Portland cement, £967,935; coke, £1,950,032; road material, and gravel, £701,472; shell grit, £22,486; sulphur and sulphuric acid, £363,115; and brick and pottery clays, £122,240. Carbide and cement, £273,588, have been excluded from the Tasmanian figures.

4. **Value of Production, 1938 to 1945.**—The values of the minerals produced in each State during the years 1938 and 1942 to 1945 are given in the table hereunder:—

MINERAL PRODUCTION: VALUES.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Australia.
	£	£	£	£	£	£	£	£
1938 ..	10,731,391	1,884,015	3,966,119	2,932,473	10,844,469	1,889,804	214,724	32,462,995
1942 ..	16,690,283	1,980,972	5,023,495	3,012,973	9,487,562	2,494,119	204,366	38,893,770
1943 ..	16,477,501	1,593,994	4,214,525	3,070,716	6,383,755	2,378,533	130,795	34,249,819
1944 ..	16,496,085	1,602,105	4,477,087	2,926,666	5,667,497	2,220,136	126,025	33,515,601
1945 ..	16,112,615	1,830,374	4,355,127	2,309,991	5,804,238	1,934,066	176,197	32,522,608

The value of mineral production in Australia during 1941 was the highest ever recorded. Although fluctuations have occurred in some States, the values recorded for Australia have declined annually since that year.

Since 1941 the greatest decrease has occurred in Western Australia, £6,595,000; followed by Queensland, £946,000; South Australia, £877,000; Tasmania, £716,000; Victoria, £541,000; Northern Territory, £98,000. New South Wales increased by £1,039,000. There was a downward movement in quantity and value for many minerals. The value of gold decreased by almost £9 million, but black coal increased by £1.2 million. The decrease of all mineral production was £8,967,000.

5. **Total Production to end of 1945.**—In the next table will be found the estimated value of the total mineral production in each State up to the end of 1945. The items excluded from the preceding table are also omitted here, and consequently the total for New South Wales is £69,500,000 less than that published by the State Department of Mines. The principal items excluded from the table below are coke, £32,900,000; cement, £33,000,000; lime, £2,400,000; and considerable values for marble, slate, granite, chert, gravels, etc., which the State Department now includes in the returns for quarries.

MINERAL PRODUCTION: VALUES TO END OF 1945.

Mineral.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Australia.

Other ..	12,293	1,156	3,495	9,884	1,864	3,651	333	32,676
Total ..	619,323	344,025	207,700	84,248	296,370	87,237	5,676	1,644,579

The "other" minerals in New South Wales include alunite, £226,000; antimony, £435,000; arsenic, £212,000; bismuth, £257,000; chrome, £143,000; diamonds, £151,000; magnesite, £764,000; molybdenite, £232,000; opal, £1,639,000; scheelite, £243,000; and shale oil, £3,481,000. In the Victorian returns antimony ore was responsible for £636,000. The value for coal in this State includes £7,116,000 for brown coal. Included in "other" in the Queensland production were opal, £188,000; gems, £655,000; bismuth, £146,000; cobalt, £158,000; molybdenite, £628,000; limestone flux, £903,000; and arsenic, £124,000. The chief items in South Australian "other" minerals were salt, £6,134,000; limestone flux, £658,000; gypsum, £1,718,000; phosphate, £188,000; and opal, £236,000. In Western Australia arsenic, £679,000; gypsum, £149,000; and asbestos, £191,000 were the principal items included with "other" minerals. In the Tasmanian returns osmiridium was responsible for £657,000, scheelite for £553,000 and limestone flux for £1,349,000.

6. **Quarries.**—Statistics giving details of the output of quarries were first published in Official Year Book No. 33, 1940. The details were collected following a resolution of the Conference of Australian Statisticians held in 1935.

The Conference defined a quarry, for the purpose of these statistics, as one in which four hands or more are employed, or in which power other than hand-power is used. The details given in the following table represent the output of quarries conforming to this definition, although in a few relatively unimportant cases details of other establishments have been included.

The authorities responsible for the collection of these statistics are the Government Statistician in New South Wales, Victoria, Queensland and Western Australia, and the Department of Mines in South Australia and Tasmania.

It should be noted that the inclusion of returns from certain small establishments tends to inflate the figures in the following tables, but there is possibly a compensating factor in that some quantities used by shires and municipalities in the repair of roads have not been returned to the collecting authority. Complete details for all States for recent years are not available.

OUTPUT OF QUARRIES, 1945.

§ 2. Gold.*

1. **Discovery in Various States.**—The discovery of gold in payable quantities was an epoch-making event in Australian history, for, as one writer aptly phrases it, this event " precipitated Australia into nationhood ". A more or less detailed account of the finding of gold in the various States appears under this Section in Official Year Books, Nos. 1 to 4,

2. **Production at Various Periods.**—(i) *Quantities.* The following table shows the quantity of gold produced in the several States and in Australia as a whole during each of the nine decennial periods from 1851 to 1940, and in single years from 1941 to 1946. Owing to the defective information in the earlier years the figures fall considerably short of the actual totals, for during the first stages of mining development large quantities of gold were taken out of Australia by successful miners who preferred to keep the amount of their wealth secret.

GOLD : QUANTITY PRODUCED.
('000 fine ounces.)

1945	43	62	63	..	469	13	7	657
1946	32	87	63	1	617	15	10	825
Total 1851–1946	15,938	72,910	21,600	444	50,835	2,341	678	164,746

The amount of gold raised in Australia in any one year attained its maximum in 1903, when Western Australia also reached its highest point. For the other States the years in which the greatest yields were obtained were as follows :—New South Wales, 1852 ; Victoria, 1856 ; Queensland, 1900 ; South Australia, 1904 ; and Tasmania, 1899.

---

* **The values quoted in this section are in Australian currency throughout.**

Owing to the exhaustion of the more easily worked deposits and the unprofitableness of gold-mining during the era of high prices following the 1914–18 War, the production of gold in Australia declined from 3,837,979 fine oz. in 1903 to 427,160 fine oz. in 1929, the lowest output since the discovery of the precious metal.

Increased activity in prospecting due to prevailing economic conditions resulted in some improvement in 1930, but the marked development since that year received its impetus from the heavy depreciation of Australian currency in terms of gold. Oversea and local capital were attracted to the industry, and the employment of advanced geological methods and technical improvements brought many difficult or abandoned propositions into profit. The output of gold rose annually from 467,742 fine oz. in 1930 to 1,645,697 fine oz. in 1939. Following the outbreak of war in 1939, production fell very slightly in 1940, and rapidly thereafter, due to the diversion of man-power, until in 1944 it was only 656,867 fine oz. In 1945, the year in which hostilities in the 1939–45 War ceased, production showed practically no change but in 1946 a marked increase of 167,267 fine oz. or 25 per cent. was recorded, the total production for the year being 824,480 fine oz.

(ii) *Values.* In the next table the gold produced since 1851 is valued in Australian currency. For the years 1851 to 1918 and 1925 to 1930 the price used was £4 4s. $11^{5}/_{11}$d. per fine oz. For the years 1919 to 1924 the price ranged between £5 12s. 6d. in 1920 and £4 8s. 6d. in 1923. The value applied for 1931 and to June, 1932 was the export parity calculated directly from London prices. Since then the average price paid by the mints in Australia has been used.

GOLD : VALUE OF PRODUCTION.

Period.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Australia.

(*a*) Period July, 1911 to June, 1920. (*b*) Period July, 1920 to December, 1930.

Values per fine oz. in Australian currency assigned to the production of gold during recent years are: £9 14s. $5\frac{3}{4}$d. in 1939, £10 13s. $1\frac{2}{3}$d. in 1940, £10 13s. 8d. in 1941, £10 9s. $0\frac{2}{3}$d. in 1942, £10 9s. 0d. in 1943, £10 10s. $1\frac{1}{2}$d. in 1944, £10 13s. $11\frac{1}{2}$d. in 1945 and £10 15s. 3d. in 1946. Further information regarding the price of gold is given in Chapter XIV. " Private Finance ".

3. **Changes in Relative Positions of States as Gold Producers.**—The figures in the table showing the value of gold raised explain the enormous increase in the population of Victoria during the period 1851 to 1861, when an average of over 40,000 persons reached the State each year. With the exception of 1889, when its output was exceeded by

that of Queensland, Victoria maintained its position as the chief gold producer for a period of forty-seven years, until its production was surpassed by that of Western Australia in 1898. From that year onward the proportion contributed by Western Australia has increased and in 1946 represented 75 per cent. of the entire yield of Australia. The proportion contributed by this State for the period 1851 to 1946 was 31 per cent. and by Victoria for the same period 44 per cent.

4. **Place of Australia in the World's Gold Production.**—The table below shows, in decennial periods from 1851 to 1940, the world's gold production (as ascertained from authoritative sources) and the share of Australia therein. The details of world production shown for the years 1941 to 1945 are possibly less complete than those shown for previous years because of censorship during the war. The figures recorded for these years represent recorded production only and therefore omit any production for those countries not reporting. Included in this latter group are the Soviet Union, Japan and some other producing countries of lesser importance.

GOLD: WORLD PRODUCTION.

Period.	World Production of Gold.	Gold Produced in Australia.	Percentage of Australia on Total.
	Fine oz.	Fine oz.	%
1851–60	64,482,933	24,877,012	38.58
1861–70	61,098,343	19,038,661	31.16
1871–80	55,670,618	14,429,601	25.92
1881–90	51,280,184	11,586,625	22.59
1891–1900	101,647,521	21,187,662	20.84
1901–10	182,891,525	33,432,069	18.28
1911–20	206,511,263	17,426,466	8.44
1921–30	183,805,900	5,843,052	3.18
1931–40	315,508,597	11,383,487	3.61
1941	(*a*) 33,685,199	1,496,698	4.44
1942	(*a*) 29,858,342	1,153,787	3.86
1943	(*a*) 23,531,415	751,279	3.19
1944	(*a*) 20,903,289	656,867	3.14
1945	(*a*) 20,205,964	657,213	3.25

(*a*) Recorded production only. (See letterpress above.)

The quantities of gold produced in the principal producing countries in each of the years 1938 and 1942 to 1945 are shown in the table hereunder. Particulars of the quantities and values of gold produced in all countries for the ten years 1930–39 will be found in *Production Bulletin* No. 34, Part II., issued by this Bureau.

GOLD: PRODUCTION IN PRINCIPAL COUNTRIES.

Country.	1938.	1942.	1943.	1944.	1945.
	Fine oz.	Fine oz.	Fine oz.	Fine oz.	Fine oz.

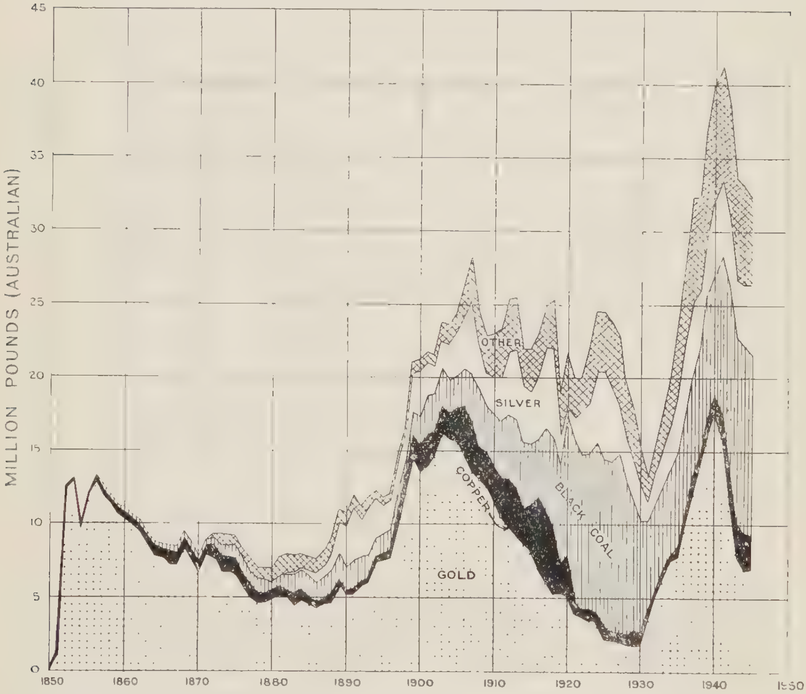
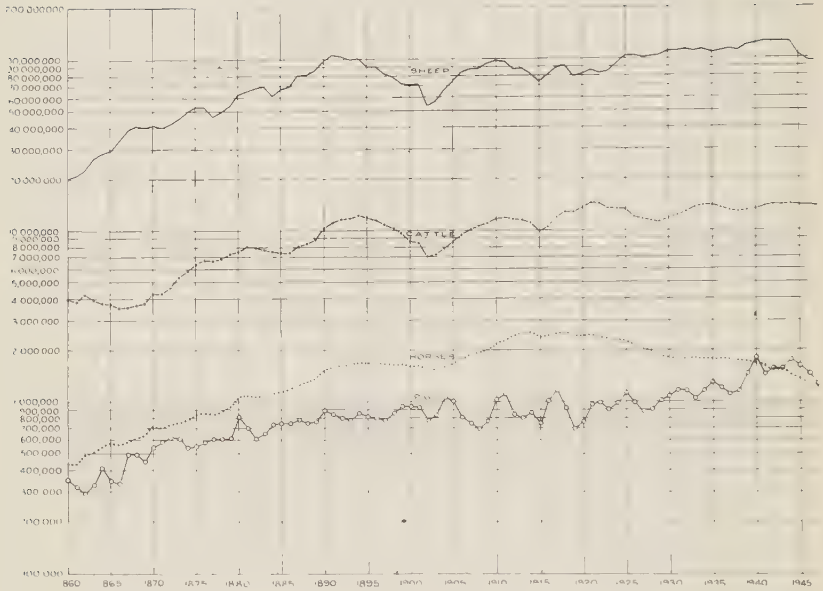
(*a*) Not available.

VALUE OF PRINCIPAL MINERALS PRODUCED—AUSTRALIA, 1850 TO 1945.



EXPLANATION.—The upper curve represents the total value of mineral production while the vertical distances between the curves represent the value of production of each mineral.

LIVE STOCK—AUSTRALIA, 1860 TO 1947.



(See page 853.)

Explanation.—This is a ratio graph, the vertical scale being logarithmic and the curves rise and fall according to the rate of increase or decrease. Actual numbers are indicated by the scale at the side of the graph.

The next table shows the average yearly production in the principal gold-producing countries for the decennium 1936 to 1945 :—

GOLD : AVERAGE ANNUAL PRODUCTION IN PRINCIPAL COUNTRIES, 1936 TO 1945.

Country.	Quantity.	Country.	Quantity.
	Fine oz.		Fine oz.
Union of South Africa ..	12,794,333	Mexico	751,468
U.S.S.R (Russia) ..	(*a*) 4,500,750	Rhodesia	743,117
Canada	4,242,180	Japan, including Formosa	(*a*) 752,868
United States of America ..	3,333,433	Korea	634,777
Australia	**1,216,271**	Philippine Islands ..	569,201

(*a*) Average eight years 1933 to 1940.

5. **Employment in Gold-mining.**—The number of persons engaged in gold-mining in each State at various intervals since 1901 is shown in the following table. The figures include prospectors, etc., so far as they are ascertainable, and include those who may not have worked during the whole of the year.

GOLD-MINING : PERSONS EMPLOYED.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Total.
	No.	No.	No.	No.	No.	No.	No.	No.
1901 ..	12,064	27,387	9,438	(*a*)1,000	19,771	1,112	(*a*) 200	70,972
1903(*b*) ..	11,247	25,208	9,229	(*a*)1,000	20,716	973	(*a*) 200	68,573
1913 ..	3,570	11,931	3,123	800	13,445	481	175	33,525
1923 ..	1,141	2,982	603	32	5,555	119	30	10,462
1933 ..	6,913	6,126	4,161	231	9,900	229	95	27,655
1938 ..	3,764	6,315	3,378	158	15,374	141	267	29,397
1942 ..	1,571	1,661	1,075	34	8,123	33	50	12,547
1943 ..	771	719	1,297	29	5,079	19	40	7,954
1944 ..	512	550	1,243	28	4,614	23	45	7,015
1945 ..	509	643	1,256	16	4,818	15	46	7,303

(*a*) Estimated. (*b*) Year of maximum production for Australia.

Owing to causes referred to earlier in this section, the number employed in gold-mining had dwindled to the comparatively small figure of 6,108 in 1929. Stimulated by the enhanced price of gold, employment in the industry rose more than five-fold to 33,113 in 1935, but thereafter the numbers employed declined each year to 7,015 in 1944. In 1945, following the cessation of hostilities and a relaxation of man-power control, an increase of nearly 300 was recorded.

6. **Tax on Gold.**—(i) *General.* The Commonwealth Government imposed a tax on gold produced in Australia or in any Territory under its jurisdiction and delivered to the Commonwealth Bank on or after 15th September, 1939. The rate of tax was fixed at 50 per cent. of the price payable by the Bank in excess of £A9 per fine oz.

The tax on gold yielded £1,214,621 during 1939–40 ; £1,452,260 during 1940–41 ; £1,030,425 in 1941–42 ; £524,694 in 1942–43 ; £317,720 in 1943–44 ; £342,457 in 1944–45 ; £383,552 in 1945-46 and £556,435 in 1946-47. This tax was suspended as from 20th September, 1947 by the Gold Tax Suspension Act 1947.

(ii) *Development of Gold Mining Industry.* Assistance amounting to £150,000 was given to the gold-mining industry, through the medium of the States, during 1940-41. In addition, an amount approximating £150,000 was paid during 1942 and subsequent years for the maintenance of those mines where, under man-power control, miners were transferred to other activities more directly associated with the war effort.

The suspension of the tax on gold referred to above was designed to assist the gold mining industry in meeting higher costs and to encourage a greater output.

7. **Bounty on Production.**—A reference to the bounty provided by the Commonwealth on gold production in Australia appears in Official Year Book No. 32, p. 579.

§ 3. Silver, Lead and Zinc.

1. **Production.**—(i) *General.* The values of the production of silver, silver-lead ore and lead from the various States during each of the years 1938 and 1942 to 1945 are shown in the following table :—

SILVER AND LEAD : VALUE OF PRODUCTION.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Australia.
	£	£	£	£	£	£	£	£
1938 ..	3,520,465	647	926,614	70	29,477	267,773	..	4,745,046
1942 ..	4,168,421	2,227	1,034,550	477	23,916	358,966	..	5,588,557
1943 ..	3,752,672	2,278	230,837	62	16,475	333,058	..	4,335,382
1944 ..	4,068,935	1,280	14,733	309	15,807	313,618	..	4,414,682
1945 ..	4,625,665	1,622	17,788	601	22,757	259,560	..	4,927,993

(ii) *New South Wales.* (*a*) *General.* The figures for New South Wales for 1945 include silver to the value of £20,703 and silver-lead ore and concentrates valued at £4,604,962. Since the Sulphide Corporation Ltd. ceased smelting operations in 1922 the silver (metal) has been obtained chiefly in the refining of gold and copper ores, and there has been no production of lead (pig). It may be noted here that the bulk of the carbonate and siliceous ore from the Broken Hill field is sent for treatment to Port Pirie in South Australia, while the remainder of the ore is concentrated on the field and then dispatched to Port Pirie for refining. The output of silver-lead ores and concentrates in 1945 decreased by 34,758 tons compared with the previous year, but owing to increased prices the value rose by more than £558,000.

It must be understood that the totals for New South Wales in the table above represent the net value of the product (excluding zinc) of the silver-lead mines of the State. In explanation of the values thus given, it may be noted that, as previously mentioned, the metallic contents of the larger portion of the output from the silver-lead mines in the State are extracted outside New South Wales, and the Mines Department considers, therefore, that the State should not take full credit for the finished product. The real importance of the State as a producer of silver, lead and zinc is thus to some extent understated.

(*b*) *Broken Hill.* Broken Hill, in New South Wales, is the chief centre of silver production in Australia. A description of the silver-bearing area in this district is given in earlier issues of the Official Year Book. (See No. 4, p. 506).

The value of output of the principal mines in the Broken Hill field totalled £207.3 million to the end of 1946.

(*c*) *Other Areas.* Silver is found in various other localities in New South Wales, the most important being at Captain's Flat where Lake George Mines produced concentrates estimated to contain 173,895 oz. of silver, 7,944 tons of lead and 13,399 tons of zinc in 1945. Production on a small scale recommenced during 1946 at Yerranderie.

(iii) *Victoria.* The silver produced in 1945 amounted to 14,861 oz., valued at £1,622, and was obtained in the refining of gold at the Melbourne Mint.

(iv) *Queensland.* The production of silver decreased from 3,055,435 oz. in 1942 to 112,710 oz. in 1945, whilst lead production dropped from 33,512 tons in 1942 to nil in 1945. This decrease was due to suspension of silver-lead and zinc operations by Mount Isa Mines Ltd. during the time it was engaged in producing copper.

(v) *South Australia.* In 1945 production amounted to 3,241 oz. valued at £513.

(vi) *Western Australia.* The quantity of silver obtained as a by-product and exported in 1945 was 146,025 fine oz. valued at £22,757.

(vii) *Tasmania.* The silver produced in 1945 amounted to 816,157 fine oz., valued at £102,101, and the lead to 6,298 tons, valued at £157,459, produced in the Western Division of the State. Compared with previous years this represents a considerable decrease as regards both quantity and value. About 136,390 oz. of the total silver output were contained in silver-lead, 24,232 oz. in the blister copper produced by the Mount Lyell Co., and 655,535 oz. in zinc lead ore.

(viii) *Northern Territory.* A rich deposit of silver-lead and copper ore was located in 1930 at the Jervois Range about 200 miles east of Alice Springs. Development is hindered, however, by transport difficulties and lack of permanent water. Rich sulphides have been found at Barrow Creek. Production during the past ten years has been very intermittent and not very great in the years when any output was recorded.

2. **Production, Sales and Stocks of Refined Silver, 1939 and 1942-1946.**—The following table sets out as fully as possible the total production and distribution of refined silver in Australia. It is based on the data published by the Australian Mines and Metals Association and shows the stocks of refined silver in Australia, production and sales (locally and overseas) during the years 1939 and 1942 to 1946. Comparable figures for the year 1938 are not available.

REFINED SILVER : PRODUCTION, SALES AND STOCKS, AUSTRALIA.

Particulars.	1939.	1942.	1943.	1944.	1945.	1946.
	'000 fine oz.	'000 fine oz.	'000 fine oz.	'000 fine oz.	'000 fine oz.	'000 fine oz.
Stock from previous year ..	122	419	402	437	414	465
Production for year ..	9,552	9,508	8,263	7,176	7,464	6,183
Total Supply ..	9,074	9,927	8,665	7,613	7,878	6,648
Sold to Australian consumers	1,794	9,495	8,228	7,199	7,413	6,407
Exported or sold for export	7,518	30	..	..	..	..
Stock on hand at end of year	362	402	437	414	465	241
Total Disposals and Stocks	9,674	9,927	8,665	7,613	7,878	6,648
Silver Contents of Ores and Concentrates Produced ..	15,320	14,242	10,330	9,366	8,077	9,073

3. **World Production.**—The world's production of silver during the years 1938 and 1941 to 1945 is estimated to have been as follows :—

SILVER : WORLD PRODUCTION.

1938.	1941.	1942.(*a*)	1943.(*a*)	1944.(*a*)	1945.(*a*)
'000 fine oz.	'000 fine oz.	'000 fine oz.	'000 fine oz.	'000 fine oz.	'000 fine oz.
267,765	262,854	218,721	193,231	169,466	142,731

(*a*) Output of reporting countries.

The world's production of silver during 1938 amounted to about 268 million fine oz., of which Australia contributed 13.9 million fine oz., or 5.2 per cent. The production for Australia includes an estimate of the silver contents of the ores, bullion and concentrates exported.

The estimated yields of the principal silver-producing countries in 1945 (or the latest year available) were as follows :—

SILVER : PRODUCTION IN PRINCIPAL COUNTRIES, 1945.

Country.	Production.	Country.	Production.
	Fine oz. ('000 omitted.)		Fine oz. ('000 omitted.)
Mexico	61,098	British India (including Burma)	(a) 6,175
United States of America ..	29,046	Belgian Congo	4,138
Canada	12,943	Yugoslavia	(b) 2,570
Peru	12,887	Union of South Africa ..	1,243
Japan	(a) 11,000	Argentina	(c) 1,134
Australia	**8,077**	Chile	1,000
U.S.S.R. (Russia) ..	(a) 7,000	Newfoundland	665
Germany	(b) 7,000		
Bolivia	6,684		

(a) Year 1940. (b) Year 1939. (c) Year 1942.

4. **Production of Lead in Australia.**—For reasons already mentioned, difficulties arise when an attempt is made to show the production of lead by States. This is due to the fact that production is largely recorded in terms other than metal. The chief sources of production are New South Wales, Queensland and Tasmania.

In the following table details of production, sales, and stocks are given for the years indicated and have been compiled from data supplied by the Australian Mines and Metals Association. Comparable figures for the year 1938 are not available.

REFINED LEAD : PRODUCTION, SALES AND STOCKS, AUSTRALIA.

Particulars.	1939.	1942.	1943.	1944.	1945.	1946.

5. **Prices of Silver, Lead and Zinc.**—In view of the close association in Australia, particularly in New South Wales, of ores containing these metals, the average prices in sterling of each metal on the London Metal Exchange during the years shown have been incorporated in the table hereunder. During 1942, 1943 and 1944, prices remained unchanged at the 1941 levels.

PRICES OF SILVER, LEAD AND SPELTER.

(In Sterling).

Metal.		1938.	1940.	1941.	1945.	1946.	1947.
		£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

Lead ..	per ton	15 6 6	*a*25 0 0	*a*25 0 0	*a*27 15 11	48 1 7	85 1 7
Spelter	,, ,,	14 1 7	*a*25 15 0	*a*25 15 0	*a*28 16 7	43 1 11	70 0 0

(*a*) Maximum price as fixed by the British Ministry of Supply.

The prices of lead and zinc in Australia were fixed by Prices Regulation at £A22 per ton in February, 1940, and have continued at that level up to December, 1948. In January, 1949, the local price of lead was increased to £A35 per ton and zinc to £A40 per ton. The price of silver, however, was not so fixed and the following prices per fine oz. in Australia represent the export parity calculated directly from London prices :— 2s. 3.8d. in 1939 ; 2s. 6.1d. in 1940 ; 2s. 7.5d. in the years 1941 to 1944 ; 3s. 2.2d in 1945 ; 5s. 0.8d. in 1946 and 4s. 7.6d. in 1947.

6. **Employment in Silver, Lead and Zinc-mining.**—The average number of persons employed in mining for these metals during each of the years 1938 and 1942 to 1945 is given below :—

SILVER, LEAD AND ZINC-MINING : PERSONS EMPLOYED.

Year.	N.S.W.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Nor. Terr.	Australia.

§ 4. Copper.

1. **Production.**—Copper is widely distributed throughout Australia. South Australia and New South Wales were once large producers but the output of these States is much less than it was in earlier years. The chief sources of production are now centred in Queensland and Tasmania.

The values of the local production as reported and credited to the mineral industry for the years 1938 and 1942 to 1945 are shown hereunder. Quantities for Australia as a whole, as returned by the several State Mines Departments, are appended at the foot of the table :—

COPPER : PRODUCTION.

(a) Incomplete.

In the following table, details of the production, sales and stocks of refined copper, as compiled by the Australian Mines and Metals Association, are given for the years indicated. Comparable figures for the year 1938 are not available :—

REFINED COPPER : PRODUCTION, SALES AND STOCKS, AUSTRALIA.

Particulars.	1939.	1942.	1943.	1944.	1945.	1946.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Stocks from previous year ..	1,342	988	972	587	800	2,611
Production for year ..	17,867	24,609	20,457	19,898	20,498	22,659
Total	19,209	25,597	21,429	20,485	21,298	25,270
Sold to Australian consumers	18,808	24,625	20,842	19,685	18,687	22,957

Total	19,209	25,597	21,429	20,485	21,298	25,270

2. **Sources of Production.**—(i) *New South Wales.* Copper ores and concentrates produced in New South Wales in 1945 amounted to 3,050 tons with an estimated metallic content of 1,830 tons of copper.

(ii) *Queensland.* In 1945 the yield of metallic copper in this State amounted to 15,007 tons compared with 15,804 tons in 1944 and 10,758 tons in 1943.

The increased production was due principally to operations at Mount Isa where, in 1943, mining for copper was undertaken to meet the war-time demand whilst mining in this field for silver-lead and zinc was suspended. The returns from the chief producing areas in 1945 were as follows :—Mount Isa, 11,763 tons, and Mount Morgan, 3,005 tons.

(iii) *South Australia.* Deposits of copper are found over a large portion of South Australia and its total production to date exceeds that of any other State. Since the exhaustion of the ore reserves on the principal copper fields, output has diminished to negligible dimensions and in 1945, at 134 tons, was less than production in Queensland, Tasmania and New South Wales. Drilling operations were continued during 1945 on the Wallaroo lode.

(iv) *Western Australia.* During 1945, the quantity of copper reported was 40 tons valued at £364 compared with 46 tons for £367 in 1944.

(v) *Tasmania.* The quantity of copper produced in Tasmania during 1945 was 7,473 tons, valued at £463,294, the Mount Lyell Mining and Railway Co. Ltd. accounting for the greater part of the production. This company treated 32,396 tons of ore and concentrates and produced blister copper, containing copper (7,197 tons), silver (24,232 oz.) and gold (4,853 oz.), the whole being valued at £771,102.

(vi) *Northern Territory.* Copper has been found at various places in the Territory. In 1945, 146 tons of concentrates were produced compared with 68 tons in 1944, and 96 tons in 1939.

3. **World Production of Copper.**—The world's production of copper during the years 1938 and 1942 to 1945 was estimated as follows. The figures have been obtained from authoritative sources but some countries did not report their production during the war years and in these cases estimates have been substituted.

COPPER : WORLD PRODUCTION.

(Tons of 2,240 lb.)

1938.	1942.	1943.	1944.	1945.
2,020,000	2,422,000	2,449,000	2,088,000	1,768,000

The yields from the principal copper-producing countries reporting in 1945 were as follows :—

COPPER : PRODUCTION IN PRINCIPAL COUNTRIES, 1945.

(Tons of 2,240 lb.)

Country.	Production.	Country.	Production.
United States of America ..	751,000	Yugoslavia	(*a*)
Chile	455,000	**Australia**	**25,850**
Canada	202,000	Peru	24,000
Northern Rhodesia ..	194,000	Germany	(*a*)
Belgian Congo	(*a*)	Turkey	9,000
U.S.S.R. (Russia) ..	(*a*)	Belgium	8,000
Mexico	61,000	Spain	6,000
Japan	28,000	Bolivia	6,000

(*a*) Not available.

During 1945 the share of the United States of America in the world's copper production amounted to 42 per cent. while the Australian proportion was about 1.5 per cent.

4. **Prices.**—At the outbreak of war in 1939, the price of copper in Australia and the United Kingdom was fixed by Regulation. Details of the average price for the years shown are given in terms of Australian currency and sterling in the following table :—

AVERAGE PRICE PER TON OF COPPER IN AUSTRALIA AND UNITED KINGDOM.

Country.	December, 1939.	1944.	1945.	1946.	1947.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Australia—in Australian currency	63 17 6	105 0 0	100 0 0	95 0 0	118 10 0
United Kingdom—in Sterling	62 0 0	62 0 0	62 0 0	77 4 0	130 12 4

5. **Employment in Copper-mining.**—The number of persons employed in copper-mining during each of the years 1938 and 1942 to 1945 was as follows :—

COPPER-MINING : PERSONS EMPLOYED.

Year.	N.S.W.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Australia.
	No.	No.	No.	No.	No.	No.	No.
1938	13	213	67	4	1,015	5	1,317
1942	79	419	52	5	1,595	7	2,157
1943	260	864	36	1	1,577	1	2,739
1944	210	919	37	..	1,549	4	2,719
1945	145	814	3	2	1,473	5	2,442

In 1917 over 9,000 persons were engaged in copper-mining.

§ 5. Tin.

1. **Production.**—The values of the production of tin as reported to the Mines Departments in each of the States during the years 1938 and 1942 to 1945 are given in the following table. A separate line is appended showing the production of refined tin as recorded by the Australian Mines and Metals Association for the years indicated.

TIN : PRODUCTION.

State.	1938.	1942.	1943.	1944.	1945.
	£	£	£	£	£
New South Wales ..	286,768	417,210	403,320	309,860	291,788
Victoria..	28,650	19,173	14,162	12,835	9,869
Queensland	141,547	150,454	167,176	275,185	207,948
South Australia	..	..	10	..	..
Western Australia ..	7,421	4,634	2,315	(b) 2,351	4,370
Tasmania	244,037	297,919	246,218	235,612	240,369
Northern Territory ..	3,205	6,627	5,594	2,086	5,026
Total	711,628	896,017	838,795	(b)837,929	759,370
	Tons.	Tons.	Tons.	Tons.	Tons.
Refined Tin	(a)	3,024	2,565	2,442	2,359

(a) Not available. (b) Incomplete.

2. **Sources of Production.**—(i) *New South Wales.* Production of tin in 1945 was stated at 776 tons of ingots, valued at £291,788, compared with 824 tons, valued at £309,860, in 1944. A large proportion of the output in this State is obtained in normal years by dredging, principally in the New England district.

(ii) *Victoria.* The production of tin in this State is obtained chiefly by dredging in the Beechworth district and by mining in the Toora district in Gippsland. The production in 1945 amounted to 42 tons of concentrates, valued at £9,869, compared with 55 tons, valued at £12,835, in 1944.

(iii) *Queensland.* The chief producing districts in Queensland during 1945 were Herberton, 821 tons, valued at £182,432 ; Cooktown, 27 tons, £6,060 ; Stanthorpe, 38 tons, £9,527 ; Chillagoe, 25 tons, £5,404 and Kangaroo Hills, 16 tons, £3,883. The total production in 1945 amounted to 930 tons, valued at £207,948, compared with 1,232 tons, valued at £275,185 in 1944. It is interesting to compare these production figures with those recorded in the early years of this century when the output ranged between 2,000 and 5,000 tons per annum.

(iv) *Western Australia.* The quantity of tin reported in this State in 1945 amounted to 22 tons, valued at £4,370, and was obtained mainly in the Pilbara and Greenbushes fields.

(v) *Tasmania.* For 1945 the output amounted to 801 tons of tin, valued at £240,369 a decrease of 9 tons on the output of the previous year but, due to the rise in prices, the value was nearly £4,000 higher.

(vi) *Northern Territory.* The production for 1945 amounted to 23 tons of concentrates valued at £5,026, compared with 11 tons of concentrates valued at £2,086 produced during 1944.

3. **World Production.**—The world's production of tin during each of the years 1938 and 1940 to 1944 was as follows :—

TIN : WORLD PRODUCTION.

(Tons of 2,240 lb.)

1938.	1940.	1941.	1942.	1943.	1944.
148,600	235,500	241,700	107,900	130,200	97,400

The production of tin reached its maximum in 1941 when 241,700 tons were recorded. The following are the chief producing countries of the world :—Malaya, Netherlands East Indies, Bolivia, Belgian Congo, Nigeria and Siam. Normally these countries produce about three-quarters of the total production.

The yields from the principal producing countries in 1944 were as follows :—

TIN : PRODUCTION IN PRINCIPAL COUNTRIES, 1944.

(Tons of 2,240 lb.)

Country.	Production.	Country.	Production.
Bolivia	38,809	China	2,160
Belgian Congo	16,858	United Kingdom ..	1,289
Nigeria	12,512	Argentina	986
Malaya	8,000	Burma	775
Netherlands East Indies ..	6,400	Portugal	610
Siam	3,296	Japan	374
Australia	**2,547**	Indo-China	357

Australia's share of the world's tin production, estimated at 97,400 tons in 1944, was about 2.6 per cent.

4. **Prices.**—At the outbreak of war in September, 1939, the price of tin in Australia and London was fixed by Regulation. Details of the movement in average prices for the years shown are given in terms of Australian currency and sterling in the following table :—

AVERAGE PRICE PER TON OF TIN IN AUSTRALIA AND UNITED KINGDOM.

Country.	December, 1939.	1944.	1945.	1946.	1947.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Australia—In Australian currency	299 0 0	376 0 0	376 0 0	376 0 0	438 15 0
United Kingdom—in Sterling	271 0 0	300 0 0	300 0 0	336 2 10	425 18 7

5. **Employment in Tin-mining.**—The number of persons employed in tin-mining during the years 1938 and 1942 to 1945 was as follows :—

TIN-MINING : PERSONS EMPLOYED.

Year.	N.S.W.	Victoria. (a)	Q'land.	W. Aust.	Tas.	Nor. Terr.	Australia.
	No.	No.	No.	No.	No.	No.	No.
1938	1,440	5	1,263	73	1,123	15	3,919
1942	1,243	3	589	15	801	(b) 49	(c) 2,702
1943	1,175	4	599	7	847	(b) 45	(c) 2,679
1944	927	26	532	5	834	(b) 46	2,370
1945	814	4	465	13	736	(b) 48	2,080

(a) The tin produced in Victoria was raised by a dredging company operating primarily for gold. (b) Including some engaged in mining for tantalite. (c) Includes two miners in South Australia.

§ 6. Zinc.

1. **Production : States.**—(i) *New South Wales.* The production of zinciferous concentrates is confined chiefly to the Broken Hill district of New South Wales, where zincblende forms one of the chief constituents in the enormous deposits of sulphide ores. The re-opening in 1937 of the mine at Captain's Flat by the Lake George Mines, Ltd. was an important development. Production commenced in 1939. Details of the zinc contents of ores and concentrates produced at this mine are given in the table below.

As the metallic contents of the bulk of the concentrates, etc., produced from these fields are extracted outside New South Wales, the mineral industry of that State is not credited by the Mines Department with the value of the finished product. During 1945 the zinc concentrates produced amounted to 205,284 tons, valued at £1,073,340. Portion of the zinc concentrates produced is treated at Risdon in Tasmania and the balance is exported, mainly to the United Kingdom and the United States of America. The production from these concentrates treated by the Electrolytic Zinc Company of Australia Ltd. at Risdon amounted to 65,263 tons of zinc, 190.87 tons of cadmium and 13.7 tons of cobalt oxide in 1945. This is referred to in the Tasmanian production below.

(ii) *Queensland.* The production of zinc in the Cloncurry district of Queensland during 1943 was 5,077 tons, valued at £76,158, compared with 21,035 tons, valued at £394,412 in 1942 and 4,411 tons, valued at £68,863, obtained in 1935. The metal was produced by the Mount Isa Mines Ltd. and was exported overseas as concentrates. There was no production in 1944 and 1945 but operations were resumed in 1946, the output reaching 11,361 tons.

(iii) *South Australia.* Zinc is known to exist in various localities in South Australia, but there has been no production during recent years.

(iv) *Tasmania.* The production of zinc from Tasmanian ores was suspended from 1931 to 1935. Developmental work on the Mount Read-Rosebery district was continued during that period and production commenced in 1936. In 1937—the first full year's operations since the inception of milling at Rosebery—23,481 tons, valued at £525,824, were obtained. In 1945, 15,609 tons of zinc, valued at £407,307, were obtained from Tasmanian ores, as well as 29 tons of cadmium valued at £13,161 and 5 cwt. of cobalt oxide valued at £136.

In addition to the foregoing the Electrolytic Zinc Company of Australia Ltd. at Risdon operated on raw materials obtained from Broken Hill in New South Wales. Production from this source during 1945 amounted to 65,263 tons of slab zinc, valued at £1,501,049, 190.87 tons of cadmium, valued at £85,510 and 13.7 tons of cobalt oxide, valued at £6,291.

2. **Production : Australia.**—The details furnished above do not adequately convey the potentialities of Australia as a producer of zinc. A better indication is given in the following table which shows the estimated zinc contents of ores and concentrates produced in Australia according to data compiled by the Australian Mines and Metals Association. Comparable figures for 1938 are not available.

ZINC CONTENTS OF ORES AND CONCENTRATES PRODUCED.

Year.	New South Wales.			Queensland.	Tasmania.	Australia.
	Broken Hill.	Lake George.	Total.	Mt. Isa.	Rosebery.	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1939	145,207	11,850	157,057	29,092	31,107	217,256
1940	161,449	19,358	180,807	29,584	32,338	242,729
1941	171,872	18,930	190,802	27,447	30,595	248,844
1942	151,128	21,309	172,437	21,035	28,362	221,834
1943	128,092	23,242	151,334	5,077	26,430	182,841
1944	128,384	19,657	148,041	..	26,317	174,358

(*a*) Not available.

The production of Australia quoted above represents the metallic contents of zinc ores produced during 1944 and is equal to 8·6 per cent. of world output. The quantity of zinc metal extracted in Australia in that year was 78,716 tons.

4. **Prices and Employment.**—Information regarding prices of zinc and employment in zinc-mining will be found on page 821.

§ 7. Iron.

1. **General.**—Although iron ore is widely distributed throughout Australia, the only known ore bodies of large extent and high grade which are easy of access are those situated at Yampi Sound, Western Australia and at Iron Knob, South Australia. Estimates of the reserves at these centres place the quantities available at approximately 100 million tons and 150 million tons respectively. Bearing in mind the expansion of the iron industry in Australia, and the limitations of these reserves, the Commonwealth Government prohibited the export of iron ore from 1st July, 1938. A survey of the iron ore resources of Australia undertaken by the Commonwealth Geologist was completed at the end of 1940.

2. **Production.**—(i) *New South Wales.* The production in 1935 of pig-iron from ores mined in New South Wales amounted to 4,580 tons, valued at £18,320. No iron ores were produced from 1935 until 1941 when 202,180 tons of ore were mined. In 1942, 375,297 tons were mined but only 86,185 tons in 1945. For many years the chief source of supply has been South Australia.

Small quantities of iron oxide produced in New South Wales are used by the various gas-works for purifying gas, and also in the manufacture of paper, and for pigments. These supplies are drawn chiefly from the deposits in the Port Macquarie Division. During 1945 the iron oxide raised amounted to 8,062 tons, valued at £5,549. Ironstone flux amounting to 2,432 tons, valued at £950 was raised in the Goulburn Division during 1933. This is the only production recorded since 1922.

(ii) *Queensland.* Extensive deposits of iron ore are known to exist in Queensland. Their location and size, however, in comparison with the more favourable deposits of South Australia, preclude their exploitation. In 1945, 1,715 tons of ore were obtained and used as a flux at the Chillagoe State Smelters.

(iii) *South Australia.* The production from the deposits worked by the Broken Hill Pty. Co. Ltd., at Iron Knob and at Middlebank reached its maximum in 1939, when 2,571,759 tons of ore valued at £2,957,523 were raised. The production of 1,519,594 tons, valued at £1,747,533, for 1945, represents a decrease of 1,052,165 tons and £1,209,990 on the 1939 figures.

(iv) *Western Australia.* The development of the deposits at Yampi Sound was discontinued in 1938 as a result of the embargo on exports. However, in 1942, production of iron ore was reported for the first time since 1938 ; it amounted to 150 tons, valued at £225. Production in 1943 amounted to 84 tons valued at £128, but up to 1945 no further production had been recorded.

At the end of 1944 Australian Iron & Steel Co. Ltd., on behalf of Broken Hill Proprietary Co. Ltd., started preliminary work connected with the development and mining of the iron ore on Cockatoo Island, and it was estimated that substantial output would not be attained for two years. The ore would be mixed with the iron ore from the Iron Monarch mine in South Australia to reduce the manganese content of the furnace charge to an acceptable figure. The Iron Monarch ore has a high manganese content.

The production of pyrites from which sulphuric acid is obtained for the manufacture of superphosphate has shown a marked expansion in Western Australia. Since 1942, when production amounted to 368 tons, it has risen to 66,504 tons in 1945.

(v) *Tasmania.* There has been no production of ironstone in Tasmania since 1943 when 7 tons, valued at £14 were produced. The production of iron pyrites, which in 1945 amounted to 40,168 tons, valued at £50,208, is not included in the mineral returns, but is credited to the manufacturing industry, as it is a by-product from the flotation of copper ore at Mount Lyell. This product is exported to the mainland, where the sulphur contents have displaced imported sulphur in the manufacture of chemical fertilizers.

Reference to the iron ore deposits in the various States appears in preceding issues of the Official Year Book (see No. 22, pp. 777–9).

3. **Iron and Steel Bounties.**—During 1945–46 the bounties paid under the Bounties Acts on articles manufactured from locally produced materials were as follows :—Wire-netting, £349 ; traction engines, £10,095. Corresponding amounts paid during 1944–45 were £496 and £13,317 respectively.

4. **Production of Iron and Steel—Principal Countries.**—(i) *General.* Particulars of the production in the principal countries during the years 1938, 1944 and 1945 according to figures published by the Imperial Institute and the Statistical Office of the United Nations are shown in the next table.

PIG-IRON AND STEEL : PRODUCTION IN PRINCIPAL COUNTRIES.

The principal producers in Australia are the Broken Hill Pty. Co. Ltd. and the Australian Iron and Steel Ltd., the former situated at Newcastle and the latter at Port Kembla in New South Wales. In South Australia, the Broken Hill Pty. Co. Ltd. established a blast furnace at Whyalla which was blown in during May, 1941, and continued to operate until May, 1944. Production was resumed during April, 1946.

(ii) *Australia.* The production of steel and pig-iron in Australia, of which New South Wales is the main producing State, is shown for each of the years 1936–37 to 1945–46.

§ 8. Other Metallic Minerals.

1. **Wolfram and Scheelite.**—Tungsten ores occur in several of the States, in the Northern Territory and on King Island in Bass Strait, the last-named being included with Tasmania. Production during 1938 and the four years 1942 to 1945 is shown in the following table :—

WOLFRAM AND SCHEELITE : PRODUCTION.

2. **Cadmium and Cobalt.**—Cadmium is extracted at Risdon in Tasmania as a by-product from ores mined at Broken Hill in New South Wales, and on the west coast of Tasmania.

Cobalt as an oxide is recovered from the treatment of silver, lead and zinc ores of Broken Hill and Tasmanian origin in the same way as is cadmium. The production of cobalt and cadmium is shown for the years 1938 and 1942 to 1945 in the following table :—

CADMIUM AND COBALT: PRODUCTION.

Year.	Cadmium.				Cobalt Oxide.			
	Extracted in Tasmania from Ores mined in—				Extracted in Tasmania from Ores mined in—			
	New South Wales.	Tasmania.	Total.		New South Wales.	Tasmania.	Total.	
	Cwt.	Cwt.	Cwt.	£	Cwt.	Cwt.	Cwt.	£
1938	2,943	980	3,923	79,406	377	12	389	8,084
1942	2,436	828	3,264	72,218	325	45	370	8,981
1943	2,344	807	3,151	70,609	274	13	287	6,604
1944	4,206	794	5,000	112,046	258	8	266	6,092
1945	3,818	588	4.406	98.671	274	5	279	6.427

The figures shown above do not include the metallic contents of cadmium and cobalt contained in the ores and concentrates exported overseas.

3. **Platinum and Platinoid Metals.**—(i) *Platinum.* (*a*) *New South Wales.* The deposits at present worked in the State are situated in the Fifield division, near Parkes, and in the Ballina division. The production in 1945 from all divisions amounted to 2 oz. valued at £22. The total production recorded to the end of 1943 amounted to 20,243 oz., valued at £128,996.

(*b*) *Victoria.* In Gippsland the metal has been found in association with copper and 127 oz. were produced in 1913, but there has been no production in recent years.

(*c*) *Queensland.* Platinum, associated with osmiridium, has been found in the beach sands between Southport and Currumbin, in creeks on the Russell gold-field near Innisfail, and in alluvial deposits on the Gympie gold-field, but no production has been recorded.

(ii) *Osmium, Iridium, etc.* (*a*) *New South Wales.* Small quantities of osmium, iridium and rhodium are found in various localities. Platinum, associated with iridium and osmium, has been found in the washings from the Aberfoil River about 15 miles from Oban, on the beach sands of the northern coast, in the gem sands at Bingara, Mudgee, Bathurst and other places. In some cases, as for example in the beach sands of Ballina, the osmiridium and other platinoid metals amount to as much as 40 per cent. of the platinum, or about 28 per cent. of the whole metallic content. There was no production of these metals during 1945.

(*b*) *Victoria.* In Victoria, iridosmine has been found near Foster, and at Waratah Range, South Gippsland.

(*c*) *Tasmania.* The yield of osmiridium was returned as 109 oz. in 1945, valued at £2,665, compared with the record production in 1925 of 3,305 oz., valued at £103,570. The decrease in later years was largely due to the decline in price from £31 in 1925 to £15 0s. 4d. per oz. in 1938 (although the price rose to £24 19s. 1d. per oz. in 1940 and reached £24 10s. 6d. in 1945), but the depletion of the known alluvial deposits was also a factor.

4. **Other.**—Detailed information in regard to occurrence and production of other metallic minerals in each of the States appears in Official Year Book No. 22, pp. 780–3 and in preceding issues.

§ 9. Coal.

1. **Production in each State.**—An account of the discovery of coal in each State appears in preceding issues of the Official Year Book (see No. 3, pp. 515–6). The quantity and value of the production in each State and in Australia during 1915, 1925, 1935, 1938 and for each of the years 1942 to 1945 are shown in the following table :—

BLACK COAL : PRODUCTION.

(*a*) Excludes brown coal, shown in next table. (*b*) At the pit's mouth.

The figures for Victoria already quoted exclude the quantities and values of brown coal which were as follows :—

BROWN COAL : PRODUCTION IN VICTORIA.

Year.	Quantity.	Value.(*a*)	Year.	Quantity.	Value.(*a*)
	Tons.	£		Tons.	£
1915	2,864	573	1942	4,933,861	469,699
1925	876,468	166,404	1943	5,091,729	528,666
1935	2,221,515	317,444	1944	5,016,437	566,444
1938	3,675,450	351,721	1945	5,445,108	641,069

(*a*) Cost of production.

2. **Distribution and Production of Coal in each State.** (i) *New South Wales.*—The coal deposits of New South Wales are the most important and extensively worked in Australia. The principal fields are known as the Northern, Southern and Western and are situated at Newcastle, Bulli and Lithgow respectively.

The coal from the various districts differs considerably in quality—that from the Northern district being especially suitable for gas-making, household purposes and steam, while the product of the Southern and Western districts is essentially a steaming coal. The Greta coal seams in the Northern division are being worked extensively between West Maitland and Cessnock, and this stretch of country, covering a distance of 15 miles, is the most important coal-mining district in Australia.

The following table shows the yields in each of the three districts during the four years 1942 to 1945 compared with 1938 :—

COAL : PRODUCTION IN DISTRICTS OF NEW SOUTH WALES.

District.	1938.	1942.	1943.	1944.	1945.
	Tons.	Tons.	Tons.	Tons.	Tons.
Northern	6,294,213	8,300,356	7,854,173	7,363,484	6,821,646
Southern	1,831,408	2,303,071	2,175,935	2,040,453	1,791,891
Western	1,445,309	1,632,792	1,498,785	1,698,201	1,624,349
Total	9,570,930	12,236,219	11,528,893	11,102,138	10,237,886
Total Value (*a*) £ ..	5,603,842	9,472,363	9,290,095	9,206,063	8,694,168
Average value per ton (*a*)	11s. 8½d.	15s. 6d.	16s. 1d.	16s. 7d.	17s. 0d.

(*a*) At the pit's mouth.

The production of coal in New South Wales exceeded 10 million tons in each year from 1920 to 1927, the maximum annual production in this period being in 1924, when 11,618,000 tons were produced. Consequent upon the economic depression, production fell to 6,400,000 tons in 1931, but steadily increased each year to 10,051,519 tons in 1937. Production declined by 480,000 tons in 1938 but rose to 11,195,832 tons in 1939. A decrease of 1,646,000 tons in 1940 was followed in the next two years by increased production, the highest output yet recorded, namely 12,236,219 tons being registered in 1942. Production decreased during the next three years by 707,000, 427,000 and 864,000 tons respectively and stood at 10,237,886 tons in 1945. Of the total quantity of coal won in New South Wales since the commencement of operations to the end of 1945, namely, 500 million tons, about 339 million tons or 68 per cent. was obtained in the Northern District, 101 million tons or 20 per cent. in the Southern District, and 60 million tons or 12 per cent. in the Western District.

(ii) *Victoria.* (*a*) *Black Coal.* The deposits of black coal in Victoria occur in three main areas in the southern portion of the State, namely, the Wannon, the Otway and South Gippsland, which total approximately 3,500 square miles. The workable seams are restricted to the South Gippsland area, where the thickness ranges from 2 feet 3 inches to 6 feet. The total quantity of black coal mined in Victoria to the end of 1945 amounted to 20,016,228 tons, valued at £16,356,482.

The output of black coal in Victoria during each of the four years ended 1945 compared with 1938 was as follows :—

BLACK COAL : PRODUCTION IN VICTORIA.

Year.	State Coal-mine.	Other Coal-mines.	Total Production.	Total Value. (*a*)
	Tons.	Tons.	Tons.	£
1938	253,065	54,193	307,258	188,101
1942	270,754	42,100	312,854	411,107
1943	253,359	33,741	287,100	429,358
1944	224,313	33,379	257,692	407,793
1945	213,710	33,587	247,297	494,690

(*a*) At the pit's mouth.

(*b*) *Brown Coal. General.* Victoria is richly endowed, both in quantity and quality, with brown coal deposits. Some account of these deposits and of the operations of the State Electricity Commission in connexion therewith will be found in preceding Official Year Books (*see* No. 22, p. 785). The brown coal produced in Victoria in 1945 amounted to 5,445,108 tons, all but 30,639 tons being procured at the State open cut at Yallourn. During 1945–46 5,534,000 tons of brown coal were produced by the State Electricity Commission, of which 3,525,000 tons went to the power station, 1,923,000 tons to the briquette factory and 86,000 tons to other factories for use as fuel.

Production of Briquettes. The briquetting plant started operations in November, 1924, and the output, which in 1926 was 95,477 tons, had increased to 180,905 tons in 1930 and to 493,000 in 1945–46. Two and a half tons of brown coal are required to make one ton of briquettes.

The table following shows the production and distribution of brown coal, and the production of briquettes in Victoria for the years 1942–43 to 1945–46, compared with 1938–39.

BROWN COAL : PRODUCTION AND UTILIZATION, VICTORIA.

('000 tons.)

Year.	Total Production.	Brown Coal used as fuel.		Brown Coal used as Material in Production of Briquettes.	Production of Briquettes.
		Generating Station.	Briquette Works.		
1938–39	3,643	2,096	516	1,031	400
1942–43	4,978	3,344	545	1,089	415
1943–44	4,829	3,215	538	1,076	417
1944–45	5,249	3,527	574	1,148	431
1945–46	(*a*) 5,534	3,525	641	1,282	493

(*a*) Includes 86,000 tons used by other factories.

(iii) *Queensland.* The distribution of production during 1938 and the years 1942 to 1946 was as follows :—

COAL : PRODUCTION IN QUEENSLAND.

District.	1938.	1942.	1943.	1944.	1945.	1946.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Ipswich	547,901	751,177	755,660	802,269	812,641	823,737
Bowen	224,778	347,381	400,931	316,016	292,043	234,512
Clermont	88,407	142,607	147,179	145,237	177,331	161,777
Maryborough ..	77,162	127,975	136,541	128,606	113,578	103,929
Darling Downs ..	76,571	112,230	115,004	126,950	112,666	107,555
Rockhampton ..	64,174	119,673	107,332	108,043	95,799	82,699
Chillagoe (Mount Mulligan) ..	19,192	17,544	17,533	18,961	19,960	22,193
Mount Morgan ..	13,608	18,561	19,341	13,593	10,728	31,118
Mackay	1,543	..	..	..	..	..
Total ..	1,113,426	1,637,148	1,699,521	1,659,675	1,634,746	1,567,520

The production of 1,699,521 tons in 1943 represents the highest annual production to date.

(iv) *South Australia.* A new field of sub-bituminous coal was opened up at Leigh Creek, South Australia, in 1942 when 1,650 tons, valued at £1,650 were produced. There was no production in 1943, but in 1944, 34,620 tons, valued at £12,117, were produced and 41,452 tons, valued at £14,508, in 1945.

Details of production (which is by open-cut methods) and employment are given in the following table for the years 1942 to 1945.

COAL : PRODUCTION AND EMPLOYMENT IN SOUTH AUSTRALIA.

Year.	Production.	Value.	Numbers Employed.
	Tons.	£	No
1942	1,650	1,650	12
1943	..	..	..
1944	34,620	12,117	91
1945	41,452	14,508	100
Total to 1945 ..	77,722	28,275	

(v) *Western Australia.* Details of the quantity of coal raised on the Collie coal-fields in Western Australia and the men employed are given in the table below for the years 1942 to 1945, compared with 1938.

COAL : PRODUCTION AND EMPLOYMENT IN WESTERN AUSTRALIA.

Year.	Production.	Value.	Men employed.		
			Above ground.	Below ground.	Total
	Tons.	£	No.	No.	No.
1938	604,792	375,083	158	607	765
1942	581,176	461,495	175	647	822
1943	531,546	489,721	188	650	838
1944	558,323	583,076	207	673	880
1945	543,363	572,896	224	636	860

(vi) *Tasmania.* Details of the production of coal in Tasmania and the numbers employed are given in the following table for the years 1942 to 1944, compared with 1938 The chief source of coal supplies in this State is the Cornwall Coal Mine situated on the east coast which produced 83,253 tons in 1945 or 56 per cent. of the State's output.

COAL : PRODUCTION AND EMPLOYMENT IN TASMANIA.

Year.	Production.	Value.	Men employed.
	Tons.	£	No.
1938	83,753	61,991	269
1942	134,442	108,241	243
1943	145,882	117,361	278
1944	143,641	122,673	277
1945	149,077	125,719	270

(vii) *Australia's Coal Reserves.* The latest available estimate of the actual and probable coal reserves of Australia is based upon that prepared by the Coal and Lignites Panel of the Power Survey Sectional Committee of the Standards Association of Australia and issued in a report prepared in 1947. The following table shows the actual and probable coal reserves as determined by that Committee :—

ACTUAL AND PROBABLE COAL RESERVES OF AUSTRALIA.

(Millions of Tons.)

State.	Anthracitic and Bituminous Coals.	Sub-bituminous and Lignitic Coals.
New South Wales	11,668	50
Victoria	33	37,000
Queensland	1,704	67
South Australia	..	650
Western Australia	..	800
Tasmania	244	..
Total	13,649	38,567

3. **Production in Various Countries.**—The total known coal production of the world in 1944 amounted to about 1,710 million tons, towards which Australia contributed about 18.8 million tons, or about 1 per cent. The following tables show the production of the chief British and foreign countries during each of the three years 1943 to 1945 compared with 1938 :—

COAL : PRODUCTION IN BRITISH EMPIRE.

(Thousands of Tons, 2,240 lb.)

Country.	Black Coal.				Brown Coal, Lignite.

Greece	..	..	..	..	106	366	177	71

(*a*) Included with black coal. (*b*) Includes Silesia, which is not included with Germany. (*c*) Not available.

World production of coal amounted to 1,440 million tons in 1938 rising to 1,750 million tons in 1943 but declining to 1,710 million tons in 1944. Of these quantities those produced in the British Commonwealth totalled 304 million or 21 per cent. in 1938, 286 million or 16 per cent. in 1943 and 281 million tons or 16 per cent. in 1944.

4. **Exports.**—(i) *General.* The quantity of coal of Australian production (excluding bunker coal) exported to other countries in 1946–47 was 44,375 tons, valued at £54,754, from New South Wales. The quantities and values of the oversea exports of Australian coal for the years specified are shown in the following table :—

COAL : OVERSEA EXPORTS, AUSTRALIA.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons.	£		Tons.	£
1913 ..	2,098,505	1,121,505	1943–44 ..	157,741	182,354
1921–22 ..	1,028,767	1,099,899	1944–45 ..	189,198	223,677
1931–32 ..	344,015	341,800	1945–46 ..	75,883	92,764
1938–39 ..	382,085	347,054	1946–47 ..	44,375	54,754

Australian coal taken for bunker purposes during the same years was as follows :—

COAL : BUNKER, AUSTRALIA.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons.	£		Tons.	£
1913 ..	1,647,870	1,018,375	1943–44 ..	211,188	371,584
1921–22 ..	1,498,035	2,178,101	1944–45 ..	207,462	382,505
1931–32 ..	506,140	534,897	1945–46 ..	228,977	415,167
1938–39 ..	549,453	561,063	1946–47 ..	355,428	655,207

(ii) *New South Wales.* The distribution of the total output from New South Wales collieries during the years 1942–43 to 1946–47 compared with 1938–39, according to data compiled by the Government Statistician for that State, was as follows.

COAL : DISTRIBUTION OF OUTPUT, NEW SOUTH WALES.

('000 tons.)

Year.	Exports.				Local Consumption.	Total.
	Interstate as—		Overseas as—			
	Cargo.	Bunker.	Cargo.	Bunker.		
1938–39 ..	1,860	411	382	517	5,744	8,914
1942–43 ..	2,793	358	254	256	8,276	11,937
1943–44 ..	2,722	378	158	162	8,139	11,559
1944–45 ..	2,866	340	189	159	7,601	11,155
1945–46 ..	2,499	287	75	173	6,997	10,031
1946–47 ..	2,378	290	44	289	8,185	11,186

5. **Consumption in Australia.**—Details of the average annual production of coal and its distribution in Australia are given in the following table for the five years ended 1938–39 and 1944–45, together with similar details of production and distribution for the year 1945–46.

Under normal circumstances the production and consumption of coal move in the same direction, but in times of short supplies or abnormal consumption consumers may be compelled to rely upon accumulated stocks, and, consequently annual figures may move out of alignment. For this reason the following table has been prepared on a five-yearly basis in order to smooth out any variations from the normal.

COAL : PRODUCTION AND UTILIZATION IN AUSTRALIA.

Black Coal.

Particulars.	Average for Five Years Ended— 1938–39.		1944–45.		Total for Year. 1945–46.

Brown Coal.

Particulars.	1938–39.		1944–45.		1945–46.	
Production of Brown Coal ..	'000 Tons. 3,064		'000 Tons. 4,849		'000 Tons. 5,534	
Utilization—		%		%		%
As fuel in Electric Light and Power Works ..	1,673	54.60	3,200	65.99	3,525	63.70
As fuel and as a raw material by Briquette Works	1,391	45.40	1,649	34.01	(*e*) 2,009	36.30
Total	3,064	100.00	4,849	100.00	5,534	100.00

(*a*) Estimated. (*b*) Estimated where details were not available. (*c*) Government Railways only. (*d*) Includes bunker coal for interstate and intra-state shipping. (*e*) Includes 86,000 tons used by other factories.

The production of coal is ascertained only in calendar years and to relate it to the other data in the table above it has been necessary to estimate the output of black coal in annual periods ended June. Checks applied from other official sources confirm the reliability of these estimates.

6. **Prices.**—(i) *New South Wales.* The price of New South Wales coal depends on the district from which it is mined. Up to 1933 the Northern district coal generally realized a somewhat higher price than the Southern, but thereafter the average price in the Southern district was in excess of that prevailing in the Northern. According to the figures compiled by the State Statistician the average prices of saleable coal at the pit's mouth for the various districts and for the State as a whole during 1938 and for the years 1942 to 1946 are given in the following table :—

COAL PRICES : NEW SOUTH WALES.

Year.	Northern District.	Southern District.	Western District.	Average for State.
	Per ton. *s. d.*	Per ton. *s. d.*	Per ton. *s. d.*	Per ton. *s. d.*
1938	11 11	14 0	9 6	12 0
1942	15 11	17 9	14 3	16 0
1943	15 11	17 11	14 5	16 1
1944	16 4	18 9	15 1	16 7
1945	16 11	19 2	14 11	17 0
1946	17 1	19 2	15 2	17 1

(ii) *Victoria.* In Victoria the average price of black coal per ton, which is largely determined on the landed cost of New South Wales coal seaborne to Melbourne was : in 1938, 12s. 3d. ; in 1942, 24s. 7d. ; in 1943, 27s. 5d. ; in 1944, 29s. 3d. and in 1945, 37s. 11d. These averages exclude brown coal, which in 1945 cost 2s. 4d. per ton to produce.

(iii) *Queensland.* Prices in the principal coal-producing districts during 1938 and the five years ended 1946 were as follows :—

COAL PRICES : QUEENSLAND.

District.	Value at Pit's Mouth.					
	1938.	1942.	1943.	1944.	1945.	1946.
	Per ton. *s. d.*	Per ton. *s. d.*	Per ton. *s. d.*	Per ton. *s. d.*	Per ton. *s. d.*	Per ton. *s. d.*
Ipswich	17 0	20 5	21 0	21 2	21 3	21 3
Darling Downs ..	19 11	23 2	24 7	24 6	24 9	24 6
Wide Bay and Maryborough	24 0	27 11	28 8	28 9	28 8	29 0

Clermont	13 8	16 4	16 8	16 6	16 5	16 4
Bowen	14 10	19 8	20 7	20 5	20 5	21 2
Chillagoe (Mount Mulligan)	31 6	33 10	34 1	34 1	34 8	35 2
Average for State ..	17 2	20 9	21 6	21 6	21 6	21 7

(iv) *South Australia.* The value of the 1945 production was 7s. per ton, which represents the cost of production.

(v) *Western Australia.* The average prices per ton of the Collie (Western Australia) coal during the four years ended 1946 were : 1943, 18s. 5d. ; 1944, 20s. 6d. ; 1945, 21s. 1d. ; 1946, 22s. 9d. as compared with 12s. 5d. recorded for 1938.

(vi) *Tasmania.* The average prices per ton of coal at the pit's mouth in Tasmania for the four years ended 1946 were : 1943, 16s. 1d. ; 1944, 17s. 0d. ; 1945, 16s. 10d and 1946, 17s. 5d. compared with 14s. 10d. in 1938.

7. **Prices in New South Wales, Great Britain, Canada and the United States of America.**—In the following table the prices of coal in Great Britain, Canada and the United States are compared with that recorded in New South Wales.

AVERAGE PRICES OF COAL PER TON : NEW SOUTH WALES, GREAT BRITAIN, CANADA AND UNITED STATES OF AMERICA.

Country.	1938.	1941.	1942.	1943.	1944.	1945.	1946.	1947.

1943	17,497	1,203	630	2,898	..	838	278	23,344
1944	17,468	1,196	613	2,978	91	880	277	23,503
1945	17,427	1,016	584	2,966	100	860	279	23,232

(*a*) Included with black coal : production prior to 1925 was of little significance.

The maximum number employed was in 1926 when 31,774 persons were engaged in the coal-mines of Australia. Shortly after that year the industrial depression and a prolonged stoppage of work on one of the principal fields of New South Wales during 1929 and 1930 seriously affected the figures of employment. Since 1933 there has been a gradual increase, but the numbers employed in 1945 were only about three-quarters of the maximum figure already quoted. In New South Wales 3,594,000 tons of coal, or 32.1 per cent. of the total output in 1939, was cut by machinery compared with 5,005,011 tons or 40.9 per cent. in 1942, 4,417,912 tons or 38.3 per cent. in 1943, 4,099,230 tons or 36.9 per cent. in 1944, 3,560,778 tons or 36.7 per cent. in 1945, and 3,818,714 tons or 34.5 per cent. in 1946. Similar details for other States are not available.

9. **Accidents in Coal-mining.**—(i) *Australia.* The following table gives the number of persons killed or injured in 1945, with the proportion per 1,000 employed, and in relation to the quantity of coal raised, a factor which must be reckoned with in any consideration of the degree of risk attending mining operations. Although no precise definition of an accident is available, any disablement from misadventure which rendered the injured unfit for work for fourteen days or more appears to have been uniformly adopted by the State Departments of Mines.

COAL-MINING: EMPLOYMENT AND ACCIDENTS, 1945.

State.	Persons Employed in Coal-mining.	No. of Persons.		Proportion per 1,000 Employed.		Tons of Coal raised for each Person—	
		Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
New South Wales ..	17,427	14	82	0.80	4.71	731,278	124,852
Victoria (*a*) ..	1,600	4	3	2.50	1.88	1,423,101	1,897,468
Queensland ..	2,966	6	221	2.02	74.51	272,458	7,397
South Australia ..	100	..	6	..	60.00	..	6,909
Western Australia ..	860	1	275	1.16	319.77	543,363	1,976
Tasmania ..	279	..	7	..	25.09	..	21,297
Total ..	23,232	25	594	1.08	25.57	514,153	21,639

(*a*) Includes brown coal.

The next table shows for the five-yearly period 1941 to 1945 annual averages respecting the number employed in mining and the number of fatalities, and the rate of fatalities per 1,000 employed.

COAL-MINING: FATALITIES, 1941 TO 1945.

State.	Average No. of Coal-miners Employed.	Average Annual No. of Fatal Accidents.	Rate per 1,000 Employed.
New South Wales	17,369	21.6	1.24
Victoria	1,802	2.4	1.33
Queensland	2,913	3.0	1.03
South Australia	41	..	..
Western Australia	836	1.4	1.67
Tasmania	262	0.4	1.53
Total	23,223	28.8	1.24

(ii) *Other Countries.* According to the report of the Chief Inspector of Mines, the average death rate per 1,000 miners from accidents in coal-mines in Great Britain during the five-yearly period 1933–37 was 1.11, the rates varying between 1.35 in 1934 and 1.02 in 1936, while the rate for Australia for the same period was 1.14. Details are not available for a later comparison.

10. **Commonwealth Board of Inquiry into the Coal-mining Industry.** In January, 1945 a Commonwealth Board of Inquiry consisting of three members was constituted under National Security (Inquiries) Regulations to inquire into and report upon the coal. mining industry of Australia. The terms of reference included, amongst other things, such matters as production of coal, absenteeism, causes of stoppages, health and safety of employees, housing, pension schemes, etc. The Chairman of the Board was the Hon. Mr. Justice Davidson, of the Supreme Court of New South Wales.

On the 4th March, 1946, the instrument appointing the Board of Inquiry was revoked and the Chairman was appointed a sole Commissioner to present a report upon the information, evidence and material already before the former Board. A report in two volumes was presented in March, 1946.

11. **Joint Coal Board.**—In August and September, 1946, a joint Commonwealth and State authority to re-organize and rehabilitate the coal industry of New South Wales was established by law.

§ 10. Coke.

1. **General.**—The production of coke in Australia was limited to about 250,000 tons per annum prior to the 1914–18 War. This was below local requirements and necessitated an annual import of about 27,000 tons from abroad. By 1920, production had risen to more than 500,000 tons and by 1938–39 it exceeded 1,000,000 tons. This increased production permitted an export of 30,000 tons in 1938–39. Imports in the same year were 9,700 tons. In 1945–46 the quantity exported was 5,613 tons, valued £14,572, of which 2,346 tons, valued at £5,286, went to New Caledonia and 1,892 tons, valued at £7,090, to New Zealand.

2. **Production at Coke Works.**—(i) *New South Wales.* The following table shows the production in New South Wales during 1938 and each of the four years 1943 to 1946, as recorded by the Department of Mines :—

COKE : PRODUCTION IN COKE WORKS, NEW SOUTH WALES.

Items.		1938.	1943.	1944.	1945.	1946.
Quantity ..	tons	1,135,446	1,567,172	1,380,158	1,045,049	1,052,303
Value, total ..	£	1,100,266	2,400,993	2,235,700	1,950,032	1,898,094
Value, per ton ..	..	19s. 5d.	£1 10s. 8d.	£1 12s. 5d.	£1 17s. 4d.	£1 16s. 1d.

(ii) *Queensland* A small quantity of coke is made in Queensland, the quantity returned in 1938 being 30,984 tons, of which 27,328 tons were produced at the Bowen State Coke Works. The greater proportion of the output of these works was consigned to the Mount Isa Mines Ltd. and to the Chillagoe State smelters. Hitherto the coke used at these ore-treatment works was imported from New South Wales, but now the local output is sufficient to meet the requirements of the State and leave a small surplus available for export. The following table shows the amount manufactured at the State Coke Works during the four years ended 1945–46, compared with 1938–39.

COKE : PRODUCTION IN STATE COKE WORKS, QUEENSLAND.

Year.		1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Quantity ..	tons	26,032	18,701	9,347	13,181	11,591

In order to avoid duplication with coal values, the returns for coke have not been included in the general tables of mineral production in the early part of this chapter.

3. **Total Production, Australia.**—The production of coke in New South Wales and Queensland referred to above relates to the product of coke ovens only and excludes coke produced at gas works. In the following table, however, particulars of the total production of coke in Australia are shown together with the quantities produced at coke works and gas works respectively.

TOTAL COKE PRODUCTION : AUSTRALIA.

Industry.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
COKE.					
	Tons.	Tons.	Tons.	Tons.	Tons.

Ammonium Sulphate ..	24,251	25,392	24,147	22,095	21,823

§ 12. Shale-oil and Mineral Oil.

1. **Shale-oil.**—(i) *General.* Reference to the deposits of shale and the search for mineral oil in Australia will be found in Official Year Book No. 22, pp. 791–3.

(ii) *New South Wales.* Reference to the establishment of the shale-oil industry in Australia will be found in previous issues of the Official Year Book. In 1937 negotiations were completed between the Commonwealth and New South Wales Governments and the National Oil Proprietary Ltd., by which the latter company undertook to develop the shale-oil industry in the Newnes-Capertee district. The Commonwealth Government agreed to protect the industry by exempting from excise, up to 10 million gallons annually, the Company's output of petrol for a period of 25 years. The successful establishment of this plant will probably lead to an expansion of the industry in Australia and should provide a valuable training ground for technicians. Production of crude oil commenced in 1940 but details are not available for publication. The following table shows the production of oil shale during 1940 to 1946 :—

OIL SHALE : PRODUCTION IN NEW SOUTH WALES.

Year.	Northern District.		Southern District.		Western District.		Total.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£	Tons.	£
1940 ..	..	..	..	..	43,805	43,805	43,805	43,805
1941 ..	..	..	820	540	122,758	96,131	123,578	96,671
1942 ..	828	1,881	1,559	1,898	114,937	138,564	117,324	142,343
1943 ..	4,033	6,377	..	..	112,842	153,838	116,875	160,215
1944 ..	3,047	8,827	..	..	134,411	156,458	137,458	165,285
1945 ..	..	..	..	..	123,170	164,648	123,170	164,648
1946 ..	..	..	..	..	121,654	139,902	121,654	139,902

(iii) *Tasmania.* About 38,000 gallons of crude oil were produced in 1934 from shale treated in Tasmania, while the total quantity of oil distilled from shale up to the end of 1934 was set down at 357,000 gallons. The plant owned by the Tasmanite Shale Oil Company has not operated since the end of January, 1935.

Interest in the commercial utilization of oil shales of the Mersey Valley for the extraction of fuel oils has been retarded due to structural and physical conditions for underground mining and the low-grade nature of the shale.

2. **Coal Oil.**—Attention has been directed to the production of oil from coal by a number of processes. A committee appointed by the Commonwealth Government which consisted of nominees of the Commonwealth and State Governments, excepting

Western Australia, and of Imperial Chemical Industries Ltd., was appointed to advise on specific questions submitted to it. In a report submitted in June, 1937, it was stated that the stage had not been reached when Australia could establish plants for the production of oil from coal. The committee recommended, however, that close touch be kept with developments abroad. A report, dated 25th July, 1939, on the production of oil from coal was submitted to the Commonwealth Minister for Supply and Development by the Standing Committee on Liquid Fuels. The recommendations of this Committee followed the lines of those of its predecessors.

3. **Natural Oil.**—(i) *Australia.* Natural oil has been proved to exist in Queensland, Victoria and Western Australia, the best indications being found in Victoria and Queensland. Many of the conditions favourable to the accumulation of oil in commercial quantities have been shown to be present in Queensland, Western Australia and New South Wales. In the latter State, however, no strong positive evidence of its existence has been recorded. Oil has been proved to occur in noteworthy quantities at Lakes Entrance, Victoria, but it still remains to be demonstrated whether the area can be developed on a commercial basis.

Reference is made in § 16 below to the assistance afforded by the Commonwealth Government in the search for petroleum oil.

(ii) *Victoria.* There has been no production of crude petroleum oil since 1940. The total production to the end of that year was 115,283 gallons, valued at £2,769. Two experts who were engaged by the Commonwealth Government to investigate the oil-producing area of Gippsland expressed the opinion that production on a commercial scale could be established and drilling has been continued in this area since 1941 in accordance with their recommendations. Boring for oil in the Nelson area was carried out during the years 1942 to 1945.

(iii) *Queensland.* Great hopes are still entertained in regard to the petroliferous area in Queensland. Gas and light to medium gravity oils have been found at Roma, and gas and oily wax at Longreach. Structural conditions favourable to accumulation on a commercial scale have been located at several places between Injune and Springsure. The search for oil was continued during 1939 by several companies in localities situated at Mount Bassett, near Roma, at Hutton Creek and at Arcadia. Test bores have been drilled in all the localities mentioned, the deepest being that at Arcadia which exceeded 6,000 feet. Showings of petroliferous gas, amounting at Arcadia to 3,000,000 cubic feet a day, and of petroleum have been encountered in all these bore-holes.

(iv) *South Australia.* Under prescribed conditions, the South Australian Government offers a bonus of £5,000 to the person or body corporate which first obtains from a local bore or well 100,000 gallons of crude petroleum containing not less than 90 per cent. of products obtainable by distillation.

(v) *Western Australia.* Only one company was active in Western Australia during 1939. The company, financially assisted by the Commonwealth and State Governments, commenced deep-drilling operations in the Kimberley district in 1939. No production has been recorded up to the end of 1945.

(vi) *General.* During 1939 efforts were made to secure greater uniformity in State legislation governing the search for oil. A draft Bill based on modern legislation in other countries was prepared by the Commonwealth and submitted to the State Governments. As a result amending legislation was passed in Victoria, Queensland, South Australia and Western Australia. There was immediate response to this in Queensland, where an agreement has been reached between the State Government and one of the major oil companies, whereby the company has undertaken to spend up to £400,000 in the search for oil in that State.

Further details of action taken by the Commonwealth Government in connexion with the search for oil will be found in § 16. "Government Aid to Mining".

§ 13. Other Non-metallic Minerals.

A more or less detailed statement regarding the occurrence and production of other non-metallic minerals is given in preceding issues of the Official Year Book (see No. 22, pp. 793–6). The tables of quantities and values in § 1 of this Chapter show the production of the principal items in this class for each State during 1945.

§ 14. Gems and Gemstones.

1. **Diamonds.**—It is difficult to secure accurate returns in connexion with the production of precious stones, but the yield of diamonds in 1945 in New South Wales was estimated at 73 carats, valued at £107. These were won by fossickers in the Inverell district. The total production to the end of 1945 is given at 206,829 carats, valued at £150,469.

2. **Sapphires.**—The production of sapphires in New South Wales during 1929 was returned as 65 oz., valued at £450, obtained wholly at Sapphire in the Inverell district, and the only output recorded since that year was 1,200 oz., valued at £600, in 1941, 248 oz., valued at £124, in 1943, and 125 oz., valued at £283 in 1945.

In Queensland, gems to the value of £1,382 were purchased on the Anakie sapphire fields in 1945. It is probable that many were sold privately or held for better prices. For these reasons the returns are considered to be very incomplete. There were about 120 miners operating on the fields during 1934 but only 25 at the end of 1945. Production has declined very considerably since 1920, when the yield was valued at £66,000.

3. **Precious Opal.**—The estimated value of the opal won in New South Wales during 1945 was £3,000. This is not regarded as the total output of the State, however, because in many instances miners, buyers and collectors leave the fields before a record of their production or purchases can be secured. Some very fine stones are at times obtained, one weighing 5 ozs. and valued at £300 being found in 1911. Three finds of large stone were made in 1928, the gems weighing 790, 590 and 232 carats respectively and showing fine fire and lustre. Occasionally black opals of very fine quality are found, one specimen from the Wallungulla field, weighing 6½ carats, being sold in 1910 for £102, while in the early part of 1920 a specimen realized £600. It is stated that this locality is the only place in the world where the "black" variety of the gem has been found. The total value of opal won in New South Wales since 1890 is estimated at £1,638,976, but, as pointed out above, the figures are to some extent understated.

In Victoria small quantities of precious opal are found in the Beechworth district.

The opaliferous district in Queensland stretches over a considerable area of the western interior of the State, from Kynuna and Opalton as far south as Cunnamulla. The yield in 1944 was estimated at £200, and up to the end of that year at about £188,000. No production was recorded in 1945. These figures are, however, merely approximations, as large quantities of opal, of which no record is obtained, are disposed of privately. The greatest recorded output was for the year 1895 when the yield was valued at £32,750.

Owing to the poor market for gems, production from the Coober Pedy opal field, situated in the Stuart Range in South Australia, fell from £11,050 in 1929 to £1,517 in 1934. The production rose in 1937 to £11,887, but declined to £6,020 in 1939, and rose again to £11,568 in 1941. After a further drop in 1942, to less than £6,000, production has risen to £12,284 in 1945. The field is extremely prolific, a large quantity of precious white opal having been raised therefrom, and only a small portion of the known opal-bearing area has been thoroughly tested. The greatest yield for the State in any one year was obtained in 1920 when the value of production was returned at £24,000.

4. **Other Gems.**—Various other gems and precious stones have from time to time been discovered in the different States, the list including agates, amethysts, beryls, chiastolite, emeralds, garnets, moonstones, olivines, rubies, topazes, tourmalines, turquoises and zircons. In Western Australia, 609 carats (rough) of emeralds, valued at £278 were produced during 1929 in the Cue district on the Murchison gold-field. The value of the 3,750 carats reported from the same area in 1930 was not ascertainable as there were no sales during the year. There has been no recorded production since 1930.

During the three years 1939, 1940 and 1941, 10 tons of beryl ore, valued at £83 were produced in Western Australia. There was no production in 1942, but since that year 515 tons, valued at £14,564 were produced in 1943, 387 tons, valued at £12,602, in 1944 and 34 tons, valued at £952, in 1945. Beryl is required chiefly for special alloys with copper which are used in the manufacture of castings, non-sparking tools and special diamond-drill bits.

§ 15. Number Engaged, Wages Paid and Accidents in Mining.

1. **Total Employment in Mining.**—The number of persons engaged in the mining industry in Australia fluctuates according to the season, the price of industrial metals, the state of the labour market, and according to the permanence of new finds and the development of the established mines. During 1945 the number so engaged was as follows :—

NUMBER OF PERSONS ENGAGED IN MINING, 1945.

State.	Number of Persons engaged in Mining for—						Total.
	Gold.	Silver, Lead and Zinc.	Copper.	Tin.	Coal.	Other.	
New South Wales ..	509	3,929	145	814	17,427	1,481	24,305
Victoria	643	..	..	4	1,600	194	2,441
Queensland	1,256	34	814	465	2,966	313	5,848
South Australia	16	..	3	..	100	621	740
Western Australia ..	4,818	..	2	13	860	324	6,017
Tasmania	15	445	1,473	736	279	241	3,189
Northern Territory ..	46		5	(a) 48	..	159	258
Australia	7,303	4,408	2,442	2,080	23,232	3,333	42,798

(a) Includes some engaged in mining of tantalite.

Included in the figures for "other" in South Australia were 210 engaged in mining iron ore, 30 gypsum miners, 189 salt gatherers, and 34 opal miners. The Tasmanian figures include 140 scheelite miners and 12 osmiridium miners. Northern Territory figures include 80 wolfram and 75 mica miners.

The following table shows, at intervals since 1911, the number of persons engaged in mining in each State and the proportion so engaged of the total population :—

NUMBER ENGAGED IN MINING PER 100,000 OF POPULATION.

State.	1911.		1921.		1931.	
	Miners engaged.	No. per 100,000 of Population.	Miners engaged.	No. per 100,000 of Population.	Miners engaged.	No. per 100,000 of Population.
New South Wales ..	37,017	2,225	29,701	1,410	30,682	1,200
Victoria	15,986	1,210	5,211	339	6,463	359
Queensland	13,201	2,147	5,847	766	6,753	730
South Australia	6,000	1,457	2,020	406	518	90
Western Australia	16,596	5,787	7,084	2,122	7,147	1,653
Tasmania	5,247	2,760	3,170	1,486	3,397	1,512
Northern Territory ..	715	21,595	131	3,356	145	2,918
Australia	94,762	2,109	53,164	974	55,105	844

NUMBER ENGAGED IN MINING PER 100,000 OF POPULATION—*continued.*

State.	1941.		1944.		1945.	
	Miners engaged.	No. per 100,000 of Population.	Miners engaged.	No. per 100,000 of Population.	Miners engaged.	No. per 100,000 of Population
New South Wales	27,554	987	24,632	859	24,305	839
Victoria	4,839	250	2,690	135	2,441	121
Queensland	6,541	631	5,981	562	5,848	542
South Australia	928	154	906	146	740	118
Western Australia	14,021	2,959	5,930	1,224	6,017	1,228
Tasmania	2,974	1,248	3,439	1,404	3,189	1,287
Northern Territory	424	6,756	259	5,020	258	4,945
Australia	57,281	807	43,837	601	42,798	580

The upward movement in the number of miners engaged which commenced in 1930 reached a peak of 998 per 100,000 of population in 1937 but since that year the ratio has declined as follows :—1938, 957 ; 1939, 945 ; 1940, 880 ; 1941, 807 ; 1942, 696 ; 1943, 636 ; 1944, 601 ; 1945, 580.

2. **Wages Paid in Mining.** -Information regarding rates of wages paid in the mining industry is shown in the Labour Report issued by this Bureau.

3. **Accidents in Mining, 1945.**—The following table gives particulars of the number of men killed or injured in mining accidents during 1945 :—

MINING ACCIDENTS, 1945.

Mining for—	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Australia.
KILLED.

§ 16. Government Aid to Mining.

1. **Commonwealth.**—(i) *General.* Assistance to mining has been given by the Commonwealth under the provisions of the Precious Metals Act 1926, the Gold Bounty Act 1930, the Petroleum Oil Search Acts 1936 (which superseded the Petroleum Prospecting Acts 1926, 1927 and 1928), the Loan Appropriation (Unemployment Relief) Act 1934, the Northern Australia Survey Act 1934 and the Gold Mining Encouragement Act 1940.

Expenditure under the Acts mentioned has been reviewed in previous issues of the Official Year Book. Further expenditure under the Gold Mining Encouragement Act is not contemplated because an entirely new scheme of financial assistance to the mining industry has been arranged. This scheme is described below. Similarly, further expenditure is not contemplated under the Petroleum Oil Search Act 1936, except for two projects not already completed. Apart from these, the Government policy is to conduct geological and geophysical surveys of possible oil-fields (*see* (iii) below).

The Commonwealth Government has recently decided to provide substantial funds both for the immediate rehabilitation of the mining industry and for development of mining projects generally which offer promise of contributing materially to the national development, employment and the economic welfare of the Commonwealth. Applications for financial assistance under the new arrangements are presented to the Mines Department of the State concerned and projects recommended for assistance by the States or Territories are considered by the newly created Bureau of Mineral Resources, Geology and Geophysics. The report and recommendation of the Bureau are considered by the Commonwealth Mining Industry Committee which consists of representatives of the Departments of Supply and Development, the Treasury and Post-war Reconstruction, under the chairmanship of the permanent head of the Department of Supply and Development. The Committee's recommendations are presented for the consideration of the Minister for Supply and Development and the Treasurer.

Recently also an Australian Mining Council has been created, consisting of the Commonwealth and State Ministers whose Departments are concerned with the mining industry. This body deals with problems of national importance and functions in relation to mining in the same way as the Agricultural Council functions in regard to agriculture.

The Bureau has sections dealing with geology and geophysics, mining, engineering, petroleum, technology and mineral economics. The geological section conducts routine surveys in Commonwealth Territories, surveys of possible oil-fields in Australia and New Guinea, surveys of Commonwealth-owned mines and mines for which financial assistance is sought, and investigations of deposits of radio-active minerals. The geophysical section conducts investigations connected with the search for metalliferous radio-active and other mineral deposits ; problems connected with exploration of coal, oil and water ; regional magnetic and gravity surveys ; and engineering and military geophysics.

Diamond Drills. Arrangements are being made by the Department of Supply and Development to import two Sullivan and two Longyear diamond drills for use in connexion with the exploration for, and exploitation of, mineral deposits. These will be capable of drilling to depths of 1,400 and 3,000 feet respectively. The plants will be hired to mining companies and should do much to relieve the shortage of diamond drilling plant in Australia, and under Commonwealth ownership to raise the standard of drilling technique.

Atomic Energy (Control of Materials) Act (34 *of* 1946). This Act provides for control of substances which could be used for production or use of atomic energy. It gives the Commonwealth power to acquire such substances in their natural state (in waste materials from mining operations), and to carry on mining and other operations necessary for the recovery of such substances, and to pay compensation for such acquisition. It also gives the Commonwealth power to obtain possession of such substances held by any person.

The Act provides for the notification of discovery of any such substance or mineral containing such substance.

Rewards for Discovery of Uranium Ore. To encourage the search for, and discovery of deposits of uranium ore, the Commonwealth Government has approved the granting of monetary rewards.

Rewards will be paid as follows :—

(1) £1,000 for the discovery of a deposit containing sufficient ore to be of economic importance.
(2) £1,000 for the discovery of a deposit capable of producing 25 tons or more of uranium oxide and £2,000 for each 25 tons and pro rata for any excess over 25 tons.
(3) A maximum of £25,000 for any one deposit.

To be eligible for a reward for discovery, the deposit must be more than 15 miles from any other deposit whose existence is known to the Department of Supply and Development.

The Gold Tax Suspension Act (*No.* 58 *of* 1947) suspended the imposition of the tax on gold under the Gold Tax Act of 1939—the latter provided for a tax of 50 per cent. of the amount received when the price of gold was in excess of £9 per oz.

Mica Production. The Commonwealth Government extended to the 31st December, 1948, its authority to acquire the mica produced in Australia at a price fixed by the Prices Commissioner.

Control of Exports of Metals and Minerals.—In order to conserve supplies and to direct surpluses to destinations where most needed, export controls were initiated in 1946. Metals, etc., controlled include copper and copper alloys ; iron, steel and scrap ; all non-ferrous scrap ; zinc dross and dust ; antimony metal and concentrates ; metallic tin, tin concentrates and ores ; and pig lead and scrap and manufactured lead.

(ii) *Survey of North Australia.* Reference to this aerial geological and geophysical survey in which the Commonwealth, Queensland and Western Australian Governments co-operated, and which was completed at the end of 1940 appears in Official Year Book No. 35, page 744. Reports on individual areas are being issued as printing is completed.

(iii) *Search for Oil.* The Commonwealth Government has encouraged the search for oil in Australia, Papua and New Guinea, and considerable sums have been spent during recent years in geological surveys and in drilling operations. Details of efforts made during that period are shown in previous issues of the Official Year Book.

In 1936 the Petroleum Oil Search Act was passed and replaced all previous enactments. A considerable amount of geological work and test drilling was conducted under this scheme, and at the outbreak of the 1939–45 War two tests were partially completed, one at Oiapu in the Gulf district of Papua and one at Nerrima in the Kimberley district of Western Australia. It is proposed to complete these tests.

During the war, in co-operation with the Government of Victoria, an attempt was made to develop the oil sands of the Lakes Entrance district by sinking a vertical shaft and drilling horizontal holes therefrom. This project was continued till 1945 and in 1946 a private company took over the shaft.

A radical change in policy with regard to the search for petroleum throughout Australia and its Territories has also been made. It has been decided that the policy of granting financial assistance to relatively small companies has proved ineffective and that the Commonwealth contribution to the search for oil should take the form of a considerably intensified effort in carrying out geological and geophysical surveys. This work also will be a function of the Bureau of Mineral Resources, Geology and Geophysics working in close co-operation with the Mines Departments of the States. In this connexion co-operative agreements have already been concluded for extensive surveys to be made in the Kimberley and Nort-West Divisions of Western Australia.

The Bureau has also assumed full responsibility for geological and geophysical surveys in Commonwealth Territories, but suitable arrangements have been made to ensure that the local Administrations have the necessary technical advice directly available to them.

(iv) *Mineragraphic Investigations, etc.* In addition to the assistance mentioned above the Commonwealth Government made a grant of £25,000 in 1934 to the Council for Scientific and Industrial Research to stimulate gold production by conducting mineragraphic and ore-dressing investigations as required by the industry. This amount was expended during the succeeding five years in conducting these investigations, which were carried out conjointly with appropriate State institutions, the three laboratory centres being the School of Mines, Kalgoorlie, the School of Mines and Industries, Adelaide, and the University of Melbourne.

The success of the scheme induced a further grant of £22,000. After providing £2,000 for 1940–41, the balance was to be expended at the rate of £4,000 during each of the succeeding five years. The scheme is administered by a Mining Advisory Committee.

(v) *Standing Committee on Liquid Fuels.* The Commonwealth Government has appointed a Standing Committee on Liquid Fuels to co-ordinate knowledge concerning the production of liquid fuels and the use of substitutes therefor, and to furnish information which will enable Australia to obtain greater independence in regard to fuel supplies. This Committee has undertaken the investigation of such matters as the production of oil from coal, benzol, power alcohol, shale-oil, the use of producer and compressed gas in road vehicles, and tar and other substitutes for fuel oil. Seven reports have been issued by this Committee to date.

(vi) *Minerals Committee and Controller of Minerals Production.* During 1941 a Minerals Committee was formed, comprising representatives of the Commonwealth and State Governments and of the mining industry, to advise the Commonwealth on plans necessary to obtain minerals and metals required for war purposes. As a result of recommendations made by the Committee, the National Security (Minerals) Regulations were brought down providing for the appointment of a Controller of Minerals Production whose powers were, broadly, to operate, control and direct the production and supply of minerals. Legislation is now being enacted to provide for the continuation of powers prescribed by the National Security (Minerals) Regulations to enable various projects which were initiated by the Controller of Minerals Production to be continued.

(vii) *Mining Industry Advisory Panel.* The Mining Industry Advisory Panel was set up under the Secondary Industries Commission in 1944 to assist the Commonwealth Government in determining its post-war mining policy. The Panel consists of representatives of the Commonwealth and the States and of the mining industry. The new policy adopted by the Commonwealth with regard to financial assistance to mining has been adopted following recommendations submitted by the Panel through the Secondary Industries Commission. The taxation concessions which have been made to the industry have also resulted from the Panel's recommendations. Investigations are being made into the possibility of arranging uniform legislation in the States and Territories in connexion with health and safety in mines.

2. **States.**—(i) *General.* In addition to free assays and determinations of rocks and minerals carried out for prospectors by the Mines Departments of the States and Territories, technical officers of these departments provide advice to the mining industry where required, carry out field examinations of mining prospects, advise on exploration and development, select sites for water supply, and in general give a free technical service to the mining industry.

(ii) *New South Wales.* State aid to metalliferous mining during 1945 amounted to £1,791, which was expended mainly in gold and tin mining. During 1946 aid totalled £4,720 of which £2,485 was for tin and £1,593 for gold.

(iii) *Victoria.* In 1946 £7,440 was granted to aid the gold mining industry by the State of Victoria.

(iv) *Queensland.* Mining operations conducted by the State include three coal-mines situated at Bowen, Styx and Mount Mulligan, batteries at Kidston and Bamford, an assay office at Cloncurry, coke-works at Bowen and the State treatment works at Irvinebank. The Chillagoe State Smelters closed down in July, 1943, and arrangements were made for copper ores to be treated at Mount Isa by Mount Isa Mines Limited.

Aid granted to prospectors during 1946 amounted to £14,651 whilst other aid granted by the State Government amounted to £88,158.

(v) *South Australia.* During 1940 the Premier announced that assistance would be given to copper mining in the form of financial help towards such development work as was absolutely necessary for the mine to enter upon reasonably continuous production.

The Commonwealth Government in 1940 made available £1,000 for distribution among gold producers in South Australia. Under the Gold Mining Encouragement Act 1940 provision was made for the refund of the gold tax to bona fide prospectors.

On 5th November, 1942, the Leigh Creek Coal Act was passed to develop the Leigh Creek Coalfield. As a result of extensive drilling operations, development of open-cut mining was commenced in January, 1943. Production from the open-cut to December, 1945 amounted to 77,722 tons.

State aid during 1946 totalled £20,885 of which £9,621 was for coal, £3,005 for copper, £2,614 for gold and the balance of £5,645 for other minerals.

The State maintains batteries and cyanide works at Mount Torrens, Peterborough, Mongolata, Tarcoola and Glenloth, and assays for public purposes are made at the School of Mines.

(vi) *Western Australia.* Under the Mining Development Act of 1902, the following sums were advanced during 1946: £2,561 for gold, £12 for copper and £9,916 for other assistance granted by the State Government.

(vii) *Tasmania.* Assistance to mining under the Aid to Mining Act of 1927 for the development of mines and for prospecting amounted to £409 in 1946. Government drilling operations involved an expenditure in 1946 of £2,027, of which £607 was repaid.

(viii) *Northern Territory.* The Commonwealth Government was responsible for the advancing of considerable sums of money for the development of wolfram and mica fields in Central Australia during the war. Commonwealth activities, with the provision of roads and water supply and the introduction of mechanical mining equipment, have resulted in a great improvement in conditions on the mica fields.

§ 17. Metallic Contents of Ores and Concentrates Produced.

According to returns compiled by the Australian Mines and Metals Association from records supplied by companies associated with mineral production and by State Departments of Mines, the metallic contents (excluding gold) of ores and concentrates produced in Australia during the years 1939 and 1942 to 1946 were as follows :—

METALLIC CONTENTS OF ORES AND CONCENTRATES PRODUCED IN AUSTRALIA.

Metal.		1939.	1942.	1943.	1944.	1945.	1946.
Silver	oz.	15,320,116	14,241,811	10,329,830	9,365,726	8,076,740	9,073,481
Lead, Pig	tons	280,003	263,183	206,376	189,485	164,741	184,314
Zinc	,,	217,256	221,834	182,841	174,358	150,313	192,117
Copper	,,	20,560	20,402	24,326	28,056	24,520	17,755
Tin	,,	3,067	2,931	2,635	2,547	2,282	2,127

The production of pig iron in New South Wales and South Australia, the only producing States, reached its peak in 1941–42 when 1,557,641 tons were produced compared with 1,104,605 tons in 1938–39. Production had declined by 1945–46 to 906,283 tons but rose again in 1946–47 to 1,143,132 tons.

CHAPTER XIX.

PASTORAL PRODUCTION.

§ 1. Initiation and Growth of Pastoral Industry.

1. **General.**—A detailed account of the various enumerations of live stock in Australia made prior to 1860 is given in previous issues of the Year Book. The numbers recorded between 1800 and 1860 are regarded as somewhat defective. Doubtless the growth of population, the expansion in the area settled and the increase in private ownership made it difficult in those early times to secure accurate returns. Since 1860 however, the annual enumerations have been based, with few exceptions, on actual collections made through the agency of the State Police and reliably record the movement in live stock numbers from year to year.

2. **Live Stock Numbers since 1860.**—Particulars concerning the numbers of each of the principal kinds of live stock in Australia at decennial intervals from 1860 to 1930, and from 1939 onwards in single years are given in the following table, and are shown continuously on the graph on page 816.

During the eighty-six years from 1860 to 1946, the live stock of Australia increased considerably, horses, 193 per cent. ; cattle, 251 per cent. ; sheep, 379 per cent. ; and pigs, 306 per cent. The average annual increases which these aggregates represent are as follows :—Horses, 1.26 per cent. ; cattle, 1.47 per cent. ; sheep 1.84 per cent. ; and pigs, 1.64 per cent.

LIVE STOCK : AUSTRALIA.

Year.	Horses.	Cattle.	Sheep.	Pigs.
1860	431,525	3,957,915	20,135,286	351,096
1870	716,772	4,276,326	41,593,612	543,388
1880	1,068,774	7,527,142	62,184,252	815,776
1890	1,521,598	10,299,816	97,881,221	891,138
1900	1,609,654	8,640,225	70,602,995	950,349
1910	2,165,866	11,744,714	98,066,046	1,025,850
1920	2,415,510	13,499,737	81,795,727	764,406
1930	1,792,734	11,720,916	110,568,279	1,071,679
1939	1,724,056	12,861,781	111,057,832	1,155,591
1940	1,698,797	13,080,180	119,305,391	1,455,341
1941	1,665,616	13,255,841	122,694,025	1,797,340
1942	1,611,059	13,560,754	125,189,129	1,477,303
1943 (31st March)	1,517,970	14,005,320	124,614,672	1,563,000
1944 ,, ,, ...	1,449,199	14,183,679	123,173,962	1,746,721
1945 ,, ,, ...	1,359,205	14,133,167	105,370,865	1,630,855
1946 ,, ,, ...	1,265,398	13,878,006	96,396,405	1,425,709
1947 ,, ,, ...	1,195,175	13,426,646	95,722,782	1,273,011

3. **Fluctuations.**—The increases referred to, however, have not been continuous, marked fluctuations having taken place during the period, mainly on account of droughts which have from time to time left their impress on the pastoral history of Australia. These occurred in 1868, 1877, 1883–4, 1892, 1893, 1895, 1901–2, 1912, 1914, 1918, 1919, 1922–23, 1925–26, 1927–28, 1929–30, 1940–41 and 1944–45 to 1946–47.

The years in which the numbers of live stock attained their maxima are as follows :— Horses, 1918 (2,527,149); cattle, 1921 (14,441,309); sheep, 1942 (125,189,129); and pigs, 1941 (1,797,340).

4. **Live Stock in Relation to Population.**—The number of each kind of live stock per head of the population of Australia has varied since 1860 as shown in the following table :—

LIVE STOCK PER HEAD OF POPULATION : AUSTRALIA.

Year.	Horses	Cattle.	Sheep.	Pigs.	Year.	Horses.	Cattle.	Sheep.	Pigs
1860 ..	0.38	3.45	17.58	0.31	1940 ..	0.24	1.86	16.97	0.21
1870 ..	0.43	2.60	25.24	0.33	1941 ..	0.23	1.87	17.28	0.25
1880 ..	0.48	3.37	27.87	0.37	1942 ..	0.22	1.89	17.46	0.21
1890 ..	0.48	3.17	31.06	0.28	1943 (*a*) ..	0.21	1.94	17.24	0.22
1900 ..	0.43	2.29	18.75	0.25	1944 (*a*) ..	0.20	1.94	16.83	0.24
1910 ..	0.49	2.65	22.16	0.23	1945 (*a*) ..	0.18	1.92	14.33	0.22
1920 ..	0.44	2.49	15.11	0.14	1946 (*a*) ..	0.17	1.87	12.97	0.19
1930 ..	0.28	1.81	17.07	0.17	1947 (*a*)(*b*)	0.16	1.78	12.70	0.17
1939 ..	0.25	1.87	16.11	0.16					

(*a*) 31st March. (*b*) Subject to revision.

5. **Live Stock in Relation to Area.**—The number of live stock per square mile in the several States and Territories of Australia is given in the following table :—

LIVE STOCK PER SQUARE MILE, 1946.

State or Territory.	Horses.	Cattle.	Sheep.	Pigs
New South Wales	1.31	10.07	142.44	1.40
Victoria	2.65	20.79	166.76	3.09
Queensland	0.55	9.76	28.25	0.62
South Australia	0.31	0.98	17.86	0.32
Western Australia	0.09	0.85	10.01	0.14
Tasmania	0.95	8.25	73.45	1.79
Northern Territory	0.06	1.83	0.04	0.00
Australian Capital Territory	1.12	8.38	239.27	0.66
Australia	0.43	4.67	32.41	0.48

6. **Minor Classes of Live Stock.**—Excluding Victoria, where the details are not available, the number of minor classes of live stock returned for 1941 were as follows :—Goats, 80,366 ; camels, 2,267 ; and mules and donkeys, 10,881. Of these, goats were most numerous in Queensland, and camels, mules and donkeys in Western Australia. In the raising of goats, some attention has been devoted to the angora goat and its product (mohair), and upwards of 5,000 angora goats are included in the number shown above. Of these, 1,640 were in New South Wales, 1,000 in Queensland, 1,531 in South Australia, and 284 in Tasmania. Details for later years were not collected.

7. **Net Exports of Principal Pastoral Products.**—The quantities by which the exports of the principal pastoral products of Australia exceeded the imports for the years 1938–39 and 1942–43 to 1945–46 were as follows :—

NET EXPORTS OF PASTORAL PRODUCTS : AUSTRALIA.

(a) Quantity not available. (b) Includes chilled beef. (c) Includes hare skins

NOTE.—The minus sign (−) signifies net imports.

The values of the net exports for the same five years are furnished in the next table. For the five years ended 1945–46 they amounted to £A.359,284,294, or an average of £A.71,856,859 per annum, of which wool represented 74.14 per cent. Meat, skins and tallow comprise the remaining principal pastoral products exported.

8. **Value of Pastoral Production.**—(i) *General.* Particulars of the gross, local and net values of pastoral production for each State are shown for 1944–45 and 1945–46 in the following table. Fuller details of the source of the information and an explanation of the terms used in this compilation will be found in Chapter XXVIII. "Miscellaneous". Maintenance costs have not been computed in all States and depreciation has not been deducted ; consequently the net values are inflated to the extent of these costs.

9. **Consumption of Meats.**—Particulars of the quantity of meat per head per annum available for civilian consumption in Australia, Canada, the United Kingdom and the United States are given in the following table. Canned and cured meat has been included at its carcass weight equivalent.

The demand for meat during the war years was such as to necessitate the introduction of rationing in order to divert supplies from civilian consumption to the armed services. Meat rationing was introduced in Australia on 17th January, 1944 covering meat other than bacon and ham, canned meat, sausages and offal, and the rate per week fixed for coupon meat averaged 2¼ lb. for persons nine years and over and 1⅛ lb. for children under nine. On 26th February, 1945, however, the coupon rating was reduced by approximately 8⅓ per cent. averaging 2.1 lb. and 1.05 lb. per week respectively. A further reduction of 12½ per cent. to an average of 1.84 lb. per week for persons nine years and over occurred on the 7th May, 1945. The rate for children under nine remained unaltered at 1.05 lb. per week. The average coupon rate current during 1947 was 1¾ lb. per head per week, the equivalent of 2.43 lb. carcass weight. The rationing of meat in Australia ceased on 21st June, 1948.

QUANTITY OF MEAT (INCLUDING CURED AND CANNED) AND EDIBLE OFFAL AVAILABLE FOR CIVILIAN CONSUMPTION PER HEAD PER ANNUM.

10. **Marketing of Meat.**—(i) *General.* The Meat Export Control Act 1935–1946 was introduced following a decision of a conference of Commonwealth and State Ministers with members of the Commonwealth Meat Advisory Committee, held in October, 1935, to set up a Meat Board with defined statutory powers. The Australian Meat Board, which was appointed under the Act in January, 1936, consisted of eighteen members, representative of producers, processors, exporters and the Commonwealth

Government. Provision was made for the appointment from within the Board of an Executive Committee and a Beef Committee. The Act provided for the control of the export of meat by licence. The Board was empowered to regulate shipments of meat and to arrange contracts in respect of freights and insurances; to promote oversea sales by advertising and to foster research into meat problems; and to supervise the issue of export licences. The Board also has power to appoint a London representative. During the 1939–45 War the control of meat exports was under National Security Regulations which ceased to operate with the expiry of the National Security Act on 31st December, 1946. Control then reverted to the Board, which was reconstituted in August, 1946 by legislation amending the Meat Export Control Act. Membership of the reconstituted Board is on an industry basis in lieu of a State basis and the number of members has been reduced from eighteen to twelve. The powers and functions of the Board were *inter alia* extended to enable it to purchase and sell any meat, meat products or edible offal on behalf of the Commonwealth Government and subject to any direction of the Minister for Commerce and Agriculture.

The Meat Export Charges Act 1935–46 provides for the imposition of a levy on all meats exported from Australia, the funds from which are used for the purpose of defraying expenses and charges incurred by the Australian Meat Board in the course of its business. The customary provision is made for exemption from the levy when recommended by the Board.

(ii) *War-time Marketing.* Details of arrangements for the marketing of meat during the 1939–45 War are given on page 1107 of Official Year Book No. 36.

(iii) *Long-term Purchase Agreement.* An agreement was completed between the Government of the United Kingdom and the Commonwealth Government for the long-term purchase of the exportable surplus of Australian meat for the period 1st October, 1944 to the 30th September, 1948.

The agreement covered all classes of meats, including sundries in the fresh, frozen, and canned forms, for the currency of the agreement, with the exception of pigmeats, whose quantities were determined only until the expiry of the second year of the contract, namely 30th September, 1946. Quantities of the latter class of meat for the two succeeding years of the contract were arranged subsequently by negotiation between the two Governments.

Prices were determined for all classes and cuts of meat for the first two years of the contract, which provided that they could be reviewed prior to specified dates at the instigation of either Government in respect of each of the two final years of the agreement.

Subject to certain conditions the Government of the United Kingdom agreed to reimburse the cost of storage and interest incurred by the Commonwealth Government in connexion with the purchase and storage of such meat after it had been in store 28 days.

The arrangement also provides for ample opportunity to be given to the meat industry of Australia to re-engage in the chilled beef trade with the United Kingdom when the shipping position makes that possible.

A further interesting feature is that the Government of the United Kingdom will consult with the Commonwealth Government regarding the steps necessary to ensure a mutually agreeable distribution of Australian meat in the United Kingdom, and also, when the present scheme of control is withdrawn or modified, will confer with the Commonwealth Government as to the ways and means of securing an orderly resumption of private trading.

The prices determined under the long-term purchase arrangement operated until 30th September, 1946, and approximated those which were being paid by the Commonwealth Government under its Meat Purchase Plan. As from 1st October, 1946, rises in prices operated for the new contract year. These rises have been passed on to the producers. Prices for the year ended 30th September, 1948 will remain unchanged, except for some minor adjustments. This contract has now been extended for a further two years to 30th September, 1950. Price changes during the period of this extension may be reviewed under the terms of the contract.

§ 2. Horses.

1. **Suitability of Australia for Horse-breeding.**—From the earliest times the suitability of the climate and pastures of Australia for the production of serviceable breeds of horses has been fully recognized. By the importation of high-class sires, and the careful selection of breeding mares, these natural advantages have been utilized to the fullest extent in breeding all classes of horses. As a consequence of this combination of advantages, the Australian horse, whether of the heavy draught, medium weight, or light saddle variety, compares very favourably with the product of other lands.

2. **Distribution throughout Australia.**—The States of New South Wales, Queensland and Victoria together depasture nearly 80 per cent. of the total number of horses in Australia. In the following table figures are given for each State and Territory during the years 1939 and 1942 to 1947 :—

HORSES : NUMBER.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	N.T.	A.C.T.	Total.
1939 . . .	531,355	343,828	444,521	195,834	143,674	30,458	33,191	1,195	1,724,056
1942 . .	525,697	302,401	431,363	171,092	124,402	28,612	26,209	1,283	1,611,059
1943 . .	483,277	292,534	392,639	164,855	112,782	27,077	43,663	1,143	1,517,970
1944 . .	465,672	277,662	387,018	154,102	106,743	26,317	30,534	1,151	1,449,199
1945 . .	436,443	253,782	380,670	133,003	96,528	25,885	31,803	1,091	1,359,205
1946 . .	403,645	232,473	367,357	115,949	88,180	24,863	31,883	1,048	1,265,398
1947 . .	379,774	227,164	343,172	109,274	80,746	23,925	30,019	1,101	1,195,175

The number of horses attained its maximum in Australia during 1918, when a total of 2,527,149 was recorded. The United States of America made its highest recording in the same year and Canada in 1921. The number in Australia has declined considerably since 1918 owing to the mechanization of transport and farming.

During the years 1941 to 1946 the rate of decline accelerated considerably, averaging 80,000 per annum compared with less than 20,000 for the previous five years. The decline continued in 1946–47.

The number of horses in Australia from 1860 onwards may be obtained from the graph on page 816.

The percentages of the number of horses in the several States and Territories on the total for Australia for 1947 were :—New South Wales, 31.78 ; Victoria, 19.01 ; Queensland, 28.71 ; South Australia, 9.14 ; Western Australia, 6.76 ; Tasmania, 2.00 ; Northern Territory, 2.51 ; and Australian Capital Territory, 0.09 per cent.

The percentages in the various States remained fairly constant during the five years 1941 to 1946, slight increases being recorded for Queensland and Northern Territory.

3. **Oversea Trade in Horses.**—(i) *Exports.* The export of horses from Australia during the early years of this century was fairly considerable, averaging about 15,000 head per annum between 1901 and 1920, exclusive of those used for war purposes during the 1914–18 War. Since then, exports have gradually declined and averaged only about 4,000 for the five years ended 1938–39 and 387 for the five years ended 1945–46.

(ii) *Imports.* The few horses imported into Australia consist mainly of valuable stud animals from the United Kingdom and racehorses from New Zealand. The average value per head of the horses imported during the five years 1941–42 to 1945–46 was £A.1,085. The average number imported per annum was, however, only 58, and the average annual value, £A.62,885.

Transport difficulties, due to the exigencies of war, affected trade as shown in the table below :—

HORSES : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.

NOTE.—The minus sign (−) signifies net imports.

§ 3. Cattle.

1. **Purposes for which Raised.**—Cattle-raising is carried out in all the States, the main object in certain districts being the production of stock suitable for slaughtering purposes, and in others the raising of profitable dairy herds. The great impetus which the development of the export trade in Australian butter gave to the dairying industry led to a considerable increase in numbers and an improvement in quality of the dairy herds in Victoria, New South Wales, and Southern Queensland in particular, the portion of Australia in the temperate zone being the best adapted to this industry. On the other hand, beef-producing cattle are mainly raised in the tropical districts, i.e., in the northern parts of Queensland, in the Northern Territory, and in the Kimberley district in the north of Western Australia.

2. **Distribution throughout Australia.**—Until 1880, New South Wales was the principal cattle-raising State, but in that year Queensland occupied the leading position, which it has since maintained. There was a very rapid increase in the number of cattle in Australia up to the year 1894, when 12,311,617 head were depastured. From 1895 onwards, however, the effects of droughts and the ravages of tick fever reduced the number to 7,062,742 in 1902. Following the disastrous drought which terminated in the latter year the herds were gradually built up, and, despite recurring droughts, they continued to increase until the maximum number of 14,441,309 cattle was attained in 1921. After that year the number dropped continuously till 1929, largely owing to the decline in the oversea demand for frozen beef. With the expansion of dairying it recovered to 14,048,671 in 1934, but from that year declined continuously to 1939 when it stood at 12,861,781. The upward movement which commenced in 1940 was continued until 1944, the total number of cattle (14,183,679) in the latter year being at its highest level since 1935. Drought conditions and other factors during 1944–45 and 1945–46 caused a decline in numbers to 14,133,167 in 1945 and 13,878,006 in 1946. The number recorded in 1947 was 13,426,646. A graph showing the number of cattle in Australia from 1860 appears on page 816.

The numbers of cattle (beef and dairy) in the several States and Territories in 1939 and in each year 1942 to 1947 are as follows :—

CATTLE : NUMBER.

Year.	N.S.W	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Aus. Cap. Terr.	Total
1939	2,811,884	1,697,295	6,097,089	318,897	767,680	262,407	899,472	7,057	12,861,781
1942	2,878,450	1,986,544	6,303,467	399,143	839,731	253,106	892,881	7,432	13,560,754
1943	3,030,546	2,022,892	6,466,316	424,253	831,231	244,681	978,434	6,967	14,005,320
1944	3,143,378	2,013,033	6,524,553	414,997	870,939	230,127	978,569	8,083	14,183,679
1945	3,144,701	1,903,110	6,623,112	391,323	852,563	224,668	984,370	9,320	14,133,167
1946	3,116,834	1,827,087	6,542,210	374,096	833,567	216,306	960,039	7,867	13,878,006
1947	2,983,093	2,060,061	5,945,285	423,980	811,949	220,119	972,990	9,169	13,426,646

Although the proportion is not as high as it has been in the past, Queensland was carrying 44.28 per cent. of the cattle in Australia in 1947. The percentage in each State and Territory during 1947 was :—New South Wales, 22.22 ; Victoria, 15.34 ; Queensland, 44.28 ; South Australia, 3.16 ; Western Australia, 6.04 ; Tasmania, 1.64 ; Northern Territory, 7.25 ; Australian Capital Territory, 0.07.

A graph showing the distribution of cattle in Australia during 1938–39 is shown in the Official Year Book No. 34, p. 453. A similar graph showing the distribution during 1924–25 is shown in Official Year Book No. 22, p. 660.

3. **Classification of Cattle According to Purpose.**—Of the total number of cattle in Australia in 1947, 8,834,433 or 65.8 per cent. were classified as beef cattle. The numbers classified as beef cattle in the several States and Territories during the years 1943 to 1947 were as follow :—

BEEF CATTLE : NUMBER.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Nor. Terr.	Aus. Cap. Terr.	Total
1943	1,676,174	577,362	4,892,691	170,657	604,543	101,735	978,434	5,428	9,007,024
1944	1,806,692	607,005	4,978,499	161,894	629,570	101,352	978,569	6,015	9,269,596
1945	1,813,166	538,908	5,113,870	146,215	617,634	96,602	984,370	6,908	9,317,673
1946	1,839,630	527,318	5,099,509	142,795	604,056	90,139	960,039	5,243	9,268,729
1947	1,755,456	648,433	4,613,163	161,913	588,397	87,854	972,990	6,227	8,834,433

A classification of numbers on this basis is not available prior to 1943.

Particulars relating to dairy cattle numbers will be found in Chapter XXI. " Farmyard, Dairy and Bee Products ".

4. **Comparison with other Countries.**—The following table shows the number of cattle in Australia and in some of the principal cattle-raising countries of the world for the years 1936–40 and at the latest available date. The figures have been compiled by the Food and Agriculture Organization of the United Nations ; for 1945 and 1946 preliminary data have been used extensively, the figures in parentheses being estimates made by the Office of Foreign Agricultural Relations, U.S. Department of Agriculture. Owing to changes in country boundaries, the figures for the two periods do not cover identical areas in all cases.

CATTLE : NUMBER IN VARIOUS COUNTRIES.

Country.	Number of Cattle. ('000 omitted). Average 1936-40.(*a*)	Year.	Number.
India (British and Native)(*b*)	205,863	1945	(200,000)
United States of America	66,684	1946	79,791
Brazil	40,807	1945	(42,000)
U.S.S.R. (Russia)	48,500	1946	(41,500)
Argentina	33,762	1945	34,010
China	(24,000)	1945	(21,000)
Germany	19,881	1945	20,268
France	15,504	1946	14,795
Australia	**13,285**	**1946**	**13,878**
Union of South Africa	11,636	1943	13,068
Colombia	8,010	1946	13,000
Mexico	11,722	1944	(*c*) 12,000
Siam	11,017	(*d*)	(*d*)
Canada	8,246	1946	9,961
United Kingdom	8,798	1945	9,624
Turkey (*b*)	7,177	1944	7,821
Uruguay	8,297	1943	6,256
Italy	7,571	1945	(6,100)
Poland	(9,965)	1945	(5,500)

(*a*) Average for two to four years in some cases. (*b*) Includes buffaloes. (*c*) Unofficial estimate. (*d*) Not available.

The Food and Agriculture Organization of the United Nations has estimated world total cattle numbers at 709.8 millions in 1945 compared with an average of 723.0 millions in the period 1936–40.

5. **Imports and Exports of Cattle.**—The products of the cattle-raising industry figure largely in the export trade of Australia, although the export of live cattle has never been large. The number of cattle imported is also small, consisting, as in the case of horses, mainly of valuable animals for stud purposes. Details for the years 1938–39 and 1941–42 to 1945–46 are as follows :—

CATTLE : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.
		£A.		£A.		£A.
1938–39	42	9,431	447	9,573	405	142
1941–42	25	1,313	81	1,275	56	−38
1942–43	14	1,655	336	7,848	322	6,193
1943–44	32	5,893	125	3,362	93	−2,531
1944–45	59	18,646	1,232	24,138	1,173	5,492
1945–46	56	36,167	340	10,110	284	−26,057

NOTE.—The minus sign (−) signifies net imports.

The average value per head of the cattle imported during the last five years was £A342 6s. 8d. while the average value per head of the cattle exported during the same period was £A22 2s. 2d.

6. **Cattle Slaughtered.**—The number of cattle slaughtered during each of the years ended June, 1939 and 1942 to 1946 is shown in the following table :—

CATTLE (INCLUDING CALVES) SLAUGHTERED.

(in thousands.)

Year ended June—	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	N. Terr.	A.C.T.	Total.
1939	(a)1,136	812	1,284	(b) 160	(b) 127	50	(b) 9	3	3,581
1942	(a)1,041	754	1,105	(b) 154	(b) 111	51	(b) 10	3	3,229
1943	1,061	753	1,064	177	105	53	41	3	3,257
1944	985	767	961	178	105	53	41	2	3,092
1945	982	809	956	171	102	47	41	1	3,109
1946	1,018	584	811	138	120	43	25	2	2,741

(a) Year ended March. (b) Year ended December. previous.

7. **Production of Beef and Veal.**—Details of the production of beef and veal in each State and Territory are given in the following table for the years indicated :—

PRODUCTION OF BEEF AND VEAL (BONE-IN-WEIGHT) : AUSTRALIA.

('000 tons.)

Year ended June—	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	N. Terr.	A.C.T.	Total.
1939	(a) 172	114	207	(b) 24	(b) 28	11	(b) 2	1	559
1942	(a) 159	112	200	(b) 23	(b) 25	11	(b) 3	1	534
1943	156	105	201	28	22	11	10	1	534
1944	145	100	187	26	20	11	10	1	500
1945	126	99	175	23	18	9	10	1	461
1946	134	76	137	21	24	8	6	1	407

(a) Year ended March. (b) Year ended December previous.

8. **Consumption of Beef and Veal.**—For the three pre-war years 1936–37 to 1938–39 the average annual production of beef and veal in Australia was 569,000 tons of which 127,000 tons were exported, leaving a balance of 442,000 tons (or the carcass equivalent of 144 lb. per head per annum) available for consumption as fresh and canned meat.

In order to cope with the increasing demands by Australian and Allied Services based upon Australia and to supply as much beef as possible to meet the import requirements of the United Kingdom, it was necessary to introduce from January, 1944 a system of rationing limiting civilian consumption which has always been very high. As a result, the quantity of beef and veal entering civilian consumption per head decreased from the pre-war average of 144 lb. to 124 lb. in 1943, 92 lb. in 1944 and 87 lb. in 1945. Consumption increased to 93 lb. per head in 1946.

In the following table details of the production and disposal of beef and veal are given for the period stated.

PRODUCTION AND DISPOSAL OF BEEF AND VEAL (BONE-IN-WEIGHT): AUSTRALIA.

('000 tons.)

Period.	Changes in Stock.	Production.	Exports.	For Canning.	Consumption by—		Civilian Consumption per head per annum.
					Services.	Civilians.	
							lb.
Average, years 1936–37 to 1938–39	..	569	127	(a)	..	442	144.2
1943	..	517	157	(a)	(a)	360	124.1
1944	+ 11	480	14	81	104	270	92.0
1945	− 2	450	42	88	61	261	86.7
1946	− 7	438	70	53	17	305	93.2

(a) Included with exports.

9. **Exports of Frozen Beef and Veal.**—The export of frozen meat from Australia dates from about 1881, and since that year the trade has grown considerably. The quantity of frozen beef and veal exported in 1938–39 amounted to 271,963,829 lb., valued at £A4,323,680, but there has since been a decline owing to reduced production and the diversion of supplies to meet the requirements of the Australian and Allied Services based on Australia. The quantities and values of frozen beef and veal exported during 1938–39 and in each year 1941–42 to 1945–46 are shown in the following table :—

EXPORTS OF FROZEN BEEF AND VEAL: AUSTRALIA.

Year.	Exports of Frozen and Chilled Beef.		Exports of Frozen Veal.	
	lb.	£A.	lb.	£A.
1938–39	259,822,971	4,128,055	12,140,858	195,625
1941–42	116,340,293	2,476,172	916,165	22,244
1942–43	22,419,121	555,285	209,786	5,460
1943–44	46,266,506	1,212,311	1,180,490	34,004
1944–45	61,595,568	1,623,697	1,551,690	39,405
1945–46	106,059,782	2,711,077	4,731,548	122,906

Prior to the war the largest purchaser of Australian beef and veal was the United Kingdom, which during 1938–39 took £3,901,691, or about 90.2 per cent. of the total shipments. Other countries importing Australian beef were, in order of importance, Egypt, Malaya (British), Malta, Philippine Islands and Hong Kong; these countries, together with the United Kingdom, accounted for 98.0 per cent. of the total value of export. However, at the request of the United Kingdom Government there has been a considerable diversion from that country to nearer British possessions during recent years. In 1945–46 shipments to the United Kingdom were valued at £912,210 or 32.2 per cent. of the total value of beef and veal exports, while exports to other British countries, amounted to £1,776,907, equivalent to 62.7 per cent. of the total.

In view of the preference overseas for chilled beef, the Australian beef industry was at a serious disadvantage until investigations proved that beef could be successfully transported from Australia to United Kingdom in a chilled condition. Trial shipments of 254,000 lb. in 1932–33 and 1,515,000 lb. in 1933–34 were made, and the exports in subsequent years increased as follows :—1934–35, 21,570,928 lb., £322,239; 1936–37 41,869,695 lb., £608,175; and 1938–39, 58,963,009 lb., £988,148. However, the advent of war seriously affected the export trade in chilled beef, which decreased as follows :— 1939–40, 12,786,859 lb., £206,353; 1940–41, nil; 1941–42, 1,697 lb., £70; 1942–43, 1,843 lb., £69, and 1943–44 to 1945–46, nil.

10. **Contract for Purchase of Exportable Surplus.** A long-term contract was negotiated between the Governments of the Commonwealth and the United Kingdom for the purchase of Australia's exportable surplus of beef and veal for 4 years ended 30th September, 1948. The contract was later extended for a further two years to 30th September, 1950. Fuller particulars will be found in § 1, par. 10 (iii) *ante*.

§ 4. Sheep.

1. **Initiation of the Pastoral Industry.**—Fortunately for Australia, the suitability of its climate and general conditions for the production of a high class of wool were, at an early date in the history of its settlement, surmised and tested by Captain Macarthur, one of the pioneer sheep-breeders of New South Wales. To the energy of this enterprising pastoralist is due in large measure the rapid and extremely satisfactory development of Australia as a producer of fine wool, and while it would appear that the introduction of the merino sheep into Australia was not due to Macarthur, a great deal of the credit for having successfully established the pastoral industry in Australia must certainly be his.

2. **Distribution throughout Australia.**—With the exception of a short period in the early sixties, when the flocks of Victoria outnumbered those of New South Wales, the latter State has occupied the premier position in sheep-raising, depasturing about one half of the sheep of Australia.

A graph showing the distribution of sheep in Australia during 1938–39 is shown in the Official Year Book No. 34, page 452. A similar graph showing the distribution of sheep during 1924–25 was published in Official Year Book No. 22, page 659.

Fluctuations in the number of sheep recorded for each year in Australia from 1860 onwards may be seen from the graph on page 816. Up to 1945 there were five marked periods of decline, but the losses were made up rapidly. In each of the years 1925 to 1945 the sheep flocks have exceeded 100 millions, reaching 125,189,129 in 1942, the greatest number recorded in Australia. At no previous period have such large numbers been depastured continuously, and the development has taken place despite an average annual slaughter of approximately 25 million sheep and lambs for the meat trade.

However, a sharp decline to 105 million occurred in 1945 followed by a further reduction to 96 million in 1946. This represented a loss from all causes other than slaughtering of about 27 million sheep (22 per cent.) since 1944 and was largely attributable to the severe drought conditions experienced during 1944, 1945 and 1946. The number of sheep recorded in 1947 was only slightly below the 1946 figure.

The numbers of sheep in the several States and Territories for 1939 and each year 1942 to 1947 are shown in the following table :—

SHEEP : NUMBER.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Total.
1939	48,876,663	17,007,352	23,158,569	9,936,586	9,177,531	2,625,690	29,901	245,540	111,057,832
1942	56,737,000	20,598,201	25,199,245	10,245,894	9,722,780	2,398,201	25,245	262,563	125,189,129
1943	56,043,598	19,614,040	25,650,231	10,370,565	10,424,385	2,226,906	34,603	250,344	124,614,672
1944	56,837,300	19,220,457	23,255,584	10,359,669	11,012,936	2,187,799	25,575	274,642	123,173,962
1945	46,662,000	16,457,101	21,292,120	8,473,939	10,049,587	2,156,071	29,269	250,778	105,370,865
1946	44,076,000	14,655,277	18,943,762	6,786,538	9,765,983	1,925,604	18,561	224,680	96,396,405
1947	43,105,000	16,598,490	16,084,340	7,958,619	9,787,002	1,933,332	28,005	227,994	95,722,782

Apart from the effect of drought the relative number of sheep depastured in the different States has remained fairly constant.

The percentage distribution in 1947 was :—New South Wales, 45.03 ; Victoria, 17.34 ; Queensland, 16.80 ; South Australia, 8.31 ; Western Australia, 10.23 ; Tasmania, 2.02 ; Northern Territory, 0.03 ; Australian Capital Territory, 0.24 per cent.

3. **Classification of Sheep According to Age, Sex and Breed.**—In the following table sheep numbers in Australia are classified according to age and sex for each of the years 1943 to 1947. Data in this form are not available prior to 1943.

SHEEP : AGE AND SEX, AUSTRALIA.

Description.	1943.	1944.	1945.	1946.	1947.
Rams, 1 year and over ..	1,651,231	1,614,976	1,426,817	1,300,842	1,331,614
Breeding Ewes (including ewes intended for mating)	56,674,075	53,636,301	46,684,632	47,652,092	47,672,089
Other ewes, 1 year and over	9,636,124	11,878,145	11,067,933	6,382,593	5,615,600
Wethers, 1 year and over..	31,985,775	30,614,132	27,751,219	25,002,494	22,486,789
Lambs and hoggets, under 1 year	24,667,467	25,430,408	18,440,264	16,058,384	18,616,690
Total, Sheep and lambs	124,614,672	123,173,962	105,370,865	96,396,405	95,722,782

Particulars relating to the principal breeds of sheep were collected uniformly for all States and the Australian Capital Territory at 31st March, 1947 and are shown in the following table :—

SHEEP : PRINCIPAL BREEDS, 31st MARCH, 1947.

Breed.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	N.T. (*a*)	A.C.T.	Australia
Merino	31,067,510	5,265,808	15,872,429	5,926,462	8,323,849	280,313	27,637	196,802	66,960,810
Other pure breeds	2,139,893	1,407,349	23,795	342,187	488,975	456,411	41	8,119	4,866,770
Merino comebacks	2,059,812	3,001,730	89,132	274,068	(*b*)	282,300	155	5,114	(*c*)5,712,311
Crossbreds ..	7,837,785	6,923,603	98,984	1,415,902	974,178	914,308	172	17,959	18,182,891
Total ..	43,105,000	16,598,490	16,084,340	7,958,619	9,787,002	1,933,332	28,005	227,994	95,722,782

(*a*) As at 31st December, 1946. Distribution between categories has been estimated. (*b*) Not available separately. Included with crossbreds. (*c*) Incomplete.

4. **Comparison with other Countries.**—As regards the size of its flocks and the quantity and quality of wool produced, Australia has long occupied a leading position amongst the sheep-raising countries of the world.

As with a number of other important sheep-raising countries, it has, however, suffered a considerable reduction in sheep numbers since 1939, but still holds the leading position with 96 million sheep (1946), followed by the U.S.S.R. (Russia) with about 63 million (1943), Argentina with 56 million (1945), India (British and Native) with approximately 48 million (1945) and the United States of America with 44 million (1946). The reduction in sheep numbers since the period 1936–40, according to latest available data, has been pronounced in the south-eastern region of Europe (embracing the pre-war areas of Hungary, Yugoslavia, Greece, Albania, Bulgaria and Rumania) with 35.7 per cent., United Kingdom with 22.8 per cent. the U.S.S.R. (Russia) with 20.4 per cent., Australia with 14.4 per cent., the United States of America with 14.0 per cent. and Union of South Africa, 12.3 per cent. On the other hand significant increases in numbers were recorded in Argentina, India (British and Native) and New Zealand.

The following table shows the number of sheep in Australia in relation to the numbers in some of the principal sheep-raising countries of the world for the years 1936–40 and at the latest available date. The figures have been compiled by the Food and Agriculture Organization of the United Nations; for 1945 and 1946 preliminary data have been used extensively, the figures in parentheses being estimates made by the office of Foreign Agricultural Relations, U.S. Department of Agriculture. Owing to changes in boundaries the figures for the two periods do not cover identical areas in all cases.

SHEEP: NUMBER IN VARIOUS COUNTRIES.

Country.	Number of Sheep ('000 omitted).		
	Average 1936–40.(*a*)	Year.	Number.
Australia	**112,571**	**1946**	**96,396**
U.S.S.R. (Russia)	79,680	1943	(63,400)
Argentina	44,900	1945	56,182
India (British and Native)	43,777	1945	(48,000)
United States of America	51,462	1946	44,241
Union of South Africa	39,899	1945	(35,000)

France	9,648	1946	6,632

(*a*) Average for 2 to 4 years in some cases. (*b*) Total within pre-war boundaries of Hungary, Yugoslavia, Greece, Albania, Bulgaria and Rumania. (*c*) Not available.

5. **Oversea Imports and Exports of Sheep.**—As in the case of cattle, the oversea exports of live sheep from Australia are of comparatively little importance. During the last five years the principal consignments of ordinary sheep have been made to Malaya (British) from Western Australia. On 27th November, 1929, the export of stud sheep was prohibited, except with the approval of the Minister for Trade and Customs. Stud sheep, however, were being exported in increasing numbers up to the outbreak of war in the Pacific, and shipments in 1939–40 amounted to 23,329 sheep valued at £79,955 compared with 525 valued at £11,859 in 1945–46. The chief countries to which stud sheep were consigned in 1939–40 were New Zealand, South Africa, Japan and Korea. The

ordinary flock sheep exported from Australia were, for the most part, consigned to Malaya and the Pacific Islands. The following table shows the imports and exports of stud and flock sheep for the years 1938–39 and 1941–42 to 1945–46 :—

SHEEP : IMPORTS AND EXPORTS, AUSTRALIA.

1945–46	122,278	86,615	24,913	25,989	22,170	7,909	36	752	290,662

8. **Consumption of Mutton and Lamb.**—For the three pre-war years 1936–37 to 1938–39 the annual production of mutton and lamb averaged 320,000 tons of which 90,000 tons were exported leaving a balance of 230,000 tons (or the carcass equivalent of 74.9 lb. per head per annum) available for consumption.

During the war the demand for meat by Australian and Allied Services and the desire to maintain, as far as possible, exports to the United Kingdom, necessitated the restriction of local consumption by the introduction, in January, 1944, of a system of rationing.

As the service and export demand was principally for beef this class of meat was in shorter supply to civilians than was mutton or lamb. As a result, the coupon rating for beef fixed under the civilian ration scale was more restrictive, and had the effect of increasing the quantity of mutton and lamb entering civilian consumption to a level approximating that of beef. In 1946, however, mutton and lamb consumption declined to below the pre-war level as a result of heavy shipments overseas and decreased slaughterings. There was a smaller increase in beef and veal consumption.

The consumption of mutton and lamb per head rose from the pre-war average of 74.9 lb. to 91.7 lb. in 1943, to 92 lb. in 1944, to 85.1 lb. in 1945 and declined to 74.1 lb. in 1946. In the following table details of the production and disposal of mutton and lamb are given for the periods stated :—

PRODUCTION AND DISPOSAL OF MUTTON AND LAMB (BONE-IN-WEIGHT) : AUSTRALIA.

('000 tons.)

1946	+ 2	319	60	9	5	243	74.1

(a) Included with exports.

9. **Exports of Frozen Mutton and Lamb.**—The export trade in mutton and lamb preserved by cold process expanded rapidly to 1913 when 205 million lb. were shipped. Progress was interrupted during the 1914–18 War and, owing probably to high wool prices, the exports of mutton and lamb for a number of years after that war were considerably less than earlier shipments. Exports commenced to rise again in 1929–30 and from that year onwards they continued to expand almost uninterruptedly until 1942–43 in which year 203,681,520 lb., valued at £5,495,886, of mutton and lamb were exported. In earlier years shipments consisted mainly of frozen mutton but in 1923–24 lamb supplanted mutton and the exports of lamb were largely responsible for the increase in total shipments during the ten years to 1942–43. Since that year, due to reduced production as a result of drought conditions and the diversion of supplies to meet the requirements of the Australian and Allied Services based in Australia, there has been a marked decline in mutton and lamb exports, which fell to 56,574,651 lb., valued at £1,540,419, in 1945–46.

The quantities and value of exports of frozen mutton and lamb in 1938–39 and each year 1941–42 to 1945–46 are given in the following table :—

EXPORTS OF FROZEN MUTTON AND LAMB : AUSTRALIA.

Year.	Exports of Frozen Mutton.		Exports of Frozen Lamb.		Exports of Frozen Mutton and Lamb.	
	lb.	£A.	lb.	£A.	lb.	£A.
1938–39 ..	28,155,757	413,693	158,332,714	4,393,773	186,488,471	4,807,466
1941–42 ..	10,638,918	172,712	164,300,962	4,498,081	174,939,880	4,670,793
1942–43 ..	19,441,131	313,328	184,240,389	5,182,558	203,681,520	5,495,886
1943–44 ..	30,010,466	501,668	141,559,299	4,141,935	171,569,765	4,643,603
1944–45 ..	38,021,898	725,214	108,772,494	3,217,869	146,794,392	3,943,083
1945–46 ..	17,527,848	362,057	39,046,803	1,178,362	56,574,651	1,540,419

As with beef, the principal customer in this trade is normally the United Kingdom, which absorbed 91 per cent. of the total quantity exported from Australia during 1943–44. In 1944–45 and 1945–46, there was however, a diversion to nearer British countries and exports of mutton and lamb to the United Kingdom fell to 82.5 per cent. and 77.8 per cent. of the total quantity exported, respectively.

10. **Contract for Purchase of Exportable Surplus.**—A long term contract covering the four years ended 30th September, 1948 was completed between the Governments of the Commonwealth and the United Kingdom for the purchase of Australia's surplus mutton and lamb. The contract was later extended for a further two years to 30th September, 1950. Particulars will be found in § 1, par. 10 (iii) *ante*.

§ 5. Wool.

1. **General.**—Australia is the leading wool-growing country in the world. With less than one-sixth of the world's sheep Australia produces one-quarter of the world's wool and of the total fine-quality merino wool, Australia produces about one-half. The bulk of the production is exported, but with the greater activity of Australian woollen mills the quantity used locally is increasing : the amount so used represented 9 per cent. of the total production in 1945–46 compared with 7 per cent. in 1938–39.

The important position held by Australia among the principal sheep and wool producing countries of the world is shown in the following table. The data for foreign countries which have been compiled by the Food and Agriculture Organization of the United Nations are generally of a preliminary nature. Figures for U.S.S.R. are rough approximations. Wool production for the Union of South Africa includes wool produced in other British South African Possessions exported through Union ports. Further particulars for the principal countries producing merino, crossbred and carpet wool are included in paragraph 6. "World Wool Production".

SHEEP AND WOOL : PRINCIPAL PRODUCING COUNTRIES.

Country.	Year.	No. of Sheep (in millions).	Wool Production (in millions of lb., greasy).
Australia	**1945–46**	**96.4**	**936**
Argentina	1944–45	56.2	500
United States of America ..	1945–46	44.2	390
New Zealand	1944–45	34.0	373
Union of South Africa ..	1944–45	35.0	234
U.S.S.R. (Russia)	1943–44	63.4	230

2. **Greasy and Scoured Wool.**—Whether the weight of the wool clip should be stated as "in the grease" or as "scoured and washed" is a matter which seriously affects comparisons between the clips of different seasons and of different countries. The quantity of grease and other extraneous matter in a fleece differs, not only between countries, but between districts in the same country. It fluctuates with the vagaries of the season, and with the breed and the condition of the sheep. There is, moreover, no clearly defined standard in regard to the clean content of wool described as scoured and washed.

A committee of experts in a report to the Central Wool Committee estimated in 1940 that the clean scoured wool content of the total production of Australia averaged between 51 and 53 per cent. of its greasy weight.

Wool scoured in Australia by wool-scouring works, however, yields only about 46 per cent. because the grade of greasy wool treated locally for export as scoured includes a large proportion of dirty and low-grade wool.

The quantity of scoured and washed Australian wool exported during the five years ended 1945–46 was approximately 18 per cent. of the total wool exports regarded as "greasy".

3. **Production.**—The bulk of the Australian wool production is shorn from live sheep; approximately 6 per cent. is obtained by fellmongering and about 5 per cent. is on skins exported. Statistics of wool production are compiled from data received from growers, fellmongers, etc. The following table gives the production for the four years 1942–43 to 1945–46 compared with 1938–39. Particulars of the gross value of wool produced in Australia are also shown; for 1938–39 these values are based upon the average price of greasy wool realized at auction in the principal markets of Australia, and for 1942–43 to 1945–46 upon the average appraised value plus certain adjustments as computed by the State Statisticians.

WOOL (AS IN THE GREASE): TOTAL PRODUCTION.

(*a*) For year ended previous December. (*b*) Estimated. (*c*) Subject to revision.

Production for 1946–47 amounted to 976.8 million lb., valued at £96,858,000.

4. **Care Needed in Comparing Clips.**—In comparing successive clips allowance must be made for the circumstance that, owing to climatic or other conditions, the time of shearing may be so far delayed in some areas that one clip may include almost thirteen months' growth of wool, while the succeeding one may include little more than eleven month's growth.

5. **Average Weights of Fleeces Shorn.**—The average weights of sheep and lamb fleeces shorn in each of the States of Australia and the Australian Capital Territory are shown in the following table for the five seasons 1934–35 to 1938–39 and each season 1942–43 to 1945–46 :—

AVERAGE WEIGHT OF SHEEP AND LAMB FLEECES SHORN.(lb.)

6. **World Wool Production.**—The following table shows particulars of wool production in the principal wool producing countries of the world in the period 1934–38 and in each year 1938–39 to 1945–46, distinguishing between merino and crossbred (apparel wool) and carpet wool. The table is based on data compiled by the Imperial Economic Committee and published in the Report and Recommendations of the Wool Conference, held in London between 16th April and 28th May, 1945, but incorporates some minor adjustments made in the light of the subsequent receipt of more authoritative information. In 1945–46, Australia produced 55 per cent. of world total production of merino wool and 30 per cent. of total apparel wool (merino and crossbred). The share of the British Commonwealth in world production in the same year exceeded 72 per cent. of merino wool and 52 per cent. of all apparel wool. Production of carpet wool in Australia is negligible, the principal producer of this class of wool being the U.S.S.R. (Russia), which accounted for 33 per cent. of world production in 1945–46.

(*a*) Including estimated wool on skins.

7. **War-time Contracts.**—(i) *Wool.* After the outbreak of war in September, 1939. negotiations were concluded between the Governments of the Commonwealth and of the United Kingdom whereby the latter contracted to purchase the entire wool clip of Australia for the duration of the war and one full clip thereafter. The price per lb. at store in Australia was fixed at 10¾d. sterling, or 13.4375d. in Australian currency for the 1939–40 to 1941–42 clips. For the 1942–43 and later clips the United Kingdom Government increased the price by 15 per cent., thus bringing the price to 15.453125d. Australian currency, and provision was made for an equal division between the two Governments of any profits derived from the sale of the wool for use outside the United Kingdom. In addition, an amount not exceeding ⅝d. sterling or ¾d. (Aust.) was paid by the United Kingdom Government to cover all costs from store at port of oversea shipment to ship. The agreement provided that sufficient quantities of wool be retained in Australia for domestic use. The administration of the scheme in Australia was controlled by the Central Wool Committee assisted by a Committee in each State. These Committees consisted of representatives of growers, brokers, buyers and manufacturers Further details may be seen in Official Year Book No. 36, page 1106.

(ii) *Sheepskins.* Under the contract negotiated in April, 1940 between the Governments of the Commonwealth and of the United Kingdom, the latter agreed to purchase, in connexion with the war, the exportable surplus of Australian woolled sheepskins. The scheme was administered by the Central Wool Committee. The exportable surplus was determined by competition in the open market between fellmongers and export packers licensed by the Central Wool Committee. The quantity appraised during each season was as follows :—

SHEEPSKIN APPRAISEMENTS : AUSTRALIA.

Season.	Number of—		Net Weight.	Appraised Values.
	Bales.	Skins.		
	No.	No.	lb.	£
1939–40	16,124	1,604,631	11,012,544	352,592
1940–41	72,643	7,645,280	49,454,306	1,501,557
1941–42	69,274	7,566,080	47,788,050	1,350,558
1942–43	73,701	7,794,507	50,911,840	1,692,955
1943–44	84,001	8,897,735	58,245,326	1,828,923
1944–45	82,296	9,433,549	56,873,508	1,731,483
1945–46	62,302	6,489,199	43,249,892	1,383,710

In accordance with the recommendations made by the representatives of the United Kingdom and Dominion Governments at the London Wool Conference, April–May, 1945, the agreements between the United Kingdom and the Australian and New Zealand Governments for the purchase of sheepskins were terminated at 30th June, 1946.

8. **Australian Wool Realization Commission.**—(i) *General.* The accumulation of Dominion wool in the hands of the United Kingdom Government as an outcome of the war-time arrangements and the disposal of these stocks concurrently with future clips were matters for discussion by a conference of officials and experts from the United Kingdom, the Commonwealth of Australia, the Dominion of New Zealand, and the Union of South Africa, held in London in April–May, 1945. Total stocks of United Kingdom-owned wool at 30th June, 1945 were estimated at 3,315,000,000 lb. actual (greasy and scoured) of which 3,245,000,000 lb. were of Dominion origin, the Australian share being 2,060,000,000 lb., or 63 per cent.

This stock approximated two years' consumption and, on reasonably optimistic assumptions the London Conference considered that the complete disposal of the stock in conjunction with current clips would occupy a period of 12 or 13 years. It was decided, therefore, that the only sound method of handling this gigantic task was by means of a partnership between the countries concerned, under which the old wool would be marketed and the marketing of the current clip supported throughout the period of disposal of stocks. A return to the auction system of marketing was favoured, provided it was continued with a floor price scheme to minimize fluctuations which occurred under pre-war auctions. Current clips would thus be offered at auction as in the past and, in addition, selections from stock would be marketed with the aim of maximizing total sales and gradually liquidating stocks. To ensure that stability of wool prices would be achieved, a reserve price appropriate to type and governed by the general trend of prices, and at which the wool would be bought in if commercial bidding did not attain the appropriate level, would be agreed upon.

(ii) *United Kingdom-Dominion Wool Disposals Limited.* The formation, by the four Governments, of a Joint Organization under the title of "United Kingdom-Dominion Wool Disposals Limited" (commonly referred to as "J.O.") was, therefore, undertaken for the purposes of buying, holding, and selling wool on behalf of the United Kingdom and the Dominion Governments concerned. As part of the plan, the organization is required :—

(*a*) to determine total quantities of wool to be offered from time to time concurrently in the Dominions and elsewhere, to be made up of all new clip wool and an appropriate proportion of wool from the organization's stock;
(*b*) to prepare schedules of reserve prices at which the organization will itself be willing to acquire wool;
(*c*) to lift from the market such quantities of new wool as cannot be sold at these reserve prices;
(*d*) to hold and dispose of stocks as the agent of the Governments concerned and, where necessary, to acquire and own stores, plant and equipment for this purpose;
(*e*) to facilitate the sale of wool in every way possible, with a view to stimulating demand.

The stock of Dominion-grown wool in the ownership of the United Kingdom Government at 31st July, 1945, was transferred to the joint ownership of the United Kingdom Government and the Dominion Government concerned, and all wool subsequently acquired under the scheme will be in the joint ownership of the United Kingdom and the Dominion concerned. Total stocks of United Kingdom wool transferred to the Joint Organization at 31st July, 1945, were :—

	Bales.
Australian grown wool	6,796,000
New Zealand grown wool	1,777,000
South African grown wool	1,834,000
	10,407,000

It is the obligation of the Joint Organization to recommend to the Governments the initial level of reserve prices and any major changes which may thereafter be necessary. The structure of reserve selling prices is built upon the basis of "c.i.f. Europe" with a corresponding schedule of reserve prices "ex Store" in the Dominions.

Reserve prices are calculated for the London market as well as Dominion markets and growers are free to forward wool to London for sale there alongside wool from the Joint Organization's stocks. If, at auction, no buyer is forthcoming at the reserve price or higher, the lot is passed in and taken over by the Joint Organization at the auction reserve price, subject to the grower's right of withdrawal.

In order to facilitate and expand the consumption of wool, the Joint Organization will maintain close contact (*a*) with the appropriate bodies interested in furthering the rehabilitation of the wool textile industry in consuming countries, and in securing the replacement and improvement of machinery, (*b*) with the International Wool Secretariat and (*c*) with all institutions concerned with uses of wool and with the reduction of costs of production, processing, manufacture and distribution of wool. The Joint Organization will give attention in general to the removal of any obstacles to consumption.

The Joint Organization has been incorporated in England as a private registered company, the voting shares being held as follows :—four by nominees of the United Kingdom Government, two by nominees of the Government of Australia and one each by nominees of the New Zealand and South African Governments. An active subsidiary has been formed in each Dominion to act on behalf of the Joint Organization in regard to all the operations of the Joint Organization in that Dominion.

The Directors of the principal Company consist of an independent Chairman appointed by the four Governments in agreement, four Directors appointed by the United Kingdom Government, two by the Government of Australia, and one each by the Governments of New Zealand and South Africa. In addition, the Chairman of each of the Dominion Subsidiaries will be *ex officio* Directors of the principal Company without additional voting power.

(iii) *The Dominion Subsidiaries.* The Subsidiary in each of the Dominions is charged with the conducting of the operations of the principal Company in the Dominion in accordance with its policy and decisions. The function of each Subsidiary will be :—

(*a*) to hold wool in the Dominion as the agent of the principal Company ;
(*b*) to sell wool from stocks in the Dominions, and to arrange for the regulation of sales of current clips by auction ;
(*c*) to assess on the basis laid down by the principal Company the appropriate reserve prices for the individual lots of wool (from stocks or current clips) being offered for sale ;
(*d*) to take up wool offered at auction for which the reserve price or better is not offered by a commercial buyer ;
(*e*) to conduct the financial operations of the principal Company in the Dominion ;
(*f*) to furnish to the principal Company annual reports on its activities, including statements of its accounts and information regarding its purchases, sales and stocks.

(iv) *The Financial Plan.* Representatives of the four Governments meet prior to the opening of each wool year and at such other times as may be required, to agree upon the general level of reserve prices in the light of the advice of the Joint Organization.

Under the financial plan, the United Kingdom and the Dominion concerned each take up 50 per cent. of the original capital represented by the opening stock of wool grown in that Dominion to be handed over to the Joint Organization, that opening stock being taken in by the Joint Organization at its original cost, including f.o.b. payments *less* the amounts accumulated in the divisible profits accounts, which amounts, except in the case of South Africa, are estimated fully to cover depreciation of that stock. The balances in the divisible profits accounts are thus used to write down the opening stocks taken in by the Joint Organization. Payment of the Dominions' share of the original capital is to be made in four annual instalments. Towards these instalments are applied the Dominions' shares of the proceeds of sales by the Joint Organization and of the net profit during the interim period 1945–46. Each Dominion and the United Kingdom share equally in the provision of any further capital required by the Joint Organization during the operation of the scheme for payment for bought-in new wool of that Dominion.

Operating expenses are borne equally between the industry and the Joint Organization, the share of the industry being paid by the Dominion Governments primarily from the proceeds of a contributory charge on all sales of new clip wool. The share of the Joint Organization is met by deduction from the proceeds of sales by the Joint Organization before application to capital repayment.

The ultimate balance of profit or loss arising from the transactions of the Joint Organization in the wool of any Dominion will be shared equally between the United Kingdom and the Government of that Dominion.

(v) *The Australian Subsidiary.* Pursuant to the provisions of the Wool Realization Act (No. 49 of 1945) the Australian subsidiary, known as the Australian Wool Realization Commission, was established and commenced operations on 15th November, 1945, the Central Wool Committee having administered the acquisition of the 1945–46 clip to that date. This Commission comprises a Chairman and an Executive Member (the two administrators of the Plan), four growers (two representatives of the Australian Woolgrowers' Council and two representative of the Wool Producers' Federation), one representative of the Federated Storemen and Packers' Union and two other persons chosen for their knowledge of the marketing of wool.

The Act also gives power to the Commission to appoint whatever advisory or technical committees it considers necessary, thus providing a formal basis for full co-operation between the Commission and the various facets of the trade. Accordingly the Commission early in 1946 appointed the following Committees :—

Wool Selling Brokers' Advisory Committee ;
Wool Buyers' Advisory Committee ;
Woollen and Worsted Manufacturers' Advisory Committee.

(vi) *The Contributory Charge.* Associated legislation, viz., the Wool (Contributory Charge) Act 1945 and the Wool (Contributory Charge) Assessment Act 1945 provide for a contributory charge to be imposed on all wool—

(*a*) produced in Australia ; and
(*b*) on or after a date to be fixed by proclamation—
  (i) sold by a broker at auction or otherwise ;
  (ii) purchased by a manufacturer ;
  (iii) subjected by a manufacturer (whether or not he is the producer or owner of the wool) to a process of manufacture ; or
  (iv) exported from Australia ;

the rate of the charge to be such percentage as is prescribed from time to time of the sale value of the wool, the percentage being such as is necessary to provide the amounts required to meet the share of the industry in the operating expenses of the Joint Organization, the payment of interest on monies expended by the Commonwealth in purchases of wool in pursuance of the Disposals Plan and unrecouped, and payment into the Wool Use Promotion Fund as provided under the Wool Use Promotion Act 1945. The plan did not require that the Contributory Charge should operate during the 1945–46 season.

(vii) *Conclusion.* To sum up, the plan, with its associated legislation, amounts to the underwriting of the income of Dominion wool producers during the life of the disposal plan, protecting the growers against the serious fall in prices which would undoubtedly occur if the accumulated stocks were unloaded without control on the market, and it will prevent also undue price fluctuations during individual years and between one year and the next. In other words, it endeavours to guarantee the stability and solvency of the whole wool industry.

(viii) *Review of the Operations during* 1945–46 *Season.* The disposals plan provided that, for the wool year 1945–46, the method of purchase which had operated during the previous six years, namely appraisement and acquisition, should be continued and that the United Kingdom Government would be responsible for financing the purchase of all the wool so acquired, the management and sale of the 1945–46 clip being entrusted to the Joint Organization. Until the 16th November, 1945, the Central Wool Committee conducted appraisements as in previous seasons, and then, with the same organization, the Australian Wool Realization Commission completed the appraisements for the remainder of the season. The total weight and value of wool appraised for the 1945–46 season are shown in the following table in comparison with similar figures for the previous six years.

WOOL APPRAISEMENTS : AUSTRALIA.

Year ended June—	Quantity of Wool Appraised.			Value of Wool.		Average Value per lb Greasy.	
	Greasy.	Scoured.	Total.	Total Appraised.	Total Return to Grower.	Appraised.	Total Return to Grower.(*a*)
	'000 lb.	'000 lb.	'000 lb.	£	£	*d.*	*d.*
1940(*b*)	1,066,237	45,829	1,112,066	59,841,898	64,722,636	12.405	13.438
1941	990,833	53,206	1,044,039	55,251,133	60,959,828	12.085	13.438
1942	1,034,617	55,853	1,090,470	57,958,392	63,126,096	12.259	13.438
1943	1,048,049	51,369	1,099,418	66,651,256	73,525,280	13.898	15.453
1944	1,044,228	54,021	1,098,249	66,850,270	73,701,759	13.925	15.453
1945	883,767	47,315	931,082	56,075,091	62,520,983	13.755	15.453
1946	823,335	43,612	866,947	51,479,647	58,183,617	13.569	15.453

(*a*) Overall flat rate price paid by the United Kingdom Government. (*b*) Period September, 1939–June, 1940.

The average weight of wool per bale for the 1945–46 season was 302 lb., compared with 298 lb. per bale for the 1944–45 season, and 304 lb. per bale for the 1943–44 season.

As was recommended by the London Wool Conference 1945, the purchase price paid by the United Kingdom Government for the Australian clip (15.4531d. per lb. Australian currency) for the 1944–45 season was maintained for the 1945–46 season.

It was agreed in communications with the United Kingdom and Commonwealth Governments that the selling prices for all sales of wool as from the 1st November, 1945, would be the United Kingdom Export Issue prices which were in force at that date.

With the accumulated stocks in Australia taken over at 31st July, 1945 by the Joint Organization and the 1945–46 clip of 2,865,717 bales, a total of 7,829,485 bales were available in Australia for supply to consumers during the 1945–46 season. In accordance with the announcement made by the Joint Organization on the 24th June, 1946, that the sale of wool at fixed prices by or on behalf of the Joint Organization would cease on 30th June, 1946, no sales were booked in Australia after the 30th June, 1946. However, the volume of sales rapidly accelerated towards the end of the year and during June, 1946, sales from wool within Australia totalled approximately 1,300,000 bales. The accounting period, however, for the 1945–46 season was from the 1st August, 1945 to the 31st July, 1946, and during this period estimated total sales amounted to 4,892,049 bales including 1,209,937 bales unshipped at 31st July, 1946.

(ix) *Stocks.* (*a*) *Total held by Joint Organization.* By the 30th June, 1946, the stocks of wool originally taken over by the Joint Organization from the United Kingdom Government on 1st August, 1945, totalling 10,407,000 bales, were reduced to 5,786,500 bales, particulars being as follows :—

WOOL STOCKS HELD BY UNITED KINGDOM-DOMINION WOOL DISPOSALS LTD., 30th JUNE, 1946.

(Bales.)

Origin and Location of Stocks.	Type of Wool.				Total.

(*b*) *Total held in Australia.* In the next table details are shown of the stocks of wool held in Australia by the Central Wool Committee and its successor, the Australian Wool Realization Commission, on the dates specified. The quantities, which distinguish between greasy, scoured and carbonized, refer to the amount of appraised wool actually held in store in Australia. Wool held by brokers prior to appraisement and any held by woollen mills or growers is not included.

(*a*) 30th June.

9. **Wool Publicity and Research.**—Under the Wool Use Promotion Act of 1945, provision was made for improving the production and increasing the use of wool by the appointment of a Commonwealth Wool Adviser, the re-constitution of the Australian Wool Board, and the establishment of a Wool Consultative Council to advise the Ministers in regard to the aspects of Australian wool industry with which they are associated. The Australian Wool Board consists of three representatives of the Australian Wool Growers' Council and three from the Australian Wool Producers' Federation. The Wool Consultative Council consists of the Wool Adviser and seven members appointed by the Minister to represent the various branches of the industry.

Funds are provided by the Wool Tax Equivalent from the Wool (Contributory Charge) Act supplemented by an equivalent contribution from Treasury funds—in all about £600,000 per annum. Of this sum an amount will be paid to the Wool Research Trust Account for scientific, economic and cost research while the balance is to be applied by the Wool Board for promotion and publicity.

The Council for Scientific and Industrial Research is responsible for scientific, biological and technical research while the economic aspects of the industry will be the responsibility of the Commonwealth Department of Commerce and Agriculture. Provision is made for co-operation with State Departments of Agriculture and other organizations.

10. **Consumption of Locally Processed Wool.**—Particulars of the total consumption of wool in Australia are not available as quantities of manufactured woollen goods are imported whose contents in terms of wool cannot be ascertained. It is possible, however, to secure with reasonable accuracy the quantities of wool used in Australian factories and mills to produce woollen cloth and other woollen goods, such as blankets, rugs and knitted wear. Some difficulties arise in the aggregation of returns from individual mills concerned with only one process in manufacture and whose output constitutes the raw material of other mills, but the risk of duplication has been reduced to a minimum. Reference is made to the woollen mills established in Australia in Chapter XXIV. "Manufacturing Industry".

The factors used to convert scoured wool and woollen yarn processed in Australia into their greasy equivalent are now computed from the data furnished by woollen mills. In 1945–46 these factors were :—1 lb. of worsted yarn was taken to equal 2.10 lb. of greasy while the greasy equivalent of 1 lb. of scoured wool was 1.71 lb.

In the following table particulars are given of the quantity of wool processed in Australian woollen mills, cotton mills, hosiery mills and other factories during the years 1938–39 and 1941–42 to 1945–46 :—

CONSUMPTION OF LOCALLY PROCESSED WOOL IN AUSTRALIA.

(In terms of greasy.)

Year.	Woollen Mills.	Cotton Mills.	Hosiery Mills.	Other Factories.	Total
	lb.	lb.	lb.	lb.	lb.
1938–39	52,375,530	533,335	13,327,245	2,208,201	68,444,311
1941–42	88,353,493	592,592	26,300,261	8,236,440	123,482,786
1942–43	87,431,811	2,091,199	24,453,022	7,771,278	121,747,310
1943–44	81,398,278	1,199,683	22,421,814	9,786,325	114,806,100
1944–45	70,120,466	1,137,644	20,947,593	9,652,693	101,858,396
1945–46	62,126,366	355,180	15,012,495	9,416,989	86,911,030

11. **Exports of Wool.**—(i) *Greasy—Quantities.* Prior to the 1939–45 War, greasy wool exported overseas was sent principally to the United Kingdom and other European countries. In 1938–39, 41.9 per cent. of total shipments were sent to the United Kingdom, other important consignees being France, 20.4 per cent., Belgium, 13.1 per cent., and Japan, 9.1 per cent. During the war, exports to the United Kingdom declined and shipments to the European continent and to Japan virtually ceased, while the quantity shipped to the United States of America showed great expansion. Of the total quantity of greasy wool exported overseas during the five years ended 1945–46, 55.0 per cent. was sent to the United States of America and 36.2 per cent. to the United Kingdom. Shipments to European continental countries were resumed on a restricted scale in 1945–46. The following table shows the quantities of greasy wool exported, and the principal countries of recorded destination.

EXPORTS OF WOOL IN THE GREASE : AUSTRALIA.

(a) Included with Other Foreign Countries.

(iii) *Total Value of Exports.* The value of wool exported from Australia during the five years ended 1945–46 averaged 34.8 per cent. of the value of the exports of merchandise of local origin, and during 1945–46 the proportion was 36.0 per cent. The value during the period under review together with the principal countries to which wool was exported is shown in the following table :—

VALUE OF WOOL EXPORTS : AUSTRALIA.

Country to which Exported.	Average, Five Years 1909–13.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.

(a) Included with Other Foreign Countries.

12. **Local Sales of Wool.**—Approximately 90 per cent. of Australian wool is normally disposed of locally. Under pre-war conditions buyers from the United Kingdom, France, Belgium, Germany and other European countries, and from America, Japan, China and India attended the sales conducted in Sydney, Albury, Melbourne, Geelong, Ballarat, Brisbane, Adelaide, Perth, Hobart and Launceston. Auction sales were resumed in 1946–47 following the cessation of the acquisition scheme which ended with the 1945–46 season.

13. **Value.**—Wool is the chief factor in the pastoral wealth of Australia, and the nation's prosperity is largely dependent upon the satisfactory sale of the clip. During the ten years ended 1938–39 the price of greasy wool sold in the selling centres of Australia averaged 11½d. per lb. compared with 13.94d. per lb. for the ten years ended 1945–46. The average for the nine post-war years ended 1928–29 was 18d. per lb., and for the seven pre-war years ended 1913–14 9d. per lb. The heavy decline in the price of wool which commenced in 1929–30 continued during the next three years. In 1933–34, prices rose in a remarkable manner, averaging 15.84d. per lb., compared with 8.72d. per lb., for the previous year, an increase of 81.6 per cent. A decline in 1934–35 was succeeded by a period of rising prices in the two years following, but in 1937–38 and in 1938–39 prices again receded.

As mentioned in paragraph 7 above, the price of wool during the 1939–45 War was determined by the British Government wool contract. The price fixed for the years 1939–40 to 1941–42 was 13.4375d. per lb., and for the years 1942–43 to 1945–46, 15.45d. per lb. With the return to auction sales in 1946–47, the average price of greasy wool sold reached the record figure of 24.49d. per lb.

The effect of fluctuating wool values upon the national income is reflected in the following figures. Based upon appraisement in each State plus certain adjustments as recorded by the State Statisticians, the gross value of the wool clip for Australia for 1942–43 amounted to £73,017,000 and for 1943–44 to £75,124,000 compared with £42,043,000 realized during 1938–39 under open market conditions. The value of the 1944–45 and 1945–46 clips declined to £64,894,000 and £58,597,000 respectively, as a result of decreased production. In 1924–25, when the record price was realized, the value was £81,430,000, and in the year 1930–31, £34,804,000.

The following table shows the average price per lb. of greasy wool in Australian currency determined by the British Government wool contract for the years 1941–42 to 1945–46 compared with the average auction-room price of greasy wool in Australia for 1938–39 as compiled by the National Council of Wool-selling Brokers. This latter price represents the average price realized for all greasy wool of whatever type or quality marketed during the year indicated.

WOOL: AVERAGE MARKET PRICE PER LB.

Description.	1938–39.	1941–42.	1942–43.	1943–44.	1944–45.	1945–46.	1946–47.

Greasy ..	(*a*) 10.39	(*b*) 13.44	(*c*) 15.45	(*c*) 15.45	(*c*) 15.45	(*c*) 15.45	(*a*) 24.49

(*a*) National Council of Wool-selling Brokers. (*b*) The equivalent of the contract price of 10¾d. sterling. (*c*) The equivalent of the contract price of 12.34d. sterling.

Measured in terms of Australian, sterling, and gold currencies the approximate values of greasy wool per lb. since 1936–37 were as follows :—

GREASY WOOL : AVERAGE VALUES PER LB.

Year.	Australian Currency.	Sterling.	Gold Prices.
	d.	*d.*	*d.*
1936–37	16.48	13.16	8.03
1937–38	12.51	9.99	6.15
1938–39	10.39	8.30	4.84
1939–40	13.44	10.75	5.37
1940–41	13.44	10.75	5.34
1941–42	13.44	10.75	5.34
1942–43	15.45	12.34	6.28
1943–44	15.45	12.34	6.28
1944–45	15.45	12.34	6.20
1945–46	15.45	12.34	6.10

The average values shown in sterling and gold currencies have been calculated by converting the average prices shown in Australian currency on the basis of the average rates of exchange and the average gold prices between the months of September and June in each year. Though not exact these results will suffice for general purposes.

14. **United Kingdom Importation of Wool.**—The important position which Australia occupies in the supply of wool to the United Kingdom is indicated in the following statement of the quantities of wool imported into that country during 1938 and each year 1943 to 1946 from the principal wool-producing countries.

WOOL (*a*) : IMPORTS INTO UNITED KINGDOM.

(*a*) Greasy and scoured. (*b*) Included with Other Foreign Countries.

Australian wool represented 55.4 per cent. of the total quantity imported into the United Kingdom during the four years ended 1946. New Zealand supplied 28.8 per cent. and South Africa 10.6 per cent., while the total quantity received from British possessions constituted 98.8 per cent. of all United Kingdom imports.

15. **Principal Importing Countries and Sources of Supply.**—The following table furnishes, in respect of the principal importing countries, details of their production and imports of wool for 1938, together with the chief sources of supply. The quantities imported refer to the actual weight of wool without distinguishing between greasy and scoured. They also exclude any wool imported on skins. Later details are not available.

WOOL : PRINCIPAL IMPORTING COUNTRIES AND SOURCES OF SUPPLY, 1938.

(In millions of lb.)

Total ..	..	833	302	302	260	456	2,153

(*a*) As in the grease.

As a considerable transit trade exists between continental countries, it must not be assumed that the whole of the imports recorded by these countries are retained for their own consumption. The countries chiefly concerned with the transit trade are the United Kingdom, Belgium, and France. The quantities re-exported during 1938 were :—United Kingdom, 269 million lb., or 30 per cent., of the total imports ; Belgium, 76 million lb., or 35 per cent. ; and France, 49 million lb., or 13 per cent.

§ 6. Trade in Hides and Skins.

1. **Extent of Trade.**—In addition to the hides and skins treated locally, considerable quantities are exported : the value of cattle and horse hides, and sheep and other skins sent overseas during the five years ended 1945–46 amounted to £34,781,323, or an average of £6,956,265 per annum.

2. **Sheepskins with Wool.**—The exports of sheepskins with wool, aggregating £9,688,183 during the five years above, constitute an important item in the values referred to in the preceding paragraph, although the largest export in this period was that of rabbit skins valued at £20,003,742. During 1938–39 France was the largest purchaser of sheepskins with wool, taking 74 per cent. of the total consignments, while the United Kingdom ranked next with 15 per cent., followed by Germany with 7 per cent. In 1945–46, France obtained 47 per cent. of total exports, the United States of America 28 per cent., Belgium, 12 per cent., and the United Kingdom, 11 per cent. The exports of sheepskins with wool during each of the years 1942–43 to 1945–46 compared with 1938–39 were as follows :—

EXPORTS OF SHEEPSKINS WITH WOOL : AUSTRALIA.

Particulars.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Number ..	12,625,200	4,616,761	3,220,448	6,716,400	18,811,654
Value £A.	2,301,800	1,078,941	1,000,386	1,489,602	4,363,835

3. **Sheepskins without Wool.**—Up to 1943–44 sheepskins without wool were exported chiefly to the United States of America. During the year mentioned this country accounted for 97 per cent. of the total shipments while the remaining 3 per cent. were exported to the United Kingdom, Canada and the Soviet Union. In 1944–45 and 1945–46, however, there was a decline in shipments to the United States of America and an increase in the quantities shipped to the United Kingdom; in the latter year these countries received 46 per cent. and 53 per cent. of total shipments, respectively. Quantities and values for the four years 1942–43 to 1945–46 compared with 1938–39 are shown in the table hereunder :—

EXPORTS OF SHEEPSKINS WITHOUT WOOL : AUSTRALIA.

Particulars.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Number ..	1,075,895	3,642,179	3,651,958	4,010,146	2,850,201
Value £A.	68,152	307,477	337,374	343,142	243,126

4. **Hides.**—(i) *Exports.* The export trade in cattle hides during 1945–46 was distributed as follows :—United Kingdom, £138,019; United States of America, £75,918; Belgium, £12,400; Other countries, £3,205.

The exports during the four years 1942–43 to 1945–46 compared with 1938–39 are shown in the table below :—

EXPORTS OF CATTLE HIDES : AUSTRALIA.

Particulars.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Number ..	1,186,543	72,526	171,421	157,432	189,863
Value £A.	896,752	49,156	273,044	206,925	229,542

Calfskins exported during the five years ended 1945–46 numbered 38,904 valued at £14,720. Export of horse hides during the same period numbered 74,477, valued at £97,913.

(ii) *Imports.* The imports of cattle hides and calfskins are fairly large, the chief source of supply being New Zealand, and small quantities are obtained from the Pacific Islands, France and Italy. The quantities and values of cattle hides, including calfskins, imported into Australia during the years 1938–39 and 1942–43 to 1945–46 were as follows :—

IMPORTS OF CATTLE HIDES AND CALFSKINS : AUSTRALIA.

Particulars.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Quantity cwt.	80,641	73,673	47,139	50,355	60,600
Value £A.	280,273	316,255	176,038	205,181	365,092

5. **Other Skins.**—The exports of skins other than those mentioned in the preceding paragraphs were valued as follows :—

EXPORTS OF OTHER SKINS : AUSTRALIA.

Description.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
	£A.	£A.	£A.	£A.	£A.
Rabbit ..	(a) 429,140	1,986,198	4,493,699	3,864,263	(a) 6,290,938
Opossum ..	16,040	13,638	37,593	135,936	86,903
Kangaroo ..	169,078	158,236	210,889	338,238	477,330

Total	6,290,938	477,330	52,845	134,652	6,955,765

(a) Includes hare skins.

6. **Marketing of Hides and Skins.**—(i) *Sheepskins with Wool.* In April, 1940, the United Kingdom Government agreed with the Commonwealth Government to acquire the "exportable surplus" of woolled sheepskins in Australia.

The "exportable surplus" is determined by competition at auction between Australian fellmongers and export packers licensed in terms of their pre-war trade in such product.

The price of the woolled skins was fixed by appraisement under the Sheepskin Table of Limits, which took into account the following factors :—

(a) The wool content—the value of which is fixed in relation to the "scoured skin wool" section of the Wool Table of Limits ;
(b) the value of the pelt—which is reviewed quarterly : and
(c) the cost of fellmongering the skins.

The contract with the United Kingdom expired on 30th June, 1946 and, since then sheepskins have been marketed principally at open auction with export freely permitted as in pre-war times.

Owing to the high world parity price levels of wool and pelts, sheepskin prices have been very high since the return to open marketing.

(ii) *Sheep and Lamb Pelts.* Pelt prices rose rapidly overseas in the war years and, by 1944, it had become essential to establish some form of marketing control in order to safeguard the Australian sheep leather tanning industry. The Sheep and Lamb Pelt Advisory Committee was established to allocate to tanners their current requirements from the production of Australian fellmongeries.

The Committee has operated on a voluntary basis under the aegis of the Hide and Leather Industries Board.

The " two price " problem has continued in the post-war period and it has been necessary for the Committee to continue to function in 1947.

The future of this voluntary control is under consideration.

(iii) *Hides and Leather.* Late in 1939 it became necessary to introduce a scheme for the control of the marketing of hides and leather and suitable action was taken by Regulations under the National Security Act. The Australian Hide and Leather Industries Board was appointed to administer the scheme.

All cattle hides and yearling and calf skins were to be submitted for appraisement in accordance with a Table of Limits prepared by the Board. On appraisement they were acquired by the Board acting on behalf of the Commonwealth and thereupon became the property of the Commonwealth. The owners of the hides and skins immediately prior to acquisition received compensation at varying rates determined by the Minister from time to time. Hides and skins acquired by the Board are sold on behalf of the Commonwealth. Tanners' purchases of hides are regulated and exports of hides, skins and leather are controlled.

When the scheme commenced, hide export prices were much higher than the domestic appraised prices which, in the case of hides, were 20 per cent. above immediate pre-war levels. About the middle of 1940, however, the oversea market for hides and skins collapsed. The scheme stood the strain of the reversed position. Appraisement continued as before, the rates of compensation to hide owners were reduced by 25 per cent. for a time and the fund already built up by the Board acted as a cushion for the change-over period.

The export price position later improved and continued to improve to such an extent that, about the end of 1941, the healthy position of the Board's funds enabled compensation to be paid to the original owners of hides at the rate of 110 per cent. of the appraised prices. The rate of compensation has since varied from time to time according to the state of the Board's finances, the highest rate of compensation reached being 120 per cent. of the appraised prices. The exceptionally heavy demand for hides for the production of leather necessary to manufacture large quantities of military boots resulted in a war-time demand by Australian tanners for hides which exceeded Australian hide production. A special arrangement was entered into with the New Zealand Government for the purchase of New Zealand hides, and additional quantities were sought from other sources of supply. The production of leather in Australia now greatly exceeds pre-war levels and hide exports from Australia are small.

World parity prices of hides and leather are still far above Australian domestic price levels and the Commonwealth Government has found it necessary to continue in 1948 the marketing control scheme which has operated since 1939.

(iv) *Rabbit Skins.* A marketing control scheme for rabbit skins was introduced under the National Security (Rabbit Skins) Regulations on 10th June, 1940. After the outbreak of war, rabbit skin prices rose sharply owing to the keen demand from overseas. In order that the prices of military and civilian hats in Australia might be kept at reasonable levels and that sufficient skins should be available to Australian hat manufacturers at prices which would enable them to produce hats at those price levels, a scheme of marketing control became necessary.

The Australian Rabbit Skins Board was appointed to administer the scheme. The basis of the scheme is the payment to hat manufacturers of compensation equivalent to the difference between appraised prices in a Table of Limits prepared by the Board, which are based on a Commonwealth Prices Commission determination, and ruling open market prices.

Funds for the payment of such compensation are provided by collections from a levy imposed on the export of rabbit skins under the Rabbit Skins Export Charges Act 1940. Since 1941 rabbit-skin prices have been extraordinarily high, reaching a peak in 1946. The rate of export levy has fluctuated on a number of occasions according to the state of the Board's finances. In some periods the levy was entirely suspended, whilst the highest rate it has reached has been 18d. per lb. The imposition of the levy was suspended in October, 1944, and during this period the Board operated on reserve funds. It was renewed in July, 1946, but in January, 1947, approval was given for a further suspension until May, 1947. In order that compensation payments should be kept as low as possible, the quantities of rabbit skins which hat manufacturers may buy at appraised prices are closely regulated. Investigations into the operations of all Australian hat manufacturing establishments have enabled the Board to do this, although the position was complicated by the heavy demand for military fur felt hats. The future of the scheme in the post-war period beyond 1947-48 has yet to be determined.

§ 7. Tallow.

1. **Production.**—Australia's production of tallow is in excess of local requirements and considerable quantities are normally available for export. The recorded production in factories is incomplete as production in establishments which do not come within the definition of a factory is excluded. More complete details, but on a calendar year basis, are however, available. These relate to production in all slaughtering establishments and are shown in the following table for each year 1943 to 1946.

TALLOW : PRODUCTION IN SLAUGHTERING ESTABLISHMENTS, AUSTRALIA.

Type.	1943.	1944.	1945.	1946.
	cwt.	cwt.	cwt.	cwt.
Edible	1,152,825	1,050,124	898,831	354,934
Inedible	315,423	300,017	222,533	712,840
Total	1,468,248	1,350,141	1,121,364	1,067,774

2. **Consumption.**—Details of net exports and consumption in factories are given in the following table for the four years 1942–43 to 1945–46 in comparison with 1938–39 :

TALLOW : NET EXPORTS AND CONSUMPTION IN FACTORIES, AUSTRALIA.

Particulars.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
	cwt.	cwt.	cwt.	cwt.	cwt.
Net Exports	560,241	99,059	590,676	421,573	146,445
Consumption by Factories..	539,095	1,083,424	896,213	900,363	850.095

3. **Marketing.**—A modified control operates on the marketing of tallow. Exports of tallow are closely regulated. In respect of tallow shipped overseas the excess returns received over the fixed Australian domestic prices are paid by the exporters into a pool or equalization fund, from which a distribution is made to tallow producers generally.

CHAPTER XX.

AGRICULTURAL PRODUCTION.

NOTE.—Except where otherwise stated, the "agricultural" years hereafter mentioned are taken as ending on 30th June.

§. 1. Introductory.

A brief reference to the attempts at cultivation by the first settlers in New South Wales and to the discovery of suitable agricultural land on the Parramatta and Hawkesbury Rivers prior to the year 1813 and west of the Blue Mountains thereafter is contained in early issues of the Official Year Book. (See No. 22, p. 670.)

§ 2. Progress of Agriculture.

1. **Early Records.**—In an "Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797", Governor Hunter gives the acreage of crops as follows :—Wheat, 3,361 acres ; maize, 1,527 acres ; barley, 26 acres ; potatoes, 11 acres ; and vines, 8 acres.

At a muster taken in 1808 the following was the return of crops :—Wheat, 6,874 acres ; maize, 3,389 acres ; barley, 544 acres ; oats, 92 acres ; peas and beans, 100 acres ; potatoes, 301 acres ; turnips, 13 acres ; orchards, 546 acres ; and flax and hemp, 37 acres.

By the year 1850 the area of crops had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales, and 169,000 acres in Tasmania. At the end of 1850 the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres.

The gold discoveries of 1851 and subsequent years had at first a very disturbing effect on agricultural progress, the area of crops declining from 491,000 acres in 1850 to 458,000 acres in 1854. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia exceeded a million acres. The largest increase took place in Victoria, which returned an area of 299,000 acres. For the same year South Australia had 264,000 acres in cultivation, Tasmania, 229,000 acres, and New South Wales, 223,000 acres.

2. **Progress of Cultivation.**—The following table shows the area of crops in each of the States and Territories of Australia at decennial intervals since 1860 and during each of the eight seasons ended 1945–46 :—

AREA OF CROPS.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Australia.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1860–61	246,143	387,283	3,353	359,284	24,705	152,860	..	..	1,173,628

1940–41	6,374,354	4,467,191	1,734,248	4,254,348	4,026,969	253,941	322	6,457	21,117,830
1941–42	5,929,553	4,734,613	1,671,336	3,976,232	3,852,092	280,970	..	5,549	20,450,345
1942–43	5,297,313	3,816,430	1,742,802	3,436,675	2,819,713	300,005	..	6,779	17,419,717
1943–44	4,797,385	3,462,537	1,757,396	2,760,778	2,782,414	334,933	..	6,769	15,902,212
1944–45	5,044,792	4,310,152	1,796,833	3,179,374	2,790,376	342,916	..	7,410	17,471,853
1945–46	6,087,566	5,327,122	1,822,108	3,824,128	2,944,879	411,824	..	8,846	20,426,473

The progress of agriculture was practically uninterrupted from 1860 to 1915–16, when, as the result of a special effort to raise wheat during the 1914–18 War, 18,528,234 acres were cultivated in Australia. Four years later the area of crops declined to 13,296,407 acres owing to the accumulation of wheat stocks consequent upon the difficulty of securing freight space during the war years. After the termination of hostilities the area again began to expand and rose steadily to a new maximum of 25,163,816 acres in 1930–31. Thereafter the slump in wheat prices seriously depressed the agricultural industry and the area of crops receded to just under 20 million acres in 1935–36. Subsequently the area increased, and reached a maximum of 23½ million acres in 1938–39. Thereafter it declined to under 16 million acres in 1943–44, then rose again to nearly 20½ million acres in 1945–46. These fluctuations approximated to changes in wheat areas. Following the outbreak of war in 1939, the area under crop declined with each successive year until 1944–45, when the areas started to increase. This movement was contrary to the experience of the 1914–18 War when the decline did not occur until the third war-year.

3. **Area under Sown Pastures.**—In all the States there are considerable areas of grasses mainly sown on land from which scrub has been cleared or on land which it is desired to rest from cultivation. These areas, which are not included in "area of crops" have expanded from 5¼ million acres in 1929–30 to approximately 10 million acres in 1945–46.

4. **Australian Agricultural Council.**—Arising out of a conference of Commonwealth and State Ministers on agricultural and marketing matters held at Canberra in December, 1934, a permanent organization known as the Australian Agricultural Council was formed. The Council consists of the Commonwealth Minister for Commerce and Agriculture and the State Ministers of Agriculture, with power to co-opt the services of other Commonwealth and State Ministers as required. The principle functions of the Council are :—(i) the promotion of the welfare and development of agricultural industries generally ; (ii) the improvement of the quality of agricultural products and the maintenance of high grade standards ; (iii) to ensure, as far as possible, balance between production and available markets ; and (iv) organized marketing, etc.

In addition a permanent technical committee known as the Standing Committee on Agriculture was formed to act in an advisory capacity to the Council. Its functions are :—(i) to secure co-operation and co-ordination in agricultural research throughout Australia ; (ii) to advise the Commonwealth and State Governments, either directly or through the Council, on matters pertaining to the initiation and development of research on agricultural problems ; and (iii) to secure co-operation between the Commonwealth and States and between the States in respect of quarantine measures relating to pests and diseases of plants and animals, and to advise the Commonwealth and State Governments. The personnel of this Committee consists of the permanent heads of the State Departments of Agriculture, members of the Executive Committee of the Council for Scientific and Industrial Research, the Commonwealth Director-General of Health, the Secretary, Department of Commerce and Agriculture, the Director-General of Agriculture and the Commonwealth Treasury. The membership of the Standing Committee was extended during the 1939–45 War to include the Department of Labour and National Service, the Department of Supply and Shipping and the Commonwealth Bureau of Census and Statistics. This war-time arrangement was terminated in 1947.

§ 3. Distribution, Production and Value of Crops.

1. **Distribution of Crops.**—The following table shows the areas in the several States and Territories of each of the principal crops for the season 1945–46. Similar details for the season 1944–45 appear in Part II. of *Production Bulletin* No. 39.

AREA OF PRINCIPAL CROPS, 1945–46.

2. **Relative Areas of Crops in States and Territories.**—The proportion of each of the crops cultivated to the extent of over 100,000 acres in the various States and Territories on the total area of crops for the season 1945–46 is shown in the next table. Similar details for the season 1944–45 appear in Part II. of *Production Bulletin* No. 39. In four of the States, namely, New South Wales, Victoria, South Australia and Western Australia, wheat-growing for grain is by far the most extensive crop. In Queensland the most extensive crops are green fodder, wheat, sugar-cane and maize, and in Tasmania, green fodder, hay, potatoes, orchards and fruit-gardens, blue peas and oats.

As pointed out previously, wheat is the main crop in Australia, the area thereof for grain only representing more than half the total area of crops in 1945–46.

RELATIVE AREAS UNDER CROP, 1945–46.

Crop.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	N.T. (a)	A.C.T.	Aust

(a) Malting only. (b) Excludes Sweet Potatoes. (c) Market Gardens.

4. **Weights and Measures.**—The production of agricultural commodities in Australia is recorded either in terms of capacity or weight. When measured in terms of capacity the unit is the bushel of 2,218.192 cubic inches or gallon of 277.274 cubic inches. When measured in terms of weight, the unit adopted is either the long ton of 2,240 lb. (except in the case of flour, bran and pollard, when the short ton of 2,000 lb. is used), the hundredweight (cwt.) of 112 lb. or pound (lb.).

The production of cereals and fruit is recorded in bushels, the production of wine in gallons, while hay, vegetables, grapes and industrial crops are measured by weight, generally in terms of long tons or cwts.

In the following table the weights adopted per bushel are given for the more important cereals, fruits, etc. Several types of cases are used for fruits, but in determining the average weights shown below, that with a capacity of 2,223 cubic inches was adopted. The packed weight of a bushel of fruit also is subject to considerable variation according to the kind and variety of fruit.

Data compiled by the State Departments of Agriculture made available to this Bureau were used in determining these average fruit weights.

Total, Gross Value ..	76,851	96,072	112,649	116,569	107,026	144.207

(*a*) Malting only. (*b*) Excludes Sweet Potatoes. (*c*) Market Gardens. (*d*) Incomplete. Includes some values of vegetables for stock fodder. (*e*) Excludes Western Australia.

8. **Value of Production—Gross and Net.**—(i) *General.* Uniform methods for arriving at the gross and net values of production in the various States were finally determined at a Conference of Statisticians held in March, 1935. The returns for the year 1933–34 and subsequent years have been valued on the new basis, and a revaluation was made for the years back to 1928–29. A more detailed reference to the value of production of agriculture and other industries in Australia as well as a brief explanation of the terms used will be found in Chapter XXVIII. " Miscellaneous ".

In computing the net value of production no deduction has been made for the cost of maintenance of farm buildings and fences, nor for the depreciation of farm plant; consequently the figure stated is inflated to that extent.

GROSS, FARM AND NET VALUES OF AGRICULTURAL PRODUCTION, 1944-45 AND 1945-46.

State.	Gross Production valued at Principal Markets.	Marketing Costs.	Gross Production valued at Farm.	Farm Costs.		Net Value of Production. (a)	Depreciation (estimated).
				Seed used, and Fodder for Farm Stock.	Value of other Materials used in process of production.

§ 4. Wheat.

1. **Royal Commission on the Wheat Industry.**—A Royal Commission was appointed in January, 1934, to inquire into and report upon the economic condition of the industries of growing, handling and marketing wheat, and the manufacturing, distributing and selling of flour and bread. A searching inquiry was made by the Commission and the results of its investigations were submitted in a series of five reports. The first and second reports covered the wheat-growing industry, the third that of baking, the fourth the flour-milling industry, while the fifth, completed in February, 1936, dealt with the history of the Commission's investigations and traversed the principal recommendations submitted.

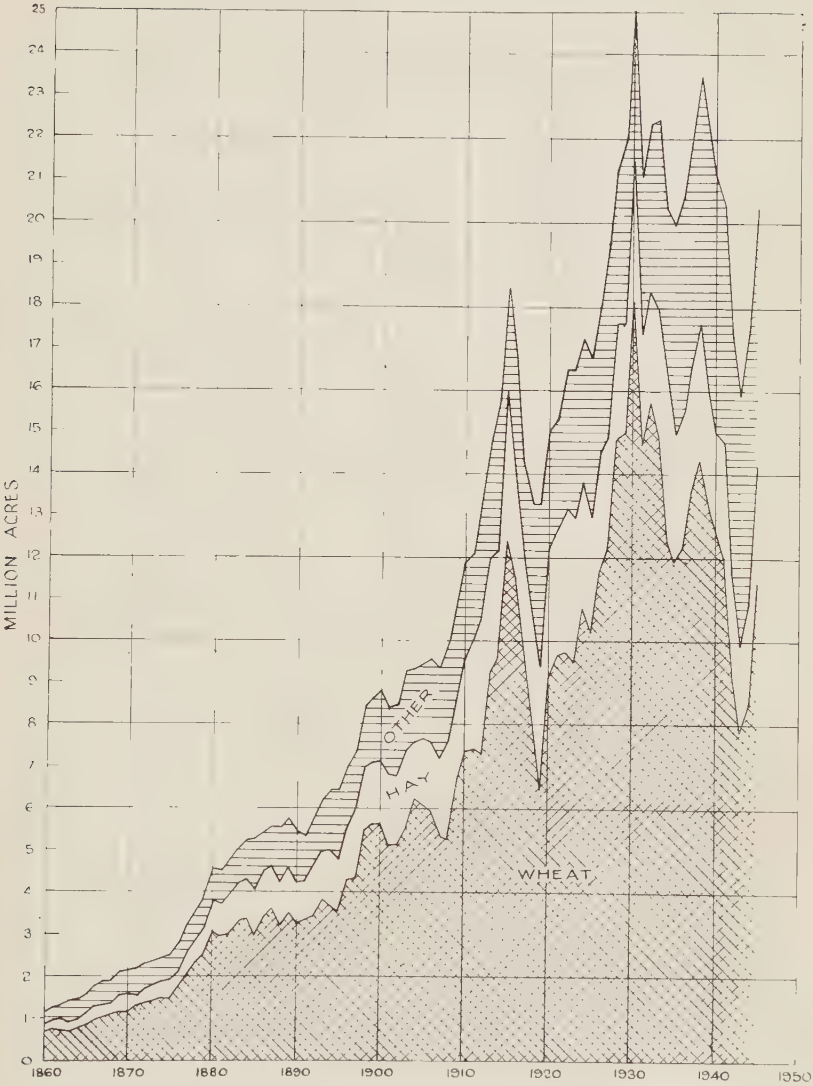
Reference to the financial assistance to the wheat industry will be found in § 20, Bounties, hereafter.

2. **Wheat Production Costs Committee.**—A Wheat Production Costs Committee was appointed by the Commonwealth Government in February, 1947, to enquire into and report upon :—(i) the reasonable costs of production of wheat per bushel in Australia's main wheat-growing districts, and (ii) whether basic items of costs could be established as an index to periodical variations in costs of the production of wheat. The Committee has submitted its report to the Commonwealth Government.

3. **Licensing of Areas Sown to Wheat, and Acreages Sown.**—The licensing of areas sown to wheat throughout Australia during each of the seasons 1941–42 to 1947–48 continued under the direction of the Wheat Stabilization Board. The area allotted to each grower is fixed in proportion to the average area normally sown by him, principally in the three years 1938–39 to 1940–41. Although licensing continued during the seasons 1945–46, 1946–47 and 1947–48, growers were permitted to plant without restriction in those years. In Western Australia growers' acreages during 1942–43 were restricted to a maximum of two-thirds of their basic acreage which restriction continued during the 1943–44 and 1944–45 seasons. During 1945–46 no such restriction was imposed but where growers voluntarily restricted the area sown to five-sixths or less of their basic acreage, compensation equal to one-sixth of their basic acreage was payable subject to the qualification that half of the area licensed for wheat was cropped for grain.

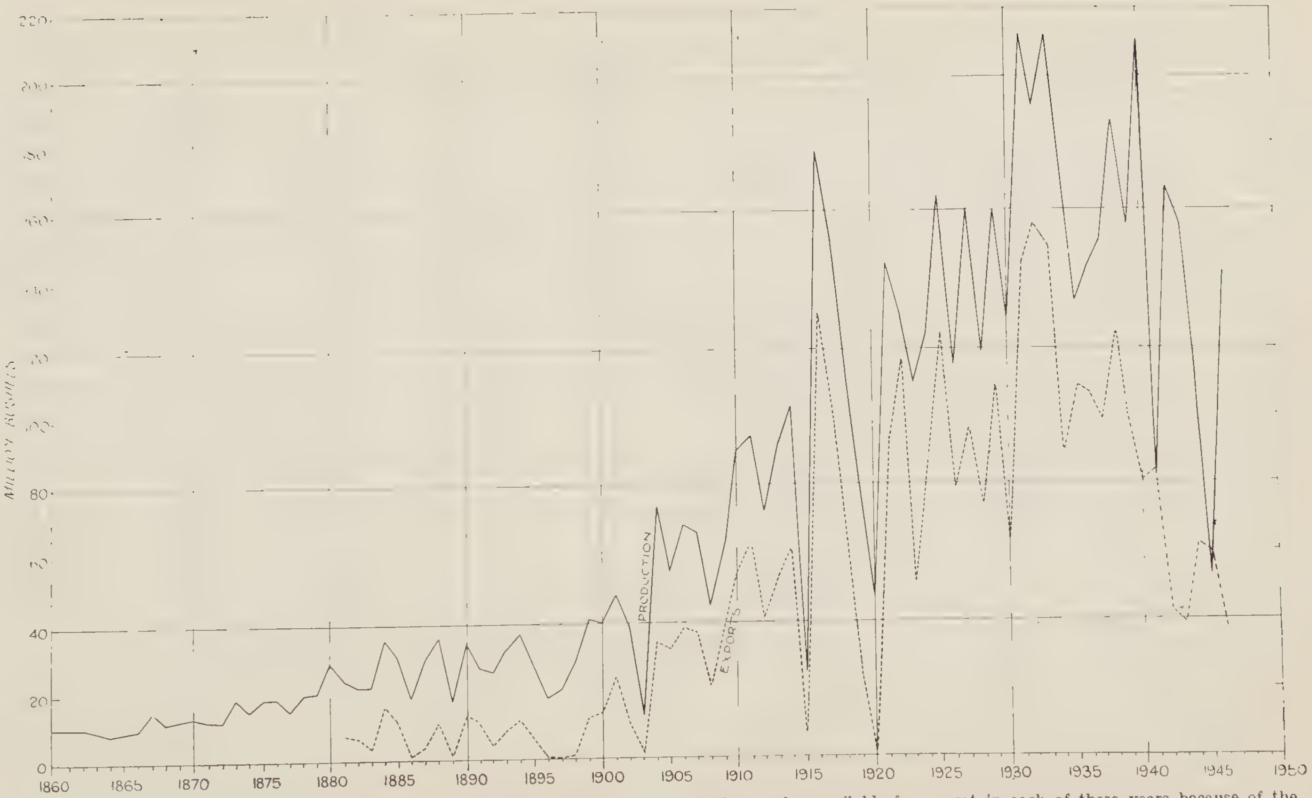
In the following table supplied by the Wheat Stabilization Board the basic acreage (i.e., the area normally sown by growers, principally in the three years 1938–39 to 1940–41) and the areas licensed to grow wheat for grain are shown for each State and the Australian Capital Territory for the years 1943–44 to 1947–48. Details of the area sown as well as the percentage that these areas bear to the area licensed are also given.

AREA OF CROPS—AUSTRALIA, 1860–61 TO 1945–46.



Explanation.—The total area of crops is shown by the top curve in this graph, and the area of wheat by the bottom curve. The vertical distances between these curves and that in the centre indicate the areas of hay and other crops.

PRODUCTION AND EXPORTS OF WHEAT—AUSTRALIA, TO 1945-46.



NOTE.—The export figures for the years 1915–16 to 1920–21 do not represent the surplus available for export in each of these years because of the dislocation of shipping due to the 1914–1918 War. For these years the quantity consumed in Australia has been averaged and the balance taken as exports.

WHEAT FOR GRAIN: LICENSED AND SOWN ACREAGES.

(*d*) Restriction not compulsory but compensation paid where area is voluntarily restricted. (*e*) Includes areas temporarily licensed on temporary wheat farms. (*f*) Subject to revision.

4. **Survey of Legislation Relating to Wheat Industry.**—A survey of legislation passed by the Commonwealth Government relating to the wheat industry of Australia will be found in the Appendix to this volume.

5. **Wheat Farms.**—Particulars of the number of farms growing wheat for grain on 20 acres and upwards during each of the five years ended 1940–41 and the year 1946–47 are shown in the following table. It should be noted that a farm worked on the share system or as a partnership is included as one holding only.

NUMBER OF FARMS GROWING WHEAT FOR GRAIN ON 20 ACRES AND UPWARDS.

6. **Area, Production and Average Yield.**—(i) *Area.* Wheat is the principal crop raised in Australia, and its progress since 1860 has been almost continuous. Prominent features in its early development were the increase in population following the discovery

of gold and the redistribution of labour after the surface gold had been won. The economic depression of 1893 interrupted its progress but its subsequent recovery was assisted by the invention of mechanical appliances, the use of superphosphate as an aid to production, and the introduction of new and more suitable varieties for Australian conditions. The establishment of closer settlement schemes and the settling of returned soldiers and others on the land were additional factors in its expansion. The most serious interruptions in more recent years were those occasioned by the two World Wars and the economic depression of the early thirties.

As previously mentioned, any variation in the acreage sown to this cereal materially affects the total area of crops. The area and yield of wheat for grain in each State are given below for 1938–39 and the five years ended 1946–47; the table also includes the averages for the ten year periods ended 1938–39 and 1945–46 :—

A graph showing the expansion of the area sown to wheat for grain in Australia since 1860 appears on page 897. A graph showing the distribution in 1924–25 is shown in Official Year Book, No. 22, p. 695 and the distribution of area for 1938–39 is shown in Official Year Book No. 34, p. 451.

(ii) *Production.* Apart from the variations in the area sown, the size of the wheat harvest in Australia is largely determined by the nature of the season and inconsistencies in this respect are reflected in the yearly production.

It should be noted, however, that with improved farming methods, which include the proper tillage of the soil, rotation of crops, the growing of suitable varieties and the application of fertilizers, average yields per acre during four decades to 1940 have shown a continued improvement, and fluctuations in production have become less pronounced.

Australia's wheat production in 1945–46 amounted to 142.4 million bushels representing an average yield of 12.46 bushels per acre. This was 90 million bushels more than in 1944–45 which was one of the worst seasons in the history of wheat-growing in this country. It approximates the average for the decennium ended 1945–46 but is 27 million bushels below that obtained during the ten years ended 1938–39.

Production for the season 1946–47 amounted to 117.3 million bushels whilst that for the season 1947–48 reached the record quantity of 220 million bushels.

(iii) *Decennial Averages,* 1861–70 *to* 1937–46. The following table shows the average area, production and yield per acre for decennial periods since 1861, together with the average wholesale price since 1871. The price quoted represents the arithmetic mean of the annual averages at Melbourne (f.o.r. Williamstown), and may be accepted as fairly representative for Australia.

WHEAT FOR GRAIN : AVERAGE AREA, PRODUCTION AND WHOLESALE PRICE, AUSTRALIA.

Decennium.	Area.	Production.	Yield per Acre.	Average Wholesale Price.
	'000 Acres.	'000 Bushels.	Bushels.	*s. d.*
1861–70	831	10,622	12.77	(*a*)
1871–80	1,646	17,711	10.76	5 1
1881–90	3,258	26,992	8.29	4 7
1891–1900	4,087	29,934	7.32	3 8
1901–10	5,711	56,058	9.82	3 10
1911–20	8,928	95,480	10.69	5 0
1921–30	11,291	135,400	11.99	5 8
1931–40	14,176	177,758	12.54	3 4½
1937–46	11,538	141,419	12.26	4 5

(*a*) Not available.

(iv) *Average Yield.* In the next table will be found the average yield of wheat per acre for specified periods :—

WHEAT FOR GRAIN : YIELD PER ACRE.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
Average 10 seasons ended 1938–39	13.00	12.54	14.88	9.84	11.34	21.73	20.63	11.81
1938–39 ..	12.88	6.59	19.42	10.28	10.79	20.84	28.74	10.83
1942–43 ..	17.04	19.49	14.95	18.18	11.75	17.76	24.88	16.78
1943–44 ..	17.64	11.00	18.07	13.49	10.56	25.24	27.75	13.93
1944–45 ..	6.02	1.63	21.00	5.70	10.51	24.18	1.22	6.25
1945–46 ..	16.57	9.11	20.86	9.72	11.40	13.38	21.20	12.46
1946–47 ..	3.50	13.99	2.84	11.08	9.84	18.47	18.09	8.00
Average 10 seasons ended 1945–46	13.03	12.17	16.16	11.58	11.20	22.29	20.08	12.26

Variation in the average yield is chiefly due to the vagaries of the seasons. The best average yields for single seasons since 1901 were obtained in 1920–21, 16.08 bushels ; in 1924–25, 15.20 bushels ; in 1939–40, 15.84 bushels ; and in 1942–43, 16.78 bushels.

(v) *Relation to Population.* The main wheat-producing States of Australia are New South Wales, Victoria, South Australia and Western Australia. Queensland production normally approaches local demands, but Tasmania imports from the mainland to satisfy its needs, though partly in exchange it ships flour made from local wheat which is particularly suitable for biscuits. Normally the production of wheat greatly exceeds Australian requirements, and from half to three-quarters of the crop is exported overseas.

7. **Varieties of Wheat Sown.**—(i) *General.* The breeding of wheat suitable to local conditions has long been established in Australia. Farrar (1845-1905) did invaluable work in pioneering this field and the results of his labour and the continued efforts of those who have since followed him have proved of immense benefit to the wheat industry of Australia. Their efforts have resulted in better average yields, a greater uniformity of sample, with which has accrued certain marketing advantages, as well as an improvement in the quality of wheat grown. More than 1,000 different varieties of Australian wheats have been catalogued by the Council for Scientific and Industrial Research but the number of the principal varieties grown during each season is restricted to about 40.

(ii) *States*, 1940. Particulars of the varieties of wheat sown and the areas thereunder were collected annually up to 1940. The collection was then suspended but was resumed in 1946–47. Details of the nine principal varieties sown in 1946 in the four main producing States and the percentage each bears to the total area sown are given in the following table.

WHEAT : PRINCIPAL VARIETIES SOWN, 1946.

New South Wales.		Victoria.		South Australia.		Western Australia.	
Variety.	Percentage.	Variety.	Percentage.	Variety.	Percentage.	Variety.	Percentage.
	%		%		%		%
Bencubbin	45.7	Quadrat	26.9	Bencubbin	23.4	Bencubbin	33.5
Ford	10.8	Ghurka	20.3	Ranee	9.6	Bungulla	21.9
Dundee	4.7	Pindar	9.8	Waratah	5.8	Gluclub	18.1
Eureka	4.1	Magnet	9.1	Sword	5.8	Ranee	4.3
Bordan	3.4	Ranee	8.8	Dundee	5.4	Merredin	3.8
Ranee	3.2	Bencubbin	8.4	Gluyas	4.8	Waratah	2.0
Waratah	2.7	Regalia	4.8	Bobin	3.8	Nabawa	1.5
Gular	2.7	Dundee	2.1	Marathon	3.6	Ford	1.2
Eureka 2	2.1	Bobin	1.4	Nabawa	3.1	Dundee	1.2
All other	20.6	All other	8.4	All other	34.7	All other	12.5
Total	100.0	Total	100.0	Total	100.0	Total	100.0

Continued progress in the breeding of new and better wheats has resulted in many changes in the varieties sown. Bencubbin, previously a variety relatively unimportant outside Western Australia, was the leading wheat sown in 1946 in New South Wales, South Australia and Western Australia. In Victoria it holds only a minor place although the area sown to this variety has increased. Other important varieties sown in New South Wales in 1946 include Ford and Dundee which, as in 1940, occupy second and third position. The leading variety sown in Victoria in 1940 was Quadrat followed by Ghurka and Pindar compared with Ghurka, Ranee and Dundee in 1940. In South Australia, the next leading varieties after Bencubbin were Ranee and Waratah. In 1940 the three leaders in South Australia were Ranee, Bencubbin and Dundee. The principal variety in Western Australia since 1934 has been Bencubbin. The percentage sown to this variety, which in 1934 was 22.5, rose to nearly 36 in 1940, but declined to 33.5 in 1946. Bungulla, a variety not previously recorded, occupies second place in 1946, supplanting Gluclub which is now in third position.

8. **F.A.Q. Standard of Wheat.**—The Chambers of Commerce in each of the four main wheat States each year determine the "f.a.q." standard for the State. "F.a.q." means "fair average quality", and the standard is used as the basis for sales of the season's crop. It represents the average quality for the season, and this average varies from year

to year, and from State to State. "F.a.q." is an Australian term, and the method differs from that of other countries which sell according to sample, or (as in Canada) according to grades which are fixed, and do not vary from year to year.

Samples of wheat are obtained by the Chambers of Commerce from the different wheat districts, and are mixed to give a representative sample of the whole crop. From this representative sample the f.a.q. weight is determined.

The following table sets out the f.a.q. weight of a bushel of wheat in each of the four main wheat-producing States from 1938–39 to 1946–47.

F.A.Q. STANDARD WEIGHT OF A BUSHEL OF WHEAT.

Year.	New South Wales.	Victoria.	South Australia.	Western Australia.
	lb.	lb.	lb.	lb.
1938–39	64½	64½	64½	63¾
1939–40	63¼	63½	64	63½
1940–41	62¾	64¼	63½	63½
1941–42	64	63¾	62½	62¾
1942–43	63	64¼	63	62½
1943–44	64¼	65	64	61¾
1944–45	63	63½	63	63
1945–46	63½	62½	61½	63½
1946–47	62½	63½	61½	63

9. **Price of Wheat.**—The collapse in the price of wheat which occurred between 1928 and 1931 was chiefly due to the accumulation of stocks in exporting countries. The weighted average price of wheat (shippers' limits f.o.r. ports Sydney, Melbourne and Adelaide) fell from 5s. 1¼d. in 1928 to 2s. 4¾d. in 1931, a decline of 53 per cent. Subsequent to 1931, prices fluctuated between 2s. 6d. and 3s. per bushel until 1936, when an upward movement coincided with the depletion of excess stocks following crop failures in North America. By December, 1936, prices exceeded 5s. per bushel and remained at that level during 1937. By the end of 1938 world exportable surpluses had again accumulated and prices receded to 2s. 1d. per bushel by August, 1939, the lowest level recorded in Australia.

On 21st September, 1939 the Australian Wheat Board was appointed under war-time legislation and the price of wheat for export or local consumption is determined by that authority. In consequence, the open market for wheat ceased and therefore a price comparison on a pre-war basis is no longer possible. The following table shows the price of wheat in Australia for the periods indicated. The price stated for 1940 and subsequent years represents the approximate average price of wheat exported during those years.

PRICE OF WHEAT: AUSTRALIA.

(WEIGHTED AVERAGE OF SHIPPERS' LIMITS FOR GROWERS' BAGGED AND BULK LOTS, SYDNEY, MELBOURNE AND ADELAIDE.)

Item.	1939. (*a*)	1942. (*b*)	1943. (*b*)	1944. (*b*)	1945.	1946. (*b*)
	s. *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*
Price per bushel	2 4	4 2	4 3¾	5 4	(*c*)	10 10$\frac{9}{10}$

(*a*) Average for eight months ended August. (*b*) Approximate export price. (*c*) Not available. The export wheat price for January and February, 1945 averaged 6s. 5d., and for December, 1945, averaged 9s. 8d. There were no sales for the other nine months of the year.

10. **Value of the Wheat Crop.**—The estimated value of the wheat crop in each State and in Australia during the seasons 1944–45 and 1945–46 is shown below. The values are on a gross basis at the principal market in each State and are based upon payments made to producers. Pending the finalizing of the accounts of the Australian Wheat Board these values are subject to revision.

WHEAT FOR GRAIN: VALUE OF CROP,(a) 1944–45 and 1945–46.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia
1944–45.	£	£	£	£	£	£	£	£
Aggregate value..	5,125,710	1,931,484	1,494,605	4,874,042	3,963,936	18,530	506	17,408,813
Value per acre ..	£1/16/0	£0/18/0	£4/0/11	£3/0/1	£2/12/4	£1/10/9	£3/6/10	£2/1/2
1945–46.	£	£	£	£	£	£	£	£
Aggregate value..	20,419,830	9,913,133	2,254,560	7,391,004	6,525,456	15,530	11,264	46,530,777
Value per acre ..	£5/8/3	£3/1/0	£5/14/11	£3/8/3	£3/11/1	£3/2/4	£6/3/7	£4/1/5

(a) Gross value of total crop, including drought relief and also seed used on farm, but excluding value of straw.

11. **Consumption of Wheat in Australia.**—The estimated annual consumption of wheat for food and the quantity used for seed in Australia during the five years 1941–42 to 1945–46 were as follows:—

AVERAGE ANNUAL HUMAN CONSUMPTION, 1941–42 to 1945–46.

Flour milled		1,222,552 tons
Less net exports of flour	489,456 tons	
Less net exports of flour in biscuits ..	10,174 ,,	
		499,630 ,,
		722,922 ,,
Change in flour stocks		4,688 ,,
Net quantity consumed		727,610 ,,
Equivalent in terms of wheat		34,925,000 bushels
Net quantity consumed per head of population—		
As flour		(a) 224.3 lb.
Equivalent in terms of wheat		(a) 4.8 bushels

AVERAGE ANNUAL QUANTITY USED FOR SEED, 1941–42 to 1945–46.

Average area sown for grain, hay and green forage ..	10,880,626 acres
Average quantity of seed used	10,510,114 bushels
Average quantity of seed used per acre	58 lb.
Average quantity of seed used per head of population ..	(a) 1.45 bushels

(a) Subject to revision.

In addition to the foregoing, allowance must be made for wheat fed to poultry and other live-stock. The average quantity so used for the five years ended 1945–46 is estimated at 35,873,931 bushels or 4.93 bushels per head of population. Because of the accumulation of wheat due to war-time shipping difficulties, the use of wheat as a stock fodder was encouraged. The objective was to obtain a greater output of eggs and pig meat to meet the increasing demands by the armed services and civilians. For this purpose the Commonwealth Government provided a subsidy of 8d. per bushel for wheat sold for fodder purposes.

Following the disastrous drought of 1944–45, however, the surpluses accumulated in earlier years had disappeared by the end of November, 1945. As a result, the quantities available as stock feed have been restricted in order to make greater quantities available for exports to meet urgent needs of the war-stricken areas of Europe and Asia.

Grain used for seed has been estimated on the basis of data collected from growers or from estimates supplied by the Departments of Agriculture. The average annual quantity used for seed during the five years ended 1945–46 was 1.45 bushels per head of population, or 58 lb. per acre sown.

The consumption of wheat in Australia for all purposes (human consumption, live-stock and seed) during the five years ended 1945–46 averaged 81,309,325 bushels, or 11.2 bushels per head of population.

12. **Production and Disposal of Wheat in Australia.**—In the following table details are given of the production of wheat and its disposal during each of the cereal years ended 30th November, 1943 to 1948. The particulars respecting local consumption refer to sales actually executed by the Australian Wheat Board whilst those respecting exports represent actual shipments. (For particulars of production and exports from 1860 see graph, p. 898.)

WHEAT : PRODUCTION AND DISPOSAL, AUSTRALIA.

(Million bushels).

Particulars.	Year ended 30th November—					
	1943.	1944.	1945.	1946.	1947.	1948.
Opening stocks (including flour as wheat)	104.5	154.0	77.9	11.5	20.2	13.5
Production	155.7	109.7	52.9	142.4	117.3	220.1
Total Available Supplies ..	260.2	263.7	130.8	153.9	137.5	233.6
Exports—						
Wheat	18.6	54.3	6.1	19.4	12.0	87.0
Flour as wheat	18.6	36.9	12.9	37.7	34.0	44.6

Total Disposals	260.2	263.7	130.8	153.9	137.5	233.6

13. **Exports of Wheat and Flour.**—(i) *Quantities.* The following table shows the exports and net exports of wheat and flour for each of the years 1938–39 and 1942–43 to 1946–47. For the sake of convenience, flour has been expressed at its equivalent in wheat, 1 ton of flour being taken as equal to 48 bushels of grain. Wheat and flour have been imported to tide over lean seasons on only two occasions since 1900 ; in 1902–3 the wheat harvest was as low as 12,378,000 bushels, and wheat and flour representing 12,468,000 bushels of wheat were imported, whilst an equivalent of 7,279,000 bushels was imported in 1914–15 to supplement the yield of 25 million bushels produced in that season. During

the five years ended 1946–47 exports in terms of wheat averaged 49,300,000 bushels compared with 97,932,000 bushels in 1938–39, the net exports for the period averaging 49,188,000 bushels :—

WHEAT AND FLOUR: EXPORTS FROM AUSTRALIA.

Year.	Exports.			Net Exports.
	Wheat.	Flour.	Total.

14. **Stocks of Wheat and Flour.**—Stocks of wheat and flour held by each State at 30th November in each year 1939 and 1943 to 1947, and the total in terms of wheat are shown in the following table. The source of these data is the Australian Wheat Board, but, in order to maintain comparability with pre-war figures, adjustments have been made where possible to allow for stocks estimated to be held by merchants, bakers and farmers.

WHEAT AND FLOUR : STOCKS AT 30th NOVEMBER. (*a*)

(*a*) One ton of flour treated is equivalent to 48 bushels of wheat. (*b*) Subject to slight revision.

15. **Flour Milling.**—Particulars of the grain-milling industry are given in some detail in Chapter XXIV. "Manufacturing Industry". The following table summarizes the operation of flour mills in Australia for the years 1938–39 and 1942–43 to 1945–46.

OPERATIONS OF FLOUR MILLS: AUSTRALIA.

16. **Voluntary Wheat Pools.**—Details of voluntary wheat pools operating in Australia are given in issues of the Official Year Book prior to No. 33, 1940. These pools ceased to function when the Australian Wheat Board was created in September, 1939.

17. **War-time Marketing of Wheat.**—(i) *General.* At the outbreak of war in September, 1939, the wheat industry of Australia was experiencing a period of low prices. The price of wheat had fallen to 2s. 1d. per bushel in August, 1939, compared with 3s. 1d. in August, 1938, 5s. 1d. in August, 1937, and 2s. 2d. per bushel in the same month of 1931, the lowest monthly quotation during the economic depression of that period.

Apart from low prices, other difficulties created by war conditions were those of marketing and transport. There was also a large accumulation of surplus stocks in the chief exporting countries of the world and this, combined with the natural disability of Australia's remoteness from the main centres of consumption, was another factor adding to a most difficult position.

In view of these circumstances, the Commonwealth Government, under the Wheat Acquisition Regulations, constituted the Australian Wheat Board on the 21st September, 1939 to acquire, with certain exceptions, all wheat held in Australia. The harvest of 1939–40 was also acquired by notification published on 16th November, 1939.

(ii) *Australian Wheat Board.* Under the Wheat Acquisition Regulations the Board was empowered, subject to directions of the Minister for Commerce and Agriculture, to purchase, sell or dispose of wheat or wheat products, manage and control all matters connected with the handling, storage, protection, shipment, etc., of wheat acquired, and such other matters necessary to give effect to the regulations under which it was created.

(iii) *Wheat Acquired and Disposed of.* (*a*) *Wheat Acquired.* Particulars of wheat acquired by the Australian Wheat Board up to 30th November, 1947 are shown in the following table :—

AUSTRALIAN WHEAT BOARD: WHEAT ACQUIRED TO 30th NOVEMBER, 1947.

(*a*) Balance only.

(*b*) *Wheat Disposal.* Details relating to the disposal of this wheat are shown in the following table :—

AUSTRALIAN WHEAT BOARD : DISPOSAL OF WHEAT TO 30th NOVEMBER, 1947.

('000 Bushels.)

Particulars.	To 31st December, 1942.	1943.	1944.	1945.	1946.	1947.	Total to 30th November, 1947.
Sold for export as wheat ..	119,641	20,053	54,619	2,742	19,820	13,314	230,189
Sold for export as flour ..	76,853	20,159	37,648	14,897	37,487	34,927	221,971
Sold for local consumption as flour	100,873	34,872	33,886	33,373	32,204	30,833	266,041
Sold for all other purposes ..	38,731	20,919	46,969	45,104	26,283	25,071	203,077

Owing to war-time conditions, a great proportion of the sales of wheat and flour for export was made up of large quantities to the British Government. To 30th November, 1947, the Board had shipped a total of 230,189,000 bushels of wheat, and, in addition, had sold on its own account (i.e., not including millers' shipments), 221,971,000 bushels for export as flour, equivalent to a shipment of approximately 4,625,000 short tons of flour.

(iv) *Finance.* Under the terms of the Wheat Acquisition Regulations, the Minister is empowered to arrange with the Commonwealth Bank for advances to the Board. These advances are guaranteed by the Commonwealth Government.

AUSTRALIAN WHEAT BOARD : FINANCIAL OPERATIONS TO 30th NOVEMBER, 1947.

(*a*) Rail freight was deducted from 1st payment. (*b*) Rail freight was deducted from 2nd payment in respect of quota, and 5th payment in respect of non-quota wheat.

(*b*) *Pools Nos.* 8 *to* 10. The Wheat Acquisition Regulations, 1939 provide that the Minister for Commerce and Agriculture shall determine the compensation to be paid for wheat acquired by the Commonwealth. During the seasons 1939–40 to 1941–42 an initial payment of compensation was made as wheat was acquired and further payments were made as the realization of the various pools progressed. In August, 1942 the Government gave approval to the proposal to guarantee to wheat-growers compensation at a fixed rate on the first 3,000 bushels delivered by each grower (known as quota wheat), while on the remainder of deliveries (non-quota) compensation at a lower rate would be paid as the wheat was acquired and further payments made as warranted by realizations.

A quota was allotted to each wheat-grower by the Wheat Industry Stabilization Board, and, on the wheat delivered by him to the extent of his quota, the grower received the guaranteed payment.

The quota allotted to the majority of wheat-growers was for 3,000 bushels but, in certain instances, growers who operated under a share farming agreement, either as owners or share farmers, or who farmed under family arrangements, received a quota of less than 3,000 bushels.

For the 1942–43 season (No. 6 Pool) the guarantee at country stations was 4s. per bushel for bagged wheat and 3s. 10d. for bulk wheat, while deliveries in excess of quota received an initial payment of 2s. per bushel for bagged wheat and 1s. 10d. per bushel for bulk wheat. Since then, additional payments of compensation on non-quota wheat have been made.

Payment of initial compensation on wheat acquired for the 1943–44 season (No. 7 Pool) was on the same basis, although the payment on both quota and non-quota wheat was increased by 1⅓d. per bushel, this amount being the estimated increased cost for harvesting the 1943–44 crop due to the introduction of an industrial award for labour employed for this purpose.

For the 1944–45 season (No. 8 Pool) the initial compensation for quota wheat was the same as for the previous season while for non-quota wheat it was 10⅔d. per bushel more than that for the previous year.

In respect of 1945–46 and 1946–47 seasons (Nos. 9 and 10 Pools) the quota system was dispensed with, the initial payment made in each case being 4s. 1d. per bushel for bulk wheat and 4s. 4d. per bushel for bagged wheat.

For the 1947–48 season (No. 11 Pool) initial compensation was fixed at 4s. 6d. per bushel for bulk and 5s. per bushel for bagged wheat.

The advances made to growers to 30th November, 1947 in the 1944–45, 1945–46 and 1946–47 seasons were as follows :—

18. **Special Tabulation of Wheat Holdings.**—With the co-operation of the State Statisticians an extensive analysis was made of the returns collected at the annual agricultural census of 1935–36 in respect of all holdings growing wheat for grain in the principal producing States. The results are published in the Official Year Book No. 33, pp. 374 to 377.

19. **World Area and Production of Wheat.**—The details in the following table of the world area and production of wheat by countries and continents have been compiled from official sources so far as they are available, but more particularly from the records published by the Food and Agriculture Organization of the United Nations, and the United States Office of Foreign Agricultural Relations. The harvests shown for countries in the Northern Hemisphere are those garnered during the period March to October whilst those for the Southern Hemisphere cover the period November to February following. Figures in parenthesis are Office of Foreign Agricultural Relations estimates based on foreign service reports and other information.

(*c*) Estimated total including the area and production of countries whose particulars are not shown separately. (*d*) Average of less than five years (*e*) Preliminary. Subject to revision. (*f*) Production estimates for the Soviet Union for the years 1933 and 1934 have been reduced 15 per cent. to take account of heavy harvesting losses. (*g*) Excludes native cultivation.

20. **Exports—Principal Countries.**—The following table shows the latest available statistics of net quantities of wheat exported from the chief exporting countries compared with the period from 1909 to 1913. In the years before the 1914–18 War the U.S.S.R. (Russia) was the outstanding contributor to the world's supply of wheat, followed by the United States of America. Owing to increased demands within their own borders, however, the net exports from U.S.S.R. have since become relatively unimportant, while those from the United States of America have become generally less important. The latter country had a net import of 89 million bushels in 1944, but was second principal wheat exporter in 1945. Canada now occupies the foremost position with Argentine and Australia usually coming next in order.

Although Australia's production of wheat is in normal times little more than 3 per cent. of the world's total, its exports represent between 15 and 20 per cent. of the quantities shipped and as an exporting country Australia, up to 1938, had made the greatest relative advance since 1913. During 1944 and 1945, however, Canada's net exports constituted 62 per cent. and 58 per cent. respectively of total world net exports.

§ 5. Oats.

1. **Area, Production and Average Yield.**—(i) *Area and Production.* Oats are usually next in importance to wheat amongst the grain crops cultivated in Australia, but while wheat grown for grain in 1945–46 accounted for 55.94 per cent., oats grown for grain represented only 9.54 per cent. of the area of crops, being less than hay. The acreage and production of oats for the years 1938–39, 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46 are shown in the following table :—

OATS FOR GRAIN : AREA AND PRODUCTION.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
				AREA ('000 ACRES).

1938–39.. ..	4,831	2,909	93	2,401	4,668	645	7	15,554
1942–43.. ..	7,338	6,638	277	3,365	3,612	292	10	21,532
1943–44.. ..	7,051	3,705	389	2,294	3,964	299	10	17,712
1944–45.. ..	1,757	1,335	296	1,316	3,845	420	1	8,970
1945–46.. ..	9,997	7,402	830	3,178	4,081	281	5	25,774
Average 10 seasons ended 1945–46 ..	5,136	5,248	233	2,757	4,185	551	6	18,116

The oat crop showed considerable variation during the past decennium, ranging from 8,970,000 bushels in 1944–45 to a record yield of 25,774,000 bushels in 1945–46, with an average for the period of 18,116,000 bushels.

The principal oat-growing States are New South Wales and Victoria, which produce, on the average, more than half the total quantity grown in Australia. Western Australia and South Australia also produce considerable quantities, but in Queensland and Tasmania the output is small.

Oats are mainly used in Australia as feed grain. The quantity consumed by stock averages about 12 million bushels annually, leaving a balance of about 4 million bushels for seed purposes, about 2 million bushels for oatmeal and a small quantity for the production of spirits and for malting.

(ii) *Average Yield.* The average yield per acre of oats varies considerably in the different States, being highest in Tasmania and lowest in South Australia. Averages for each of the seasons 1938–39, 1942–43 to 1945–46 and for the ten-year periods ended 1938–39 and 1945–46 are given in the following table :—

OATS FOR GRAIN : AVERAGE YIELD PER ACRE.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
Average 10 seasons ended 1938–39 ..	15.66	12.03	12.77	7.91	10.77	28.15	22.35	11.80
1938–39	12.09	4.42	10.77	8.99	10.95	25.97	21.95	8.72
1942–43	17.01	15.51	14.49	12.81	10.55	22.19	23.20	14.38
1943–44	18.84	8.69	17.60	10.22	11.07	30.69	24.67	12.52
1944–45	3.23	1.85	17.64	3.94	9.57	28.41	2.65	4.41
1945–46	16.20	14.47	20.75	8.60	10.30	20.15	9.21	13.22
Average 10 seasons ended 1945–46 ..	13.50	10.62	15.62	8.31	10.20	27.69	15.34	10.99

The smallest average yield per acre ever recorded for Australia was that experienced in the abnormally dry season 1944–45, namely, 4.41 bushels, while the largest in the last ten years was that of the season 1941–42, amounting to 15.27 bushels per acre.

2. **Price of Oats.**—The average wholesale prices in the Melbourne market for oats of good milling quality for the years 1942–43 to 1946–47 in comparison with 1938–39 are shown in the following table :—

OATS : MELBOURNE AVERAGE WHOLESALE PRICES.

(*a*) Excludes the value of straw.

4. **Imports and Exports.**—The production of oats in Australia is sufficient to admit of a regular export trade. The quantities and values of oats imported into and exported from Australia during the years 1938–39 and 1942–43 to 1946–47 are shown hereunder :—

OATS : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.(*a*)	Quantity.	Value.(*a*)	Quantity.	Value.(*a*)
	Bushels.	£	Bushels.	£	Bushels.	£
1938–39 ..	10,428	2,762	117,347	18,866	106,919	16,104
1942–43 ..	1,045	350	284,113	57,075	283,068	56,725
1943–44 ..	643	193	88,040	18,618	87,397	18,425
1944–45 ..	202	79	30,368	9,700	30,166	9,621
1945–46 ..	1,231,085	276,734	429,163	112,931	−801,922	−163,803
1946–47 ..	85	28	106,645	27,934	106,560	27,906

(*a*) Australian currency values.
NOTE.—Minus sign (−) denotes net imports.

The quantity of oats imported into Australia is usually not very large, although in 1945–46 imports exceeded exports by 801,922 bushels. Canada was the chief supplier. The previous year when imports exceeded exports was in 1927–28 (by 460,581 bushels) when New Zealand was the main supplier. The principal countries to which oats were exported during pre-war years were the United Kingdom, New Zealand, Malaya (British), Ceylon, India and Mauritius. In 1945–46 and 1946–47 the principal countries of destination were Union of South Africa, China, Hong Kong, Ceylon, Belgium and India.

5. **Oatmeal, etc.**—The production in Australia of oatmeal—much of which is consumed locally—amounted in 1945–46 to 401,613 cwt., the quantity of oats used for this purpose being 2,658,922 bushels, or about 10 per cent. of the total production. Oversea trade in this and similar products is small ; the exports of oatmeal, including rolled oats, during 1945–46 and 1946–47 amounted to 68,394 cwt. and 247,599 cwt. respectively. Imports in 1945–46 were negligible, but in 1946–47 amounted to 301 cwt.

6. **World Production.**—The world's production of oats for the year 1945, as compiled by the International Institute of Agriculture, amounted to 4,240 million bushels. This quantity was harvested from 138 million acres, and represents an average yield of 30.72 bushels per acre. In comparison with this average return per acre, that of Australia for the same period (13.22 bushels) appears very small. Yields in excess of 40 bushels per acre are not uncommon and some European countries record averages

in excess of 50 bushels per acre. The following table shows the world's production and average yield for the period 1935–39 and for each of the ten years ended 1945. The latter year is the latest for which particulars are available :—

OATS : WORLD PRODUCTION.

Year.	Area.	Production.	Average Yield per acre.
	Million Acres.	Million Bushels.	Bushels.
Average 1935–1939	139	4,336	31.26
1939	141	4,400	31.21
1940	143	4,545	31.78
1941	140	4,166	29.76
1942	141	4,648	32.96
1943	135	4,115	30.48
1944	134	4,045	30.19
1945(*a*)	138	4,240	30.72

(*a*) Preliminary. Subject to revision.

§ 6. Maize.

1. **States Growing Maize.**—Maize is grown for grain chiefly in Queensland and New South Wales, the area so cropped in these States during the 1945–46 season being 228,861 acres, or 97 per cent. of the total for Australia. Of the balance, Victoria contributed 6,809 acres and Western Australia 48 acres. The climate of Tasmania is generally unsuitable for the growing of maize for grain although 11 acres were sown in this State in 1945–46. In the States mentioned the crop is also grown to a greater or lesser extent for green fodder particularly in connexion with the dairying industry.

2. **Area, Production and Average Yield.**—(i) *Area and Production.* Although maize for grain is grown extensively in other countries, the area sown to maize for grain in Australia has averaged only 300,000 acres during the past decennium. Compared with the previous year, the area in 1945–46 decreased by 21,226 acres and was considerably less than the comparatively large areas of 414,914 and 400,544 acres sown in 1910–11 and 1927–28 respectively.

The area and production of maize for grain in each State for the years 1938–39, 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46 are given in the following table :—

(*a*) 56 lb. per bushel.

The greatest production of maize in Australia was recorded in 1910–11, when it amounted to over 13,000,000 bushels. The production in 1945–46 amounted to 5,729,000 bushels compared with 7,082,000 bushels, the average for the decennium ended 1945–46.

(ii) *Average Yield.* (*a*) *Australia.* The following table gives particulars of the average yields per acre of the maize crops of the States for the seasons 1938–39, 1942–43 to 1945–46, and for the ten year periods ended 1938–39 and 1945–46 :—

MAIZE FOR GRAIN : AVERAGE YIELD PER ACRE.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.

Average 10 seasons ended 1945–46 ..	26.66	33.30	20.91	29.07	12.95	7.18	8.88	23.62

The average for Victoria is generally amongst the highest in the world. The area however, is comparatively small and is situated in specially favourable districts. The average for New South Wales is generally higher than that for Queensland.

(*b*) *Various Countries.* The average for Australia for the past ten years was 23.62 bushels per acre. During the period 1935–39 the United States of America averaged 25.0 bushels, Argentine Republic 28.0 bushels, Rumania 16.8 bushels, and the U.S.S.R. (Russia) 18.9 bushels per acre.

3. **Price of Maize.**—The average wholesale price of maize in the Melbourne market is shown in the following table :—

MAIZE : AVERAGE PRICE, MELBOURNE.

5. **Maize Products.**—Imports of cornflour into Australia are negligible. Exports of cornflour, which prior to the war were very small, increased considerably during the war years, the principal countries of destination being New Zealand and the Pacific Islands. In 1945–46 2,290,372 lb., valued at £54,394 were exported, compared with an annual average of 36,761 lb., valued at £364, during the five years ended 1938–39.

6. **Oversea Imports and Exports.**—The imports of maize into Australia during the five years ended 1945–46 were negligible, averaging 2,003 bushels compared with nearly 600,000 bushels during the five years ended 1929–30. Details of imports and exports for the years 1938–39 and 1942–43 to 1946–47 are as follows :—

MAIZE : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.

NOTE.—Minus sign (−) denotes net imports. (*a*) Australian currency values.

7. **World Production.**—The following table furnishes particulars of the world's acreage, production and average yield per acre of maize for the latest available period, according to records published by the Food and Agriculture Organization of the United Nations :—

MAIZE : WORLD PRODUCTION.

Year.	Area.	Production.	Average Yield per Acre.
	Million Acres.	Million Bushels.	Bushels.
Average 1935–1939	216	4,725	21.88
1939	218	5,107	23.43
1940	214	5,000	23.36
1941	209	5,040	24.11
1942	210	5,250	25.00
1943	220	5,380	24.45
1944	215	5,240	24.37
1945(*a*)	215	5,050	23.49

(*a*) Preliminary. Subject to revision.

The United States of America is the most important maize-producing country in the world. Approximately 100,000,000 acres are planted there annually, and in normal seasons more than 2,000 million bushels are reaped, representing about 50 per cent. of the world's production. About 85 per cent. of the production is fed to live-stock on farms, 10 per cent. is used for human food, and only a very small fraction—less than 1 per cent.—is exported.

§ 7. Barley.

1. **Area, Production and Average Yield.**—(i) *Area and Production.* The area sown to barley for grain has expanded considerably during the past ten years. Although a substantial decrease occurred during 1942–43 and 1943–44 the area increased again during 1944–45 and 1945–46 and the average annual area sown for the decennium ended 1945–46 amounted to 642,000 acres, compared with an average of 415,000 acres for the previous ten years. Victoria was originally the principal barley-growing State, but since 1913–14 its place has been taken by South Australia which accounted for 63 per cent. of the Australian acreage in 1945–46. Victoria was next in importance with 19 per cent.

leaving a balance of about 18 per cent. distributed among the other States. The totals here given relate to the areas harvested for grain ; small areas are sown for hay, but more considerable quantities are cut for green forage. These, however, are not included in this section. The area and production of barley for grain in the several States for the years 1938–39, 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46 are shown in the following table :—

BARLEY FOR GRAIN : AREA AND PRODUCTION.

(*a*) 50 lb. per bushel.

(ii) *Average Yield.* The average yield of barley per acre varies considerably in the different States, being as a rule highest in Tasmania and lowest in Western Australia. Details for each State during the seasons 1938–39, 1942–43 to 1945–46 and for the ten year periods ended 1938–39 and 1945–46 are given in the following table :—

BARLEY : YIELD PER ACRE.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.

Average 10 seasons ended 1945–46 ..	14.20	14.41	18.91	17.24	11.81	26.73	14.08	16.13

South Australia and Victoria were the only States producing more than 1,000,000 bushels on the average during the past decade, the yields being respectively 6,873,000 and 2,070,000 bushels.

(iii) *Malting (2 Row) and Other (6 Row) Barley.* (*a*) *Season* 1945–46. In the following table details of the area sown to barley of the 2 row or malting variety and 6 row or feed variety, and production therefrom for the season 1945–46 are given by States :—

BARLEY, MALTING (2 ROW) AND OTHER (6 ROW) : AREA AND PRODUCTION, 1945-46.

Total ..	496	1,744	520	7,566	666	123	2	11,117

Taking Australia as a whole, about 85 per cent. of the area of barley for grain in 1945–46 was sown with malting, or 2 row, barley while the remainder consisted of 6 row, or feed varieties. The proportion, however, varied considerably in the several States. The disposal of barley during the season 1945–46 was as follows : malt works, 3,734,780 bushels ; flour and other grain mills, 429,083 bushels ; distilleries, 203,734 bushels ; exports, 702,104 bushels ; leaving a balance of 6,047,137 bushels for feed, seed and other purposes.

(*b*) *Area, Production and Average Yield.* The following table sets out the acreage and production of malting and other barley in Australia during the seasons 1938–39, 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46.

BARLEY, MALTING AND OTHER : AREA AND PRODUCTION, AUSTRALIA.

Season.	'000 Acres.			'000 Bushels.			Average Yield per Acre.

1945–46 ..	593	106	699	9,581	1,536	11,117	16.15	14.52	15.90
Average 10 seasons ended 1945–46 ..	539	103	642	8,946	1,399	10,345	16.59	13.57	16.13

During the past ten seasons the area and production of barley of the malting, or 2 row class have been more than five times the corresponding figures for barley of the 6 row, or feed class. The average yield per acre for the last ten-yearly period for malting barley was 22 per cent. higher than that for 6 row barley.

2. **Australian Barley Board.**—Following the outbreak of war in 1939, the Australian Barley Board, representative of the industry, was formed, and the Commonwealth Government acceded to its request to acquire the entire 1939–40 barley crop, which was placed under the control of the Board. A pool was established from which proceeds were distributed with appropriate margins for different grades of barley.

The Board is responsible for the marketing and storage of barley, and, like the Australian Wheat Board, has appointed licensed receivers to receive grain on its behalf and to act as agents for all local and oversea sales.

Following the decision of the Commonwealth Government not to acquire barley in smaller producing States after 1941–42, the Governments of Western Australia and Queensland established State Barley Boards to control marketing in these States.

Particulars of the barley acquired and sold, and of advances made to growers in respect of the 1942–43 to 1946–47 crops are given in the following table.

AUSTRALIAN BARLEY BOARD : BARLEY ACQUIRED, SOLD, ETC., TO JANUARY, 1948.

(*a*) Australian currency values.
NOTE.—Minus sign (—) denotes net imports.

In addition to barley grain, there is also an export of Australian pearl and scotch barley, the total for 1945–46 amounting to 2,601,428 lb., valued at £53,159, and consigned mainly to Hong Kong, Malaya and Ceylon.

6. **Malt.**—(i) *Production.* The production of malt in Australia is sufficient to meet local requirements and to provide a margin for export as indicated in the next section. Details of the quantity of grain used and the production of barley malt are given in the following table.

MALT : GRAIN USED AND MALT PRODUCED, AUSTRALIA.

Year.	Barley Malt.		Wheaten and Oaten Malt.

7. **World Production.**—In comparison with the barley production of other countries, that of Australia is extremely small. Separate particulars for some of the leading countries during 1945 were not available at date of publication, but the United States of America produced 264 million bushels and Canada 158 million bushels during that year. Production in the U.S.S.R. (Russia) in 1935 approximated 360 million bushels, while China produced an average of 343 million bushels for the five years 1935 to 1939.

The following table shows the latest available details of the world's acreage of barley, together with the production and average yield per acre, according to the results compiled by the Food and Agriculture Organization of the United Nations :—

BARLEY : WORLD PRODUCTION.

Period.	Area.	Production.	Average Yield per Acre.
	Million Acres.	Million Bushels.	Bushels.
Average 1935-1939	114.2	2,338	20.47
1939	117.0	2,400	20.51
1940	119.0	2,350	19.75
1941	116.0	2,325	20.04
1942	120.0	2,515	20.96
1943	112.5	2,310	20.53
1944	108.6	2,180	20.07
1945(*a*)	106.2	2,030	19.11

(*a*) Preliminary. Subject to revision.

§ 8. Rice.

Rice growing is almost entirely concentrated in Asia and the extent to which this crop is grown in other countries is relatively small. In Australia experimental rice cultivation was carried on at the Yanco Experimental Farm in New South Wales for a number of years before 1924–25, but it was not until that year that an attempt was made to grow the crop on a commercial basis, 16,240 bushels being produced from 153 acres, or a average of 106 bushels per acre. Favoured by tariff protection and high average yields, the development of rice culture in the Murrumbidgee Irrigation Area made rapid progress, and production soon equalled Australian requirements and later provided a margin for export.

The area which growers may plant is subject to control. Each year representatives of the Rice Marketing Board, rice growers, the Department of Agriculture and the Water Conservation and Irrigation Commission of New South Wales meet to decide the maximum area which growers may plant in the following season. Because of war-time demands the areas sown have been expanded, but the extent of any expansion is determined by the limits imposed by the quantity of water available.

Consequent upon the outbreak of war in the Pacific in 1941 and the enemy occupation of the rice producing countries north of Australia, the demand for rice was so great as to be beyond the capacity of the industry. From August, 1942 civilian consumption in Australia was prohibited, except in the case of invalids, hospitals, resident Asiatics and other priorities, and the total production was diverted to service needs and for the feeding of natives in the south-west Pacific area. This restriction still continues in order to meet, as far as possible, the needs of native populations in the Pacific area, whose diet consists chiefly of rice.

For the five years ended 1938–39 the area sown to rice in the Murrumbidgee Irrigation Area averaged 22,900 acres. No marked expansion occurred until after Japan's entry into the war in 1941. The area was increased to 34,300 acres in 1942–43 and to 36,500 acres in 1943–44. This expansion was not sufficient to meet the war-time demand and new areas in the Wakool and Berenembah Irrigation Districts of New South Wales were developed, bringing the total area for the State and for Australia to 40,690 acres in 1943–44. Owing to water shortage the area sown in 1944–45 fell to 24,596 acres, but rose to 28,372 acres in 1945–46.

The production of paddy rice reached its highest level in 1943–44 with more than 4 million bushels or an average yield of just under 100 bushels per acre. In 1944–45 it dropped to nearly 1.7 million bushels or 68.8 bushels per acre due to water shortage arising from severe drought conditions. In 1945–46 production recovered to 2.7 million bushels or an average of 96.4 bushels per acre.

Prior to 1938–39 the greater part of Australia's export of rice was consigned to the United Kingdom, but, because of shortages in Pacific areas arising from war damage in south-east Asia, exports from Australia have been diverted mainly to the islands in this region.

Details relating to area, production, and trade for the years 1938–39 and 1942–43 to 1945–46 are shown in the following table :—

RICE : AREA, PRODUCTION AND TRADE, AUSTRALIA.

§ 9. Sorghum for Grain.

The growing of sorghum for grain on an extensive scale is a recent development in Australia. No details of the area and production of this cereal are available prior to 1939–40 but the output was of little importance. The climatic conditions of Queensland and northern New South Wales are particularly suited for the growing of sorghum and the development so far has been restricted to these areas, but more particularly to Queensland which accounts for about 90 per cent. of the area sown. The grain produced is fed to live-stock and is becoming an important source of supply for supplementing other coarse grains for the feeding of live-stock. Other sorghums are grown in Australia mainly as green fodder, hay and for the production of brush for broom manufacture. Details of these are included in § 14 and § 19 hereafter. Particulars of the area and production of sorghum grown for grain are given in the following table.

GRAIN SORGHUM : AREA, PRODUCTION AND YIELD, AUSTRALIA.

(a) Not available. (b) Queensland only.

§ 10. Other Grain and Pulse Crops.

In addition to the grain crops already specified, the principal other grain an pulse crops grown in Australia are navy beans, blue peas and rye.

The areas of crops of blue peas and navy beans for the season 1945–46 were 23,780 acres and 11,058 acres respectively, giving yields of 7,996 tons and 1,856 tons, or averages of 0.34 tons and 0.17 tons respectively per acre, which was less than the average yield for the decennium ended 1945–46. Navy beans are grown chiefly in New South Wales, Queensland and Victoria in that order, but in other States the quantity produced is negligible. The production of blue peas is almost entirely restricted to Tasmania which accounts for more than 80 per cent. of the total area and production for Australia. Blue peas are exported in considerable quantities to the United Kingdom, the chief exporting State being Tasmania.

The total area of rye in Australia during the season 1945–46 was 43,654 acres, yielding 201,308 bushels, or an average of 4.61 bushels per acre, as compared with the average of 6.85 bushels for the last ten seasons. Of the total area sown to rye in 1945–46, about 76.3 per cent. was in South Australia, 17.6 per cent. in Victoria, and 3.4 per cent. in Western Australia.

§ 11. Potatoes.

1. **Area, Production and Average Yield.**—(i) *Area and Production.* Victoria possesses peculiar advantages for the growth of potatoes, as the rainfall is generally satisfactory and the climate is unfavorable to the spread of Irish blight ; consequently the crop is widely grown. The principal areas are the central highlands, the south-western and Gippsland districts. Tasmania comes next in order of acreage sown, but the production has exceeded that of Victoria in recent years. New South Wales occupies third place in acreage and production. The area for these three States accounted for 80.71 per cent. of the total for Australia in 1945–46.

The area sown and production of potatoes in each State during the years 1938–39, 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46 are given hereunder :—

1945–46 ..	61,768	230,749	33,605	35,097	47,672	236,140	575	645,606
Average 10 seasons ended 1945–46	55,876	177,858	23,407	30,011	32,027	160,125	361	479,665

The area sown to potatoes averaged 130,000 acres during the ten years ended 1935–36 and rose to 142,000 acres for the decennium ended 1945–46 after declining to 120,000 acres for the decennium ended 1942–43. Victoria, with a drop of 21,000 acres, was mainly responsible for the decline. After the outbreak of war in the Pacific in December, 1941, the area sown to potatoes rose rapidly, and in 1943–44 was 56 per cent. greater than in 1940–41. The greatest ever sown was 242,000 acres in 1944–45, when there were record areas in Victoria and Tasmania. The total area under potatoes declined to 176,000 acres in 1945–46.

The expansion during the war years was necessary in order to meet the large demand for potatoes by Australian and Allied Servicemen based upon Australia and to maintain supplies for civil needs. As a result, production rose to the record level of 881,049 tons in 1944–45. A decline of about 27 per cent. to 645,606 tons was recorded for 1945–46.

(ii) *Average Yield.* Average yields for each State for the seasons 1938–39, 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46 are shown hereunder :—

POTATOES : AVERAGE YIELD PER ACRE.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Average 10 seasons ended 1938–39 ..	2.30	2.75	1.64	2.50	4.73	2.72	2.09	2.71
1938–39	2.34	2.37	1.85	4.31	4.95	3.35	1.95	2.80
1942–43	2.64	3.77	2.27	4.54	5.04	3.37	3.36	3.45
1943–44	2.18	3.09	2.10	4.02	4.14	3.60	7.06	3.12
1944–45	2.32	3.67	1.85	5.11	4.36	4.26	4.96	3.64
1945–46	2.70	3.66	2.21	3.96	4.87	4.20	4.87	3.67
Average 10 seasons ended 1945–46 ..	2.43	3.57	1.89	4.61	4.88	3.70	4.31	3.39

Compared with the average yield per acre obtained in other countries, that returned for Australia is very low ; the production in New Zealand, for example, in 1945–46 averaged 6.04 tons per acre from an area of 23,228 acres, as compared with 3.67 tons per acre in Australia from 176,079 acres.

(iii) *Relation to Population.* The average annual production of potatoes for the last five seasons was 81 tons per 1,000 of population. In Tasmania, where this crop is of far greater importance in relation to population than is the case in any other State, the production per head in 1906–7 was nearly a ton, while for the last five seasons it has averaged almost 17 cwt. due to an abnormal production of 1.4 tons per head in 1944–45. Details for each State for the 1938–39 and 1942–43 to 1945–46 seasons are as follows :—

POTATOES : PRODUCTION PER 1,000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons

1945–46 ..	21	114	31	55	97	947	39	87

2. **Gross Value of Potato Crop.**—The estimated gross value of the potato crop of each State for the seasons 1944–45 and 1945–46 is given in the following table :—

POTATOES : VALUE OF CROP, 1944–45 and 1945–46.

Value.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1944–45—	£	£	£	£	£	£	£	£
Aggregate value	1,238,020	3,574,332	532,697	653,370	639,875	4,315,400	15,759	10,969,453
Value per acre	£35/11/7	£42/18/10	£29/6/3	£52/2/3	£54/10/7	£53/4/4	£76/2/7	£45/7/4
1945–46—	£	£	£	£	£	£	£	£
Aggregate value	880,160	2,496,050	532,079	458,793	599,883	3,004,880	8,280	7,989,425
Value per acre	£38/18/0	£39/12/5	£34/19/4	£51/16/4	£61/6/8	£53/8/6	£70/3/5	£45/7/6

3. **Consumption.**—The annual civilian consumption of potatoes in Australia during each of the three years ended 1946 amounted to 334,000 tons, 359,300 tons and 408,600 tons respectively, or 113.7 lb., 119.6 lb. and 124.9 lb. per head of population respectively. These figures exclude the quantities used for seed, which averaged about 100,000 tons annually over this period. New South Wales, Queensland and, in some seasons, South Australia do not produce the quantities necessary for their requirements and must import from Tasmania and Victoria, which have a surplus.

4. **Australian Potato Committee.**—This Committee was set up under National Security (Potatoes) Regulations on 27th April, 1942, to ensure that adequate supplies of potatoes would be available in Australia to meet the needs of the Defence Forces and the civilian population during the war.

War-time control covered production of quantities needed for all purposes, the regulation of marketing and distribution to meet service and civilian needs, and the spreading of supplies over the season.

A guaranteed minimum price was assured for the first season, any excess of market return above the minimum going to growers. For later seasons there was a fixed contract price, allowing supplies to be directed according to needs rather than market prices.

Production was arranged through State Departments of Agriculture, which supervised controls of grading. Distribution was arranged through trade channels, which marketed the Commonwealth-owned potatoes.

The Committee worked through an Executive Member, with State Deputies, assisted by Advisory Committees of State officers, growers and merchants.

Supplies from growers were controlled by delivery quotas to regulate the flow on to the market. Quotas for merchants to market applied when supplies were scarce.

The retail price was subsidized under the price stabilization policy, and was less than the growers' contract price.

The system gave favourable conditions to growers, and their organizations are moving for stabilization of the industry on similar lines in the post-war period.

The Commonwealth has continued contracts for the 1947–48 season. State Boards have been formed in Western Australia, New South Wales and Victoria, and action to constitute them is being taken in Tasmania and Queensland. Marketing from 1948 onward is therefore likely to be under control of State Boards in most States.

In the following table details of the quantities of potatoes received and the manner of their distribution are given for the years ended 31st October, 1944, 1945 and 1946. The quantities shown are those recorded by the Committee and therefore exclude a quantity which does not come within the Committee's control.

AUSTRALIAN POTATO COMMITTEE : RECEIVALS AND DISPOSALS OF POTATOES, AUSTRALIA.

Particulars.	Year ended 31st October—					
	1944.		1945.		1946.	
	Tons.	Per cent.	Tons.	Per cent.	Tons.	Per cent.

§ 12. Onions.

1. **Area, Production and Average Yield.**—Australia's supply of onions comes chiefly from Victoria which accounted for 66 per cent. of the total area and 69 per cent. of the quantity produced in 1945–46. Queensland came next with nearly 20 per cent. of the area and 15 per cent. of the production, leaving a balance of about 14 per cent. of area and 16 per cent. of production distributed among the remaining four States. Details of the area, production and average yield per acre are given in the following table for the years 1938–39 and 1942–43 to 1945–46, together with averages for the ten year periods ended 1938–39 and 1945–46.

Details of the area and production of fresh vegetables other than potatoes and onions are given in § 18.

2. **Gross Value of Onion Crop.**—The gross value of the onion crop is shown in the following table for the years 1938–39 and 1942–43 to 1945–46.

ONIONS : GROSS VALUE, AUSTRALIA.

Year.	Total Production.	Gross Value of Crop.	Average value per ton.	Average value per acre.
	Tons.	£	£ s. d.	£ s. d.
1938–39	18,372	305,744	16 12 10	45 11 7
1942–43	54,688	781,398	14 5 9	80 8 6
1943–44	46,922	695,909	14 16 7	68 7 2
1944–45	66,512	1,129,246	16 19 7	94 19 10
1945–46	66,793	961,111	14 7 9	77 9 2

3. **Consumption.**—During the war years the onion requirements of Australian and Allied Services based upon Australia were the first to be met, the balance of production being available for civilian consumption and for exports. Throughout these years, however, production was such that civilian supplies were not seriously limited. The following table furnishes details of the quantity available for consumption by Services and civilians for the years 1938–39 and 1942–43 to 1945–46.

PRODUCTION AND CONSUMPTION OF ONIONS, AUSTRALIA.

Particulars.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
	Tons.	Tons.	Tons.	Tons.	Tons.
Production	18,372	54,688	46,922	66,512	66,793
Less net exports	+3,548	439	3,239	1,106	6,443
Balance available for Civilian and Service consumption.. ..	21,920	54,249	43,683	65,406	60,350

Plus sign (+) signifies net imports.

4. **Imports and Exports.**—Onions are the only root crop, other than potatoes, in which any considerable oversea trade is carried on by Australia. During the five years ended 1945–46 1,296 tons, valued at £A10,984 were imported, principally from New Zealand, while during the same period the exports, which amounted to 11,934 tons, valued at £A193,763, were shipped mainly to the Pacific Islands.

§ 13. Hay.

1. **General.**—(i) *Area and Production.* As already stated, the chief crop in Australia is wheat grown for grain. Next in importance is hay, which for the season 1945–46 constituted 13.50 per cent. of the total area cropped. A graph showing the area sown to hay since 1860 appears on page 897. In most European countries the hay consists almost entirely of meadow and other grasses, but in Australia a very large proportion consists of oats, wheat and lucerne. The area and production of hay of all kinds

in the several States during the years 1938–39 and 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46 are shown below :—

Owing to various causes, the principal being the variation in the relative prices of grain and hay and the favourableness or otherwise of the season for a grain crop, the area of hay is liable to fluctuate considerably. The area under hay in Australia during the season 1915–16, 3,597,771 acres, was the largest on record, whilst the average for the decennium ended 1945–46 was 2,701,303 acres.

(ii) *Average Production.* During the last ten years Queensland and Tasmania show the highest average production per acre, although the area sown in these States is small. For the same period the lowest yield for Australia as a whole was that of 16.6 cwt. per acre in 1944–45, while the highest was that of 27.8 cwt. in 1939–40. The average for the decennium was 23.2 cwt. Particulars for the several States for the seasons 1938–39, 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46 are given hereunder :—

(*a*) Includes barley and rye hay.

For all States combined the proportions of the areas sown to the principal kinds of hay in 1945–46 were 50 per cent. for oaten, 31 per cent. for wheaten, 6 per cent. for lucerne, and 13 per cent. for other hay. In that year, oaten hay predominated in the States of Victoria, Western Australia and Tasmania, wheaten hay in New South Wales and South Australia, and lucerne in Queensland.

2. **Value of Hay Crop.**—The following table shows the value, and the value per acre, of the hay crop of the several States for the seasons 1944–45 and 1945–46 :—

HAY : VALUE OF CROP, 1944–45 and 1945–46.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.

3. **Farm Stocks of Hay.**—Details of stocks of hay held on farms are now collected at the annual census of farm production. Particulars of stocks so held at 31st March in each year 1943 to 1946 are given in the table below.

STOCKS OF HAY HELD ON FARMS.

31st March—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1943 ..	698,332	1,107,137	114,131	499,475	188,740	74,277	2,201	2,684,293
1944 ..	522,294	859,302	107,375	403,002	140,494	89,010	2,246	2,123,723
1945 ..	189,986	460,369	71,162	200,790	184,321	82,736	606	1,189,970
1946 ..	504,521	1,026,581	86,722	307,494	156,841	78,414	2,123	2,162,696

The decrease in stocks at 31st March, 1945 resulted from the disastrous drought which occurred during 1944–45.

4. **Imports and Exports.**—Under normal conditions hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not figure largely amongst the imports and exports of Australia. During 1945–46 3,418 tons were imported, while the exports amounted to 522 tons, valued at £6,574.

§ 14. Green Fodder.

1. **Nature and Extent.**—Considerable areas are devoted to the growing of green fodder mainly in connexion with the dairying industry. These crops may be cut for feeding to live-stock as green fodder or may be fed off to stock as green forage. Included with the latter are areas which may have been sown with the intention of harvesting for grain, but which, due to adverse seasonal conditions, showed no promise of producing grain or even hay and were fed off to live-stock. The principal crops cut for green fodder are oats, wheat and lucerne, while small quantities of barley, sorghum, maize, rye and sugar cane also are so used. In 1945–46 the area under green fodder (1,805,748 acres) consisted of oats (806,021 acres), lucerne (219,443 acres), wheat (175,348 acres), barley (89,918 acres), sorghum (85,329 acres), maize (75,058 acres), rye (26,366 acres), sugar cane (5,452 acres) and other crops (322,813 acres). Particulars concerning the area of green fodder in the several States during each of the years 1938–39 and 1942–43 to 1945–46 are given in the following table :—

GREEN FODDER : AREA.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1938–39 ..	573,569	108,796	448,643	275,988	352,442	28,681	681	1,788,800
1942–43 ..	728,404	103,598	578,452	285,587	351,509	62,751	1,518	2,111,819
1943–44 ..	782,265	112,880	600,181	269,645	446,803	51,592	1,436	2,264,802
1944–45 ..	647,187	73,159	622,268	262,394	388,466	48,087	1,679	2,043.240
1945–46 ..	541,810	63,311	581,905	189,882	288,206	138,540	2,094	1,805,748

2. **Value of Green Fodder Crops.**—The value of these crops is variously estimated in the several States, and the Australian total for the season 1945–46, excluding Western Australia, may be taken approximately as £3,854,000.

§ 15. Sugar-cane and Sugar-beet.

1. **Sugar-cane.**—(i) *Area.* Sugar-cane for sugar-making purposes is grown only in Queensland and New South Wales, and much more extensively in the former than in the latter State. Thus, of a total area of 336,960 acres of sugar-cane grown for this purpose in Australia for the season 1945–46, there were 321,894 acres or about 96 per cent.

in Queensland. This latter area is made up of 229,736 acres cut for crushing, 12,151 acres cut for plants, and 80,007 acres left to stand-over or young cane on areas not ready for cutting. Sugar-cane growing appears to have commenced in Australia in or about 1862, as the earliest statistical record of sugar-cane as a crop is that which credits Queensland with an area of 20 acres for the season 1862–63. In the following season the New South Wales returns show an area of 2 acres of this crop. The area of cane in New South Wales reached its maximum in 1895–96 with a total of 32,927 acres. Thenceforward, with slight variations, it fell gradually to 10,490 acres in 1918–19, but from that year it expanded until 1924–25, when about 20,000 acres were planted. Since 1924–25, the area has fluctuated between 15,000 acres and 21,000 acres, the average for the ten seasons ended 1945–46 amounting to 18,689 acres. In Queensland, although fluctuations in area are manifest, the general trend has been upwards, but, because of the contingencies arising from war, the area under sugar in that State has declined since 1940–41. In 1939–40 Queensland's acreage under cane reached its highest level, namely, 353,996 acres. The area of sugar-cane in Australia for the seasons 1938–39 and 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46 are shown in the following table :—

SUGAR-CANE : AREA.

(Acres.)

Season.	New South Wales.			Queensland.			Australia.			
	Area crushed.	Area of stand-over and newly-planted cane.	Area cut for plants.	Area crushed.	Area of stand-over and newly-planted cane.	Area cut for plants.	Area crushed.	Area of stand-over and newly-planted cane.	Area cut for plants.	Total
Average 10 seasons ended 1938–39 ..	9,106	9,023	140	229,327	75,409	9,368	238,433	84,432	9,508	332,373
1938–39 ..	10,458	10,772	163	251,847	84,098	11,254	262,305	94,870	11,417	368,592

1945–46 ..	5,943	8,860	263	229,736	80,007	12,151	235,679	88,867	12,414	336,960
Average 10 seasons ended 1945–46 ..	9,126	9,322	241	241,602	80,449	11,759	250,728	89,771	12,000	352,499

(ii) *Productive and Unproductive Cane.* The areas shown in the preceding table do not include the small acreage cut for green fodder which in Queensland in 1945–46 amounted to 4,673 acres. The whole area planted is not cut for crushing during any one season, there being always a considerable amount of young and "stand-over" cane as well as a small quantity required for plants. Thus the season in which the highest acreage is recorded may not show the greatest area of productive cane cut for crushing.

(iii) *Production of Cane and Sugar.* For Queensland, statistics of the production of sugar-cane are not available prior to the season 1897–98. In that season the total for Australia was 1,073,883 tons, as against the maximum production of 6,313,369 tons in 1939–40.

The average production of cane during the ten seasons ended 1945–46 was 5,130,554 tons, and of raw sugar 740,388 tons. Particulars of the total production of cane and sugar for the years 1938–39, 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46 are as follows :—

SUGAR-CANE ; PRODUCTION OF CANE AND SUGAR.

Season.	New South Wales.		Queensland.		Australia.	
	Cane.	Sugar.	Cane.	Sugar.	Cane.	Sugar.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Average 10 seasons ended 1938–39 ..	241,402	30,317	4,461,988	626,789	4,703,390	657,106
1938–39	336,701	45,022	5,342,193	775,064	5,678,894	820,086
1942–43	338,013	44,290	4,353,488	605,609	4,691,501	649,899
1943–44	290,364	37,442	3,397,617	486,423	3,687,981	523,865
1944–45	200,050	26,423	4,398,268	643,520	4,598,318	669,943
1945–46	166,069	21,220	4,551,971	644,661	4,718,040	665,881
Average 10 seasons ended 1945–46 ..	294,462	39,195	4,836,092	701,199	5,130,554	740,394

The production of raw sugar in Australia in 1945–46 amounted to 665,881 tons manufactured from 4,718,040 tons of cane, the maximum production being 928,676 tons recorded in 1939–40. This decline in production arises from war-time contingencies such as labour shortage and insufficient fertilizers. In addition, variations in seasonal conditions were contributing factors.

Official data are not available regarding the total number engaged in the sugar industry in Queensland, other than the number of separate holdings growing cane (6,418 in 1945–46) and of employees in sugar mills (4,948 in 1945–46).

According to data obtained from the Occupation Survey of 1st June, 1945, the number of persons engaged in the growing and harvesting of sugar cane in New South Wales and Queensland was as follows :—

SUGAR-CANE : NUMBER OF PERSONS ENGAGED IN GROWING AND HARVESTING, OCCUPATION SURVEY, 1st JUNE, 1945.

Particulars.	New South Wales.	Queensland.
	No.	No.
Sugar-grower (including Manager)	222	6,842
Cane-cutter	90	2,636
Foreman, Overseer	4	38
Labourer	147	5,492
Total	463	15,008

(iv) *Average Production of Cane Sugar.* Owing to climatic variation, comparison between the average yields of cane per productive acre in Queensland and New South Wales cannot be accurately made except on an annual basis. In New South Wales the crop matures in from 20 to 24 months, whereas in Queensland a period of from 12 to 14 months is sufficient. Allowing for the disparity in maturing periods the average annual yields of cane per productive acre during the ten years ended 1945–46 were 17.60 tons for New South Wales, and 18.48 tons for Queensland. Similarly, the yields of sugar per acre crushed for the same period were estimated at 2.34 tons and 2.68 tons respectively. Apart from the consideration mentioned above, the yields of cane and sugar per acre crushed for Australia for the ten years ended 1945–46 were 20.46 tons and 2.95 tons respectively, as compared with 18.37 tons and 2.50 tons for the decennium ended 1935–36.

(v) *Quality of Cane.* The quantity of cane required to produce a ton of sugar varies with the variety planted, the district and the season. For the ten years ended 1945–46 it required on the average 6.93 tons of cane to produce 1 ton of sugar, or 14.43 per cent. of its total weight, as compared with 7.34 tons for the ten years ended 1935–36. As the result of the systematic study of cane culture in Queensland and improvements in field and mill methods the sugar content of the cane has been considerably increased, and in 1937–38 only 6.78 tons of cane were required to produce one ton of sugar. It is believed that this is the highest sugar content obtained anywhere in the world.

The Bureau of Sugar Experiment Stations in Queensland is rendering useful service to the sugar industry by advocating and demonstrating better methods of cultivation, the more scientific use of fertilizers, lime, etc., and by producing and distributing improved varieties of cane.

(vi) *Relation to Population.* The yield of raw sugar in Australia during recent years was more than sufficient to supply local requirements, the average annual production during the last five years amounting to 201 lb. per head of population. Details for the years 1938–39 and 1942–43 to 1945–46 are as follows :—

RAW SUGAR: PRODUCTION PER HEAD OF POPULATION.

State.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
	lb.	lb.	lb.	lb.	lb.
New South Wales ..	37	35	29	21	16
Queensland	1,731	1,302	1,031	1,346	1,330
Australia	266	202	162	205	201

(vii) *Consumption.* The average annual consumption of raw sugar in Australia during the five years ended 1945–46 was estimated at 503,358 tons, equal to 155.18 lb. of raw sugar or 148.20 lb. of refined sugar per head of population. The sugar content of jam, preserved fruit, milk, etc., exported during the period has been deducted in arriving at the figures quoted. The quantity of sugar used in factories during 1938–39 and each of the four years ended 1945–46 is shown in the following table, the figures including, where necessary, estimates of consumption based on the sugar content of the finished product. Particulars of sugar used in establishments not classified as factories are not available, and consequently the quantities shown below are deficient to that extent.

SUGAR : CONSUMPTION IN FACTORIES, AUSTRALIA.

Factories.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.

(*a*) Includes Condiments, Pickles, etc. (*b*) Raw Sugar. (*c*) Includes sugar consumed in the industrial and heavy chemicals and dehydrated fruit and vegetables industries.

(viii) *Control of Cane Production in Queensland.* Agreements between the Commonwealth and Queensland Governments have fixed the price of sugar in Australia from time to time. Under the latest agreement, the wholesale price of refined sugar in each of the capital cities was fixed at £33 4s. per ton or 4d per lb. retail for the five years ended 1951. On the 3rd December, 1947, the wholesale price fixed under this agreement was increased to £37 6s. 8d. per ton or 4½d. per lb. retail. The net proceeds of all sugar sold in Australia and sugar sold abroad are pooled and a uniform price per ton is paid to the mills. This pooling is made possible by the acquisition by the Queensland Government of all sugar produced in the State, under legislation which has been in force since 1915. The small New South Wales production (about 5 per cent. of the whole) is also acquired by the Queensland Sugar Board by private agreement.

Sugar production, which in 1923 had scarcely been sufficient to cover Australian requirements, grew very rapidly in subsequent years. In 1925 the Queensland Government took steps to prevent, as a general rule, new land from being opened up for cane production. At that date 56 per cent. of the sugar production was consumed in Australia and 44 per cent. exported. After 1925 production remained stable for some years. In 1929 the operations of the pool, which had hitherto received at a uniform price all sugar offered it by the mills, were re-organized. After 1929, mills received the full pool price for sugar up to the amount of their previous maximum production only. Any further supplies were acquired at export price only.

Between 1929 and 1939 the export price was generally less than half the pool price. In spite of this, production increased by 72 per cent. during that period. In 1939, in view of the fact that the International Sugar Agreements imposed certain restrictions on the volume of Australian exports, the Queensland Parliament passed further legislation limiting the pool to 737,000 tons. Any production in excess of this was to be acquired at a penalty price of 10s. per ton. This tonnage was divided up in quotas between the mills, on the understanding that the mills would allocate quotas of production to individual farmers. Proclamations issued by the Queensland Government, however, permitted the harvesting of the whole of the 1939 and 1940 crops. Crops for subsequent years have been similarly treated.

2. **Sugar-beet.**—Victoria is the only State growing beet for sugar, although 5 tons of sugar-beet were produced from 1 acre in Tasmania during 1942–43. Particulars of acreage and production for Victoria for the years 1938–39 and 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46 are shown in the following table :—

SUGAR-BEET : AREA AND PRODUCTION, VICTORIA.

Particulars.		Average Ten Seasons ended 1938–39	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.	Average Ten Seasons ended 1945–46.
Area sown ..	acres	3,312	4,268	955	836	485	108	2,486
Production ..	tons	36,694	13,454	5,907	6,975	3,200	975	20,475
Average yield per acre	,,	11.08	3.15	6.28	8.34	6.60	9.03	8.24
Sugar produced ..	,,	4,642	1,507	678	704	..	..	2,499

During the 1939–45 War the area under sugar-beet declined steadily from 4,268 acres in 1938–39 to 108 acres in 1945–46 but increased to more than 600 acres in 1946–47. Much of this decline was due to the diversion, as a war-time measure, of many areas to the production of vegetables. The mill at Maffra ceased operations at the end of 1943 but re-opened to treat the 1946–47 crop.

3. **Sugar Bounties.**—Reference is made to the various Acts in connexion with sugar bounties and sugar excise tariffs in early issues of the Official Year Book. (*See* No. 6 pp. 394–6.)

4. **Sugar Purchase by Commonwealth Government.**—The steps taken by the Commonwealth Government in connexion with this matter are also referred to in the Official Year Book. (*See* No. 18, p. 720.)

5. **Sugar Agreement in Australia—Embargo on Imports, etc.**—By agreement between the Commonwealth and Queensland Governments in 1925 the embargo on the importation of foreign sugar, which was first introduced in September, 1915, was extended for three years from 1st September, 1925. The price of raw sugar needed for home consumption was fixed at £27 per ton, £1 of which was to defray administrative and general expenses of the Sugar Board and to provide special concessions to certain consumers of sugar. The embargo was later extended, on practically the same terms as previously, for a further period of three years until 1st August, 1931.

In response to representations the Commonwealth Government appointed a Committee of Inquiry on the 23rd August, 1930, to report on the industry. The Committee consisted of eight members representing the various interests concerned. The reports of the Committee were made available in March, 1931, and the renewal of the sugar agreement, with certain modifications, was recommended. The terms of the new agreement closely followed those previously in force, particularly as regards the embargo on imports and the fixation of prices. The assistance to the fruit industry was increased from an average of £180,000 per annum to £315,000 by way of grant from the sugar industry. The agreement was signed on 1st June, 1931, and was to remain in force for a period of five years from 1st September, 1931. In 1932, however, conferences arranged between the Commonwealth Government and representatives of the industry agreed to a reduction of ½d. per lb. in the retail price of sugar from 1st January, 1933 until the end of the period of the agreement (31st August, 1936). It was also decided to reduce the amount of the assistace to the fruit industry to £200,000. A renewal of the agreement for a period of five years commencing 1st September, 1936, was negotiated between the Commonwealth and Queensland Governments in July, 1935, and in May, 1940 the agreement was extended for a further period of five years to 31st August, 1946. The wholesale and retail prices of sugar remained unaltered but the concession to the fruit industry was increased to £216,000 in 1936. The agreement was extended in April, 1946 for a further five years to 31st August, 1951, but in December, 1947, it was amended, the wholesale and retail prices of sugar being increased in response to representations made by a delegation of the sugar industry.

6. **International Sugar Agreement.**—Delegates of 21 Nations representing 90 per cent. of producers met in London and entered into an agreement on 6th May, 1937, providing for the regulation of the production and marketing of sugar in the world during a period of five years from 1st September, 1937. The object of the agreement was to ensure an adequate supply of sugar at a price not exceeding the cost of production, including a reasonable profit to efficient producers. For this purpose, each country was given a basic annual export quota which would be increased in proportion to any expansion in sugar consumption. By this means and by limitations on stocks and measures to encourage more consumption it is expected that the International Sugar Council, which has been established to administer the agreement, will be able to hold in proper balance the supplies and requirements of sugar. The export quota originally allotted to Australia was 400,000 long tons. This figure may be increased, however, where the delivery from any British Colony falls short of its quota. In such circumstances, the deficiency may be allocated among other producing countries of the Empire including Australia.

This agreement, which normally would have expired on 31st August, 1942, has proved of great benefit to Australia. In 1943 fourteen of the original 21 Nations signed a protocol continuing the agreement for another two years ending 31st August, 1944. Three further protocols have since been signed, each extending the agreement for a period of one year. After the outbreak of war in September, 1939, certain clauses of the agreement were declared inoperative because of the difficulties arising therefrom.

7. **Net Return for Sugar Crop.**—Calculations by the Sugar Board regarding the disposal of the crop, net value of exports and the average price realized during each of the years 1938–39 and 1942–43 to 1945–46 will be found in the following table :—

SUGAR : NET RETURNS, AUSTRALIA.

Year.	Percentage Exported. (a)	Net Value of Exports per Ton. (a)	Average Price per ton for Whole Crop. (a)	Estimated Value of Crop.
	Per cent.	£ s. d.	£ s. d.	£
1938–39	55·78	8 4 3	15 3 11	12,806,376
1942–43	31.92	10 16 3	18 18 5	11,762,432
1943–44	17.12	13 2 6	20 18 4	12,554,579
1944–45	32.19	15 0 6	19 16 3	12,417,262
1945–46	31·53	16 17 9	20 6 5	13,674,661

(a) As supplied by the Queensland Sugar Board.

The estimated value of the raw sugar produced has been taken from the audited accounts of the Queensland Sugar Board. The values stated represent the gross receipts from sales in Australia and overseas less refining costs, freight, administrative charges, etc., and export charges, but not deducting concessions to the fruit industry and other rebates which in 1945–46 amounted to £216.000. The value thus obtained represents the net market value of all raw sugar sold, which, since 1933, has been divided between the growers and millers in the approximate proportions of 70 per cent. and 30 per cent. respectively. Prior to that year the distribution was about two-thirds to the grower and one-third to the miller.

8. **Imports and Exports of Sugar.**—Particulars showing the imports and exports of cane sugar for the years 1938–39 and 1942–43 to 1946–47 are as follows :—

SUGAR : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£A.	Tons.	£A.	Tons.	£A.
1938–39	42	883	443,021	4,177,741	442,979	4,176,858
1942–43	..	5	66,332	1,001,353	66,332	1,001,348
1943–44	..	..	95,826	1,523,786	95,826	1,523,786
1944–45	..	4	114,011	1,853,628	114,011	1,853,624
1945–46	..	3	150,972	3,059,599	150,972	3,059,596
1946–47	..	25	117,379	2,717,252	117,379	2,717,227

9. **Sugar By-products.**—Large quantities of molasses are produced as a by-product in the sugar mills. Details for a series of years of the quantities produced and the proportions used for distilling, fuel, manure and other purposes will be found in Chapter XXIV. " Manufacturing Industry ". A distillation plant erected at Sarina, near Mackay, was opened in 1927 for the production of power alcohol.

Boards are now being made from the residuum of crushed fibre after the removal of the sugar content from sugar-cane. These boards are used in the building industry for walls and ceilings and possess high insulating and sound-absorbing properties.

10. **Sugar Prices.**—The prices of sugar in Australia are shown in the following table. These prices have been fixed in accordance with the agreements referred to on pages 940–1.

SUGAR : PRICES IN AUSTRALIA.

Year.	Raw Sugar 94 Net Titre. Average Price per Ton received for—			Refined Sugar.		
	Home Consumption.	Exports. (a)	Whole Crop. (a)	Date of Determination.	Wholesale Price per ton.	Retail Price per lb.

(a) Including " Excess " Sugar.

11. **War and Post-war Arrangements.**—After the outbreak of war in September, 1939, the British Ministry of Food concluded arrangements with the Queensland Goverment for the purchase of Australia's surplus production of raw sugar for the season 1939. The price was fixed at £Stg.7 10s. per ton at United Kingdom ports plus the preference on dominion sugar of £Stg. 3 15s. per ton under the existing tariff.

Similar agreements were negotiated for the disposal of the surplus raw sugar in subsequent seasons, the price in sterling currency per ton c.i.f. United Kingdom ports, basic 96° polarization being as follows :—1940 and 1941, £12 12s. 6d.; 1942, £13 15s. ; 1943, £14 5s. ; 1944, £15 5s. and 1945, £17 5s., inclusive of the existing preference of £3 15s. From the 1st January, 1946 the price was further increased by £Stg. 2 5s. per ton and the United Kingdom agreed to absorb an additional 12s. 6d. per ton on the freight cost.

The United Kingdom is to continue the bulk purchase of exportable sugar from Dominions and Colonies up to and including 1949. From 1947 an increase of £Stg. 4 15s. per ton operated, bringing the export price up to £Stg.24 5s.

§ 16. Vineyards.

1. **Progress of Cultivation.**—(i) *Area of Vineyards.* The date of introduction of the vine into Australia has been variously set down by different investigators, the years 1815 and 1828 being principally favoured. It would seem, however, that plants were brought out with the first fleet in 1788, consequently the Australian vine is as old as Australian settlement. As already mentioned, a report by Governor Hunter gives the area of vines in 1797 as 8 acres. From New South Wales the cultivation spread to Victoria and South Australia, and these States have now far outstripped New South Wales in the area of this crop. . In Western Australia an expansion of area under vineyards has occurred in recent years, but in Queensland, where vine-growing has been carried on for many years, little progress has been made. The purposes for which grapes are grown in Australia are (*a*) for wine-making, (*b*) for table use, and (*c*) for drying. The total area of vines in the several States during each of the years 1938–39 and 1942–43 to 1945–46 and the averages for the ten-year periods ended 1938–39 and 1945–46 are shown in the following table :—

VINEYARDS : AREA.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	A.C.T.	Australia.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Average 10 seasons ended 1938–39 ..	15,777	40,563	2,142	54,156	5,666	..	118,304
1938–39	16,979	42,436	2,793	58,020	6,277	2	126,507
1942–43	16,302	42,634	3,040	58,202	10,126	3	130,307
1943–44	16,001	42,711	2,998	57,261	10,240	2	129,213
1944–45	15,891	42,914	3,032	56,925	10,117	2	128,881
1945–46	15,983	42,843	3,003	57,440	9,583	3	128,855
Average 10 seasons ended 1945–46 ..	16,455	42,570	2,959	57,606	8,297	2	127,889

The total area of vines in Australia has shown a substantial expansion since 1860. This development has been interrupted periodically, decreases occurring in 1896, in the years between 1904 and 1910, and in 1914. Since the latter year the area increased without interruption from about 61,000 acres to more than 114,000 acres in 1924–25, due largely to the planting of varieties suitable for drying. Subsequently the area fluctuated around 114,000 acres but commenced to increase again in 1933–34. Since then the expansion has continued, reaching the record area of 130,307 acres in 1942–43. A slight decline has occurred in each of the years 1943–44 to 1945–46, the acreage in the latter year being 128,855 acres.

(ii) *Report on the Wine Industry.* An investigation into conditions in the wine industry was undertaken by the Commonwealth Director of Development and the Senior Inspector of Excise, Department of Trade and Customs, and a comprehensive report was presented to Parliament on the 17th July, 1931.

During 1944 the Minister for Trade and Customs referred a number of matters to the Tariff Board for inquiry and report. Subsequently four reports were issued during 1944–45 which dealt with the following subjects, viz. :—Use of cane sugar in sauterne, spirit for fortification of wine, prices for grapes and fortifying spirit and control of liquor order.

(iii) *Wine Production, Bounties, etc.* The production of wine has not increased as rapidly as the suitability of soil and climate would appear to warrant. Production for the ten years ended 1945–46 averaged 18.2 million gallons compared with 16.4 million gallons produced during the ten years ended 1935–36. This seems to arise from two causes. In the first place, Australians are not a wine-drinking people ; it is estimated that prior to the 1939–45 War they consumed approximately 4.1 million gallons only or 0.6 gallons per head per annum and consequently the local market is restricted. On this point, however, the quantity of wine released annually for home consumption during the war years increased to 7 million liquid gallons or the equivalent of about 1 gallon per head of population. Secondly, the comparatively new and unknown wines of Australia must compete in the markets of the old world with the well-known and long-established brands from other countries. Continued efforts are being made to bring the Australian wines under notice both here and abroad and with the assistance of a Commonwealth bounty on the export of fortified wine of specified strength, the industry has been greatly stimulated. Further development, however, was interrupted by the war. The loss of the United Kingdom market due to the lack of shipping space placed the wine industry of Australia in a most difficult position, but this was partly offset by the increase in local consumption due to the availability of supplies, the restriction on the production of beer and the presence of large numbers of defence personnel.

Particulars of the Wine Export Bounty are shown in § 20 hereafter. The Wine Export Bounty Act 1930 which provided for payment at the rate of 1s. 9d. per gallon was replaced in 1934 by a new Act which fixed the rate at 1s. 3d. per gallon for the two years ending 28th February, 1937, and thereafter at a reduction of 1d. per gallon for each succeeding year until 1940. The payment of a bounty at the rate of 1s. per gallon for a period of five years to 28th February, 1945, subsequently extended to 28th February, 1947, was provided for under the Wine Export Bounty Act of 1939–1944.

The quantity of wine produced in the several States during the 1938–39 and 1942–43 to 1945–46 seasons, together with the averages for the ten year periods ended 1938–39 and 1945–46, is shown in the following table :—

WINE : PRODUCTION.

('000 omitted.)

Average 10 seasons ended 1945–46 ..	2,836	1,298	32	13,606	464	18,238

2. Imports and Exports of Wine.—(i) *Imports.* The principal countries of origin of wine imported into Australia were, before the War, France, Spain, Portugal and Italy, the bulk of the sparkling wines coming from France. The imports for the five years ended 1946–47 compared with 1938–39 are shown hereunder :—

WINE : IMPORTS INTO AUSTRALIA.

Year.	Quantity.			Value.		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total
	Gallons.	Gallons.	Gallons.	£A.	£A.	£A.
1938–39 ..	10,759	30,451	41,210	23,303	22,792	46,095
1942–43 ..	3	59	62	63	82	145

1946–47 ..	1,719	1,585	3,304	8,690	3,340	12,030

(ii) *Exports.* Before the 1939–45 War practically all wine exported was sent to the United Kingdom, only 200,000 gallons (approximately) being sent elsewhere. Exports in 1946–47 totalled 2,720,599 gallons of which the United Kingdom received 2,041,804 gallons; Canada, 186,725 gallons; New Zealand, 152,194 gallons; New Caledonia, 94,522 gallons; and other countries 245,354 gallons.

Exports for the years 1938–39 and 1942–43 to 1946–47 are shown in the following table :—

WINE : EXPORTS FROM AUSTRALIA.

Year.	Quantity.			Value.		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.

1945–46 ..	7,984	1,776,452	1,784,436	10,619	729,969	740,588
1946–47 ..	3,244	2,717,355	2,720,599	4,975	1,176,626	1,181,601

3. Overseas Marketing of Wine.—(i) *The Wine Overseas Marketing Act* 1929–1945. This Act was introduced at the request of the viticultural interests in Australia with the object of placing the overseas marketing of Australia's surplus wine on an orderly basis. The Wine Overseas Marketing Board was appointed to supervise the exports, and the sale and distribution after export, of Australian wine.

The name of the Board was changed to the Australian Wine Board in 1936. An amendment to the Act in 1945 made provision for eleven members on the Board, comprising five representatives of proprietary and privately-owned wineries and distilleries, two representatives of co-operative wineries and distilleries, three representatives of grape-growers supplying to wineries and distilleries, and one representative of the Commonwealth Government. No wine may be exported except by means of a licence which is issued under conditions recommended to the Minister by the Board; these include the withholding of shipments as directed by the Board. The Board has a London agency which advises on marketing conditions. The methods of marketing adopted by the Board have resulted in the widening of the distribution of Australian wines overseas.

(ii) *The Wine Grapes Charges Act* 1929–1941. This Act provides for the imposition of a levy on all grapes used in Australia for the manufacture of wines or spirit used for fortifying wine. The proceeds of the levy are used to defray the administrative and other expenses of the Board, and provision is made for such exemptions from the levy as the Board may recommend.

4. **Other Viticultural Products.**—(i) *Table Grapes.* Grapes for table use are grown in all the States except Tasmania, but the area cultivated to this variety is only about 7 per cent. of the productive area of grapes. The greatest development in the industry has taken place in the drying of raisins and currants, particularly in Victoria and South Australia. The quantities of table grapes grown during the seasons 1938–39 and 1942–43 to 1945–46 and the averages for the ten year periods ended 1938–39 and 1945–46 are as follows :—

TABLE GRAPES : PRODUCTION.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Australia.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Average 10 seasons ended 1938–39 ..	4,354	3,884	2,060	738	2,874	13,910
1938–39	4,034	4,089	2,313	985	3,139	14,560
1942–43	5,186	4,123	2,621	1,218	3,194	16,342
1943–44	5,325	4,067	2,696	1,150	3,240	16,478
1944–45	4,363	5,255	2,237	917	2,903	15,675
1945–46	4,817	4,133	3,120	1,036	2,342	15,448
Average 10 seasons ended 1945–46 ..	4,732	4,182	2,515	1,032	2,782	15,243

(ii) *Raisins and Currants.* The quantities of raisins (sultanas and lexias) and currants dried during each of the seasons 1938–39 and 1942–43 to 1945–46 and the averages for the ten-year periods ended 1938–39 and 1945–46 are shown in the following table. The production of 103,410 tons for the 1943–44 season represents the greatest output recorded in any year. Due to adverse seasonal conditions, heavy crop losses occurred during the three succeeding years. Production in 1944–45 amounted to 68,857 tons, to 73,840 tons in 1945–46 and to 65,197 tons in 1946–47.

RAISINS(*a*) AND CURRANTS : PRODUCTION.

(*a*) Sultanas and lexias.

5. **Production and Disposal of Dried Vine Fruit.**—As the production of dried vine fruit is far in excess of Australia's requirements, considerable quantities are available for export overseas. Details of the quantities disposed of in Australia and overseas are given in the table below. The quantities disposed of to civilians include amounts delivered to biscuit manufacturers, bakeries, etc., as well as retail sales for household consumption.

DRIED VINE FRUIT : QUANTITIES DISPOSED OF, AUSTRALIA.

(a) Not available separately. (b) Estimated. Subject to revision.

6. **Exports of Raisins and Currants.**—The following table shows the oversea exports of raisins and currants during each of the five years ended 1946–47 compared with 1938–39. As the quantities of imports were practically negligible they have been omitted.

RAISINS AND CURRANTS : EXPORTS, AUSTRALIA.

Year.	Raisins.		Currants.		Total Raisins and Currants.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£A.	Tons.	£A.	Tons.	£A.
1938–39 ..	49,550	1,974,045	23,759	772,966	73,309	2,747,011
1942–43 ..	46,731	1,813,713	11,240	358,039	57,971	2,171,752
1943–44 ..	56,039	2,449,050	18,994	714,315	75,033	3,163,365
1944–45 ..	56,418	2,647,719	20,994	828,330	77,412	3,476,049
1945–46 ..	30,022	1,547,688	9,307	403,645	39,329	1,951,333
1946–47 ..	35,248	1,913,574	5,606	243,508	40,854	2,157,082

Since 1912 Australia has not only produced sufficient raisins and currants for home consumption but has been able to maintain a large export trade. The chief countries importing Australian raisins and currants are the United Kingdom, Canada and New Zealand, the quantities exported thereto in 1946–47 being respectively 24,163, 10,880 and 4,763 tons or 59, 26 and 12 per cent. respectively. Exports to Canada increased from 4,600 tons in 1928–29 to 16,944 tons in 1939–40 and to 25,955 tons in 1944–45, but decreased to 10,880 tons in 1946–47.

7. **War-time Contract.**—At the outbreak of war in 1939 the Government of the United Kingdom purchased all available surpluses after provision had been made for Canadian and New Zealand requirements. During the 1944 and 1945 seasons prices fixed under these contracts represented a substantial increase over pre-war prices.

8. **Post-war Contract.**—A long term agreement has been negotiated between the Governments of the Commonwealth and the United Kingdom for the purchase of the exportable surplus of the dried vine fruit crop for the 1946, 1947 and 1948 seasons. The contract prices for currants, sultanas and lexias sold to the United Kingdom during the war years 1942 to 1945, as well as the prices fixed under the post-war contract covering the years 1946 to 1948, are shown in the following table.

DRIED VINE FRUITS : CONTRACT PRICES PER TON TO UNITED KINGDOM.

(Basis : F.o.b. Australian Ports.)

Lexias ..	4 and 5 Crown ..	49	7	6	50	12	6	54	7	6	55	18	9	64	7	6

9. **Overseas Marketing of Dried Fruits.**—(i) *The Dried Fruits Export Control Act* 1924–1938. This Act was passed by the Commonwealth Parliament at the request of the dried fruits industry to organize the overseas marketing of Australian dried vine fruits. The Dried Fruits Control Board, consisting of eight members—including five growers' representatives, two members with commercial experience and one Government nominee—was appointed to control the export, and the sale and distribution after export, of Australian sultanas, currants and lexias. In conjunction with its London agency, the Board has improved the marketing of Australian dried fruits overseas, and has increased the demand for the product. Its system of appraisement has resulted in more satisfactory realizations. Its methods of ensuring continuity of supply and regulating shipments and its participation in the advertising campaign of the Australian Overseas Trade Publicity Committee have benefited the industry considerably. No dried fruits may be exported except by means of a licence, which is issued subject to conditions recommended by the Board.

(ii) *Dried Fruits Export Charges Act* 1924–1929. This Act provides for the imposition of a levy on all sultanas, currants and lexias exported from Australia for the purpose of defraying the administrative expenses of the Board and the cost of advertising, etc. The rate of the levy is fixed by regulation. Under an amendment made in 1927 provision was made for the exemption of sultanas, currants and lexias from the levy upon recommendations by the Board.

(iii) *The Dried Fruits Act* 1928–1935. In previous issues of the Official Year Book reference has been made to the Dried Fruits Act and its provisions have been outlined (*see* p. 894 of Official Year Book, No. 28).

§ 17. Orchards and Fruit-Gardens.

1. **Area.**—The greatest area of orchards and fruit-gardens was attained in 1933–34 when 281,989 acres were planted. From that year until 1942–43, when 260,384 acres were under fruit, there was a gradual decline. Since 1942–43 there has been an upward movement to 269,823 acres in 1945–46. The total area of orchards and fruit-gardens in the several States during the years 1938–39 and 1942–43 to 1945–46 is shown in the following table :—

ORCHARDS AND FRUIT-GARDENS : AREA.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	N. Terr.	A.C.T.	Australia.

2. **Varieties of Crops.**—(i) *General.* The varieties grown differ in various parts of the States, ranging from such fruits as the pineapple, papaw, mango and guava of the tropics to the strawberry, the raspberry and the currant of the colder parts of the temperate zone. In New South Wales, citrus fruits (oranges, lemons, etc.) occupy the leading position, although apples, peaches, plums, pears, cherries and bananas are extensively grown. The principal varieties grown in Victoria are the apple, peach, pear, orange, plum and apricot. In Queensland, the banana, pineapple, apple, orange, mandarin, peach, and plum are the varieties most largely cultivated. In South Australia, in addition to the apple, orange, apricot, plum, peach and pear, the almond and the olive are extensively grown. In Western Australia, the apple, orange, lemon, pear, plum, peach, apricot and fig are the chief varieties. In Tasmania, the apple occupies over two-thirds of the fruit-growing area, but small fruits, such as the currant, raspberry and gooseberry, are extensively grown, while the balance of the area is mainly taken up with the pear, apricot and plum. The following table shows the acreage—bearing and non-bearing—of the principal kinds of fruit, and the quantity and value of fruit produced.

(ii) *Area.* The table hereunder shows the total acreage for 1945–46 :—

ORCHARDS AND FRUIT-GARDENS : AREA, 1945–46.

4. **Imports and Exports of Fruit.**—(i) *General.* The imports of fresh fruits into Australia are negligible whilst those of dried fruits consist mainly of dates.

A considerable export trade in both fresh and dried fruits is carried on by Australia with oversea countries. The values of the shipments in 1946–47 amounted to £1,549,890 and £2,430,584 respectively. Apples formerly constituted the bulk of the fresh fruit exported although the exports of citrus fruits and pears were fairly considerable. Shipments of raisins and currants have increased greatly since 1914–15, and are mainly responsible for the growth in the dried fruits exports although dried tree fruits also figure amongst the exports.

(ii) *Fresh Fruits.* Particulars of the Australian oversea trade in fresh fruits are shown in the following table :—

FRESH FRUITS : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Centals.	£A.	Centals.	£A.	Centals.	£A.
1938–39 ..	69,883	29,843	2,752,437	2,022,936	2,682,554	1,993,093

(iv) *Dried Fruits.* The quantity and value of overseas imports and exports of dried fruits, other than raisins and currants, for the five years ended 1946–47 compared with 1938–39 are shown below. Normally, the bulk of the imports consists of dates obtained almost entirely from Iraq. This trade was prohibited during the war years but has since been resumed.

DRIED FRUITS(*a*) : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	'000 lb.	£A.	'000 lb.	£A.	'000 lb.	£A.
1938–39 ..	11,097	80,752	3,927	117,814	−7,170	37,062
1942–43 ..	23	323	2,428	105,265	2,405	104,942
1943–44 ..	24	725	3,631	131,188	3,607	130,463

(*a*) Excludes raisins and currants referred to separately under Vineyards, § 16, par. 6.
NOTE.—Minus sign (−) denotes net imports.

(v) *Jams and Jellies.* Jams and jellies were exported in large quantities during the 1914–18 War, the record shipment of 79,277,560 lb., valued at £1,847,970, being dispatched from Australia during 1918–19. Exports during the 1939–45 War did not reach the record dimensions obtained during the 1914–18 War. Australian and Allied Services based upon Australia had prior claims upon Australia's output of jam, with the result that the exportable surplus, after meeting civil needs, was much reduced. Exports reached their highest level in 1940–41, before the outbreak of war in the Pacific, when nearly 45 million lb. of jam were exported. Peak production occurred in 1943–44 and amounted to 171 million lb. compared with the peak of the 1914–18 War of 136 million lb. in 1918–19. Particulars of imports and exports during each of the years 1938–39 and 1942–43 to 1946–47 are as follows :—

JAMS AND JELLIES : IMPORTS AND EXPORTS, AUSTRALIA.

Year.	Imports.		Exports.		Net Exports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	'000 lb.	£A.	'000 lb.	£A.	'000 lb.	£A.
1938–39 ..	81	3,253	13,872	262,486	13,791	259,233

1946–47 ..	..	4	65,434	2,206,696	65,434	2,206,692

(vi) *Preserved Fruit.* The total quantity of fruit preserved in liquid, or partly preserved in liquid or pulped, imported into Australia during 1946–47 was £A.537. Large quantities of fruit preserved in liquid are normally exported from Australia, the value of shipments in 1938–39 amounting to £A.1,271,525. Exports were considerably reduced during the recent war owing to the prior claims on Australia's output by the Australian and Allied Services based on Australia, but in 1946–47 the value of exports had increased to £A.2,114,248. In addition, the exports of pulped fruits during 1946–47 amounted to

£446,335. Particulars of the quantities and value of fruit preserved in liquid exported from Australia in 1938–39 and each year 1942–43 to 1946–47 are shown in the following table :—

FRUIT PRESERVED IN LIQUID : EXPORTS FROM AUSTRALIA.

Year.	Apricots.	Peaches.	Pears.	Other.	Total.
			QUANTITIES ('000 lb.)		
1938–39	9,484	44,383	20,858	6,753	81,478

5. **Marketing of Apples and Pears.**—(i) *Apple and Pear Organization Act* 1938–1947. This Act, which was passed by the Commonwealth Parliament at the request of the apple and pear industry, provides for the establishment of an Australian Apple and Pear Board for the purpose of organizing and controlling the export trade in fresh apples and pears.

The Board originally comprised sixteen members but by an amendment of the Act in 1947 the members were reduced to twelve, representative of the following interests :—one member to represent the Commonwealth Government ; seven members to represent growers of apples and pears on the basis of two for Tasmania and one each for the other States ; three members to represent exporters of apples and pears on the basis of one each for Tasmania and Western Australia and one for the other States ; and one member to represent the employees engaged in the apple and pear industry.

The Board has power to regulate the shipment of apples and pears from Australia by licensing exporters and issuing permits to export. Power is also given to determine export quotas and to allocate the consignments from each State. The Board may appoint persons to represent it overseas.

The Apple and Pear Publicity and Research Act 1938 and the related Apple and Pear Tax Acts, referred to in earlier issues of the Official Year Book, have now been repealed by the 1947 amendment to the Apple and Pear Organization Act.

(ii) *Apple and Pear Export Charges Act* 1938–1947. This Act provides for the imposition of a levy on all apples and pears exported from Australia for the purpose of providing the funds necessary to meet the administrative and other expenses of the Board.

(iii) *Apple and Pear Acquisition.* Exports of apples and pears have been seriously curtailed as a result of the war and during the 1940 to 1948 seasons crops were acquired and marketed under the National Security (Apple and Pear Acquisition) Regulations and Regulations issued under the Defence (Transitional Provisions) Act 1946. During the 1940 season the scheme was supervised by a Marketing Committee attached to the Australian Apple and Pear Board with committees operating in each State, but from 1941 the operations of the Australian Apple and Pear Board were suspended and the Australian

Apple and Pear Marketing Board was constituted under the National Security (Apple and Pear Acquisition) Regulations to handle and market all apples and pears acquired. The Regulations provide for the acquisition and orderly marketing of apple and pear crops, growers being paid guaranteed advances on fruit acquired. During the 1940, 1941 and 1942 seasons, the acquisition applied to all States but from 1943 to 1948 the scheme has operated only in respect of crops grown in Tasmania and Western Australia. The following table gives details of the total quantity of fruit acquired and the amounts paid to growers as advances on the basis of " bare " fruit in the orchard for the seasons 1942 to 1946. All packing and marketing costs such as cases, packing, transport, cool storage, selling, etc. were paid by the Board :—

(*a*) Includes Australian Capital Territory. (*b*) Acquisition scheme did not apply. (*c*) Excludes 110,154 bushels sold privately by growers. (*d*) Excludes 6,861 bushels sold privately by growers.

6. **Overseas Marketing of Canned Fruit.**—(i) *The Canned Fruits Export Control Act* 1926–1938. This legislation was introduced at the request of canners and representative organizations of fruit-growers with the object of organizing the oversea marketing of canned fruit. The original Act referred to canned apricots, peaches and pears only, but canned pineapples and canned fruit salads consisting of not less than 75 per cent. of specified fruits were subsequently brought within the scope of the Board's operations. The personnel of the Australian Canned Fruits Board consists of one representative each from proprietary and privately owned canneries, co-operative canneries, State-controlled canneries, pineapple interests and the Commonwealth Government. No canned fruits to which the Act applies are permitted to be exported except under a licence issued in accordance with conditions recommended by the Board. The system of marketing adopted by the Board, including the fixation of minimum selling prices overseas, the appointment of a London agency and the engaging in oversea trade publicity, has resulted in the satisfactory disposal of the annual exportable surplus of canned fruits. The distribution of canned fruits has been widened and the exporting side of the industry placed on a sounder basis through the Board's operations.

(ii) *The Canned Fruits Export Charges Act* 1926–1938. This Act provides for the imposition of a levy on the export of canned fruits to meet the administrative and other commitments of the Board. The rate of the levy is fixed by regulation from time to time. An amendment in 1929 provided for certain exemptions from payment of the levy when recommended by the Board.

(iii) *War-time Contracts.* The exportable surplus from the 1940 pack was subject to an arrangement between the Commonwealth and United Kingdom Governments under which the British Ministry of Food agreed to purchase canned apricots, peaches, and pears at prices fixed on an f.o.b. basis, Australian ports.

In 1941 further purchases were made by the British Ministry of Food for shipment to destinations other than the United Kingdom.

From 1942 onwards, the requirements of the Defence Services and other Governmental orders expanded rapidly and necessitated official control of disposals to ensure that these priority demands were fully met. Commercial shipments of canned fruits virtually ceased and the quantities available for civilian consumption were considerably below normal requirements. Approximately 70 per cent. of the 1945 pack was allocated to meet service and other Governmental demands.

In 1946 commercial shipments were resumed and approximately one million cases of canned fruits were exported to the United Kingdom under an official arrangement which was virtually on a merchant to Government basis. A similar arrangement is in operation in respect of 1947 exports to the United Kingdom.

§ 18. Vegetables for Human Consumption.

1. **Area and Production of Fresh Vegetables.**—The pre-war production of vegetables in Australia, which had been sufficient to meet the needs of the population was, generally speaking, supplied by growers whose holdings were adjacent to centres of consumption. These areas were classified for statistical purposes as market gardens and were tabulated as such. Details of the areas planted and production respecting individual kinds of vegetables were not collected.

Following the outbreak of war in the Pacific in December, 1941 and the establishment of Australia as a base for Australian and Allied Services in the South-West Pacific Area it was evident that the production of fresh vegetables under the conditions then existing would be insufficient to meet the additional demand from the Services. Consequently extensive development of vegetable-growing in Australia was undertaken, resulting in an expansion from the peace-time need of about 100,000 acres to more than 200,000 acres exclusive of potatoes, onions, navy beans and blue peas, details of whose production are referred to in §§ 10, 11 and 12 of this Chapter.

This development was achieved by continuing supplies of vegetables to the civil population from the market gardens already established, by extending production to areas which previously had not grown these crops and by the mechanization of the industry. Farming operations were thus able to be undertaken in many cases on a scale larger than that normally adopted in Australia. In addition, the letting of contracts at guaranteed prices proved an attraction, and the vegetable-growing industry was able to produce the additional quantities necessary to meet the war-time needs of the services as well as those of the civil population.

Details of the area and production of vegetables for the seasons 1943–44 to 1945–46 are given in the following table. Owing to the difference in collection already referred to, comparable figures prior to 1942–43 are not available.

FRESH VEGETABLES(*a*) FOR HUMAN CONSUMPTION : AUSTRALIA.

Vegetable.	1943–44.		1944–45.		1945–46.

Total ..	198,608	..	240,282	..	196,523	..

(*a*) Excludes potatoes, onions, blue peas and navy beans.

2. **Production of Canned Vegetables.**—As a corollary to the development mentioned above a considerable expansion occurred in the processing of vegetables. New canning factories were established in many parts of the Commonwealth, and a new industry for the processing of vegetables by the dehydration method was commenced. Since the close of hostilities there has been a sharp decline in the output of canned vegetables, but preliminary figures indicate that the quantity canned in 1946–47 (approximately 46 million lb.) was considerably greater than in 1938–39.

The development in the vegetable canning industry is indicated in the table below :—

PRODUCTION OF CANNED VEGETABLES : AUSTRALIA.

Vegetable.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.	1946–47. (*d*)

(*a*) Included in "Other Vegetables". (*b*) Includes particulars of vegetables marked (*a*). (*c*) Includes Parsnips, Potatoes, Turnips, Sweet Corn, etc. (*d*) Subject to revision.

3. **Production of Dehydrated Vegetables.**—The dehydration of vegetables was not undertaken in Australia until after the outbreak of war in the Pacific towards the close of 1941. The demand for vegetables in this form by Australian and Allied Services made this development a necessity and as a result 33 dehydration plants were erected in all

States except Queensland, in areas where adequate supplies of suitable vegetables were assured. With the termination of Commonwealth contracts for dehydrated vegetables in October, 1946, a number of plants ceased to operate and output for commercial purposes in the remaining plants was drastically curtailed.

In the following table details, as recorded by the Department of Commerce and Agriculture, are given of the quantities of fresh vegetables processed and the output in dehydrated form since the industry was established.

DEHYDRATED VEGETABLES : QUANTITY OF FRESH VEGETABLES USED AND PRODUCTION, AUSTRALIA.

Particulars.	1942–43.	1943–44.	1944–45.	1945–46.	1946–47.

Total	2,748	8,788	20,502	21,622	2,315

(a) Not available. (b) Included with "Other".

4. **Imports and Exports of Vegetables.**—Oversea exports of pulse and fresh vegetables during 1946–47 consisted of :—pulse, 7,893 tons, £343,915 ; onions, 7,248 tons, £170,125 ; potatoes, 25,852 tons, £504,658 ; other vegetables, 7,038 tons, £222,017. Imports totalled 4,063 tons, valued at £279,974, of which pulse comprised 3,971 tons, valued at £275,898.

The export trade in dehydrated and preserved vegetables has shown remarkable expansion since 1938–39. In 1946–47 exports of dehydrated vegetables amounted to 13,702,324 lb., valued at £1,162,426 and exports of preserved vegetables consisted of :—Peas, 3,895,478 lb., £145,091 ; tomatoes, 1,700,285 lb., £63,027 ; other vegetables 22,502,942 lb., £738,535.

Exports of both canned and dehydrated vegetables during the war years were mainly for the purpose of supplying the Australian, British and Allied Services overseas.

§ 19. Minor Crops.

1. **General.**—There are many other crops which do not occupy so prominent a position as those already enumerated. Some of the more important of these are included under the headings—Tobacco, Hops, Flax, Peanuts, Cotton and Sorghum.

2. **Grass Seed.**—Particulars of the area of grass crops grown for seed cannot be accurately determined as seed is obtained from certain crops such as clover, lucerne, etc. at a second cutting. The production of seed recorded in 1945–46 was clover, 15,288 cwt. ; lucerne, 7,444 cwt. ; other grass seed, 23,763 cwt., or a total of 46,495 cwt.

3. **Other Grains from Sorghums.**—In addition to the grass seed referred to in paragraph 2 above and grain sorghum in § 9, considerable expansion has occurred in the area sown to Japanese Millet, Panicum and Setaria. Particulars of the area and production for the years 1941–42 to 1945–46 are given in the table below.

SORGHUMS : AREA AND PRODUCTION OF GRAIN, AUSTRALIA.

Year.	Japanese Millet.(a)		Panicum, Millet and Setaria.(b)	
	Area.	Production.	Area.	Production.
	Acres.	Tons.	Acres.	Tons.
1941–42	(c)	(c)	14,042	5,497
1942–43	496	149	9,319	3,115
1943–44	1,083	460	15,948	8,044
1944–45	2,948	964	16,570	4,784
1945–46	2,628	1,526	22,172	8,711

(a) Victoria only. (b) Queensland only. (c) Not available.

4. **Tobacco.**—(i) *General.* Tobacco-growing years ago promised to occupy an important place amongst the agricultural industries of Australia. As early as the season 1888–89, the area of this crop amounted to 6,641 acres, of which 4,833 were in New South Wales, 1,685 in Victoria, and 123 in Queensland. This promise was, however, not fulfilled, and after numerous fluctuations, in the course of which the Victorian area rose in 1895 to over 2,000 acres, and that in Queensland to over 1,000 acres, the total area declined considerably.

(ii) *States, Area and Production.* The expansion of the tobacco-growing industry was hoped for as a war-time measure but, although the acreage planted increased slightly during the first three war years, it has since decreased considerably, being in 1945–46 only 35 per cent. of the annual average for the ten years ended 1938–39 and the production of dried leaf only 47 per cent. of the pre-war average. The area of 3,971 acres and production of 2,505,000 lb. represented a decrease on 1941–42 of 4,849 acres and of more than 4,535,000 lb.

In the following table particulars of the area and production of tobacco are given by States for each of the years 1938–39 and 1942–43 to 1945–46, together with averages for the ten year periods ended 1938–39 and 1945–46 :—

(iii) *Australian Tobacco Board.* The Australian Tobacco Board was constituted in May, 1941 for the purpose of regulating the marketing of Australian-grown tobacco leaf, which must be submitted to the Board for appraisement.

(iv) *Tariff Board Inquiries.* The tobacco industry has been the subject of a number of investigations. The Tariff Board inquired into the industry in 1926, 1931 and 1940 and reports were issued.

(v) *Tobacco Inquiry Committee.* The Tobacco Inquiry Committee, which was appointed by the Commonwealth Government to investigate certain aspects of the industry in North Queensland, presented its report in 1933. Recommendations included that for payment of a sum of £20,000 annually for a period of five years to assist the States to continue economic and scientific investigations. This recommendation was adopted and the distribution was spread between the years 1934–1938 as follows:—£5,000 to the Council for Scientific and Industrial Research, £3,750 to each of the States of New South Wales, Victoria and Queensland, and £1,250 each to South Australia, Western Australia and Tasmania.

A further grant of £62,500, which was increased by £11,250 in 1941, was allotted by the Commonwealth Government to be paid periodically between the years 1939 to 1943. The amount of £73,750 was allocated as follows:—Council for Scientific and Industrial Research, £25,000, and £10,000 annually among the States for the years 1939 and 1941 to 1943, and £8,750 for 1940. In August, 1946, the Commonwealth Cabinet approved a grant of £10,000 per annum for five years on a £ for £ basis to be allocated among producing States for experimental and demonstration work in connexion with tobacco leaf production; particularly in regard to control and elimination of diseases and pests. The annual grant of £10,000 has been allocated to States on the following basis:—Queensland, £3,750; New South Wales, £1,500; Victoria, £2,250; Western Australia, £2,500.

The Council for Scientific and Industrial Research is investigating diseases affecting the tobacco plant, including work on disease-resisting varieties, and is making tests of smoking quality. In spite of delays due to the war, the Council has been successful in discovering effective means of preventing blue mould, which has seriously retarded the development of the industry. The States are carrying out field investigations on disease resistance, selection, yield and quality improvement, and are conducting instructional, demonstrational and field experimental work.

(vi) *Tobacco Factories.* In 1945–46 the quantity of stemmed leaf used in tobacco factories in Australia amounted to 15.5 million lb. of which 4.7 million was of local origin and the balance was imported, chiefly from the United States of America.

(vii) *Imports.* The total net imports of tobacco into Australia during the years 1945–46 and 1946–47 were valued at £A.5,126,802 and £A.4,376,147 respectively. These figures include net imports of unmanufactured tobacco valued at £A.5,829,636 in 1945–46 and £A.4,082,081 in 1946–47.

5. **Hops.**—Hop-growing in Australia is practically confined to Tasmania and some of the cooler districts of Victoria, the total area for 1945–46 being 1,359 acres, of which 1,191 acres were in Tasmania, 153 acres in Victoria and a small area of 15 acres in Western Australia. The Tasmanian area, though still small, has increased during the present century, the total for 1901–2 being 599 acres. In Victoria the area, which in 1901–2 was 307 acres, dwindled to 71 acres in 1918-19, then rose to 312 acres in 1925–26 and dropped to 173 in 1939–40. The cultivation of hops was much more extensive in Victoria some 60 years ago than at present, the area in 1883–84 being 1,758 acres.

In the following table details of the production, imports and exports of hops and the quantity of hops used in breweries are shown for each of the years 1938–39 and 1942–43 to 1945–46 :—

HOPS : PRODUCTION AND DISPOSAL, AUSTRALIA.

Year.	Production. Quantity.	Production. Gross Value.	Imports.	Exports.	Net Available Supplies. (a)	Quantity used in Breweries
	Cwt.	£	Cwt.	Cwt.	Cwt.	Cwt.

1945–46	19,835	225,946	2,402	55	22,182	22,436

(a) Disregarding movements in stocks.

The Tariff Board conducted an inquiry into the hop-growing industry and issued a report on 12th June, 1945.

6. Flax.—For many years flax was grown intermittently in parts of Victoria and unsuccessful attempts were made to introduce its cultivation in some of the other States.

During the 1914–18 War there was an acute shortage of flax fibre and expansion of production was encouraged by the Commonwealth Government. Bounties were paid on production during the years 1907 to 1918 and again for each of the five years ended 1935. The amounts distributed as bounty during these periods totalled £2,370 and £2,830 respectively. However, the maximum area, which was sown in 1919–20, was only slightly more than 2,000 acres. The area subsequently declined to less than 100 acres in 1928–29. A further attempt to establish the industry was made in 1935 and as a result the area in Victoria had increased to 1,358 acres by 1938–39. Following the outbreak of the 1939–45 War the area sown increased rapidly, reaching over 54,000 acres in 1941–42 and over 61,000 acres in 1944–45. In 1945–46, however, the area shown fell by 32 per cent. to 41,413 acres. Victoria is the chief producing State, but South Australia, Western Australia and Tasmania have also contributed to this war-time expansion which was necessary to ensure Australia's supplies of flax and, in accordance with an agreement negotiated between the two Governments, to provided an export to assist in meeting the urgent needs of the United Kingdom. The arrangement concluded on 31st October, 1946, and action is being taken to effect financial adjustment between the two countries.

Details of the area under flax and the production of straw are given in the following table :—

FLAX : AREA AND PRODUCTION.

Year.	Victoria.	S. Australia.	W. Aust.	Tasmania.	Total
		Area (Acres).			
1938–39..	1,358	..	..	..	1,358

1944–45..	17,035	3,315	3,907	4,088	28,345
1945–46..	18,798	6,969	4,229	1,360	31,356

Although the growing of flax on a large scale was established as a war-time measure, it is proposed to continue the industry at a level sufficient to meet local requirements providing that it can be efficiently maintained in competition with other countries. It has been estimated that about 30,000 acres are required to produce flax for the peace-time needs of Australia.

The industry is under the control of the Flax Production Committee appointed under the Supply and Development (Flax Production) Regulations. The Committee has, amongst other things, organized the growing and harvesting of the crop, and the processing of the flax as well as disposing of the resultant products to spinners and others in Australia and overseas. In 1943–44 in the four producing States there were 31 mills under the control of the Committee. Some of these mills have since been closed.

The growing of flax for oil has not been developed extensively in Australia, the area devoted to this purpose in 1945–46 being 383 acres from which 51 tons of linseed were obtained. Action is being taken to develop this industry.

The flax industry was the subject of two investigations, one in 1933 and the other in 1936 (*see* Official Year Book No. 32, p. 658).

7. **Peanuts.**—The production of peanuts, or groundnuts, in Australia is mainly confined to Queensland although small quantities are grown in New South Wales and Western Australia. Details of the area and production are given in the table below.

PEANUTS : AREA AND PRODUCTION, AUSTRALIA.

Year.	Area.				Production.			
	N.S.W.	Q'land.	W. Aust.	Total.	N.S.W.	Q'land.	W. Aust.	Total.

(*a*) Includes 1,040 acres, 217 tons in Northern Territory. (*b*) Not available. (*c*) Excludes New South Wales. (*d*) Average for five years. (*e*) Average for six years.

The gross value of the 1945–46 crop was £494,488.

In addition to the production shown above, considerable quantities of peanut kernels are imported annually, chiefly from India, for oil expression purposes. Details of Australia's available supplies in terms of kernels are given for the years 1938–39 and 1942–43 to 1946–47.

PEANUTS (IN TERMS OF KERNELS): AVAILABLE SUPPLIES, AUSTRALIA.

Total ..	5,770	10,659	8,637	17,432	7,592	8,878

(*a*) Crop harvested in April–May of the preceding year and available for consumption during year shown.

8. **Broom Millet.**—The total area devoted to broom millet in 1945–46 was 5,189 acres, of which 3,704 acres were in New South Wales, 1,195 in Victoria, 240 in Queensland and 50 in Western Australia. The total production from these areas was 32,673 bushels of grain and 31,719 cwt. of fibre.

9. **Nurseries.**—In all the States fairly large areas are occupied as nurseries. The acreages under flowers, fruit-trees, etc., in 1945–46 in the various States were as follows:—New South Wales, 603 acres; Victoria 2,246 acres; Queensland, 67 acres; South Australia, 137 acres; Western Australia, 162 acres; and Tasmania, 83 acres; a total for Australia of 3,298 acres.

10. **Cotton.**—(i) *General.* The production of cotton in Australia is restricted to Queensland where cultivation began in 1860, and ten years later the area cropped had increased from 14 acres to over 14,000 acres. The reappearance of American cotton in the European market on the conclusion of the Civil War gave a severe setback to the new industry, and the area declined continuously until 1888, when only 37 acres were planted. Later on the industry was revived, and manufacturing on a small scale was undertaken on two separate occasions at Ipswich, but low prices over a term of years checked development.

(ii) *Bounties, etc.* In 1913 the Queensland Government made an advance of 1½d. per lb. on seed cotton and ginned it on owner's account, the final return being equal to about 1¾d. per lb. The rise in price enabled the Government to offer a guarantee of 5½d. per lb. for seeded cotton of good quality for the three years ended 31st July, 1923, and the areas picked increased from 166 areas in 1920 to 50,186 acres in 1924. Guarantees were continued until 1926, when the Commonwealth Government granted a bounty varying from ¾d. to 1½d. per lb. according to grade. In addition, the cotton-manufacturing industry received a graduated bounty on all cotton yarn manufactured in Australia which contained 50 per cent. of home-grown cotton. This bounty, however, ceased to operate after 30th June, 1932. The cotton-growing industry was further assisted by the Bounty Act of 1934, which extended the period to 1940 at varying rates of bounty.

The Raw Cotton Bounty Act 1940 provided an extension of assistance until 31st December, 1946. The Act was amended in August, 1946 to provide a guaranteed net average return to cotton-growers of 15d. per lb. of raw cotton for five years from 1st January, 1947.

The Tariff Board carried out an investigation into the cotton-growing industry in 1945.

(iii) *Expansion of the Cotton-growing Industry.* Australia produces less than its requirements of raw cotton, the balance being obtained chiefly from the United States of America and India. Efforts have been directed towards increasing production by an extension of area and the introduction of irrigation methods, but the results so far have not met with much success. Production was increased during the war years but has since fallen away. The expansion of the industries connected with the spinning and weaving of cotton is referred to in Chapter XXIV. " Manufacturing Industry ".

The area under cultivation and the production in Queensland for the years 1939 and 1943 to 1946 are shown hereunder :—

COTTON : AREA AND PRODUCTION IN QUEENSLAND.

Season ended September—	Area Sown.	Production of Cotton.				Average Yield per Acre Sown.	
		Unginned.		Ginned.	Ginned-Equivalent in Bales. (*a*)	Unginned.	Ginned.

Average 10 seasons ended 1946 ..	39,385	10,793	207,159	3,784	7,694	274	96

(*a*) Bales of approximately 500 lb. (*b*) Includes governmental assistance. (*c*) Includes 7,221 lb. of unginned cotton and the equivalent of ginned cotton, grown in New South Wales.

(iv) *Consumption of Raw Cotton.* The following table shows the expansion which has taken place in the consumption of raw cotton in Australia since 1938–39.

RAW COTTON : PRODUCTION, IMPORTS AND CONSUMPTION, AUSTRALIA.

Year.	Production.	Imports.	Total.	Consumption
	'000 lb.	'000 lb.	'000 lb.	'000 lb.
1938–39	4,774	11,790	16,564	14,117
1939–40	6,183	17,826	24,009	18,332
1940–41	4,128	33,853	37,981	26,540
1941–42	5,631	31,959	37,590	29,766
1942–43	4,925	29,634	34,559	31,713
1943–44	3,346	20,805	24,151	30,955
1944–45	2,946	28,567	31,513	27,758
1945–46	651	26,494	27,145	25,329

11. **Coffee.**—Queensland is the only State in which coffee has been grown to any extent, and the results have not been satisfactory. The area of this crop reached its highest point in the season 1901–2 with 547 acres. Thereafter the acreage fluctuated but on the whole with a downward tendency, and in 1945–46 only 5 acres were recorded with a production of 8,044 lb.

12. **Other Crops.**—Miscellaneous small crops grown in Australia include chicory, cut flowers, herbs, ginger, liquorice and vegetable seeds.

§ 20. Bounties, etc.

1. **Bounties.**—The bounties paid by the Commonwealth Government during the year ended 30th June, 1946 amounted to £76,116. This amount refers only to bounties paid under the Bounties Acts and does not include financial assistance given to wheat-growers and other primary producers under other Acts. Particulars of the assistance so rendered by the Commonwealth Government are furnished hereafter. Details of the amounts paid as bounty during the years 1941–42 to 1945–46 are as follows :—

BOUNTIES : AUSTRALIA.

(a) Year ended December, 1942. (b) Rates subject to variation as prescribed.

2. **Other Financial Assistance to Primary Producers.**—(i) *General.* In addition to the payment of bounties mentioned in the preceding paragraph, financial assistance has been granted by the Commonwealth Government for the relief of wheat-growers, fruit-growers, and other primary producers. The amounts shown exclude such items as the expenditure on cattle tick control, banana industry, tobacco investigation and apple and pear research, which indirectly benefits the industries concerned, and exclude loans made to States to alleviate hardship suffered by primary producers in consequence of drought. The distribution as bounty, relief or subsidy has been made in the following manner.

Details of payments made prior to 1938–39 are given on page 847 of Official Year Book No. 36.

AMOUNTS PAID BY THE COMMONWEALTH GOVERNMENT AS ASSISTANCE FOR RELIEF OF PRIMARY PRODUCERS.

(a) Includes special grant to Tasmania. (b) Growers of apples, pears and mandarins. (c) Includes Wheat Acreage Restriction Grant. (d) Includes payment of £1,659,325 recovered in London. (e) Includes £3,484,729 recovered from the United Kingdom Government. (f) Includes subsidy payments of £186,649 on nitrogenous fertilizers.

(ii) *Wheat-growers.* Details of payments made prior to 1938–39 will be found in Official Year Book No. 36. In 1938–39 a sum of £1,808,693, collected through the medium of a flour tax, was allocated for distribution as relief to wheat-growers. From the same source a sum of £1,708,543 was allocated to the States for the same purpose during 1942–43, £1,940,481 in 1943–44, £1,995,775 in 1944–45, £1,779,238, in 1945–46 and £1,747,383 in 1946–47.

In addition to the foregoing amounts paid from flour tax, compensation was paid to wheat-growers in Western Australia where acreage restrictions have applied since 1942–43. The amounts so paid during each year 1942–43 to 1946–47 were £535,000, £599,348, £586,964, £243,828 and £2,619.

(iii) *Artificial Fertilizers Subsidy.* Assistance has been given to primary producers other than wheat-growers in the form of a subsidy on artificial fertilizers ; the rate was 15s. for each ton of artificial manure used in the production of primary produce, but in 1936–37 this was reduced to 10s. per ton. The payment of this subsidy ceased on 30th June, 1939, but was resumed one year later.

Because of the substantial increases in the price of superphosphate and their effect on the efficiency of the farming industry, the Commonwealth Government introduced a bounty on superphosphate produced and sold in Australia after 1st July, 1941. The rate of bounty was fixed at 25s. per ton, payable to manufacturers, who were required to adjust their prices so that consumers received the full benefit of the subsidy. For 1942–43 and subsequent years subsidy has been paid under the Primary Producers Relief (Superphosphate) Act 1943, the rates of subsidy being determined in accordance with variations in costs from 1943 basic costs. For 1946–47 the actual rate of subsidy was £2 11s. 11d. Details of the amounts paid are given in the table above.

(iv) *Dairy Industry.* The war-time demand for butter, cheese and processed milk products was such as to necessitate production being increased to the limit of existing resources. With this object in view the Commonwealth has subsidized production and so encouraged dairy farmers to maintain output at the highest level possible. The amounts paid since the introduction of the subsidy are shown above. These do not include the subsidies paid on the production of whole milk which is consumed directly and which amounted to £319,000 in 1943–44, £1,786,000 in 1944–45, £2,520,000 in 1945–46 and £2,249,000 in 1946–47.

(v) *Farmers' Debt Adjustment.* In addition to the assistance outlined above the Loan (Farmers' Debt Adjustment) Act 1935 made provision for grants, totalling £12 million, to be made available to the States for the adjustment of farmers' debts. Of this amount £10 million was allocated as follows :—New South Wales, £3,450,000 ; Victoria, £2,500,000 ; Queensland, £1,150,000 ; South Australia, £1,300,000 ; Western Australia, £1,300,000 ; and Tasmania, £300,000. The remaining £2 million was allocated in the same proportion, and was subject to review at a later date.

§ 21. Fertilizers.

1. **General.**—In the early days of settlement in Australia scientific cultivation was little understood. It was common, as in other new countries, for the land to be cropped continuously to a degree of exhaustion. This practice is very much less in evidence now than in the early days of Australian agricultural development. Under the guidance of the State Departments of Agriculture, scientific farming is now much more widely practised. The importance of fallowing, crop rotation, and the application of suitable fertilizers in adequate quantities is now appreciated by farmers. The introduction of the modern seed-drill acting also as a fertilizer-distributor has greatly facilitated the use of artificial manures and much land formerly regarded as useless for cultivation has now been made productive.

2. **Fertilizers Acts.**—In order to protect the users of artificial fertilizers, legislation has been passed in each of the States regulating the sale and prohibiting the adulteration of fertilizers. A list of these Acts and their main features is given in Official Year Book No. 12, p. 378.

3. **Imports.**—The Australian output of prepared fertilizers is derived chiefly from imported rock phosphates and is sufficient for local requirements.

The chief source of Australia's normal supplies of rock phosphate was Nauru and the Gilbert Islands group. The war in the Pacific interrupted supplies from these sources and the bulk of the imports since 1941–42 came from Algeria, Egypt and the Makatea Islands. Sodium nitrate is obtained chiefly from Chile.

The imports of manures during 1938–39 and the four years ended 1946–47 are shown in the following table :—

FERTILIZERS : IMPORTS INTO AUSTRALIA.

Australian Currency Values.

5. **Quantities Locally Used.**—Information regarding the area fertilized with artificial fertilizers and the quantity of artificial fertilizers (superphosphate, bonedust, nitrates, etc.) used in each State during the year 1945–46 is given in the following table. Details of the area manured with natural manure (stableyard, etc.) are no longer collected.

AREA FERTILIZED AND QUANTITY OF FERTILIZERS USED, 1945–46.

State or Territory.	Area Fertilized.			Fertilizers Used.		
	Crops.	Pasture Lands.	Total.	Crops.	Pasture Lands.	Total.
	Acres.	Acres.	Acres.	Tons.	Tons.	Tons.
New South Wales	2,913,654	462,959	3,376,613	87,163	19,044	106,207
Victoria	3,383,072	2,708,379	6,091,451	114,541	133,484	248,025
Queensland..	254,667	2,277	256,944	46,623	210	46,833
South Australia	3,035,536	853,699	3,889,235	109,548	37,599	147,147
Western Australia	2,821,864	1,537,658	4,359,522	123,818	66,820	190,638
Tasmania	223,505	218,024	441,529	24,894	9,326	34,220
Australian Capital Territory ..	4,693	2,801	7,494	193	125	318
Total	12,636,991	5,785,797	18,422,788	506,780	266,608	773,388

Particulars of the quantity of artificial fertilizers used in each State and Territory during each of the years 1938–39 and 1942–43 to 1945–46 are included in the next table. These details include the quantity used in the top-dressing of pasture lands.

The serious diminution in the output of superphosphate during the war caused by the interruption of imports of rock phosphate necessitated the introduction of a system of rationing of supplies which adversely affected the yields from those crops which are dependent upon the use of superphosphate and other fertilizers.

QUANTITY OF ARTIFICIAL FERTILIZERS USED.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	N.T.	A.C.T.	Total

As mentioned in § 20 the Commonwealth Government has encouraged the use of artificial fertilizers by subsidizing primary producers, other than wheat-growers, at the rate of 15s. per ton up to 1936–37 when the subsidy was reduced to 10s. per ton. The payment of this subsidy ceased on 30th June, 1939, but was re-introduced as from 1st July, 1941 at the rate of 25s. per ton. For the purpose of stabilizing the price of superphosphate the Primary Producers Relief (Superphosphate) Act 1943 was passed and subsidy payments have been made under this Act since 1942–43.

6. **Local Production.**—Complete information regarding local production of fertilizers is not available. The number of firms engaged in the manufacture of chemical fertilizers in Australia for the year 1945–46 was 38, made up as follows :—New South Wales 6 ; Victoria, 8 ; Queensland, 6 ; South Australia, 7 ; Western Australia, 6 ; and Tasmania, 5. The production of superphosphate in Australia during 1945–46 amounted to 1,105,304 tons, the largest producing States being Victoria, Western Australia and South Australia

§ 22. Ensilage.

1. **Government Assistance in Production.**—The various State Governments devote a considerable amount of attention to the education of the farming community in regard to the value of ensilage. Monetary aid is afforded in the erection of silos, and expert advice is supplied in connexion with the design of the silos and the cutting and packing of the ensilage.

2. **Quantity Made.**—Information regarding the number of holdings on which ensilage was made and the quantity made during each of the seasons 1938–39 and 1942–43 to 1945–46 is given in the following table :—

ENSILAGE MADE.

State.	1938–39.		1942–43.		1943–44.		1944–45.		1945–46.

Australia ..	2,759	193,686	(b)	151,031	(b)	114,777	(b)	94,744	(b)	140,533

(a) Number of holdings on which ensilage was made. (b) Not available.

The drought of 1902–3 drew increased attention to the value of stocks of ensilage and during the four seasons ended 1909–10 there was an increase both in the number of holdings on which ensilage was made and in the quantity produced. The accumulated stocks proved of great value during the 1914 drought, though far less than would have been the case if more attention had been paid to production during the previous years when there was a surplus of green fodder. The quantities made since that date have fluctuated considerably, but the output increased up to 1939–40 in which year the production of 303,495 tons was the highest yet recorded. During subsequent seasons output has declined noticeably. The production in 1945–46 was 140,533 tons, 162,962 tons less than the 1939–40 record production.

3. **Stocks Held on Farms.**—Details of farm stocks of ensilage, which were collected for the first time as at 31st March, 1943, are shown in the following table :—

ENSILAGE : FARM STOCKS.

31st March—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Total.

§ 23. Agricultural Colleges and Experimental Farms.

In most of the States agricultural colleges and experimental farms have been established with a view to the promotion of more scientific methods in agriculture, stock-breeding and dairying. In the colleges, and on some of the farms, provision is made for the accommodation of pupils to whom both practical and theoretical instruction is given by experts in various branches of agriculture. Analyses of soils and fertilizers are made, manures are tested, and elementary veterinary science, etc., are taught, while general experimental work is carried on with cereal and other crops, not merely for the purpose of showing that is it practicable to produce certain crops in a given place, but to show also how it is possible to make farming pay in the locality. Opportunities are afforded for practice in general agricultural work, and instruction is given in the conservation of fodder; in cheese and butter making; in the management, breeding and preparation for the market of live stock; in the eradication of pests and weeds; and in carpentering, blacksmithing and other trades.

Expert lecturers visit the various agricultural and dairying centres, and there is a wide distribution of periodical agricultural gazettes and bulletins.

§ 24. Employment in Agriculture.

Particulars relating to the number of males employed in agriculture are available up to 1941–42 in Official Year Book No. 36, page 852, and also in previous issues. Similar details for later years are not available, but statistics of permanent employment on rural holdings may be found in § 25 following.

§ 25. Number and Area of Rural Holdings and Permanent Employment Thereon.

1. **General.**—The statistical data included in the chapters relating to agricultural, pastoral and dairying activities are obtained at an annual census taken in each State under the direction of the State Statisticians. This census is taken as early as practicable after the conclusion of the main harvest and covers every holding within the boundaries of each State.

A holding in Australia has been defined by the States on a more or less uniform basis and discrepancies which exist are not of sufficient importance to vitiate any comparisons. For the purpose of these statistics, a holding may be defined as land of one acre or more in extent, used in the production of agricultural produce, the raising of live stock or the products of live stock.

With the exception of Queensland, particulars of the number of holdings included in these censuses are available for all States over a series of years. It was not until 1938–39, however, that a complete tabulation became available for Queensland.

2. **Number and Area.**—The following table shows the number and area of the holdings in each State for the years 1938–39 and 1941–42 to 1945–46.

RURAL HOLDINGS: NUMBER AND AREA.

(*a*) Estimated.

3. **Analysis of Holdings.**—(i) *General.* It is not possible to classify these holdings according to the purpose for which they are used. This arises from a number of factors, the chief of which is mixed farming. The general trend in Australia is for farmers to diversify their activities and consequently it is very difficult to determine whether the purpose of many holdings is mainly agricultural, pastoral or dairying, or any of these in combination.

(ii) *New South Wales.* Such an analysis is made in New South Wales but, as pointed out by the Statistician, it should be regarded as an approximation. It is compiled from the description of purpose given by the occupier of the holding at the time of the Census. This tabulation reveals that there were 71,743 holdings so classified in New South Wales during 1940–41. Of this number 9,938 described their main purposes as agricultural only, 20,897 as pastoral only, 14,098 dairying only, 2,558 as poultry, pig or bee farming while the main purpose of the remaining 24,252 holdings was stated to be a combination of two or more of these activities. Holdings used mainly for residential or other purposes but which were used partly for the production of rural products have been omitted. These numbered 2,752 during 1940–41.

4. Permanent Employment on Rural Holdings.—The following table shows for each State of Australia the number of persons permanently engaged full-time on rural holdings as at 31st March, 1947.

RURAL HOLDINGS: PERMANENT FULL-TIME EMPLOYMENT AS AT 31st MARCH, 1947.

(*a*) Total permanently engaged, full-time.

CHAPTER XXI.

FARMYARD, DAIRY AND BEE PRODUCTS.

§ 1. Introductory.

1. **General.**—The introduction of cattle into Australia and the early history of the dairying industry are referred to in some detail in earlier issues of this publication. It may here be noted that the original stock has been crossed with specially imported stud cattle, while further judicious crossings of strains have resulted in an increased and improved milk supply. In Australia dairy cattle thrive in the open throughout the year, local climatic conditions demanding no protection other than tree plantations for shelter, and in certain districts rugging in the coldest weather. Indigenous and imported grasses furnish food during the greater part of the year, and winter fodder, when necessary, is given to the cattle in the fields. With the wider application of scientific methods in the treatment of animals and pasturages and in the processes of manufacture, coupled with herd testing and effective State supervision, the dairying industry has shown rapid expansion. It has been demonstrated that Australian production and marketing methods do not adversely affect the vitamin content of the butter and that the loss during cold storage even for as long as two years is insignificant.

2. **Mixed Farming.**—Dairying is not, as formerly, wholly confined to agriculturists, since many graziers in a large way of business also give it their attention. In non-coastal regions it is generally carried on in conjunction with agriculture and sheep-raising, sufficient fodder being grown to carry the cattle through the winter months. Local wants are thus met, and in many places remote from the metropolis well-equipped factories have been established. The extent to which dairy cows and pigs were run in conjunction with the growing of wheat in 1935–36 is referred to on page 375 of Official Year Book No. 33.

3. **Employment.**—The numbers of persons employed in primary industry are ascertained at the annual census of rural production. The particulars collected are in respect of those persons who were permanently engaged in the actual work of the farm and include owners, lessees, tenants or sharefarmers, relatives over 14 years of age not receiving wages, and other permanent employees, including managers and relatives, working for wages or salary. Details of the numbers so engaged are given in Chapter XX.—Agricultural Production, § 25.

For the years prior to 1940–41, it was possible to classify each holding according to the chief purpose for which it was used and thus obtain a distribution of employment in the three main classes, viz., Agriculture, Pastoral and Dairying. As this information has been omitted from the schedules since that year, it has not been possible to continue the details shown in the following table.

EMPLOYMENT IN DAIRYING INDUSTRY.

Year and Sex.		N.S.W.	Victoria.	Q'land. (*a*)	S. Aust.	W. Aust.	Tas.	Total.
		No.	No.	No.	No.	No.	No.	No.

(*a*) Not available.

5. **Official Supervision of Dairying Industry.**—Dairy experts of the various State Agricultural Departments give instruction in approved methods of production, and inspect animals, buildings and marketable produce. A high standard of cleanliness, both of *personnel* and *materiel*, prevails.

The export trade is regulated by the terms of the Commonwealth Commerce (Trade Descriptions) Act 1905–1933, and regulations thereunder. It will be sufficient to state here that the true trade description, etc., must be marked on all produce intended for export, while official inspection ensures the maintenance of purity and quality. Upon request of the exporter the goods are given a certificate by the inspector.

§ 2. Dairy Cattle and Dairy Products.

1. **Dairy Herds.**—Due to the lack of uniformity in the schedules used by the several States in the collection of live-stock statistics, it is not possible to measure with precision the growth of the dairy herds of Australia prior to 1943. However, statistics of dairy cows, which provide a reliable measurement of this development, show that in 1918–19 there were 1,900,000 dairy cows in milk and dry, compared with 2,345,000 in 1928–29 and 3,200,000 in 1938–39. This latter figure was sustained until March, 1944, but has since declined, the number recorded at 31st March, 1947, being slightly in excess of 3,000,000. In New South Wales, Victoria, South Australia and Tasmania the proportion of dairy cattle to all cattle is high. In Queensland, the Northern Territory and Western Australia there is a greatly preponderating number of other cattle, the main object in these areas being the production of beef. Dairying, however, has developed greatly in southern Queensland since 1914–15, and the largest contribution to the Australian increase in dairy production has been made by this State. The numbers of dairy cows for 1944 to 1947 shown in the following table refer to those recorded by farmers as being in milk and dry as at 31st March. The figures shown for 1939 cover the same categories, but the period differs in some States (*see* footnote (*a*)). To this extent the figures lack comparability.

NUMBER OF CATTLE AND DAIRY COWS (IN MILK AND DRY).

State.		1939.(a)	31st March—			
			1944.	1945.	1946.	1947.

(a) Includes other milking cows not in registered dairies. (b) Excludes Northern Territory.

2. **Factory System.**—(i) *General.* Cream separation and butter-making are often carried on together under the co-operative system. The creation of large central butter factories has resulted in a considerable reduction in the cost of manufacture, since improved appliances such as refrigerators, etc., may be profitably worked at the larger establishments. The product is also of a more uniform quality, and few farmers prefer to convert the cream rather than send it to the factory. Formerly the average quantity of milk used per pound of hand-made butter was about 3 gallons, but separator butter requires less than 2¼ gallons.

(ii) *Number of Factories.* The factories in Australia for the manufacture of butter cheese and condensed milk numbered 462 in 1945-46. They were distributed among the States as follows :—New South Wales, 117 ; Victoria, 148 ; Queensland, 100 , South Australia, 46 ; Western Australia, 17 ; and Tasmania, 34. Fuller details regarding numbers of factories, output, etc., are given in Chapter XXIV.—" Manufacturing Industry ".

3. **Butter and Cheese—Stabilization Schemes.**—(i) *Voluntary Plan.* During the period from January, 1926 to April, 1934, a voluntary scheme known as the " Paterson Plan " was in operation and had the effect of stabilizing the price of butter in Australia. The scheme provided for the payment of a levy on all butter produced in Australia sufficient to pay a bounty on export which ranged from 3d. to 4½d. per lb. The local price was raised by the amount of the bounty per unit while the return to the producer on all butter produced was increased by approximately the difference between the rate of bounty paid and the rate of levy charged. The scheme, which continued until 25th April, 1934, did not receive the full support of all butter manufacturers.

(ii) *Compulsory Plan.* On 1st May, 1934 the " Paterson Plan " was superseded by a compulsory price equalization plan. The object of this scheme was to maintain local prices for butter and cheese independently of prices realized for exports. The Dairy Produce Act was passed by the Commonwealth Parliament towards the end of 1933, and at the same time complementary legislation was passed by the Parliaments of New South Wales, Victoria, Queensland and Tasmania. As a result of a referendum among producers held in 1936, Tasmania withdrew from the plan and the State Act expired. In the Commonwealth Act power was given to regulate interstate trade while the State Acts were designed to regulate trade within the respective States. The authority set up by each State Act fixed the proportion of the State's production to be sold within the State, and the Commonwealth Act protected this allocation by regulating the movement of butter and cheese from one State to another and so ensured the removal from the Australian market of the surplus production.

The compulsory plan was invalidated by the decision in 1936 of the Privy Council which declared in the James (Dried Fruits) Case that the Commonwealth had no power under the Constitution to regulate trade between the States.

(iii) *Equalization Scheme.* Since the Privy Council decision, the butter price stabilization scheme has continued to operate by voluntary action based on the agreements between the manufacturers and the Commonwealth Dairy Produce Equalisation Committee Limited. The Committee, which comprises members of the State Dairy Products Boards and other persons representing the industry, enters into agreements with manufacturers to secure to them equal rates from sales of butter and cheese, and for this purpose may fix basic prices at which these products sold in Australia or abroad are to be taken into account. The effect is that local and export trade are distributed in equitable proportions among the manufacturers by means of quotas. The Committee fixes basic prices and equalizes returns to factories through an Equalisation Fund. The States originally participating in the scheme were New South Wales, Victoria, Queensland, Tasmania in respect of both butter and cheese, and South Australia in respect of cheese. South Australia and Western Australia entered the scheme in respect of butter on 1st April, 1946 and Western Australia extended its participation to include cheese in January, 1947.

The Commonwealth Prices Commissioner has fixed the home consumption prices of butter and cheese.

4. **Commonwealth Subsidies.**—(i) *Butter, Cheese and Processed Milk Products.* Under the provisions of the various Dairy Industry Assistance Acts, the first of which was passed in 1942, the Commonwealth Government has provided subsidies on milk supplied for the manufacture of butter, cheese and processed milk products. Subsidies

were paid on a seasonal basis prior to 1st April, 1946, but from that date have been on a flat rate basis. Subsidies are distributed through factories to milk producers by payments on butter, cheese and processed milk products manufactured.

In the following table, particulars of the average equalization rates and subsidy rates in operation in each year 1942-43 to 1946-47, together with the equalization rates for the pre-war year 1938-39 are shown in respect of butter and cheese. The equalization rates are those determined by the Commonwealth Dairy Produce Equalisation Committee Limited, referred to in the preceding section.

BUTTER AND CHEESE: AVERAGE EQUALIZATION RATES AND RATES OF COMMONWEALTH SUBSIDY UNDER DAIRY INDUSTRY ASSISTANCE ACTS.

(Rates per cwt.)

Year ended 31st March.	Butter.						Cheese.					
	Average Equalization Rate.		Subsidy Rate.		Total.		Average Equalization Rate.		Subsidy Rate.		Total.

1947 ..	179	8.8	25	4.2	205	1	108	7.8	11	6.95	120	2.75

(*a*) Year ended June. (*b*) Nine months ended March.

Subsidy payments for the year ended 31st March, 1947 were based on the recognized cost to milk producers of 1s. 7½d. per lb. commercial butter equivalent at the factory, but subsidy rates were later increased as a result of increased prices under the United Kingdom Dairy Produce Contract which operated from 1st July, 1946. Following representations by industry organizations, the Commonwealth Government established the Joint Dairy Industry Advisory Committee in November, 1946, comprising a chairman nominated by the Government, four representatives of Commonwealth Government Departments and four industry representatives from the several States. The Committee's functions, broadly, are to advise and assist in conducting cost and other surveys of dairy farm production and to act as an advisory body to the Government in these matters.

Following consideration of the initial recommendations submitted by the Joint Dairy Industry Advisory Committee in October, 1947, the Commonwealth Government announced that subsidy payments in respect of milk supplied for butter, cheese and processed milk products manufacture would be made from 1st April, 1947 on the basis of a return to the milk producer of 2s. per lb. commercial butter equivalent. This increase will be absorbed partly by increased prices under the United Kingdom Dairy Products Contract operating from 1st July, 1947, partly by higher home consumption prices for dairy products from 1st December, 1947 and partly by increased Commonwealth subsidy.

Details of the amounts distributed under the Dairy Industry Assistance Acts are shown in the following table. These amounts include assistance on exported dairy products paid in the first instance by the Commonwealth Government and recovered from the Government of the United Kingdom.

COMMONWEALTH SUBSIDIES TO THE DAIRYING INDUSTRY UNDER DAIRYING INDUSTRY ASSISTANCE ACTS.

(£'000.)

Year ended June.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.(*a*)
1943	277	430	365	50	42	22	1,186
1944	1,833	2,614	2,146	338	285	130	7,346
1945	1,495	2,717	1,879	315	260	146	6,812
1946	1,524	2,384	1,745	323	274	124	6,374
1947	1,070	2,353	1,111	322	238	129	5,223

(*a*) These amounts include assistance on export dairy products paid in the first instance by the Commonwealth Government and recovered from the Government of the United Kingdom. The actual amount recovered to date amounts to £5,114,021

(ii) *Whole Milk.* In addition to the subsidies referred to above, the Commonwealth Government also subsidizes the production of whole milk consumed directly. The subsidy rates vary according to States, regions within the State and the seasonal period. Details of the amounts distributed are shown in the following table :—

COMMONWEALTH SUBSIDY ON WHOLE MILK FOR DIRECT HUMAN CONSUMPTION.

(£'000.)

(f) Includes 218,778 gallons of whole milk, the produce of New South Wales, sent to Victoria. (g) Includes milk used in the production of condensed, concentrated and powdered milk, etc. (h) Includes 528,201 lb. of butter made from cream, the produce of Victoria and Queensland. (i) Includes 1,303,474 lb. of butter made from cream, the produce of New South Wales. (j) Includes 253,348 lb. of butter made from cream, the produce of New South Wales. (k) Estimated.

6. Whole Milk.—(i) *Production and Utilization.* While there has been a decline in the production of whole milk in Australia since 1939–40 the quantities used for the manufacture of cheese and condensory products and those consumed as fluid milk have increased. As a result, there has been a substantial decrease in the quantity of milk used for butter manufacture, and the proportion so used has declined from 78 per cent. in 1938–39 to 63 per cent. in 1946–47. In 1946–47, 62.8 per cent. of the milk supply was used for the production of butter, 8.4 per cent. in the production of cheese, 6.5 per cent. in the production of processed milk products and 22.3 per cent. for all other purposes, including consumption as fluid milk, sweet cream and ice cream.

Details of the production of whole milk for various purposes are shown in the following table for each year 1938–39 and 1943–44 to 1946–47 :—

PRODUCTION AND UTILIZATION OF WHOLE MILK : AUSTRALIA.

('000 gallons.)

Year.	Total Production.	Quantity used for—			
		Butter (Factory and Farm).	Cheese (Factory and Farm).	Condensory Products.	Other purposes
1938–39	1,189,174	925,308	64,994	33,367	165,505
1943–44	1,066,679	733,451	77,963	63,253	192,012
1944–45	1,012,830	670,206	76,533	62,440	203,651
1945–46	1,077,469	701,819	89,555	65,313	220,782
1946–47	1,079,640	678,293	91,086	70,450	239,811

In the following table, particulars of production of whole milk in the several States are shown for the years 1938–39 to 1946–47. Victoria is the principal milk-producing State and in 1946–47 output from that State, viz., 445.5 million gallons represented 41.3 per cent. of total production. Output from New South Wales was 254.1 million gallons or 23.5 per cent. of the total and that of Queensland 207.5 million gallons (19.2 per cent.). Production in the remaining States accounted for 16.0 per cent. of the total Australian output.

TOTAL PRODUCTION OF WHOLE MILK.

('000 gallons.)

Period.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Total.
1938–39 ..	311,384	377,881	347,336	72,521	45,562	34,140	350	1,189,174
1943–44 ..	297,175	360,539	260,998	78,172	43,150	26,285	360	1,066,679

(ii) *Production per Cow.* The annual quantity of milk produced per dairy cow reaches as high as 1,000 gallons, varying greatly with breed, locality and season. For the whole of Australia for all dairy cows and for all seasons prior to 1916 it averaged considerably under 300 gallons per annum. In recent years not only has there been an improvement in the quality of the cattle, but the application of scientific methods has been continually extended, and the 300-gallon average has been exceeded in each year since 1924, the yield of 392 gallons in 1931 constituting a record. The annual average yields per cow given in the following table are based on the number of dairy cows which were in milk during any part of the year. The average given is, therefore, below that for cows which were yielding during the greater part of the year. It should be noted that there are many difficulties attending the collection of particulars of the total quantity of milk obtained during any year. In addition, there is the further difficulty of ascertaining with reasonable accuracy the average number of cows in milk during the same period. The average yield per cow shown hereunder may be accepted as sufficiently reliable to show the general trend :—

(a) Mean for the year. (b) Excludes Northern Territory.

7. **Butter Production.**—The quantity of butter produced in Australia depends chiefly upon seasonal conditions. There was a steady increase in the annual output of butter for many years prior to the 1939–45 War. The average annual production rose from 126,000 tons for the five years ended 1928–29 to 195,000 tons for the five years ended 1938–39.

The output of 212,000 tons in 1939–40 was a record. Production has declined considerably since that year and during 1946–47 amounted to approximately 143,300 tons. The factors contributing to this decline include unfavourable seasons, transfer of man-power owing to the war, shortages of fertilizers for pastures and change in some factories from butter to cheese manufacture. These figures include butter produced on farms which has shown a steady decline from about 8,700 tons in 1938–39 to 4,500 tons in 1946–47.

The following table shows production of butter in factories in each State for the years 1938–39 and 1943–44 to 1946–47.

BUTTER PRODUCTION IN FACTORIES.

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Australia.(a)

8. **Cheese Production.**—For many years the production of cheese in Australia ranged about 13,400 tons per annum. By 1932–33 production had risen to 16,500 tons and, apart from minor fluctuations, has continued to rise until 1946–47, when the record output of approximately 42,000 tons was recorded. The States contributing chiefly towards this increase are Victoria, Queensland and South Australia.

The following table shows production of cheese in factories in each State in the years 1938–39 and 1943–44 to 1946–47 :—

CHEESE PRODUCTION IN FACTORIES.

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Australia.(a)

Grand Total ..	29,304	35,825	34,620	41,238	42,343

9. **Condensed, Concentrated and Powdered Milk, etc., Production.**—The manufacture of these products has expanded greatly since 1938–39 due mainly to the demand to meet the needs of the Services during the 1939–45 War. The output for the years 1938–39 and 1942–43 to 1945–46 was as follows :—

PRODUCTION OF CONDENSED, CONCENTRATED AND POWDERED MILK, ETC.

State.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.

(*a*) Separate details not available for publication.

10. **Local Consumption of Butter and Cheese.**—The production of butter and cheese less net exports and adjusted to account for movements in stocks, represents the quantity available for consumption in Australia.

As previously mentioned, the quantity of butter required by the Armed Services based upon Australia limited supplies during the war years for export overseas and for consumption in Australia. The former had diminished to such an extent that, in order to prevent further decline, it became necessary to introduce a system of butter rationing on 7th June, 1943. The rate was fixed at 8 oz. per head per week, but was reduced to 6 oz. per week as from 7th June, 1944, at which level it still remains.

Cheese was not rationed, although the supplies available for civil needs were limited to the residue after Service needs and exports had been met. This had the effect of limiting consumption below the level it would have attained if there had been no such restriction. Nevertheless, consumption of cheese rose during the war to offset, in part, the reduced consumption of butter due to rationing.

The following table shows details of the production and disposals of butter and cheese for the periods 1937–39 and 1943 to 1947.

11. Marketing of Dairy Products.—(i) *The Dairy Produce Export Control Act* 1924–47. Introduced at the request of the dairying industry this Act was passed by the Commonwealth Parliament with the object of organizing the oversea marketing of Australian dairy produce. A Dairy Produce Control Board was appointed and was in existence from 1924 to 1935. It dealt with matters relating to the organization and supervision of oversea marketing of dairy produce. In the course of its functions the Board regulated shipments to ensure regularity of supply in the London market, controlled forward selling, obtained reductions in oversea freights and insurance rates, and participated in an advertising campaign in the United Kingdom.

Prior to the appointment of the Dairy Produce Control Board a voluntary body—the Australian Dairy Council—was established to advise and make recommendations to the Governments on problems connected with the production, manufacture and quality of dairy produce, pasture improvement and diseases of dairy cattle.

Following a recommendation by the Australian Agricultural Council the functions of these bodies were combined by an amending Act of 1935 under the Australian Dairy Produce Board and provision was made for the allocation of money from the Board's funds for research and investigation into pastures, diseases of dairy cattle and the quality of butter. The functions of the Board were later extended to enable it to advise the Government in connexion with the transport of dairy produce and the securing of new markets and the expansion of existing markets and other matters.

The Australian Dairy Produce Board was re-constituted in 1947 by an amendment to the Dairy Produce Export Control Act, reducing its membership from seventeen to twelve. The functions of the Board were extended to enable it to purchase and sell, on behalf of the Commonwealth, dairy produce intended for export, and to control all matters concerning the handling, storage, protection, treatment, transfer and shipment of the produce so purchased or sold.

(ii) *The Dairy Produce Export Charges Act* 1924–1937. This Act provides for the imposition of a levy on all butter and cheese exported from Australia to cover the administrative expenses of the Board and for advertising and other purposes. The rate of the levy is fixed by regulation.

(iii) *War-time Marketing.* Reference to the marketing arrangements which operated during the 1939–45 War was made in Chapter XXVIII. "Miscellaneous", pp. 1108–1110 of Official Year Book No. 36.

12. **Butter and Cheese Contracts.**—(i) *Butter.* At the outbreak of war in September, 1939, a contract was arranged between the Governments of the Commonwealth and the United Kingdom whereby the latter undertook to purchase Australia's surplus butter and cheese. The following table indicates the periods covered, and prices per cwt. f.o.b. Australian currency for the various grades of butter, including whey butter, for this and subsequent contracts.

The conditions of sale provided for payment of 90 per cent. on shipment, and the balance 28 days after arrival or due date of arrival.

A further contract for the year 1940–41 was entered into with the United Kingdom Government, which agreed to take up to 100,000 tons of butter at the same prices as in the previous year. For the year 1941–42, second, pastry and all whey butters were excluded; moreover the butter target was reduced to 57,000 tons to permit of diversion to cheese production at the request of the United Kingdom Government.

Prices were increased as from 1st July, 1942, as shown in the table. Also second grade butter was re-included towards the end of 1942 and the Ministry sought 10,000 tons of dry butterfat at the following prices per cwt. f.o.b. Australian currency:—Grade 1, 195s. 7½d.; Grade 2, 181s. 3d. Actually 2,203 tons of dry butterfat were exported during that period.

Pastry and whey butters were re-included as from 1st July, 1943.

While the 1943–44 prices were the same as those applying for 1942–43, the United Kingdom Government agreed additionally to reimburse the Commonwealth Government to the extent of subsidy paid on butter and cheese exported on Ministry account during the year ended 31st March, 1944. Although provision was made in the several contracts for the supply and purchase of stated quantities of butter, the decline in production and the increased demand by Australian and Allied Services based on Australia resulted in the quantities actually shipped being less than those stipulated.

The purchase of butter in 1944–45 and subsequent years has been covered by the Long-Term Purchase Agreement (*vide* sub-para. (iii) following).

(ii) *Cheese.* The following table indicates the periods covered and prices per cwt. f.o.b. Australian currency for the various grades of cheese as provided by the several contracts between the Commonwealth and United Kingdom Governments. Conditions for payment were on the same terms as for butter.

For the year 1941–42, the United Kingdom sought diversion from butter to cheese production, and undertook to purchase maximum quantities, with a minimum of 40,000 tons, at increased prices. Prices were increased further for the year 1942–43.

As in the case of butter, the United Kingdom Government agreed to reimburse the Commonwealth Government for subsidy paid on cheese exports since 1st April, 1943.

Although provision was made in the several contracts for the supply and purchase of stated quantities of cheese, the quantities shipped were less than stipulated. Service demands in India, Egypt and elsewhere accounted for the greater part of exports. There was also considerable increase in consumption in Australia, due, no doubt, to the rationing of butter.

When the United Kingdom authorities in 1941 desired greatly increased supplies of cheese, the Committee took action to convert butter-making establishments to cheese-making, the financial burden being distributed over the industry.

As with butter, the purchase of cheese in 1944–45 and subsequent years has been covered by the Long-Term Purchase Agreement (*vide* sub-para. (iii) following).

(iii) *Long Term Purchase Agreement.* Early in 1945 an agreement was completed between the United Kingdom and Australian Governments covering the sale to the former of Australia's surplus butter and cheese for the four years 1944–45 to 1947–48. In the original agreement, prices were stipulated for the initial two years ended June, 1946. In accordance with the terms of the agreement prices were increased for the year 1946–47 and further increases were agreed upon for the year 1947–48, following representations from the Australian Government after having considered recommendations by the Joint Dairy Industry Advisory Committee (*vide* para. 4 above.)

The United Kingdom will undertake responsibility for storage costs if unable to provide ships to lift butter and cheese from store after 90 days, and will make advances against stored stock in this event.

The usual provisions relative to quality, packing, etc. will continue to obtain, but in regard to payment the United Kingdom will pay 97½ per cent. of the value on shipment and a further 2½ per cent. 60 days after the date of the last bill of lading in respect of butter and cheese carried by the vessel.

The extension of the agreement beyond 30th June, 1948 is at present under consideration by the United Kingdom and Commonwealth Governments.

13. **Oversea Trade in Butter, Cheese and Milk.**—The production of butter and cheese in Australia is considerably in excess of local requirements and consequently a substantial surplus is available for export overseas. In normal circumstances the extent of this surplus is chiefly dependent upon the seasonal conditions. In the immediate pre-war period the quantity of butter and cheese consumed annually in Australia was about 101,000 tons and 13,400 tons respectively, and production in excess of these amounts was available as surplus for export.

Because of the abnormal requirements due to the presence of Australian and Allied Servicemen in the South-West Pacific Area, exports of butter to the United Kingdom were reduced to a level lower than that attained in any year since 1926–27. During 1938–39, 97,000 tons or 95 per cent. of all butter exported was shipped to the United Kingdom, but by 1944–45 exports to this country had decreased to 37,000 tons or 86 per cent. of the total quantity exported. In 1945–46, the quantity rose to 55,000 tons (or 88.8 per cent.) but dropped to 52,000 tons (or 86.2 per cent.) in 1946–47.

With cheese, and for the same reason, increased production has been accompanied by decreased exports. In 1938–39 exports totalled 16,038 tons of which 15,500 tons were exported to the United Kingdom. By 1944–45, however, the quantity exported to the United Kingdom had declined to 2,800 tons or 18 per cent. of the total of 15,000 tons exported. In 1945–46 the quantity rose to 9,200 tons (or 63.0 per cent.) and to 18,300 tons (or 76.5 per cent.) in 1946–47.

All butter and cheese exported comes under the provisions of the Exports (Dairy Produce) Regulations and is subject to the supervision, inspection and examination of officers appointed for that purpose. These commodities are graded according to quality which has been fixed by regulation as follows :—Flavour and aroma, 50 points ; texture, 30 points ; and condition, 20 points. Butter and cheese graded at 93 to 100 points is of choicest quality ; at 90 to 92 points, first quality ; at 86 to 89 points, second quality ; and at 80 to 85 points, pastry or cooking quality or, in the case of cheese, third quality.

In the following table particulars are given of the relative proportions of butter and cheese graded for export according to quality. Fuller details, which include actual quantities by States, are to be found in *Production Bulletin* No. 41, Part II.

§ 3. Pigs and Pig Products.

1. **Pigs.**—Between 1928–29 and 1938–39 the number of pigs fluctuated around one million. In the latter year an upward movement commenced and continued until the record number of 1,797,340 was recorded in 1940–41. There was a decline in the following two years but the numbers rose again to 1,746,721 in 1943–44. Since that year there has been a continuous decline, the number recorded at 31st March, 1947 being 1,273,011. The distribution of pigs among the States and Territories at 31st March, 1947 was— New South Wales, 358,417; Victoria, 290,450; Queensland, 340,150; South Australia, 134,033; Western Australia, 101,719; Tasmania, 47,407; Northern Territory, 208; Australian Capital Territory, 627.

A more accurate index of the development of pig-raising in Australia is provided in the following table which combines, for each of the years 1937–38 to 1946–47, the number of slaughterings with the number returned. The table discloses substantial increases in the number of pigs raised over the period under review :—

NUMBER OF PIGS AND NUMBER SLAUGHTERED : AUSTRALIA.

Year.	Number of Pigs.	Number Slaughtered.	Year.	Number of Pigs.	Number Slaughtered.
1937–38 ..	1,100,082	1,897,430	1942–43(a) ..	1,563,000	2,126,000
1938–39 ..	1,155,591	1,839,597	1943–44(a) ..	1,746,721	1,828,456
1939–40 ..	1,455,341	1,952,552	1944–45(a) ..	1,630,855	1,966,434
1940–41 ..	1,797,340	2,350,358	1945–46(a) ..	1,425,709	1,727,924
1941–42 ..	1,477,303	2,593,927	1946–47(a) ..	1,273,011	b1,580,863

(a) Year ended 31st March. The numbers slaughtered relate to slaughterings for human consumption.
(b) Subject to revision.

Further details relating to pig numbers are given in Chapter XIX. "Pastoral Production."

2. **Pork.**—(i) *Production.* With Allied Servicemen in Australia during the war years, the demand for pork was considerably increased and producers were encouraged to increase production to the highest level attainable in order to meet Service requirements and maintain exports as far as possible. After these requirements had been met, the quantity available for civilian consumption was much less than that normally consumed. In some States the civilian consumption of pork was negligible, but in other parts of Australia, where transport difficulties precluded the marketing of pork in the main centres, civilian consumption was not prohibited. In the following table details of production in each State are shown for the years 1938–39 and 1942–43 to 1946–47 :—

PRODUCTION OF PORK (BONE-IN-WEIGHT).

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Northern Territory.	Australian Capital Territory.	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1938–39 ..	9,617	10,769	11,844	2,037	1,092	1,623	8	43	37,033
1942–43 ..	11,376	9,963	9,343	3,033	3,863	1,347	17	69	39,011
1943–44 ..	14,532	11,226	8,709	5,892	3,649	1,446	17	11	45,482
1944–45 ..	8,605	11,407	8,249	9,013	4,006	1,270	17	3	42,570
1945–46 ..	6,335	9,595	9,363	4,072	4,749	986	17	3	35,120
1946–47 ..	6,364	7,153	9,011	2,978	3,446	1,039	17	18	30,026

(ii) *Consumption.* For the three pre-war years ended 1938–39 the average annual production of pork was 46,000 tons, of which 14,000 tons were exported, leaving 32,000 tons, or the carcass equivalent of 10.4 lb. per head per annum, available for local consumption.

As in the case of other meats, the demand for pork for the Armed Services and for exports was so great that it was necessary to divert supplies from civilian consumption under the rationing scheme introduced in January, 1944. This resulted in the per capita consumption of pork declining from the pre-war average of 10.4 lb. to 9.0 lb. in 1943, to 6.4 lb. in 1944 and to 4.9 lb. in 1945. Since 1945, there has been a reduction in exports and supplies to the Armed Services and in September 1946, pork was made available to civilians in all States subject to coupon rationing. As a result, consumption per head rose to 5.9 lb. in 1946 and 6.8 lb. in 1946–47. In the following table details of the production and disposal of pork are shown for the periods 1937–39 and 1943 to 1946–47.

PRODUCTION AND DISPOSAL OF PORK (BONE-IN-WEIGHT) : AUSTRALIA.

3. **Bacon and Ham.**—(i) *Production.* As in the case of pork, the increased demand for bacon and ham during the war years stimulated production to a level never previously attained. Production reached its peak in 1944–45 when 56,246 tons of bacon and ham were cured. Details of production are shown by States in the following table for the years 1938–39 and 1942–43 to 1946–47.

PRODUCTION OF BACON AND HAM.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.

1946–47	15,830	10,998	9,983	5,069	4,638	1,150	..	47,668

(ii) *Consumption.* For the three pre-war years ended 1938–39 the annual production of bacon and ham averaged 32,400 tons of which 1,000 tons were exported, leaving 31,400 tons, or 10.2 lb. per head per annum, available for local consumption. The presence of large numbers of Allied Servicemen in Australia during the 1939–45 War necessitated the diversion of civilian supplies. Bacon and ham were not included in the list of rationed meat but supplies to be placed on the civilian market were determined after the demands for Services and export requirements had been met. Consumption per head declined in the early stages of the war but by 1944 had been restored to the pre-war level and has since increased to 12.7 lb. in 1946–47. Details of production and disposal of bacon and ham are shown for the periods 1937–39 and 1943 to 1946–47 in the following table.

PRODUCTION AND DISPOSAL OF BACON AND HAM : AUSTRALIA.

§ 5. Poultry-Farming.

1. **General.**—Poultry-farming has been carried on in Australia for many years and the State Departments of Agriculture have encouraged its development by appointing experts to advise on the care and management of poultry and by conducting egg-laying competitions.

Originally the industry was conducted in conjunction with other branches of rural activity, mainly dairying, but it is now a specialized and distinct industry. It is from this source that the bulk of the commercial production is obtained. Practically all farms keep poultry for the purpose of supplying their own domestic requirements and in many cases some supplies from this source are also marketed. In addition, small numbers of fowls are kept in backyards of some private homes and this helps to maintain domestic needs particularly when eggs are in short supply.

2. **Numbers of Poultry.**—In pre-war years the numbers of the principal kinds of poultry was a normal feature of the annual census of live-stock in all States except Victoria and Tasmania. This collection was suspended during 1941–42 but was resumed in 1942–43 and extended to cover all States. It was not, however, resumed on the previous basis, but was restricted to farms of 1 acre or more producing eggs or poultry for sale. Moreover, the details exclude poultry held by persons (including " backyard " poultry-keepers) producing for their own use as well as those who are producing from areas of less than 1 acre. Because of this incompleteness, details of poultry numbers are not published.

3. **Recorded Production and Disposals of Eggs.**—(i) *Shell Eggs.* Available statistics of the production and disposals of eggs in Australia are restricted to those recorded by the Egg Boards of the several States.

Egg Boards, or authorities appointed to control the marketing of eggs, have operated in the States of New South Wales, Victoria and Queensland for some years, whilst in South Australia the Board commenced to operate in August, 1942. It was not until August, 1943 that Advisory Committees were established in Western Australia and Tasmania. These authorities were created under National Security Regulations. Statistics of recorded production of eggs for Australia as a whole are not available, therefore, prior to 1943–44

In the following table details of receivals and disposals of eggs, as recorded by these authorities, are shown for Australia for the years 1943–44 to 1946–47.

SHELL EGGS: RECEIVALS AND DISPOSALS RECORDED BY EGG BOARDS, AUSTRALIA.

Total	91,324,067	105,055,275	115,682,950	124,250,241

There has been a pronounced upward movement in the recorded production (i.e. receivals by Egg Boards) of eggs over the period covered by the previous table from 89,165,000 dozen in 1943–44 to 122,518,000 dozen in 1946–47. The movement in production in the respective States is shown in the following table.

SHELL EGGS: PRODUCTION(a) RECORDED BY EGG BOARDS.

(Unit: Dozen).

State.	1943–44.	1944–45.	1945–46.	1946–47.
New South Wales	41,887,727	47,457,664	49,807,075	54,100,235
Victoria	23,228,278	27,952,482	30,932,944	37,110,328
Queensland	7,211,966	9,500,596	11,789,924	9,421,586
South Australia	9,802,072	11,138,438	12,389,672	14,252,300
Western Australia	6,074,359	6,752,228	6,967,711	6,735,580
Tasmania	960,102	1,221,218	1,165,324	898,440
Total	89,164,504	104,022,626	113,052,650	122,518,469

(a) Receivals from consignors and producer agents.

(ii) *Egg Pulp.* Prior to the 1939–45 War, production of egg pulp was about 7 million lb. per annum. This was used almost entirely for the manufacture of cakes, pastry and biscuits, only negligible quantities being exported. Production was expanded greatly during the war years to meet the requirements of the Armed Services and has since been maintained at a high level for export purposes, in addition to meeting increased local requirements.

Particulars of the production of whole egg pulp as recorded by the Egg Boards in the several States are shown in the following table.

LIQUID WHOLE EGG : PRODUCTION RECORDED BY EGG BOARDS.

State.	1943–44.	1944–45.	1945–46.	1946–47.
	lb.	lb.	lb.	lb.
New South Wales	5,814,240	8,762,311	11,929,681	14,575,545
Victoria	5,031,440	7,626,573	8,296,340	12,854,130
Queensland	1,174,320	1,418,996	2,526,109	1,649,989
South Australia	4,494,848	4,604,665	7,121,845	7,073,198
Western Australia	901,450	882,646	1,122,198	1,295,067
Tasmania	101	500,220	519,014	247,115
Total	17,416,399	23,795,411	31,515,187	37,695,044

In addition to liquid whole egg, New South Wales also produced liquid egg whites and liquid egg yolks. Output in 1946–47 amounted to 213,104 lb. and 123,359 lb. respectively compared with 196,082 lb. and 61,276 lb. respectively in the previous year.

(iii) *Egg Powder.* The production of dried egg powder was not established in Australia until 1942, when the industry was introduced to treat Australia's surplus eggs so as to maintain exports to the United Kingdom. The shortage of refrigerated shipping space precluded the export of shell eggs so they were converted into powdered form. Following the outbreak of war in the Pacific in December, 1941, when Australia undertook responsibility for the feeding of the fighting services in the South-West Pacific Area, the bulk of the egg powder produced was diverted, however, for use by Australian and Allied Servicemen. Since the termination of hostilities in 1945, the manufacture of egg powder has been maintained at a high level for export purposes. A market for this product in Australia has not yet been established due no doubt to the availability of fresh eggs.

Details of production of egg powder are shown in the table below.

PRODUCTION OF EGG POWDER.

State.	1943–44.	1944–45.	1945–46.	1946–47.(*a*)
	lb.	lb.	lb.	lb.

Tasmania	..	..	..	..
Australia	3,470,603	4,778,697	3,562,867	4,318,311

(*a*) Includes sugar-dried egg powder.

4. **Consumption of Eggs.**—Statistics of egg production must necessarily be accepted with some reserve. Owing to the difficulties experienced in obtaining a complete census of output, it is more expedient to compute a figure based on the best data available. The production shown in the following table, which shows also details of exports and consumption, is based upon the records of Egg Boards of production from areas under their control plus an estimate of production from uncontrolled areas and an estimate of the production of "back yard" poultry-keepers. The estimates of total production obtained have been checked with data from other sources and found to be reasonably in accord.

ESTIMATED PRODUCTION AND DISPOSAL OF EGGS : AUSTRALIA.

(*a*) In terms of weight of shell eggs. (*b*) The average weight of an egg in Australia is taken as 1.75 oz. (*c*) Includes consumption by Services in Australia.

5. **Marketing of Eggs.**—(i) *United Kingdom Contracts.* Commencing in 1939–40, annual contracts have been entered into between the Governments of the Commonwealth and the United Kingdom for the sale and purchase at agreed prices of Australia's surplus

shell eggs, egg pulp and egg powder. During the war years lack of shipping facilities curtailed the export of shell eggs, while the demands of the Armed Forces based on Australia considerably reduced the quantity of egg powder available for shipment to the United Kingdom.

The contract for the 1947–48 season provided for the sale and purchase of Australia's surplus eggs and egg products at prices considerably in advance of those operating in previous years. The contract specified maximum quantities of 30 million dozen shell eggs, 13,500 tons of whole egg pulp, 2,700 tons of sugared egg powder and 450 tons of whole egg powder. The price for shell eggs was proportionately higher than for egg products in order to give effect to the United Kingdom's desire to obtain maximum shipments in the form of shell eggs.

Early in 1948 an agreement was entered into between the Governments of the Commonwealth and the United Kingdom covering the sale and purchase of eggs, egg pulp and egg powder for the five seasons 1948–49 to 1952–53. The agreement envisages progressive expansion in the export of eggs from Australia with ultimate objective target of the equivalent of 105 million dozen eggs in all forms. Prices for the initial three seasons of the agreement, i.e. 1948–49, 1949–50 and 1950–51, have been determined, these representing further increases on those operating for 1947–48. Prices for the latter two seasons of the agreement will be decided by negotiations between the two Governments prior to sixteen months before the season to which they apply. The agreement stipulates the practices to be followed in packing shell eggs to ensure the minimum of deterioration and specifies the following order of preference in the supply of eggs and egg products to the United Kingdom, viz. :—(i) eggs in shell (to be shipped between 1st June and 24th December of each season); (ii) frozen whole egg pulp; (iii) dried sugared egg; (iv) dried whole egg. Eggs suitable for export during the period June to December are not to be processed into pulp or powder. Payment of 97½ per cent. of the contract price will be made at the time of shipment and the balance within 28 days of arrival in the United Kingdom.

The prices stipulated in the several contracts for eggs and egg products since 1939–40 are shown in the following table.

EGGS AND EGG PRODUCTS: PRICES UNDER UNITED KINGDOM-AUSTRALIA CONTRACTS.

(*Australian Currency, f.o.b. Australian Ports.*)

Period.	Eggs in Shell.(a)	Frozen Whole Egg Pulp.	Whole Egg Powder.	Sugared Egg Powder.

1950–51	2 4	1 8¾	7 0	5 1

(a) Price for pack of 15 lb. per long hundred (ten dozens); proportionate adjustments made for other packs.

(ii) *War-time Marketing.* Prior to the 1939–45 War, no Commonwealth legislative control was exercised over the marketing of Australian eggs. Overseas publicity and research into problems of the egg industry were managed by a voluntary organization known as the Egg Producers' Council, which was financed by the proceeds from an inspection fee imposed on eggs in shell exported. State Egg Marketing Boards operated in New South Wales, Queensland and Victoria. During the initial stages of the war, administration of the United Kingdom contracts was handled by the Department of Commerce, assisted by an Egg Supervision Committee constituted under the Egg Control Regulations of 1939.

In July, 1943 the Commonwealth Government appointed a Controller of Egg Supplies with Deputy Controllers in each State under the National Security (Egg Industry) Regulations. The Regulations also provided for the appointment of an Egg Industry Advisory Committee consisting of the Controller of Egg Supplies as chairman and the Deputy Controllers as members. Controlled areas for the purpose of the National Security (Egg Industry) Regulations were defined in respect of each State. Wide powers were vested in the Controller of Egg Supplies enabling him to purchase and sell eggs and egg products on behalf of the Commonwealth; to supervise licences for exports so that domestic requirements could be met; to manage and control the marketing and shipment of eggs, the property of the Commonwealth; and to perform various other functions relating to the production, manufacture, grading, treatment, processing, consumption, storage, etc., of eggs and egg products.

The Egg Supplies Control continued to operate during 1947 under the Defence (Transitional Provisions) Act, 1946 but ceased to function on 31st December, 1947.

(iii) *Egg Export Control Act* 1947. Following the termination of Commonwealth control over the production and marketing of eggs on 31st December, 1947, functions relating to the local marketing of eggs reverted to State Egg Boards which became responsible for stabilizing prices and marketing of eggs produced in the respective States. In order to assist in marketing Australia's surplus production of eggs under the Long Term Purchase Agreement with the United Kingdom, the Commonwealth established the Australian Egg Board under the Egg Export Control Act 1947. The Board, which commenced to operate on 1st January, 1948, is empowered to buy and sell, on behalf of the Commonwealth Government, eggs and egg products intended for export which comply with the provisions of the Export (Dairy Produce) Regulations. In addition, the Board is authorized to deal with all matters relating to the export of eggs and egg products from Australia, to make such experiments as are likely to lead to the improvement of the quality of Australian eggs and to promote their sale overseas. The Board consists of ten members, including six representatives of egg producers and one representative of the Commonwealth Government.

6. **Oversea Trade in Poultry Products.**—The Australian overseas export of poultry products has in the past been confined chiefly to eggs in shell and egg contents, which are consigned mainly to the United Kingdom. New South Wales, Victoria and South Australia are at present the largest exporters. Exports of eggs from Australia rose from less than 3 million dozen valued at £219,000 in 1928–29 to 21.7 million dozen valued at more than £1.1 million in 1934–35, but declined to 10.3 million dozen in 1939–40. A high level of exports in 1940–41 was followed by a steep decline in 1941–42 and a further decrease in 1942–43 and 1943–44 to almost negligible quantities. Following a slight increase in 1944–45, exports rose to 7.3 million dozen in 1945–46 and to 17.5 million dozen valued at £1,416,519 in 1946–47.

Prior to the 1939–45 War, exports of egg contents were small and in 1939–40 there was an excess of imports. During the war years, exports expanded greatly, mainly to meet Service requirements and since the close of the war there has been further expansion. In 1946–47, 29.8 million lb. of egg contents, valued at £3,097,208, were exported.

Since the close of the war there has also been a marked increase in the export of frozen poultry, exports in 1946–47 amounting to 957,724 pair, valued at £872,257.

The oversea trade during the four years ended 1946–47 in comparison with 1938–39 was as follows :—

7. **Value of Poultry Products—Gross and Net.**—(i) *General.* Difficulty is experienced in obtaining complete figures for the production of poultry products. The following table sets out the values accruing to the poultry industry for Australia on a gross, local and net basis, and has been compiled from data actually collected or carefully estimated by the State Statisticians :—

GROSS, LOCAL AND NET VALUE OF POULTRY PRODUCTS, 1944–45 AND 1945–46.

State.	Gross Production valued at Principal Markets.	Marketing Costs.	Gross Production valued at Farm.	Feed and Other Costs.	Net Value of Production. (a)
			1944–45.		
	£	£	£	£	£
New South Wales ..	9,536,000	843,000	8,693,000	2,978,000	5,715,000

§ 6. Bee-Farming.

1. **General.**—Although practised as a separate industry, bee-farming is also carried on in conjunction with other branches of farming but its place in Australia's rural economy is not very significant. The returns of honey from productive hives during 1945-46 gave an average of 62.4 lb. per hive and the average quantity of wax was 0.82 lb. per hive.

2. **Production of Honey and Bees-wax.**—The number of hives and the production of honey and bees-wax during the year 1945–46 are shown in the following table. As these details have been collected from holdings of one acre and upwards, any production from smaller areas is omitted and consequently the production is understated to that extent. In Victoria and South Australia, however, the compulsory registration of bee-keepers enables the collection to cover all producers and the production for these States is considered to be complete.

BEEHIVES, HONEY AND BEES-WAX, 1945–46.

(*a*) Estimated. (*b*) Year 1946–47.

The production of honey and bees-wax fluctuates considerably and is determined mainly by the flow of nectar from flora of the eucalypts, which varies greatly from year to year. However, in recent years there has been a pronounced upward trend in the output of honey, the figure of approximately 31 million lb. recorded for 1946–47 easily constituting a record.

The table hereunder shows the production of honey and bees-wax for the five years ended 1945–46 in comparison with the year 1938–39.

3. **Value of Production—Gross and Net.**—(i) *General.* The following table shows the gross, local and net values of production which have been compiled by the Statisticians of the several States by uniform methods. These data are based upon actual records but, as previously explained, it is known that the production in some States is understated. As production costs are not known they are not taken into account, and consequently, the gross production valued at the farm and net values shown are identical :—

GROSS, LOCAL AND NET VALUE OF BEE PRODUCTS, 1944–45 AND 1945–46.

4. **Oversea Trade in Bee Products.**—Prior to the 1939–45 War the production of honey exceeded Australian requirements and a small quantity was available for export. As a result of increased production, exports have risen considerably since 1938–39, when a quantity of 687,000 lb. of honey, valued at £13,957, was shipped. In 1946–47 the record quantity of 13.9 million lb., valued at £556,605, was exported.

The wider use of frame hives has reduced the production of wax, and as a result the quantity imported generally exceeds that exported.

Particulars of the oversea trade in honey and bees-wax are shown in the following table for the four years ended 1946–47 in comparison with 1938–39.

2. **Butter.**—(i) *Imports.* Australia has for many years supplied a large proportion of the butter imported into the United Kingdom. The quantity in 1946 amounted to 1,309,802 cwt., or 30.99 per cent. of the total importation. The Australian contribution was valued at £10,796,716 and was exceeded only by that received from New Zealand. Substantial imports were also received from Denmark. Australia and New Zealand combined supplied 78.86 per cent. of the total quantity imported during 1946 and Denmark, 20.60 per cent.

In the following table particulars of the imports of butter into the United Kingdom, are shown for the pre-war year 1938 and the post-war year 1946 according to country of origin.

BUTTER : IMPORTS INTO UNITED KINGDOM.

Country from which Imported.	1938.		1946.	
	Quantity.	Value.	Quantity.	Value.
	Cwt.	£ stg.	Cwt.	£ stg.
New Zealand	2,592,251	14,524,140	2,023,240	16,777,303
Australia	1,797,811	9,629,939	1,309,802	10,796,716

(ii) *London Prices.* Fluctuations in prices in London during the years 1938–39 and 1939–40 are shown in the following table. Until September, 1939, the prices quoted represent the mean of the top prices quoted weekly for choicest salted Australian butter together with their f.o.b. equivalents in Sydney and Melbourne in terms of Australian currency. Since September, 1939, the price represents that fixed in accordance with the contract between the Governments of Australia and the United Kingdom for choicest Australian butter. Pence have been omitted throughout.

AVERAGE PRICE PER CWT. OF AUSTRALIAN CHOICEST BUTTER IN LONDON (WITH F.O.B. EQUIVALENTS IN AUSTRALIAN CURRENCY).

Month.	1938–39.		1939–40.		Year.	London.	Australia.

(a) Sydney and Melbourne. (b) Equivalent of contract price. (c) Contract price f.o.b. Australian ports. Equivalent under pre-war conditions would be 122s. stg. covering the period 1939 to 1942, 126s. stg. during 1942 to 1944, 161s. stg. during the contract period 1944 to 1946, 185s. stg. during 1946–47 and 215s. stg. during 1947–48.

3. **Cheese.**—The value of cheese imported into the United Kingdom in 1946 was £26,208,693, of which £9,131,328 was received from the United States of America, £8,536,988 from New Zealand and £5,848,531 from Canada. Imports from Australia during 1946 were valued at £1,901,641.

4. **Bacon and Ham.**—Of a total import in 1946 of bacon and ham valued at £24,154,908, Canada supplied £16,742,282, Denmark, £5,612,714 and United States of America, £944,742. Small shipments from other countries amounted to £855,170. Exports of bacon and hams from Australia to the United Kingdom were prohibited during this period.

5. **Pork.**—The value of the United Kingdom imports of pork (frozen and chilled) was £8,830,338 in 1946. Imports from Australia amounted to £1,476,373 only. The principal supplies were obtained from Argentine Republic, £3,484,280, United States of America, £2,891,125 and New Zealand, £910,416.

6. **Eggs.**—In 1946 the value of eggs imported into the United Kingdom was £40,070,423, comprising eggs in shell, £9,286,567 and dried eggs, £30,783,856. The Australian share in this trade amounted to £1,816,936. Eggs in shell were supplied by Canada, £4,476,224 and Eire, £2,646,563. The principal exporters of dried eggs to the United Kingdom were the United States of America, £25,017,459, Canada, £2,788,274 and Argentine Republic, £1,596,355.

7. **Milk Products.**—In 1946 the value of powdered and preserved milk imported into the United Kingdom was £10,330,591, comprising condensed milk, sweetened, £410,145, condensed milk, unsweetened, £6,038,217 and powdered milk, £3.882,229. The imports of Australian origin were of a minor nature and amounted to £156,823 only. United States of America supplied the major portion of the imports (£8,016,838) with Canada the next largest exporter (£801,297).

8. **Other Products.**—The imports into the United Kingdom from Australia of bees-wax poultry, game, lard, honey and frozen rabbits in 1946 were unimportant.

CHAPTER XXII.

FORESTRY.*

§ 1. General.

1. **Objects of Forestry.**—Forestry is a profession based on science, art, economic and business principles, which aims to protect and treat forests as restorable resources to provide their maximum direct and indirect benefits to a country.

The direct benefits lie in the providing of essential commodities such as structural timber, poles, piles, sleepers, pulpwood, firewood, tans, oils, resins, etc.; the provision of an avenue for the healthful employment of labour in the rural forestry and sawmilling industry as well as in the transport of timber by rail, road, and water, and in numerous industries directly dependent on forest produce as a raw material. The history of all countries shows that these direct benefits are never fully appreciated until they are seriously reduced following reckless exploitation and absence of conservation measures.

The indirect benefits include regulation of stream flow from catchment areas, for a forest cover provides ideal conditions for the maximum penetration into the soil of rainfall and other precipitations which then become available for the perennial flow of streams. As a result, surface run-off after heavy rain is reduced and therefore floods are minimized in number and severity and as a corollary the ill effects of reduced and/or intermittent flow of streams in the non-rainy season are minimized. Consequent on their action in reducing surface run off in the rainy season, forests have very marked effect in minimizing the ravages of water erosion. The presence of forests in drier wind swept areas also lessens the ill effects of æolian or wind erosion. As with the direct benefits, the indirect benefits of forests unfortunately are seldom appreciated until disastrous floods, siltation of rivers and reservoirs, washing away or blowing away of the topsoil, landslides, tearing of gullies out of hillsides and deposition of stones, rocks and other debris on fertile lands following the destruction of forests, becomes a matter of public concern.

Australia has a particular interest in water and soil conservation for several reasons. The area suitable for agricultural and pastoral development is not so large that material reduction in extent or deterioration of productive capacity cannot but limit expansion and retard development; the topographical soil and climatic conditions of many parts of Australia render them potentially highly susceptible to water and wind erosion; to ensure successful cropping of very large areas of land in Australia, millions of pounds have been spent on water conservation and irrigation schemes but in the last analysis these water conservation schemes are dependent upon regular stream flow and the minimum of siltation.

Forestry aims to protect existing forests from the ravages of fire, insect, fungus and destructive agencies generally; to improve the quality and condition of forests by carrying out judicious fellings; to control exploitation so that the forest increment and not the forest capital is removed; to regenerate cut over areas; to afforest with native or exotic species denuded lands, or those which for protection or other reasons are from a national point of view better under forest than under any other crop.

2. **General Account of Forests and Timbers.**—Compared with Australia's land area of approximately three million square miles, the area of forest land capable of producing commercial timber has always been very small, occupying in the main the wetter belts of the coastal areas and the near coastal highlands. In the early days of settlement the forests, however, appeared to the small population to be practically inexhaustible. In those early days timbers were exploited chiefly on account of their accessibility, ease of working and general utility regardless of their intrinsic merits, and so it was that what are now regarded as superlative furniture and cabinet timbers were often put to quite inferior

---

* A specially contributed article dealing with Forestry in Australia appeared as part of this chapter in Official Year Book No. 19 (*see* pp. 701–12 therein). *See* also "The Commonwealth Timbers of Australia, Their Properties and Uses" by I. H. Boas, published by the Council for Scientific and Industrial Research in 1947, "Timbers and Forest Products of Queensland" by E. H. S. Swain, published in 1928 and "Australian Standard Nomenclature of Australian Timbers" published by the Standards Association of Australia.

uses. Clearing of forest land by axe and fire stick to make room for crops and pastures has bitten deeply into the original forest estate which has been further degraded by recurrent forest fires. In retrospect, the damage and waste of the past is appalling, but it marked a phase of forest and timber loss which has been paralleled in the vigorous pioneering activity of the early history of many countries.

Predominantly the forests of Australia consist of relatively coarse bluish green foliaged evergreen hardwoods. The characteristic genus is Eucalyptus, embracing five to six hundred species, which with few exceptions are endemic to Australia. The genus includes such species as the white mountain ash (*E. regnans*) of Victoria and Tasmania, and karri (*E. diversicolor*) of Western Australia, both of which for height and grandeur have few equals in the world. At the other end of the scale of size of species of this genus are dwarf types, including the small multiple stemmed species collectively known as the " mallees ", which thrive in some of the drier belts. Probably not more than 80 to 90 of the eucalypts are used for sawmilling in Australia and, for one reason or another, not more than 30 to 40 are extensively exploited.

Among these outstanding eucalypts are—

Blackbutt (*E. pilularis*) of New South Wales and Queensland ;
Tallowwood (*E. microcorys*) of New South Wales and Queensland ;
Spotted Gum (*E. maculata*) of New South Wales and Queensland ;
Ironbarks (*E. spp.*) of New South Wales, Victoria and Queensland ;
Alpine Ash (*E. gigantea*) of New South Wales, Victoria and Tasmania ;
Redgum (*E. camaldulensis*) of New South Wales, Victoria and South Australia ;
Mountain Ash (*E. regnans*) of Victoria and Tasmania ;
Messmate, Stringybark or Tasmanian Oak (*E. Obliqua*) of New South Wales, Victoria and Tasmania ;
Jarrah (*E. marginata*) of Western Australia ;
Karri (*E. diversicolor*) of Western Australia.

The range and properties of eucalypt timbers are very great indeed. They fulfil all Australia's requirements where strength and durability are required, for example in such uses as railway sleepers, poles, piles, beams, girders, telegraph crossarms, waggon scantlings, posts, house blocks, wheelwright timber as well as for fuel, etc. In large measure they also meet general building requirements and, to a lesser extent perhaps, export packaging requirements. In recent years certain of the eucalypts have been extensively pulped for paper-making and, less widely, for the manufacture of hardboard.

A large number of other genera represented in the Australian forest flora also produce commercial hardwoods. Among the outstanding furniture cabinet and veneer timbers are red cedar (*Cedrela toona Var. Australis*), Queensland maple (*Flindersia brayleyana*), Southern and Northern silky oak (*Grevillea robusta* and *Cardwellia sublimis*, respectively), Queensland walnut (*Endiandra palmerstoni*), blackwood (*Acacia melanoxylon*), rose mahogany (*Dysoxylum fraseranum*), etc. Turpentine (*Syncarpia laurifolia*) ranks with the world's best as a harbour piling timber and swamp box (*Tristania suaveolens*) is almost as good. Coachwood (*Ceratopetalum apetalum*) came into prominence for rifle furniture and for aircraft ply during the last war. The foregoing are but a few examples indicating the range of use of the timbers of the Australian hardwood forests.

Indigenous softwood resources have never been large and are now seriously depleted. A remnant only remains of the forests of hoop pine (*Araucaria cunninghamii*), bunya pine (*Araucaria bidwilli*) of New South Wales and Queensland, kauri (*Agathis spp.*) of Queensland, and huon pine (*Dacrydium franklinii*), celerytop pine (*Phyllocladus rhomboidalis*) and King William pine (*Athrotaxis selaginoides*) of Tasmania.

There are still considerable areas of the slow-growing but useful white ant resisting cypress (*Callitris spp.*) in the forests of the inland areas of Queensland, New South Wales and Victoria, but many of them are being overcut and in some localities regeneration of the forests presents difficulties.

The savannah forests of the interior yield minor products such as sandalwood and tan barks, and the leaves of some of the mallees are used for oil distillation.

3. **Extent of Forests.**—According to data submitted by State Forestry authorities for the Empire Forestry Conference in 1947, the total area of forest is 119,402 square miles, or about 4 per cent. of the total land area of Australia. This forest area is distributed between the different States as follows :—

	Square miles.
New South Wales and Australian Capital Territory ..	19,364
Victoria	27,025
Queensland	27,050
South Australia	(a)5,909
Western Australia	27,154
Tasmania	12,900
Total	119,402

(a) Excludes 4,600 square miles of mallee containing firewood only.

The South Australian authorities especially emphasize that, after excluding the mallee firewood areas, the percentage of the remaining forest comparable with even mediocre forest land in other States is so small as to be almost negligible. Apart from this specific case it seems clear that there is considerable variation in the standards adopted for the definition of forest land. Also it should be emphasized that the figures given are stated to be rough estimates only. Furthermore, it is generally agreed that the figures for forest areas given are often far in excess of those which are both suitable for reservation and likely to be maintained for timber production. Considering these facts the percentage of Australia carrying commercial forests is very low. On the other hand it should be noted that approximately 68 per cent. of the area of the continent is practically uninhabited and carries less than one person in every eight square miles.

The table below shows a classification of the estimated total forest area referred to above :—

CLASSIFICATION OF FOREST AREA : AUSTRALIA.

(In square miles).

Class of Forest.	State Forest.	Communal Forest.	Private Forest.	Total.	
				Square Miles.	Percentage of Total Forest Area.
Exploitable—					
Softwood	3,858	16	1,832	5,706	4.8
Mixed wood	1,033	..	94	1,127	0.9
Hardwood	32,016	780	13,146	45,942	38.4
Total	36,907	796	15,072	52,775	44.1
Potentially Exploitable—					
Softwood	200	..	278	478	0.4
Mixed wood	100	..	..	100	0.1
Hardwood	16,853	141	7,848	24,842	20.9
Total	17,153	141	8,126	25,420	21.4
Other Land Classed as Forest	34,798	..	6,409	41,207	34.5
Grand Total	88,858	937	29,607	119,402	..
Percentage of Total Forest Area	74.3	0.8	24.9	..	100.0

The bulk of the softwood forest areas of approximately 4,000 square miles are in Queensland and New South Wales. The softwood forest areas given for these States represent natural forest, a large proportion of which consists of slow growing native cypress (*Callitris spp.*) in low rainfall areas, and the per acre volume of which is comparatively low.

4. **Forest Reservations.**—The rate at which the original forest estate was being diminished had exercised the minds of far-sighted individuals as long ago as the eighties of last century and it was about that time that the first large forest reservations were made. Over the years recognition that forest reservations were inadequate became more general. It was not, however, until an Interstate Forestry Conference was held at Hobart in 1920 that a specific target to be aimed at was mentioned. The figure then agreed upon was an area of 24½ million acres of indigenous forest, which it was considered should be permanently reserved to meet the future requirements of Australia.

The forest reservations in Australia at 30th June, 1946 totalled 25,895,893 acres of which 19,042,219 acres are described as Dedicated State Forests and 6,853,674 acres as Timber and Fuel Reserves. The distribution of these areas is shown by States in § 4. 2 hereafter.

In general the timber and fuel reserves are temporary only and are liable to be alienated after the timber on them has been exploited. Some of these areas contain land of high value for forestry purposes, but the greater part does not justify permanent reservation.

If the permanently reserved areas were all of good quality, accessible, and fully productive forests supplying the class of timber required, they could be regarded as adequate for a much larger population than exists in Australia at the present time. Actually, however, a considerable proportion is in inaccessible mountainous country and many of the forests contain a mixture of species, some only of which are at present of commercial value: a good proportion consists of inferior forest and a large proportion of the whole has been seriously degraded by recurrent fires. Also the indigenous forest does not contain adequate supplies of softwoods producing commercial timbers of which our needs have to be largely met by softwood timber imported from other countries.

It is freely acknowledged by Australian forestry authorities that information on forest resources is very imperfect. It is not possible at present to give a reliable estimate of the forest areas needed to meet all future demands because of the number of unknown variables involved; in particular the yield capacity per acre, future per capita consumption of different classes of timber, and the future population. It would appear, however, that all available potentially good forest country, including adequate areas for plantations of conifers, will need to be reserved, protected and systematically managed, if Australia is to approach the goal of self sufficiency in timber supplies in the future. One of the most urgent requirements in this connexion is a comprehensive, if provisional, estimate of forest resources.

5. **Plantations.**—The inadequacy of indigenous softwood supplies has been referred to. This fact has long been recognized by the various forest authorities and considerable progress has been made in experimental planting of exotic conifers and also some substantial progress made in the establishment of commercial plantations. It was natural that this aspect of forestry received earliest attention in South Australia as it is the State most poorly endowed with natural forest and it now has the largest plantation area. For some years South Australia has been exploiting considerable quantities of timber from its plantations and these quantities will increase very substantially during the next decade.

According to statements provided by State authorities, the total effective area of plantations in Australia as at the 30th June, 1946 was 249,379 acres. Details by States are given under § 4. 3.

§ 2. Forestry Activities of the Commonwealth.

1. **General.**—When the Commonwealth of Australia was established on the 1st January, 1901, forestry was not included among the matters transferred from the States to the control of the Commonwealth, and Federal jurisdiction was therefore restricted to the then relatively unimportant forests of the Australian Territories. After the 1914–18 War these Territories (including Papua-New Guinea and Norfolk Island) covered a large area, and in the aggregate contained a substantial forest resource. In the early twenties of this century a professional forester was appointed as forestry adviser to the Commonwealth Government, and he submitted preliminary reports on the forest resources of Papua-New Guinea, Norfolk Island and the Australian Capital Territory, with suggestions for future policy.

2. **Commonwealth Forestry Bureau.**—In 1925 the Commonwealth Forestry Bureau was instituted and the Commonwealth Forestry Adviser became the Inspector-General of Forests. At this stage it was considered that the most useful contribution that the Commonwealth could make to Australian forestry was: (*a*) to provide better facilities than then existed for the higher training in forestry for recruits to the professional ranks of the State services and for forestry research workers; and (*b*) to initiate research into problems connected with silviculture, forest management and forest protection, which fundamentally were common to most, if not all of the States.

By deciding to build, equip and staff the Australian Forestry School on its own Territory the Commonwealth Government ended a long standing controversy as to the site of a National School which successive Interstate Forestry Conferences had unanimously resolved was necessary. All States sent students to the Australian Forestry School when its career commenced in Adelaide in 1926, pending completion of the school in Canberra in the following year. At this time also a nucleus of selected and qualified officers was sent abroad to undergo special courses of instruction and to obtain experience for the purpose of staffing the research side of the Bureau, which received statutory powers by an Act passed in 1930. These powers and functions subject to the regulations and the direction of the Minister, were as follows:—(*a*) advising the Administrations of the Territories on all matters pertaining to the management of forests; (*b*) the management of forests placed under its control by the Governor-General; (*c*) the establishment of experimental stations for the study of silviculture, forest management and forest protection; (*d*) the provision of educational facilities for the training of professional foresters; (*e*) the establishment and awarding of forestry scholarships; (*f*) the collection and distribution of forestry information; (*g*) the publication of reports and bulletins dealing with forestry; and (*h*) such other functions as are prescribed.

The financial situation in the years immediately following delayed development on the research side, but some progress was being made, including the establishment of experimental stations in South Australia and Tasmania on a co-operative basis with the services of those States. Plans were upset and progress retarded as a result of the 1939–45 War.

3. **Wartime Control of Timber.**—Because of its importance to the war effort of Australia, the supply of timber immediately on the outbreak of war in 1939 came under the control of the Commonwealth Department of Munitions. With the increasing importance of timber as a raw material in the production of munitions and for defence, a Controller of Timber was appointed in April, 1941 to plan and co-ordinate the supply of timber. Under an order of 8th October, 1941, the Controller of Timber was given power to prohibit the cutting of timber, to determine the priority of orders and to collect returns from persons dealing with timber.

On 23rd March, 1942, these powers were extended by the National Security (Timber Control) Regulations to cover all phases in the production, treatment and use of timber. From time to time orders were issued restricting the use of certain timbers.

4. **Forestry and Timber Bureau.**—At the end of the war, the direction of timber supplies within the boundaries of each State became the responsibility of the respective State Governments. By the Forestry and Timber Bureau Act 1946 the title of the Bureau was altered from Forestry Bureau to Forestry and Timber Bureau and its administration was placed under the charge of a Director-General in lieu of an Inspector-General of Forests.

The powers and functions of the Bureau were extended to embrace the following :—(*a*) Collecting statistics and information regarding timber supplies and requirements in Australia, and formulating programmes in respect of the supply, production and distribution of timber in Australia, and the importation into, and exportation from, Australia of timber ; (*b*) advising the Government of the Commonwealth or any instrumentality of that Government, or, when so requested, the Government of any State, or any instrumentality of the Government of any State, or any body or person, on matters relating to the supply, production and distribution of timber in Australia, and the importation into, and exportation from, Australia of timber ; and (*c*) carrying out investigations and research relating to the supply, production, distribution and use of timber.

5. **The Australian Forestry School.**—The genesis of the Australian Forestry School situated in Canberra in the Australian Capital Territory, which was established by the Commonwealth Government primarily to meet the demand of the States for an institution which would give professional training at least equal to that given by the recognized Forestry Schools abroad, has been referred to in (2) above.

Under the Forestry Bureau Act 1944, which came into operation on 3rd May, 1944, a Board of Higher Forestry Education has been established to maintain the standard of the diploma course at the school and to advise as to pre-requisite university courses.

Under existing arrangements the head of the State forestry service may nominate candidates for enrolment at the school. According to the system in vogue in each State, the nomination may be made either at school-leaving age or after the candidate has successfully completed the specified university course. In the first case, the youth is helped throughout his university career and is given employment in practical work during the long vacations to test his suitability as a forestry officer ; in the second case he is chosen later, and the practical tests are not made until the long vacation immediately preceding his entry to the school. The Commonwealth Government also awards to selected students ten scholarships each year of the value of £150 per year for the four years of academic study required. The possession of a nomination by a State Government Service or the receipt of a Commonwealth Government scholarship is not, however, essential to enrolment, since any candidate possessing the necessary qualifications will be accepted for the diploma course, and in special cases applicants desirous of studying a particular branch of forestry will be required to follow certain lectures only. Refresher or post-graduate courses are arranged to meet the needs of senior foresters.

A candidate for enrolment in the diploma course must possess—(*a*) a degree of a university ; or (*b*) a certificate that he has completed the special two years' preliminary course at a university.

The qualifications for enrolment may be waived to assist an applicant of exceptional ability with a record of long service in a State Forestry Department, who has been specially recommended by the head of that service. Such applicants must show proof of education equal to that required for a school leaving certificate.

The course of instruction extends over three years, the first two of which are spent at the school, and the third in one of the forestry services of Australia.

The Commonwealth diploma of forestry is awarded to students on the following conditions :—(*a*) successful completion of theoretical course ; (*b*) satisfactory field work during the course ; and (*c*) one year's satisfactory practical forestry work following the school course.

Students who have passed the approved two-year preliminary science course at the Universities of Adelaide, Melbourne, Western Australia, Queensland, Sydney or Tasmania and two years of Diploma course at the School, may be granted the degree B.Sc.F. by their Universities, subject to certain conditions laid down, particulars of which may be obtained from the Registrar of the University concerned.

For various reasons the number of students attending the School each year almost since its inception has been well below the number which events have since shown were necessary to meet the demand for trained personnel. This position was naturally aggravated during the six years of war, while demands for timber and the need for expansion in all phases of forest developmental work, better protection, transport and more intensive management, have accentuated the shortage of trained staffs. The attendance at the Australian Forestry School has consequently increased substantially and large numbers of ex-servicemen are taking the University science courses which are a necessary pre-requisite to entry to the Forestry School.

Fundamental investigations connected with the properties and uses of timber and forest products generally are carried out by the Forest Products Division of the Council for Scientific and Industrial Research. These investigations cover a very wide field, e.g., pulp, paper, seasoning, structure and chemistry of wood, tans, etc.

Details can be obtained from the annual reports and publications of the Division.

§ 3. Forest Congresses.

Reference to the various forestry conferences held in Australia and elsewhere is given in Official Year Book No. 22, page 742. The first British Empire Forestry Conference was held in London in 1920. Subsequent conferences were held in Ottawa in 1923, Australia, 1928 and South Africa, 1935, but the Fifth Conference which was to have been held in India in 1940 was postponed because of the war. The Fifth Conference was eventually held in London in 1947, at which statements were presented on a more uniform basis than formerly by the various forest authorities of the British Commonwealth of Nations. These statements included references to the part played by forestry in the different parts of the Empire in the war effort. Publications issued in connexion with these conferences are available on application to the various State and Commonwealth forestry authorities.

The first session of the Food and Agriculture Organization of the United Nations held at Quebec in 1945 drew attention to the need for statistics on forest resources and the supply of, and demand for, forest products; sound forest policies; sound forest management; afforestation; forest research; forest education; integration of forest industries and avoidance of waste; and forest products research, particularly in the direction of extending utilization to little known woods.

At the second Session held at Copenhagen in 1946, the Director-General of the Forestry and Timber Bureau attended the conference as alternate delegate and adviser in forestry matters for the Commonwealth.

§ 4. State Forestry Departments.

1. **Functions.**—With the exception of Queensland, the powers and functions of State forest authorities are laid down under Forestry Acts and Regulations. In each State there is a department or commission to control forestry work. The functions of these administrations are as follows :—(*a*) The securing of an adequate reservation of

forest lands; (*b*) the introduction of proper measures for scientific control and management of forest lands; (*c*) the protection of forests; (*d*) the conversion, marketing and economic utilization of forest produce; and (*e*) the establishment and maintenance of coniferous forests to remedy existing deficiency in softwoods.

In Queensland, forestry is a sub-department of the Department of Public Lands.

Annual reports are issued by each State forest authority: that for Queensland being included with the report issued by the Department of Public Lands.

In Victoria a forestry school has been established at which recruits are trained for the forestry service of the State.

2. **Forest Reservations.**—As mentioned in § 1. 4 *ante*, State forest authorities agreed that, in order to secure Australia's future requirements, an area of 24½ million acres should be permanently reserved. In June, 1946 the area of State forests reserved in perpetuity totalled 19,042,219 acres or 78 per cent. of the area recommended as the goal to be attained.

In addition to the work of permanently reserving areas in each State, foresters are endeavouring to survey all timbered lands with a view to the elimination of those unsuitable for forestry. Considerable areas have been revoked in certain States, while dedications of new areas have resulted in gains to the permanent forest estate.

The Forestry Departments also control 6,853,674 acres recorded as temporary timber and fuel reserves, but, while these areas contain some land of high value for forestry purposes, the greater part does not justify permanent reservation.

In the following table details of forest areas as recorded by State Forest Authorities, distinguishing between Dedicated State Forests and Timber and Fuel Reserves, are given for each State as at 30th June, 1946.

AREA OF FOREST RESERVATIONS, 30th JUNE, 1946.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Total.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Dedicated State Forests ..	5,258,146	4,904,364	3,402,926	(*a*)249,687	3,395,586	1,831,510	19,042,219
Timber and Fuel Reserves ..	1,295,948	(*b*)	3,041,170	..	2,138,412	(*c*) 378,144	*d* 6,853,674
Total ..	6,554,094	4,904,364	6,444,096	249,687	5,533,998	2,209,654	25,895,893

(*a*) Includes Timber and Fuel Reserves. (*b*) Not available. (*c*) Excludes Fuel Reserves. (*d*) Incomplete.

3. **Reforestation, Afforestation, etc.**—In the table below details are given of the area of indigenous forest improved or regenerated, the area of forest plantations and the number of persons employed by Forestry Departments for the year 1945–46.

FORESTRY : AREAS, AND NUMBERS EMPLOYED BY FORESTRY DEPARTMENTS, 1945–46.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
Total area of indigenous forest improved or regenerated .. acres	1,442,300	1,058,458	436,280	9,928	527,077	(*a*)	3,474,043
Total area of effective plantations							
Hardwoods .. .. acres	421	2,592	2,713	2,232	17,065	173	25,196
Softwoods .. .. "	29,163	47,004	29,777	103,212	12,892	2,135	224,183
Number of persons employed in Forestry Departments—							
Office staff .. .. No.	(*b*) 272	185	151	54	51	55	768
Field staff .. .. "	176	(*c*) 279	1,161	456	(*d*) 338	81	2,491

(*a*) Not available. (*b*) Includes Wood Technology staff totalling 56. (*c*) Includes professional staff totalling 129. (*d*) Includes 236 casual hands.

4. **Revenue and Expenditure.**—The revenue and expenditure of State Forestry Departments for the years 1938–39 and 1942–43 to 1945–46 are shown below.

With the exception of Queensland and South Australia, expenditure in all States has exceeded the amount of revenue received since 1942–43. Since that year South Australia has recorded an excess of income over expenditure which is indicative of the successful development of the afforestation policy adopted in a State which is less endowed in natural forest resources than any of the other States.

STATE FORESTRY DEPARTMENTS: REVENUE AND EXPENDITURE.

(*a*) Includes expenditure from Relief Works, 1938–39, £167,611; 1942–43, £72. (*b*) Includes expenditure from General Loan and Trust Funds, 1938–39, £136,254; 1942-43, £98,908; 1943–44, £124,894; 1944–45, £115,423; 1945–46, £111,317.

§ 5. Forestry Production.

1. **Timber.**—(i) *Production.* Particulars of logs treated and the production of rough sawn timber by sawmills and other woodworking establishments are shown by States in the following table for the year 1945–46. The information published in the corresponding table of previous issues was restricted to establishments classified as Forest Sawmills. In order not to omit the output of other mills not included under this classification, the table has been amended to include all mills as described above.

OUTPUT OF NATIVE TIMBER : ALL MILLS, 1945-46.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
LOGS TREATED, INCLUDING THOSE SAWN ON COMMISSION.							
	'000 sup. feet.	'000 sup. feet.	'000 sup. feet.	'000 sup. feet.	'000 sup. feet.	'000 sup. feet.	'000 sup. feet.

Total ..	252,108	212,611	189,912	37,113	107,647	95,393	894,784

The next table shows the sawn output of native timber in sawmills and other woodworking establishments in each State for the years 1938–39 and 1942–43 to 1945–46.

SAWN OUTPUT OF NATIVE TIMBER : ALL MILLS.

State.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
	'000 sup. feet.	'000 sup. feet.	'000 sup. feet.	'000 sup. feet.	'000 sup. feet.
New South Wales ..	179,350	250,018	259,035	245,975	252,108
Victoria..	120,197	182,045	176,464	173,619	212,611
Queensland	193,250	199,398	204,201	194,138	189,912
South Australia	14,537	35,194	35,684	38,418	37,113
Western Australia ..	125,453	109,377	109,987	106,029	107,647
Tasmania	84,228	93,381	81,888	83,775	95,393
Total	717,015	869,413	867,259	841,954	894,784

In addition to the sawn timber shown in the table, a large amount of other timber, e.g., sleepers, piles, poles, fencing material, timber used in mining, and fuel, is obtained from forest and other lands. Complete information in regard to the volume of this output is, however, not available. In Western Australia particulars are obtained of the quantities of timber hewn by contractors for the Railway Department, mines, etc., as well as of the quantities produced by other agencies, but the figures have not been included in the preceding two tables. The quantities so produced in Western Australia in the five years shown in the preceding table were as follows :—1938–39, 35,862,540 sup. feet; 1942–43, 19,498,536 sup. feet; 1943–44, 11,698,704 sup. feet; 1944–45, 10,216,392 sup. feet; and 1945–46, 10,348,458 sup. feet. The annual reports of the Forest Departments of the States contain particulars of the output of timber from areas under departmental control, but owing to lack of uniformity in classification and measurement, accurate determination of total production cannot be made. Moreover, there is a moderate quantity of hewn timber produced from privately owned land, but information regarding output is not available.

(ii) *Stocks.* Particulars are given below of timber stocks held on 30th June, 1946, as reported by mills and other factories included in the woodworking group. These latter establishments include box and case factories and joinery works, etc. It is not known whether the particulars shown are complete.

STOCKS OF TIMBER REPORTED BY FACTORIES, 30th JUNE, 1946.

2. **Paper and Wood Pulp.**—(i) *Tasmania.* The manufacture of paper from Australian-grown timber has been established in three States. In Tasmania two large mills are making paper from indigenous hardwoods. The first of these started production of paper from imported pulp at Burnie in August, 1938, and so continued until the pulp mill, using local hardwood, came into operation a few months later. At this mill, pulp is produced by the soda process and the caustic soda necessary for cooking the wood and chlorine for bleaching the pulp are produced by a separate plant located alongside the mill. Two paper-machines are operated. The larger machine has the capacity to produce paper 180 inches wide at 800 feet per minute, while the smaller machine is capable of producing paper 90 inches wide at about 400 feet per minute. The paper produced covers a wide range of high class printing, writing, drawing, duplicating and blotting papers. At Boyer on the Derwent River, near Hobart, production of newsprint commenced in February, 1941. The newsprint is manufactured from local ground wood pulp to which is added a small proportion of sulphite pulp imported from Canada. The paper-making machine installed is capable of making paper 161 inches wide at the rate of 1,200 feet per minute, and when running at full capacity can produce about 540 tons of newsprint per week. At both these mills logs are taken from the forests by means of tractors and transported to the mills by rail. Power is supplied by the Tasmanian Hydro-electric Commission and hardwood not suitable for pulping is used as fuel. During 1945–46, 51,590 cords of pulp wood and 38,293 cords of firewood were delivered to these mills.

(ii) *Victoria.* In Victoria the production of wood pulp for paper-making commenced in January, 1937, with a pilot plant having the capacity of about 3,000 tons of air dried pulp per annum. In October, 1939 the main plant at Maryvale, with a capacity of 27,000 tons of pulp per annum, commenced operations. Associated with the pulp mill is a paper-making plant capable of producing about 20,000 tons of kraft paper per annum. The timber used at this mill consists mainly of hardwoods at present unsuitable for other purposes. In addition, a small quantity of pine, mainly thinnings, mill waste and special softwood for production of cellulose is used. During 1945–46 the wood taken from Crown Lands for the production of wood pulp and cellulose amounted to 1,812,293 cubic feet of which 1,744,176 cubic feet were hardwoods and 68,117 cubic feet were radiata pine.

(iii) *South Australia.* In South Australia a pulp and paper board mill commenced operations during 1941–42 near Millicent. When completed and in full production the mill will use considerable quantities of softwoods from the Mount Burr and Penola pine plantations. During 1945–46, 5,253,961 super. feet of pulp wood were produced of which 4,682,719 super. feet were supplied to the pulp mill and 571,242 super. feet for the production of cellulose.

3. **Other Forest Products.**—(i) *Veneers, Plywood, Etc.* Cutting of timber for the manufacture of veneers, plywood, etc., has been carried out in most States for a number of years. Recently, however, this has been considerably extended in all States, and much greater use has been made of local-grown timbers, both hard and softwoods. In recent years special attention has been paid to the selection of logs suitable for peeling. In 1945–46 the quantity of plywood produced amounted to 106,856,615 square feet ($\frac{3}{16}''$ basis) and veneers to 38,132,562 square feet ($\frac{3}{16}''$ basis).

(ii) *Charcoal.* With the availability of additional petrol supplies towards the end of the 1939–45 War, the production of charcoal, which previously had a wide use as a substitute fuel during the war years, was considerably reduced and is now little higher than normal.

(iii) *Eucalyptus Oil.* Oil may be distilled from the foliage of all varieties of eucalyptus, and several of them furnish a product widely known for its commercial and medicinal uses. Complete information regarding Australian production and consumption of eucalyptus oil is not available, but considerable quantities are manufactured, particularly in Victoria. Oversea exports amounted in 1938–39 to £86,714 ; in 1942–43 to £94,050 ; in 1943–44 to £124,148 ; in 1944–45 to £136,297 ; and in 1945–46 to £201,948. The bulk of the product is shipped to the United Kingdom and the United States of America with Victoria as the principal exporting State. Large quantities of the crude oil are used locally in flotation processes in connexion with the recovery of gold and other minerals.

(iv) *Sandalwood and Sandalwood Oil.* Most of the sandalwood is produced in Western Australia where considerable quantities are gathered each year for export to Asiatic countries. Small quantities are also produced in South Australia, Queensland and New South Wales. Details of exports of sandalwood are shown in paragraph 3 (ii), § 7. Oil distilled from Western Australian sandalwood has a medicinal value and is used extensively in the manufacture of perfumes. Quantities of this oil are exported annually to the Eastern States of Australia and oversea countries, principally the United Kingdom. Oversea exports of Australian sandalwood oil amounted in 1938–39 to £13,964 ; in 1942–43 to £2,834 ; in 1943–44 to £34 ; in 1944–45 to £11,390 ; and in 1945–46 to £19,560.

(v) *Grass Tree or Yacca Gum.* South Australia is the chief State producing this gum, which is used in the preparation of varnishes and lacquers. Quantities are also obtained in New South Wales and Western Australia but these are small. The production in South Australia during 1945–46 amounted to 991 tons, whilst the exports from Australia amounted to 832 tons valued at £10,659

(vi) *Tan Barks.* The forests of Australia are capable of yielding a wealth of tanning materials ; many species of eucalyptus and other genera contain varying proportions of tannin, chiefly in the bark, but also in the wood and twigs. Although many of these species contain higher percentages of tannin than are found in the barks of oak, chestnut and hemlock, formerly the chief source of tannin material in the northern hemisphere, scattered distribution has resulted in the richest tan-bearing species only being used in Australia. These are :—golden wattle (*Acacia pycnantha*), black or green wattle (*Acacia decurrens* or *mollissima*), and mallet (*Eucalyptus astringens*).

Up to 1913 the production of wattle bark was more than sufficient for local requirements, and an export trade was built up. The supply diminished during the six years ended 1926–27, and Australia imported on the average about 2,000 tons each year from Natal, where the plantations were originally started from Australian seed. From 1927–28 to 1938–39 exports exceeded imports in every year except 1936–37, but since 1939–40 there has been a considerable excess of imports. The chief exporting States are Western Australia, South Australia and Tasmania. This matter is referred to in tables appearing in § 7 following. The other valuable tan bark, mallet (*Eucalyptus astringens*) of Western Australia, is not extensively used in Australian tanneries, but it is exported to Europe and other countries, where it is used for producing a tannin extract. A brief account of work done by the Council for Scientific and Industrial Research in connexion with tanning materials is given in Official Year Book No. 22, p. 743. The production of extract from the bark of karri (*Eucalyptus diversicolor*), of which very large quantities are available at karri sawmills, has passed the experimental stage, and private enterprise has started production on a commercial scale. The experimental work in kino impregnated marri (*Eucalyptis calophylla*) bark is not yet complete. The production of tan bark in Australia approximated 25,000 tons per annum in the years prior to 1939. Since then production has declined and in 1945–46 reached the level of about 8,800 tons. It is noted, however, that this diminution is offset by the increased use of vegetable tanning extract which rose from 3,686 tons in 1938–39 to 12,015 tons in 1945–46.

4. **Value of Production—Gross and Net.**—(i) *General.* The values of forestry production on a gross, local and net basis are shown in the following table for the years 1944–45 and 1945–46.

GROSS, LOCAL AND NET VALUE OF FORESTRY PRODUCTION.

§. 6. Commercial Uses of Principal Australian Timbers.

1. **General.**—The uses of the more important Australian timbers are many and varied, and are indicated in previous issues of the Official Year Book. (*See* Official Year Book No. 6, pp. 454–6 and Official Year Book No. 10, Section III., §§ 7 and 8).

A list of Australian timbers best known on the local markets appeared in Official Year Book No. 20, p. 713.

2. **Nomenclature of Australian Timbers.**—The vernacular names applied to the gums, ironbarks, etc., in the various States, and even in different parts of the same State, do not always refer to identical timbers, whilst in other cases the same name may apply to different timbers. This naturally leads to a good deal of confusion and the difficult problem of providing a solution was referred by the timber trade to The Standards Association of Australia which prepared and published lists showing for each of the most important commercial timbers in Australia, the standard trade common names and their appropriate associated names. The adoption of the standard trade common names recommended by the Association would eliminate confusion and materially assist all those engaged in the production, marketing and use of timber in Australia.

§ 7. Oversea Trade.

1. **Imports.**—(i) *Dressed Timber.* The quantities and values of timber imported into Australia during the years 1938–39 and 1944–45 to 1946–47 inclusive are shown in the following table according to countries of origin :—

DRESSED TIMBER: IMPORTS INTO AUSTRALIA.

Country of Origin.	Quantity.				Australian Currency Values.			
	1938–39.	1944–45.	1945–46.	1946–47.	1938–39.	1944–45.	1945–46.	1946–47.
	'000 sup. ft.	'000 sup. ft.	'000 sup. ft.	'000 sup. ft.	£A.	£A.	£A.	£A.
United Kingdom ..	1	..	..	..	48	..	1	126
Canada	8,927	5,353	7,950	2,037	99,797	107,380	217,197	72.078
New Zealand	..	150	555	312	..	7,425	25,836	15,861
Other British Countries ..	3	19	..	1	23	172	..	41
Norway	4,209	..	..	44	47.570	..	..	1,215
Sweden	1,978	..	..	1,534	26.687	..	..	61,045
U.S. of America	2,242	722	2,179	1,153	24,203	69,028	81,686	67,299
Other Foreign Countries ..	418	..	..	..	6,771	..	..	..
Total	17,778	6,244	10,684	5,081	205,099	184,005	324,720	217,665

The figures in the table above exclude items such as architraves, veneers, plywood, staves, etc., quantities for which are either not shown, or are expressed in dissimilar units in the Customs entries. The total value of the items so excluded amounted to £A.138,208 in 1946–47.

Prior to the 1939–45 War the bulk of the imports of dressed timber came from Canada, Norway, Sweden and the United States of America; but after the outbreak of the war increased quantities were imported from New Zealand. Practically the whole of this timber consisted of softwoods—deal and pine—used for lining, weatherboards, flooring, shelving, doors, box-making, etc.

(ii) *Undressed Timber.* Australian imports of undressed timber for the years 1938–39 and 1944–45 to 1946–47 are shown hereunder:—

UNDRESSED TIMBER (*a*): IMPORTS INTO AUSTRALIA.

Country of Origin.	Quantity.				Australian Currency Values.

Total	348,098	85,989	103,412	121,926	1,854,936	1,163,653	1,518,834	3,367,164

(*a*) Excludes timber not measured in super. feet.

By far the larger proportion of the undressed timber imports consists of softwood such as oregon, redwood, hemlock, western red cedar and yellow pine from Canada and the United States of America; and kauri, rimu and white pine from New Zealand. Amongst the hardwoods imported the principal are oak from the United States of America and furniture woods from the Pacific Islands.

2. **Exports.**—(i) *Undressed Timber (excluding Railway Sleepers).* The quantity and value of undressed timber, exclusive of railway sleepers, exported during the years 1938–39 and 1944–45 to 1946–47 are shown below, together with the countries of destination.

UNDRESSED TIMBER (EXCLUDING RAILWAY SLEEPERS) (*a*): EXPORTS FROM AUSTRALIA.

(*a*) Excludes timber not measured in super. feet.

The bulk of the exports of undressed timber were consigned to New Zealand, the United Kingdom, South Africa and the United States of America, and consisted largely of the Western Australian hardwoods, jarrah and karri, which have earned an excellent reputation for such purposes as harbour works and wood paving, etc. Considerable quantities of pole, pile and girder timber are also exported from New South Wales to New Zealand.

(ii) *Railway Sleepers.* Particulars of the quantities and values of railway sleepers exported, which are excluded from the previous table relating to undressed timber, are shown below.

(a) Not recorded separately. (b) Exports of wood pulp not included.

NOTE.—The minus sign (—) denotes an excess of exports.

(ii) *Sandalwood.* A considerable quantity of sandalwood is exported, principally from Western Australia, to Hong Hong and China, where it is highly prized and largely used for artistic and ceremonial purposes. Particulars for the four years 1943–44 to 1946–47 are compared with 1938–39 in the following table :—

SANDALWOOD : EXPORTS FROM AUSTRALIA.

Country to which Exported.	Quantity.					Value.

(iii) *Tan Bark.* Tan bark appears both as an export and an import in the Australian trade returns. The following table refers to exports for the three years ended 1946–47, compared with 1938–39.

TAN BARK : EXPORTS FROM AUSTRALIA.

Country to which Exported.	Quantity.				Value.			
	1938–39.	1944–45.	1945–46.	1946–47.	1938–39.	1944–45.	1945–46.	1946–47.

Total	18,220	..	1	9,673	8,630	..	6	13,032

(*a*) There were no exports for the years 1942–43 to 1944–45.

For a number of years prior to 1927–28 Australia had to import large quantities of tanning bark, but thereafter imports dropped to negligible quantities and exports rose annually to 89,061 cwt. in 1931–32. Since 1931–32 there has been a diminution of exports and by 1941–42 these had reached the low level of 421 cwt. The quantity imported did not rise appreciably until 1939–40 when imports were more than three times that of the previous year. Since that year there has been a considerable excess of imports; the Union of South Africa being almost the sole source of supply.

A comparison of the imports and exports of tan bark during 1938–39 and the four years ended 1946–47 is given in the following table :—

TAN BARK : IMPORTS AND EXPORTS, AUSTRALIA.

Particulars.	1938–39.	1943–44.	1944–45.	1945–46.	1946–47.
QUANTITIES—	Cwt.	Cwt.	Cwt.	Cwt.	Cwt.
Imports	6,199	105,315	90,024	86,367	65,056
Exports	18,220	..	..	1	9,673
Excess of imports over exports	− 12,021	105,315	90,024	86,366	55,383
VALUES—	£A.	£A.	£A.	£A.	£A.
Imports	2,547	67,075	59,955	62,601	54,335
Exports	8,630	..	..	6	13,032
Excess of imports over exports	− 6,083	67,075	59,955	62,595	41,303

NOTE.—The minus sign (−) denotes an excess of exports.

The imports consist almost exclusively of wattle bark from the plantations in South Africa. One species of Australian wattle *Acacia mollissima* is chiefly relied upon for the production of wattle bark in the South African plantations. Seed has been tried from New South Wales, Tasmania and Victoria, but it is stated that most of the seed is obtained from the best wattle bark areas in eastern Tasmania and western Victoria.

Two reasons are given to account for the success of the industry in the Union of South Africa :—(*a*) It is found that the treeless, grassy highlands of Natal are specially suitable for wattle culture, and the trees can therefore be grown in rows and economically attended to, while the necessary bark sheds and other appurtenances can be placed in the most advantageous positions; and (*b*) the availability of native labour.

(iv) *Other Tanning Substances.* Considerable quantities of tanning substances other than bark are imported annually into Australia. The total value in Australian currency of the importations in 1946–47 was £336,045, and was composed as follows :—Tanners' Bates, £2,704; wattle bark extract, £289,098; quebracho extract, £9; other extract, £9,924; and volonia, myrobalans, cutch, etc., £34,310.

Exports of tanning extracts from Australia amounted to £58,084 in 1946–47.

CHAPTER XXIII.

FISHERIES.

§ 1. General.

1. **Fish Stocks.**—Australia possesses a varied native fauna of freshwater and marine fish, including tropical and temperate species. In addition, certain exotic species have become acclimatized in the freshwater streams. The commercial fisheries exploit on-shore, demersal (bottom) and pelagic (surface) stocks. The on-shore stocks are at present of greatest importance.

The Australian marine fauna includes also a number of mollusca (oysters, scallops) and crustacea (crabs, prawns, crayfish) groups which are commercially exploited.

At certain times of the year whales of various species appear off our coasts.

2. **Fishing Areas.**—The principal fishing areas at present are the coastal lakes, streams, estuaries and beaches, from Cairns in Queensland to Ceduna in South Australia, and from Esperance to Geraldton in Western Australia. There are interruptions of variable size; for the most part, these fishing grounds are associated with the coastal streams. The demersal grounds fall into two classes—(*a*) the reefs from which cod and other tropical species are taken in tropical waters, and snapper in temperate waters; and (*b*) the grounds from which flathead, morwong, etc., are taken. The reefs extend intermittently from northern Queensland around the southern part of the continent to Shark's Bay in Western Australia. The flathead grounds lie on the continental shelf off south-east Australia, chiefly from off Crowdy Head to south of Cape Everard and further off the east Tasmanian coast off Babel Island southwards to Storm Bay. Other demersal grounds are known to exist in the Great Australian Bight but as yet are not exploited. The demersal shark grounds lie principally in Bass Strait and on the continental shelf off eastern South Australia. Other grounds have been located off southern Western Australia.

The grounds of existing pelagic fisheries include that for the Spanish mackerel off the north-eastern coast from about Coff's Harbour to Cairns and that for barracouta in Bass Strait and off eastern Tasmania. Horse mackerel is found in the waters of eastern Tasmania, the south-east coast of New South Wales, and Western Australia. Concentrations of other pelagic groups, including tuna and clupeoid species, are reported over the continental shelf at various points.

The pearl oyster inhabits the northern and western coastal waters from Cape York to Shark Bay. Edible oysters are found in the temperate waters of Queensland, New South Wales and Victoria. Some cropping of natural resources takes place in Queensland but the principal cultivation grounds are found in New South Wales. The scallop is found commercially only in Tasmanian waters.

Crabs of various species are found in practically all coastal waters. Prawns are taken in the temperate waters of Queensland and New South Wales. Crayfish are taken on reefs of the continental shelf in the waters of all southern States, the fishery extending (with a major interruption in the Bight) from Port Macquarie in New South Wales to Geraldton in Western Australia.

The whale appearances occur off the south of the continent, extending as far north as southern Queensland in the east and to beyond Shark's Bay in the west.

3. **Fishing Boats and Equipment.**—The fishing equipment includes almost every possible type of gear, and appropriate boats are employed. The on-shore equipment includes mesh-nets, trawl-nets, and traps of various types. The demersal reef-fishery is worked with traps, hand lines and other long lines. The demersal flathead-fishery

is worked by both otter trawl (with V.–D. gear) and Danish seine; in addition some hand-lining is carried out. The demersal shark fishery is worked by long lines. The pelagic mackerel-fishery employs trolling gear with lures of various types; while the pelagic barracouta fishery employs principally barbless jigs. Large nets, chiefly of the purse seine type, for pelagic fisheries have been tested experimentally by the Council for Scientific and Industrial Research in its exploratory work.

The boats for the on-shore fisheries are almost invariably small vessels fitted with low-power petrol engines. The vessels working the reefs are larger (up to 50 feet) and have more power. The otter trawl vessels are steam trawlers, while the Danish seine vessels are 40 to 70 feet in length with diesel engines. The shark boats have diesel power and range from 35 to 50 feet in length.

4. **Administration.**—The fisheries at present are administered by State Departments implementing State laws. This administration includes licensing of men and boats, and restriction on fishing by prohibitions against fishing at certain times and places and by certain methods. In some States the quantity, type and construction of gear is subject to limitations and legal minimum sizes are prescribed.

In October, 1946 the Commonwealth Government appointed a Director of Fisheries and established a Commonwealth Fisheries Office in the Department of Commerce and Agriculture to co-ordinate fisheries administration. This office took over the responsibilities of the Controller of Fisheries who operated in the Ministry of Post-war Reconstruction.

Special legislation exists for the pearl-shell and bêche-de-mer fisheries and for whaling.

§ 2. Development and Present Condition of the Fishery.

1. **Fisheries Proper.**—(i) *General.* The earliest Australian fishery was on-shore. To this was soon added the demersal reef fishery using lines. At each centre of population this sequence has almost invariably been followed, and expansion of the industry up to about the year 1900 consisted chiefly of the extension of these operations into hitherto unworked areas. The taking of barracouta in Tasmanian waters was begun at least by 1880, if not earlier, but the main development of this fishery occurred between 1915 and 1925.

The first major development of the fishery came with the institution of trawling operations off the New South Wales coast in 1918 by the New South Wales Government, as a consequence of the results obtained from the exploratory work of the Federal Investigation ship *Endeavour*. The State enterprise failed, but the fishery was found very profitable by private enterprise, which had as many as sixteen steam trawlers operating at one time. In 1936 the use of Danish seine vessels began and the fleet of these vessels rapidly expanded, being given an exceptional opportunity by the requisitioning of the steam trawlers by the Navy. Subsequently, practically all the Danish seine vessels were also requisitioned. Since the war, vessels requisitioned by the Services have returned to this fishery, and in 1946 licences were issued to 13 steam trawlers and 120 Danish seine vessels. Many of these vessels made very satisfactory catches when they first entered the industry, but by the end of 1946 signs of serious depletion of fish stocks had appeared. It seems that the catch should be limited to from 10 to 12 million lb. per annum to ensure economic production.

In about 1929–30 Queensland fishermen turned their attention to Spanish mackerel, and this fishery rapidly developed, with Townsville as principal centre. Production of this fishery rose to about 1 million lb. in 1942, but catches since that year have been considerably lower.

At about the same time (1930) a fishery for snapper shark in southern waters began to expand. This fishery rapidly extended its area of operations and the catch increased from 23,131 lb. in 1930 to 3,150,000 lb. in 1942–43. Greater impetus was given to the fishery during war years by the demand for livers for fish oil production for medicinal purposes. The catch of shark in south-east Australia has been stabilized at about three million pounds. Livers have been used for the production of about 15,000 gallons of vitamin oil, and the flesh is sold for the most part in Melbourne Fish Market.

The presence of stocks of tuna of various species in Australian waters has been established, but despite extensive experiments, no commercial quantities have yet been taken. However, following experimental work by the Council for Scientific and Industrial Research, a Commonwealth crew, operating an American mackerel purse seine net, made two catches of approximately 15 tons each of horse mackerel in Tasmanian waters in 1947. After considerable alterations to the net, experiments were made on the southern New South Wales coast, and three catches of about 20 tons each were made. Further experiments will be made on the Tasmanian coast in the 1948 season, and these results should give useful information for the development of a commercial fishery on this species, which is of particular interest for canning.

(ii) *Production.* Production for the year 1945–46 is considerably higher than for previous years, being about 75 million lb. This is due to the fact that steam trawlers and Danish seine vessels operating on the south-east coast of Australia have made large catches on the grounds that were rested for the period of the war, and also due to the general expansion in the industry following the war when so many of the larger vessels were requisitioned by the Services.

2. **Oysters and Shell Fisheries.**—Initially the Australian oyster fisheries depended solely upon the harvesting of naturally grown stock in littoral and submarine areas. However, the stocks soon deteriorated and attention was turned to methods of cultivation. These have not been successful in Queensland, but in New South Wales there has been constant improvement in methods and the present technique in certain areas is highly efficient. Peak production of 44,723 bags was reached in 1938.

Cray fisheries have developed greatly in recent years The catch for 1945–46 was considerably higher than in previous years in Tasmania, South Australia, and Western Australia ; in each of these States it exceeded a million lb.

3. **Pearl-shell and Bêche-de-mer.**—Before the war pearl shelling was carried out in the tropical waters of Queensland, Northern Territory, and Western Australia, mainly by Japanese and Malay divers, using diving apparatus, in waters varying from 4 to 20 fathoms in depth. During the war practically all of these operations were discontinued. After the war the policy of the Commonwealth Government was to prohibit indentured labour, but despite this restriction, by the middle of 1947, there were 24 boats again in commission off the Western Australian coast, operated by 223 men, of whom about 70 per cent. were Asiatics. In North Queensland, pearling operations are centred at Thursday Island, where, by June, 1947, 19 boats were being operated by Europeans, with 169 men, of whom 65 per cent. were Torres Straits Islanders. In addition, Island owners were operating 20 luggers and 20 cutters. Because of the warmer water the Thursday Island divers dispense with the heavy diving dress and boots used by divers in the Broome area, and use only a helmet and corselet.

§ 3. Marketing and Distribution.

1. **Marketing.**—The greater portion of Australian fish is sold in metropolitan markets. In Queensland, fish marketing is under the control of a Fish Board, which has representatives of producers, wholesalers, consumers, and a Government nominee as chairman. A central market is located in Brisbane and there are branch markets or depots at 15 centres along the coast. The organization ensures that all fish is marketed through the correct channels, and the board has encouraged to a very marked extent the steadily increasing annual fish production of the State. The fish marketing methods in this State have proved most successful. In New South Wales the central market in Sydney

is conducted by the Chief Secretary's Department, and the port depots in various centres along the coast by fishermen's co-operatives. These co-operatives distribute the fish to local centres and to inland country districts, and send any balance of fish they may have to the central market in Sydney. In Victoria, South Australia, and Western Australia fish is sold in central markets by agents. The greater part of the catch of fish in Tasmania is either processed in canneries in that State or exported to the mainland. There is some interstate movement of fish from the northern rivers of New South Wales to Queensland, from Tasmania to New South Wales and Victoria, and from South Australia to Victoria.

2. **Consumption of Fish.**—Prior to the 1939–45 War, Australians consumed annually the equivalent of about 145 million lb. of round fish, or 20.7 lb. per person. About 65 million lb. was produced locally and the remainder was imported; that is, the average Australian ate about 9.3 lb. of Australian fish a year and the equivalent of 11.4 lb. of overseas fish. The per capita consumption in the United Kingdom in 1937 was 49.8 lb., in New Zealand 23.8 lb. and in Japan 110 lb. During the 1939–45 War, however, the quantity of fish entering civilian consumption in Australia was reduced to approximately 4 lb. per person annually owing to the decline in local production, the steep drop in the imports of canned fish and the allocation of supplies for the Services and other priority needs.

Although during the period of meat rationing fish was in increased demand, it is not, as in many countries, a staple item in the diet of Australia, and is still regarded rather as a luxury.

3. **Processing, including Canning.**—The equipment for handling fish has in the past been rather inadequate, but in most States since the war cold storage facilities have been improved and increased. In Queensland, and New South Wales particularly, the depots which have been established at fishing ports have been equipped with cold storage space. In several States there has been a development of establishments equipped for snap freezing of fish.

In all States there has been a development of facilities for light processing of fish, particularly for smoking.

There are six canneries operating in Tasmania, two in New South Wales, three in Western Australia and one in South Australia. The output from these for 1946–47 was 6,356,000 lb., and it is estimated that these figures will be doubled in 1947–48. The whole of this production is absorbed by the home market, and it is estimated that even the doubled production will find ready sale in Australia.

4. **By-Products.**—Processing of offal for fish-meals, etc., has been established in certain States The processing of livers for vitamin rich oils has been undertaken in several States and oil-production has been favourably developed.

§ 4. Inquiries and Research.

1. **General.**—Australian fishing industries have been the subject of numerous inquiries seeking explanation of the very slow rate of development, of the unfortunate conditions prevailing within the industry and of the paucity of supplies available to the public. To meet the situation revealed, various research programmes have been instituted.

2. **Conference 1927–1929.**—With the object of reviewing the potentialities of the fishing industry of Australia the Development and Migration Commission convened a meeting of State and Commonwealth representatives. The Conference, which was held in Melbourne during September, 1927, affirmed :—

(1) The importance of establishing a Marine Biological Institution to study the scientific problems connected with Australian fisheries, and to collect and disseminate authoritative information and give advice on matters concerning the fisheries ;

(2) the desirability of establishing an experimental trawling unit to explore the fisheries resources of Australia.

Committees were formed to deal with important problems concerning the preservation, transportation, marketing and distribution of fish, the canning and curing of fish, the production of fish by-products, the factors of destruction in fisheries, the development of the oyster industry, etc. The reports prepared by these Committees were submitted to a further conference held in July, 1929, at which the Commonwealth and all State Governments were represented; it was then unanimously recommended that investigation work should be undertaken by the Commonwealth Government.

3. **Council for Scientific and Industrial Research, Division of Fisheries.**—Acting on the recommendation of the 1927–1929 Conference, the Commonwealth Government entrusted to the Council for Scientific and Industrial Research the task indicated by the Conference. In its original plans the Council provided a sum of £80,000, spread over a period of five years, for the following purposes :—(i) to procure a vessel specially designed for the exploration of pelagic or surface-swimming fish, but which could also carry out certain investigations of demersal or bottom-dwelling species; (ii) to undertake experiments in the canning of fish and the determination of the chemical composition of fish thought to be suitable for the manufacture of fish by-products; (iii) to determine, by tests, the best methods of curing and preserving fish, especially the more common varieties; and (iv) in co-operation with the State authorities, to undertake a study of the systems of distribution of fish in each State with a view to improving existing transport and marketing facilities. A research vessel constructed at a cost of £17,000 was commissioned in 1938 and a programme of work was laid down extending over a period of five years. During the first three years the investigation was confined to the south-eastern portion of the Australian coast; part of the work was extended later to the south-western portion of the Continent. A modern biological laboratory was established at Port Hacking in New South Wales.

The early work led the Council to place this programme on a permanent basis, and the Division of Fisheries has increased its staff and its work to include (1) an exploratory programme designed to survey new areas and study oceanographical, hydrological and planktological conditions and new fisheries, and (2) a biological programme designed to study the important existing fisheries, both marine and freshwater, shell fisheries, and seaweed resources.

Portions of this programme have already been completed, and much information regarding the pelagic fish (tuna, Australian salmon, horse mackerel or cowanyoung, kingfish, pilchards, anchovies and sprats) has been collected. As a result of this work commercial catches of sprats are now being made in Tasmania, and the Division's purse seine net has been used by a commercial fishing crew to take several catches of horse mackerel in Tasmanian and southern New South Wales waters.

An experimental shipment of the Pacific oyster from Japan is at present under observation in Australian waters to determine whether this oyster could be successfully transplanted to Australia.

Surveys have been made of beds of the seaweed *Gracilaria* and this weed, and other seaweeds, have been used in the experimental production of agar. As a result of these experiments agar is now being produced commercially in sufficient quantities to supply the Australian market.

4. **Tariff Board Inquiry.**—The Tariff Board, after an inquiry held in 1941, concluded that the development of a prosperous fishing industry would be an important contribution to the war effort, that the possibilities of commercial exploitation were established, and that the stage had been reached when additional governmental assistance was desirable. It recommended that assistance to the Council for Scientific and Industrial Research be continued and that a Commonwealth Fisheries Authority be established with the necessary authority to carry out its functions.

5. **War-time Control.**—A conference between representatives of the Council for Scientific and Industrial Research and State Departments administering fisheries was held in October, 1941, for the purpose of inquiring into the constitution of the proposed Commonwealth Authority and other related matters.

No action arose from this Conference. In 1942 the Division of Fisheries, Council for Scientific and Industrial Research, prepared, on behalf of the Director-General of Man-power, a register of man-power in the industry and made suggestions for the rationalization of the industry under war-time conditions. As a result of these suggestions a Controller of Fisheries was appointed to co-ordinate and organize the industry. The programme of the Controller included the setting of production goals, control of the allocation of man-power, fuel and equipment, organization of co-operatives within the industry, rationalization of marketing and distribution and general supervision of development.

6. **Commonwealth Fisheries Authority.**—As a practical outcome of the recommendations of the Tariff Board and negotiations by the Controller of Fisheries, the Commonwealth Government appointed a Director of Fisheries and the staff of the Commonwealth Fisheries Office, which is located in the Department of Commerce and Agriculture. This Fisheries Authority was appointed to administer all fisheries matters which are the concern of the Commonwealth Government, having as special responsibilities the co-ordination of fisheries administration of the States by conference of officials, the administration of legislation concerned with extra-territorial waters, the oversight of development of all commercial fisheries. the designing of a co-ordinated marketing scheme, the extension work for the industry, which was to include publicity through a journal, and also a school for fishermen. The last portion of the programme has been carried out and the "Fisheries Newsletter", with a distribution of 16,000, is despatched to all licensed fishermen in the Commonwealth, and to a large number of overseas fisheries institutions. The Fisheries School for ex-Servicemen under the Commonwealth Reconstruction Training Scheme is the responsibility of this Department for staffing and general administration.

7. **Pearl-shell Fishery Royal Commission.**—In accordance with the "White Australia" policy it was originally determined that the employment of Asiatic labour in the pearl-shelling industry should be restricted, and ultimately cease, and it was proposed that after 31st December, 1913, permits to bring in Asiatics for the pearling fleet should no longer be issued. In view, however, of the disorganization of the industry occasioned by the 1914–18 War, the time was extended to the 30th June, 1918, after which date permits to introduce Asiatic labour were to be granted only in cases where the diver and tender of a boat were Europeans. The Royal Commission appointed in March, 1912, presented its final report in 1916. The Commissioners stated that, though it might be practicable, they did not consider it advisable or profitable to attempt to transfer the industry from Asiatics to Europeans. They further stated that, while the labour employed is almost entirely Asiatic, they did not consider that the "White Australia" policy would be weakened or imperilled by allowing the industry to continue as then conducted.

8. **Pearl-shell Fishery Tariff Board Inquiry.**—Arising out of an application for the payment of a bounty on pearl-shell gathered by fishing vessels registered in Australia, the industry was the subject of an inquiry by the Tariff Board which presented its report in 1935. The Board did not approve the granting of a bounty but recommended some relief to the industry in the form of the remission of primage and customs duty.

9. **North Australia Development Committee.**—In 1946 the North Australia Development Committee gave considerable attention to the fisheries resources of North Australia and recommended that a hydrological and oceanographical survey should be made of the area. It also suggested that a biological survey should be made of pearl shell with particular reference to the possibility of instituting pearl shell culture. It recommended that all information regarding the area should be compiled and made available for scientific workers. It also recommended that an economic survey of the fisheries resources should be made, comparing them particularly with those of the Netherlands East Indies.

§ 5. The Fishing Industry.

1. Boats and Men Engaged, and Take.—(i) *General Fisheries.* The returns have been compiled from particulars supplied by the State Departments, and while the data do not generally lend themselves to presentation on a uniform basis, the principal facts are shown in the following tables :—

GENERAL FISHERIES, 1945–46.

Particulars.		N.S.W.	Vic.	Q'land.	S. Aust. (*c*)	W.Aust. (*c*)	Tas.	N. Ter.	Australia.

Quantity	cwt.	612,735	467,547	479,971	568,661	640,298
Gross value ..	£	1,385,281	1,920,293	1,929,329	2,168,676	2,517,540
Crustaceans obtained—Gross value	£	134,866	227,775	246,576	213,343	210,402

(ii) *Edible Oyster Fisheries.* Edible oyster fisheries are of small dimensions outside New South Wales and Queensland. During 1945–46 the available returns show the following takes :—New South Wales, 55,203 cwt., value £193,210 ; Queensland, 6,512 cwt., value £14,131. In Tasmania the scallop is far more important than the oyster. In 1945–46 the scallops taken in Tasmania were valued at £30,750 and oysters at only £630.

Figures for Australia for the years 1938-39 and 1942–43 to 1945–46 are shown in the following table :—

EDIBLE OYSTER FISHERIES : AUSTRALIA.

Particulars.		1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Boats engaged ..	No.	754	715	816	861	892
Men engaged	,,	850	728	790	813	883
Oysters obtained—						
Quantity	cwt.	89,145	79,885	50,482	57,489	62,205
Gross value (*a*) ..	£	132,201	171,754	137,698	204,465	238,919

(*a*) Includes scallops in Tasmania, valued at £14,500 in 1938 ; £14,583 in 1942–43 ; £15,428 in 1943–44 ; £16,300 in 1944–45 ; and £30,750 in 1945–46.

(iii) *Pearls, Pearl-shell and Bêche-de-mer—States.* At the outbreak of war in the Pacific in December, 1941, the pearling industry ceased to operate. Operations were resumed in Queensland in 1944–45 but in Western Australia and Northern Territory not until 1946–47. The latest available particulars of equipment used and production are shown in the table following :—

PEARL, PEARL-SHELL AND BÊCHE-DE-MER FISHERIES.(*a*)

State or Territory.	Number of Boats Engaged.	Value of boats and Equipment.	Number of Men Engaged.	Pearl-shell.		Gross Value of Pearls obtained. (*b*)	Gross Value of Bêche-de-mer obtained.	Gross Value of Tortoise shell obtained.

(*a*) No pearl-shell industry in New South Wales, Victoria, South Australia and Tasmania. (*b*) Incomplete ; as returned. (*c*) Also 275 tons of trochus-shell valued at £19,286. (*d*) Year ended December, 1940. (*e*) Also 3 cwt. trochus-shell valued at £10. (*f*) Year 1939–40. (*g*) Queensland and Northern Territory not available for 1941–42. (*h*) Also 122 tons of trochus shell valued at £15,278. (*i*) Also 371 tons of trochus shell valued at £48,795. (*j*) Includes Torres Strait Islanders and other Australian natives.

(iv) *Australia.* A summary of the principal statistics relating to pearl, pearl-shell and bêche-de-mer fisheries is given in the following table for the three years ended 1940–41 and for 1944–45 and 1945–46. Particulars of tortoise shell and trochus shell have been omitted because they are regarded as incomplete.

Details of exports of these items are given in § 6. 3 hereafter.

PEARL, PEARL-SHELL AND BÊCHE-DE-MER FISHERIES(*a*) : AUSTRALIA.

(*a*) See notes to previous table. (*b*) Incomplete ; as returned. (*c*) Queensland only available.

2. **Value of Production—Gross and Local.**—(i) *General.* Although statistics of the value of production of the fishing industry have been on an established basis for some years, attention is drawn to the fact that the actual collection of statistics of the quantity of fish taken presents many difficulties and consequently any defects which may occur in their collection must necessarily be reflected in the value of production. Particulars of the value of other materials used in the process of production are not available for all States, so the values can only be stated at the point of production and not on a net basis as has been done with other industries. Variations in the relative proportions of marketing costs to gross production suggest that complete uniformity in method has not yet been attained.

GROSS AND LOCAL VALUE OF FISHERIES PRODUCTION.

State.	Gross Production Valued at Principal Markets.	Marketing Costs.	Gross Production Valued at Place of Production.	Value of other Materials used in process of Production.	Net Value of Production.(*a*)
			1944–45.		
	£	£	£	£	£
New South Wales	1,220,000	197,000	1,023,000	23,000	1,000,000

(*a*) No deduction has been made for depreciation and maintenance. (*b*) Not available. (*c*) Excludes production in the Northern Territory.

(ii) *States,* 1935–36 *to* 1945–46. In the following table the local value of fisheries production and the local value per head of population are given by States for the years 1935–36 to 1945–46. Local value is gross value less marketing costs and is the value at the place of production. The value of materials used in the course of production is not available for all States and consequently production is valued at that point. These values therefore overstate the net values by the extent of these costs.

LOCAL VALUE OF FISHERIES PRODUCTION.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.

(*a*) No deduction has been made for depreciation and maintenance.

3. **Fish Preserving.**—The attempt to establish the fish preserving industry at the commencement of this century met with little success although a bounty was paid to encourage production. The industry, however, has continued to operate, and small quantities of fish have been canned from time to time. For particulars of recent developments *see* page 1029.

In 1939 New South Wales and Tasmania were the only producing States, but by 1941 the industry had been extended to South Australia and Western Australia. Details of production are given in the following table for the years 1938–39 and 1942–43 to 1945–46.

PRODUCTION OF CANNED FISH: AUSTRALIA.

Particulars.		1938–39.	1942–43.	1943–44.	1944–45. (*a*)	1945–46.
Quantity ..	lb.	603,302	1,286,307	533,740	1,038,771	1,683,612
Value	£	13,700	65,912	43,856	102,607	147,016

(*a*) Incomplete.

The varieties canned in the various States differ according to the catch available, but separate details for each variety are not available. In New South Wales salmon is the principal variety, while in South Australia there are more varieties, including mullet, salmon, garfish, etc. In Western Australia herrings, crayfish and mullet are included, and in Tasmania salmon and crayfish.

4. **State Revenue from Fisheries.**—The revenue from fisheries in each State during the year 1945–46 is shown hereunder :—

FISHERIES : REVENUE, 1945–46.

State or Territory.	Licences.	Leases.	Fines and Forfeitures.	Other Sources.	Total.

Total	1,616,004	779,138	729,719	952,358	642,894	1,127,740

(*a*) Not recorded separately.

Canned fish constituted by far the largest proportion of the imports; salmon from Canada, herrings from Canada and the United Kingdom, pilchards from the Union of South Africa and sardines from Norway were the chief varieties imported. The potted fish came chiefly from the United Kingdom and New Zealand, which also supplied a considerable proportion of the fresh fish imported in 1946–47; the bulk of the remainder came from the Union of South Africa. The small import of oysters was supplied by New Zealand, which has also furnished the bulk of the crustaceans imported in recent years.

2. **Exports of Fish.**—During 1946–47 the exports of fish of Australian origin were as follows:—oysters in shell, 170 cwt., £1,280; other fresh or preserved by cold process, 2,688 cwt., £41,512; potted or concentrated, 568 cwt., £12,613; fish preserved in tins, 7,889 cwt., £73,175; shell fish in tins, 1,250 cwt., £19,516; smoked or dried, 822 cwt., £7,607 and other fish, 9 cwt., £9,590.

3. **Exports of Pearl and other Shell.**—The exports of pearl, tortoise and trochus-shell of Australian origin are shown hereunder for the years 1938–39 and 1942–43 to 1946–47:—

PEARL, TORTOISE AND TROCHUS-SHELL: EXPORTS FROM AUSTRALIA.

CHAPTER XXIV.

MANUFACTURING INDUSTRY.

NOTE.—Working proprietors are included in all cases in the "Number of Persons Engaged".

Single-year tables in this issue relate to the year 1945–46 and in the immediately preceding issue to the year 1943–44. Corresponding tables for 1944–45 may be found in the *Production Bulletin* 1944–45 No. 39, Part I.—Secondary Industries.

§ 1. Number of Factories.

1. **Number of Factories in each State.**—For statistical purposes, a "factory" was defined by the Conference of Statisticians in 1902 as any factory, workshop or mill where four or more persons are employed or power is used. The statistics which follow should be read in the light of this definition. The following table shows the number of factories in each State for the four years 1942–43 to 1945–46 compared with 1938–39 :—

FACTORIES : NUMBER.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
1938–39 ..	9,464	9,250	3,087	2,067	2,129	944	26,941
1942–43 ..	10,110	8,738	2,641	2,134	1,799	992	26,414
1943–44 ..	10,755	9,317	2,652	2,149	1,807	994	27,674
1944–45 ..	11,359	9,669	2,783	2,182	1,931	1,006	28,930
1945–46 ..	12,287	10,195	2,945	2,395	2,280	1,082	31,184

2. **Number of Factories in Industrial Classes.**—(i) *Australia.* The next table shows the number of factories in Australia during 1938–39 and the years 1942–43 to 1945–46 classified in the industrial classes agreed upon by the Conference of Statisticians in 1930. This classification, which was introduced during 1930–31, superseded the grouping which had been in use since 1902. The definition of a factory adopted at the Conference of Statisticians in 1902 is, however, still used. Details of some of the principal industries included in the table will be found in § 9 hereinafter.

FACTORIES : NUMBER IN INDUSTRIAL CLASSES, AUSTRALIA.

Class of Industry.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
I. Treatment of Non-metalliferous Mine and Quarry Products	564	412	417	458	591
II. Bricks, Pottery, Glass, etc.	471	322	289	318	[illegible]
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease	666	770	816	862	886

Grand Total	26,941	26,414	27,674	28,930	31,184

Although not the best index of manufacturing activity, the number of factories affords some indication of the development of secondary industries. From 1931–32 to 1940–41 the number of factories increased each year but in the two succeeding years there were decreases. In 1943–44, however, a substantial increase occurred and has continued until 1945–46 when the number of factories in Australia reached the new high level of 31,184.

(ii) *States*, 1945–46. The following table shows the number of factories in each State in 1945–46, classified according to the nature of the industry :—

FACTORIES : NUMBER IN INDUSTRIAL CLASSES, 1945–46.

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
I. Treatment of Non-Metalliferous Mine and Quarry Products ..	225	178	42	68	54	24	591

§ 2. Classification of Factories according to Number of Persons Engaged.

1. **General.**—The classification of factories previously in use ended at the group " Over 100 ". This was regarded as too restricted as it did not permit of any analysis of the development of factories in size groups above 100 employees. In consultation with the State Statistical Bureaux, it was agreed to extend, in 1945–46, the classification of factories according to size in the manner shown in the table below in respect of numbers of factories and, in the table which follows, in respect of numbers employed.

Comparative details on the new basis are not available but those on the old basis are continued in par. 3 hereafter.

2. **States, 1945–46.**—The following table shows, for each State, the number of factories classified according to the number of persons engaged in 1945–46 :—

FACTORIES : CLASSIFICATION ACCORDING TO SIZE OF FACTORY, 1945–46.

Size of Factory (Persons engaged).	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
	NUMBER OF FACTORIES.						
Under 4	3,536	3,065	753	585	996	334	9,269
4	1,118	785	282	244	120	126	2,675
5 to 10	3,304	2,520	858	707	587	345	8,321
11 to 20	1,803	1,584	469	328	242	128	4,554

§ 3. Power Equipment in Factories.

1. **General.**—In 1936–37 statistics of power equipment in factories were collected on a basis different from that previously in use. Information now obtained relates to the "rated horse-power" of engines ordinarily in use and of engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of Central Electric Stations are collected in greater detail. To avoid duplication it is essential that some distinction should be made between Central Electric Stations and other classes of industries. In the following tables Central Electric Stations have been treated separately from other factories.

In para. 2 below, 1,125 factories are shown as using no power other than hand-power, the distribution of these factories among the various industries being as follows: Lime, Plaster and Asphalt, 17; Chemicals, Drugs and Medicines, 22; Galvanized Ironworking, Tinsmithing, 34; Ready-made Tailoring and Clothing, 306; Dressmaking, 105; Millinery, 36; Bakeries, 145; Cabinet and Furniture Making, 20; all other industries, 440.

2. **Rated Horse-power of Engines in Factories other than Central Electric Stations.**—The following table shows the number of factories using steam, gas, oil, electricity, or water power, those using hand-power, and the rated horse-power of engines ordinarily in use and in reserve or idle during 1945–46 :—

FACTORIES(*a*) : RATED HORSE-POWER OF ENGINES, 1945–46.

State.	Number of Establishments.			Rated Horse-power of Engines.	
	Using Power.	Others.	Total.	Ordinarily in use.	In Reserve or Idle (omitting obsolete).
	No.	No.	No.	H.P.	H.P.

§ 4. Employment in Factories.

1. **Number Engaged.**—(1) *General.* All persons engaged in the manufacturing activities of a factory, including proprietors who work in their own business and "outworkers" (*see* par. 4 (ii) hereinafter) are counted as factory employees, while all those are excluded who are engaged in selling and distributing, such as salesmen, travellers, collectors, carters engaged solely on outward delivery of manufactured goods and retailing storemen. Prior to 1945–46 the classification of employment distinguished between (i) working proprietors ; (ii) managers and overseers ; (iii) accountants and clerks ; (iv) enginedrivers and firemen ; (v) workers, skilled and unskilled ; (vi) carters and messengers ; and (vii) others. This grouping, however, did not make adequate provision for measuring the development that has taken place in the employment of chemists and other research workers. As a result, the classification of factory employment was amended in 1945–46 to read as follows :—(i) Working proprietors ; (ii) managerial and clerical staff including salaried managers and working directors ; (iii) chemists, draftsmen and other laboratory and research staff ; (iv) foremen and overseers ; (v) skilled and unskilled workers ; (vi) carters (excluding delivery only), messengers and persons working regularly at home for factory, mill or workshop.

Prior to the year 1928–29 employment in factories was computed by dividing the sum of the number engaged each week by the number of weeks worked. The figures therefore, represented the average number engaged over the period worked, which, for many factories, was less than a full year. Commencing with the year 1928–29 the figure represents the equivalent average number engaged over a full year of fifty-two weeks. The classification of factories according to the number of persons engaged (*see* § 2 *ante*), however, is still based on the old method, but for all other purposes the average number engaged over the full year is used.

(ii) *Australia*, 1936–37 *to* 1945–46. Particulars of the number employed, the increase in employment and the rate per cent. of such increase are given for years 1936–37 to 1945–46 in the following table :—

NOTE.—Minus sign —) indicates decrease.

3. **Persons Engaged in Classes of Industry.**—(i) *Australia.* The following table shows the average number of persons engaged in factories under each industrial group in Australia for the years 1938–39 and 1942–43 to 1945–46.

FACTORIES : PERSONS ENGAGED IN INDUSTRIAL CLASSES, AUSTRALIA.

Class of Industry.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
I. Treatment of Non-metalliferous Mine and Quarry Products	10,343	8,001	7,701	7,933	9,929
II. Bricks, Pottery, Glass, etc. ..	15,709	10,428	9,616	10,459	13,466
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease	19,816	54,101	42,551	36,340	31,471
IV. Industrial Metals, Machines, Implements and Conveyances.. ..	177,677	328,142	341,030	319,314	292,477
V. Precious Metals, Jewellery and Plate	3,726	2,358	2,373	2,399	3,240
VI. Textiles and Textile Goods ..	46,082	58,661	58,539	57,204	55,008
VII. Skins and Leather	10,767	12,056	12,708	12,474	14,492
VIII. Clothing	86,092	80,573	80,692	86,391	93,370
IX. Food, Drink and Tobacco	83,846	96,448	101,630	105,194	105,878
X. Woodworking and Basketware ..	30,739	33,658	34,827	35,382	38,346
XI. Furniture, Bedding, etc.	15,287	10,216	9,563	9,930	13,107
XII. Paper, Stationery, Printing, Bookbinding, etc	39,913	35,645	35,193	36,726	39,905
XIII. Rubber	7,502	7,178	7,061	7,970	8,699
XIV. Musical Instruments	451	392	353	392	459
XV. Miscellaneous Products	7,727	12,320	12,699	13,018	14,838
Total, Classes I. to XV. ..	555,677	750,177	757,436	741,126	734,685
XVI. Heat, Light and Power	9,429	8,868	9,070	9,453	10,573
Grand Total ..	565,106	759,045	766,506	750,579	745,258

Following the outbreak of war in the Pacific in 1941, the transfer of man-power to the more essential industries became apparent, and industries not directly concerned with Australia's war effort showed a marked decline. The industries which declined were those in Class I., Mine and Quarry Products ; Class II., Bricks, Pottery, Glass, etc. ; Class V., Precious Metals ; Class VIII., Clothing ; Class XI., Furniture ; and Class XII., Paper, etc., while industries where the war-time expansion in employment occurred were those in Class III., Chemicals, etc.; Class IV., Metals, etc.; Class VI., Textiles; Class VII., Skins and Leather; and Class IX., Food.

Following the cessation of hostilities in 1945 and the relaxation of man-power control which permitted movement of employees between industries, Class III., Chemicals, etc.; Class IV., Metals, etc.; and Class VI., Textiles recorded lower levels of employment in 1945–46 while in each other class of industry a higher level of employment was recorded.

(ii) *States.* Particulars of the numbers engaged in each industrial class are shown in the following table for each State :—

FACTORIES : PERSONS ENGAGED IN INDUSTRIAL CLASSES, 1945–46.

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tas.	Aust.
I. Treatment of Non-metalliferous Mine and Quarry Products	4,376	2,659	889	888	670	447	9,929

Grand Total ..	310,870	256,249	65,460	63,188	30,256	19,235	745,258

4. **Persons Engaged According to Grade of Employment.**—(i) *General.* In the following table the average number of persons engaged in the States during 1945–46 are classified on the new basis according to the grade of their employment. Persons employed in factories are now classified on a basis different from that adopted prior to 1945–46. The nature of this change is indicated in § 4 (i).

PERSONS ENGAGED : GRADE OF EMPLOYMENT, 1945–46.

Average Number of Persons Engaged.

State	Working Proprietors.	Managerial and Clerical Staff, etc.(*a*)	Chemists, Draftsmen, etc.	Foremen and Overseers.	Workers in Factory (Skilled and Unskilled).	Carters (excluding Delivery only) and Messengers, etc. (*b*)	Total.
New South Wales ..	9,414	31,616	3,873	10,577	253,145	2,245	310,870
Victoria	8,089	24,236	3,255	9,439	208,725	2,505	256,249
Queensland ..	2,261	6,064	396	1,838	54,119	782	65,460
South Australia ..	1,695	6,441	737	2,216	51,744	355	63,188
Western Australia..	1,379	2,445	181	941	25,092	218	30,256
Tasmania ..	682	1,767	240	638	15,757	151	19,235
Australia ..	23,520	72,569	8,682	25,649	608,582	6,256	745,258

(*a*) Including salaried managers and working directors. (*b*) Including persons working regularly at home.

(ii) *Outworkers.* The term "outworker" or "homeworker" has acquired a special meaning in connexion with manufacturing industries, and technically embraces only those to whom work is given out by factory owners to be done in the employees' own homes. Individuals working for themselves are not included. The following table gives particulars of the average number of outworkers employed by factories in each State during the years 1938–39 and 1941–42 to 1944–45. Owing to the altered classification of employment adopted in 1945–46, persons working regularly at home for factories are now included with carters and messengers and separate details of the numbers of homeworkers are no longer available.

FACTORIES : OUTWORKERS.(a)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
1938–39	201	120	6	11	7	11	356

6. **Distribution of Employees According to Age.**—(i) *States.* The extension of statistics of employment in factories, decided upon at the Conference of Australian Statisticians held in 1945, permits of a distribution of employees (excluding working proprietors) into seven age-groups in 1945–46 instead of three as in previous years. The particulars are collected as at June. The number employed in each age-group in June, 1946, are given below :—

FACTORIES : DISTRIBUTION OF EMPLOYEES ACCORDING TO AGE, JUNE, 1946.

§ 5. Sex Distribution in Factories.

1. **Distribution According to Sex of Persons Engaged.**—(i) *General.* In New South Wales the ratio of the number of females engaged in factories to the number of males during 1886 was about one to seven; in 1891 one to six; in 1903 it became about one to four; and in 1945–46 was one to nearly three. In Victoria the ratio of females to males during the year 1886 was about one to five. Five years later (1891) it was somewhat less, but in 1896 had increased to about one to three, and in 1945–46 was about one to two. In the remaining States the ratio in 1945–46 was roughly one female engaged to every four males. For Australia as a whole the ratio of females employed in factories was highest in 1943–44 at about two females to five males but by 1945–46 the ratio had declined to about the pre-war level of one female to nearly three males.

(ii) *Average Number of Males and Females Engaged.* The following table shows the average number of males and females engaged in factories in each State for 1938–39 and the four years 1942–43 to 1945–46 :—

FACTORIES : MALES AND FEMALES ENGAGED.

State.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.

Total	1.30	11.20	1.74	− 5.58	− 8.53

NOTE.—The minus sign (−) indicates decrease.

3. **Masculinity of Persons Engaged in Factories.**—The extent to which females are engaged in the factories of Australia may perhaps be more clearly shown by giving the masculinity of persons engaged in each State. The following table shows particulars for the years 1938–39 and 1942–43 to 1945–46 :—

FACTORIES : MASCULINITY(*a*) OF PERSONS ENGAGED.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
1938–39	271	208	432	445	415	420	271
1942–43	244	202	360	265	309	319	240
1943–44	236	203	367	268	299	289	237
1944–45	246	210	407	299	332	310	250
1945–46	273	232	451	362	405	366	280

(*a*) Number of males per 100 females.

For a number of years prior to 1926–27 there were on the average 300 males engaged in factories for every 100 females, but in that year the proportion of males began to fall with the increasing activity in the clothing and textile industries, in which the number of females to males is relatively high. As these trades were not so seriously affected by the depression as the heavier industries, the proportion of males continued to fall, until in 1932–33 there were only 239 males engaged to every 100 females. With the recovery of employment in the heavier industries subsequent to that year, the proportion of males per 100 females had increased to 271 in 1937–38 and 1938–39.

The decrease in masculinity from 1938–39 to 1943–44 resulted from the enlistment of men in the armed services and the expansion of industry caused by the war. In many industries the younger men were released for service in the defence forces and large numbers of women were absorbed as an adjustment to the industrial effort of Australia. Following the cessation of hostilities in 1945 and the return of servicemen to civilian life, the number of females employed in factories declined and masculinity increased. In 1945–46, at 280 males per 100 females, it was slightly higher than pre-war.

4. Employment of Females in Particular Industries.—(i) *General.* The greater number of females in manufacturing industries are engaged in four classes, namely :—IV., Industrial Metals, Machines, etc. ; VI., Textiles ; VIII., Clothing ; and IX., Food, Drink and Tobacco. In 1945–46 these industries accounted for 80.92 per cent. of all females in factories. In two classes only did the number of females exceed the number of males, namely, in Class VI., Textiles, where there were 129 females to every 100 males and in Class VIII., Clothing, with 270 females per 100 males. The following tables show the average number of males and females engaged in each of these classes in 1945–46 :—

MALES AND FEMALES ENGAGED IN PARTICULAR INDUSTRIES, 1945–46.

Class.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

(*a*) Number of females per 100 males. (*b*) Not applicable.

§ 6. Child Labour in Factories.

1. **Conditions of Child Labour.**—The employment of young persons in factories in the States is regulated by Acts of Parliament, as is the case with the employment of female labour. The object of the restrictions imposed is to ensure, amongst other things, that a proper period shall be devoted to primary education, and that the early years of labour shall not exhaust the worker before the attainment of full growth.

2. **Number of Children Engaged, 1939 and 1943 to 1946.**—In the returns for the various States, the term " child " denotes any person under sixteen years of age. The decline in the number of children employed from the peak of 33,553 reached in June, 1940 to 16,897 in June, 1946, which is most marked in all States excepting Western Australia, was probably caused by several factors, including (i) the raising of the school leaving age in New South Wales and Tasmania, (ii) fewer children available for employment owing to the decline in the birth rate which occurred about 1929, and (iii) the high level of employment which enabled parents to keep their children at school beyond the statutory leaving age.

The following table shows the number of children of each sex employed in manufacturing industries in June of the years 1939 and 1943 to 1946.

FACTORIES: CHILDREN ENGAGED, JUNE.

(*a*) Excludes working proprietors.

5. **Apprenticeship.**—In all the States, acts are in force for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under the various State Factories Acts or Arbitration Acts. These acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

§ 7. Salaries and Wages Paid and Value of Production.

NOTE.—In all tables relating to salaries and wages paid in factories the amounts drawn by working proprietors are excluded.

1. **General.**—The importance of the manufacturing industries of Australia is indicated by the fact that the total value of the output for 1945–46 was £867,647,517, of which amount £488,287,428 represented the value of the materials used, including containers, etc., tools replaced and repairs to plant and buildings, and £27,036,648 the value of the power, fuel and light used. The difference between the sum of the last two amounts and the value of the output, namely £352,323,441, represents the value of production as defined by the Conference of Statisticians at Sydney in 1925, i.e. "the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production." The total amount of salaries and wages paid in factories in 1945–46 was £205,818,733. This figure, which excludes amounts drawn by working proprietors, shows a decrease of £1,833,067 or slightly under 1 per cent. on that for the previous year.

2. **Salaries and Wages Paid.**—(i) *In Classes of Industry*, 1945–46. The amounts of salaries and wages paid in the various classes of industry in each State are shown in the following table :—

FACTORIES : SALARIES AND WAGES PAID, 1945–46.

(ii) *Totals and Averages*, 1938–39 *and* 1942–43 *to* 1945–46. The following statement shows the total amount of salaries and wages paid, and the average amount paid per employee in each State, for each of the years indicated. The average wage paid is not comparable with that shown in similar tables in issues of the Official Year Book prior to No. 23, 1930, on account of the change in the method of computing the average number of hands employed, as explained earlier. The figures exclude working proprietors and the amounts drawn by them :—

FACTORIES : TOTAL AND AVERAGE SALARIES AND WAGES PAID.

Year.	Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia.

1944–45	Total amount paid . .	89,243,041	70,560,011	17,979,827	17,246,148	7,614,213	5,008,530	207,651,800
	Average per employee	291.93	282.90	289.91	269.53	271.20	265.32	285.21
1945–46	Total amount paid . .	87,647,460	70,499,214	18,011,966	16,769,768	7,883,811	5,006,511	205,818,733
	Average per employee	290.75	284.09	285.00	272.71	273.01	269.85	285.17

In comparing the figures in the preceding table, regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, there is a large number of hands employed in Class VIII., Clothing, comprising a relatively high percentage of women and children. The highest average wages per employee in 1945–46 were paid in New South Wales, Queensland and Victoria in that order.

The average earnings per employee rose annually from 1938–39 to 1943–44 when the record high level of £291 was attained as a result of war-time conditions. In 1944–45 the average dropped to £285 and remained at this level in 1945–46.

(iii) *Earnings of Males and Females*, 1945–46. The following table shows the approximate amount of salaries and wages paid to males and females in each class of industry in each State during the year 1945–46 :—

SALARIES AND WAGES : MALE AND FEMALE FACTORY EMPLOYEES, 1945–46.

(v) *Managers, Clerical Staff and Other Employees.* A further analysis of salaries and wages paid is given in the following table for 1945–46 and shows the amounts paid to managers, clerical staff, etc., and those paid to other employees. As previously mentioned, amounts drawn by working proprietors are excluded in all cases :—

SALARIES AND WAGES: MANAGERS, CLERICAL STAFF, ETC., AND OTHER EMPLOYEES, 1945–46.

3. **Power, Fuel and Light Used.**—(i) *In Classes of Industry*, 1945–46. The expenditure by factories on power, fuel and light, including the value of lubricants and water, is of considerable importance; in 1945–46 it amounted to £27,036,648, an increase of £203,897 as compared with the previous year. The following table shows the value of power, fuel and light, etc., used in the different classes of industry in that year:—

FACTORIES: VALUE OF POWER, FUEL AND LIGHT USED (*a*), 1945–46.

(*a*) Includes value of lubricants and water.

4. **Value of Materials Used.**—(i) *In Classes of Industry*, 1945–46. The value of materials used (which includes the value of containers, packing, etc., the cost of tools replaced and repairs to plant) in factories in Australia in 1945–46 was £488,287,428, representing 56·28 per cent. of the value of the final output (*see* par. 5). The following table shows the value of the materials used in various classes of industry in each State :—

FACTORIES : VALUE OF MATERIALS USED, 1945–46.

Class of Industry.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia
	£	£	£	£	£	£	£
I. Treatment of Non-metalliferous Mine and Quarry Products	3,596,231	1,441,819	567,904	438,009	266,920	199,493	6,510,376

(ii) *Total Amount*, 1938–39 *and* 1942–43 *to* 1945–46. The following table shows the values of materials used in factories for the years 1942–43 to 1945–46 compared with 1938–39 :—

FACTORIES : VALUE OF MATERIALS USED.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia
	£	£	£	£	£	£	£
1938–39 ..	120,501,795	82,971,608	42,596,040	20,308,797	9,603,657	5,321,540	281,303,446
1942–43 ..	207,599,130	149,630,126	55,063,141	36,745,047	13,845,868	9,836,766	472,720,078
1943–44 ..	223,603,640	154,490,654	57,945,796	36,730,842	15,193,718	10,958,410	498,923,060
1944–45 ..	215,219,002	158,098,951	59,593,548	35,284,903	17,134,744	11,557,523	496,888,671
1945–46 ..	201,706,086	159,797,041	58,633,079	37,770,050	18,360,635	12,019,637	488,287,428

5. **Value of Output.**—(i) *In Classes of Industry*, 1945–46. The value of the output of factories in the various classes in each State in 1945–46 is shown in the following table. It represents the wholesale selling value at the factory of goods made or processed during the year, including by-products. In addition, it includes the value of other work done such as repair work, assembling and making up for customers. The figures given include not only the increase in value due to the process of manufacture, but also the values of the raw materials and the power, fuel and light used. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output is the real value of factory production (*see* par. 6).

FACTORIES : VALUE OF OUTPUT, 1945–46.

6. **Value of Production.**—(i) *In Classes of Industry*, 1945-46. The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as "the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production".

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the "value of output". All these deductions with the exception of depreciation are included in the items "value of materials used" and "value of fuel used" as defined above. On account of the difficulty experienced in securing accurate figures for depreciation, it was subsequently agreed that the particulars obtained should be published but that no deduction should be made on this account for the present. The value of production as given in the following tables is obtained, therefore, by deducting "value of materials used" and "value of fuel used" from the "value of the output."

The figure thus calculated is, however, not the net value of production. The deduction for depreciation, particulars of which are shown in § 8, par. 4, was estimated at £17,134,005 for 1945–46. Many miscellaneous expenses, such as taxation, insurance, advertising and other sundry charges have not been taken into account. Therefore, it must not be inferred that when wages and salaries are deducted from the value of production the whole of the "surplus" is available for interest and profit.

The following table shows the value of production in 1945–46 in each State for the various classes of factories :—

FACTORIES : VALUE OF PRODUCTION, 1945–46.

§ 8. Value of Land, Buildings, Plant and Machinery.

1. **General.**—The following statement shows the value of land and buildings and of plant and machinery used in connexion with manufacturing industries during the year 1945–46 :—

FACTORIES : VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY(*a*), 1945–46.

Value of—	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia
	£	£	£	£	£	£	£
Land and buildings	80,308,347	60,264,953	14,331,556	18,446,966	8,282,694	5,304,703	186,939,219
Plant and machinery	72,560,630	58,537,394	18,690,541	19,017,955	8,507,705	8,230,715	185,544,940
Total ..	152,868,977	118,802,347	33,022,097	37,464,921	16,790,399	13,535,418	372.484,159

(*a*) Includes estimated value of rented premises and plant.

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates for premises and plant rented. The totals shown in the table consequently do not represent the actual amount of capital invested in the items specified

2. **Value of Land and Buildings.**—(i) *Total for Australia*, 1938–39 *and* 1942–43 *to* 1945–46. The following table shows for Australia as a whole the approximate value of land and buildings occupied in connexion with manufacturing industries for 1938–39 and 1942–43 to 1945–46.

FACTORIES : VALUE OF LAND AND BUILDINGS(*a*), AUSTRALIA.

1945–46 ..	80,308,347	60,264,953	14,331,556	18,446,966	8,282,694	5,304,703	186,939,219

(*a*) Includes estimated value of rented premises.

Prior to 1929–30 the increase in the value of land and buildings was uninterrupted, rising from £23 million in 1903 to £118 million in 1929–30, a growth of £95 million in 27 years. During the three years ended 1932–33, however, there was a decline of £12 million to £105.8 million, but since that year the value has risen annually and stood at £186.9 million in 1945–46.

3. **Value of Plant and Machinery.**—(i) *Total for Australia,* 1938–39 *and* 1942–43 *to* 1945–46. The following table shows for Australia the approximate value of plant and machinery used in factories in 1938–39 and each of the four years ended 1945–46 :—

FACTORIES : VALUE OF PLANT AND MACHINERY(*a*), AUSTRALIA.

Class of Industry.	1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
	£	£	£	£	£

Grand Total ..	143,662,127	176,965,326	180,992,769	183,917,060	185,544,940

(*a*) Includes estimated value of rented plant.

Except for the years 1930–31 to 1933–34, when decreases were recorded, there has been a continuous increase in the value of plant and machinery in Australia. The increase in 1945–46 of £1.6 million extended over all industrial classes except Classes III. Chemicals, IV. Industrial Metals and XII. Paper, where reductions occurred. The greatest increase occurred in Class XVI. Heat, Light and Power.

(ii) *Totals in each State.* The following table shows the value of plant and machinery in each State during the years 1942–43 to 1945–46 compared with 1938–39. During 1945–46 decreases in New South Wales and Victoria were more than offset by increases in the other States.

FACTORIES : VALUE OF PLANT AND MACHINERY.(*a*)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
	£	£	£	£	£	£	£
1938–39 ..	62,692,956	38,626,743	18,095,415	9,749,679	8,095,064	6,402,270	143,662,127

1945–46 ..	186,939	185,545	6,245	21,766	2,537	14,597

(*a*) Includes estimated value of rented premises and machinery.

§ 9. Individual Industries.

1. **General.**—The preceding pages afford a general view of the magnitude of industries in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible, within the limits of this work, to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour and capital or for other features of special interest. Where there are only one to two establishments of a particular industry in a State, details of activities are not published, but are combined with some other factory group so that operations of individual concerns will not be disclosed.

2. **Cement (Portland) and Cement Goods.**—(i) *Details for each State.* The manufacture of portland cement and cement goods is an important industry included in Class I. and details for each State during 1945–46 are given in the following table :—

CEMENT (PORTLAND) AND CEMENT GOODS, 1945–46.

Items.		N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia.
Number of factories ..	..	51	41	21	16	16	7	152
Number of persons engaged	..	1,981	1,011	644	440	314	192	4,582
Value of land and buildings	£	680,462	365,801	153,410	93,015	34,737	136,170	1,463,595
Value of plant and machinery	£	748,765	571,250	221,644	304,547	91,645	66,903	2,004,754
Salaries and wages paid	£	585,901	286,854	194,739	138,909	83,666	43,653	1,333,722

(ii) *Total for Australia.* By reason of a change in classification in 1945–46, it is now possible to publish separate details for each of the two groups indicated above, viz. :— manufacture of portland cement and production of cement products. Particulars for each group are shown for 1945–46 in the following table.

CEMENT (PORTLAND) AND CEMENT GOODS : AUSTRALIA, 1945–46.

Items.		Cement (Portland).	Cement Goods.	Total.
Number of factories	..	10	142	152
Number of persons engaged ..	..	1,510	3,072	4,582
Value of land and buildings ..	£	933,561	530,034	1,463,595
Value of plant and machinery ..	£	1,542,773	461,981	2,004,754

	£	2,486,306	..	2,486,306

3. **Chemicals, Drugs and Medicines.**—In 1945–46 the classification of factories was amended to provide for the separate tabulation of factories engaged in the production of Industrial and Heavy Chemicals and Acids and those engaged in producing Pharmaceutical and Toilet Preparations which previously had been combined. Details for each of these industries are given in the next two tables for 1945–46.

INDUSTRIAL AND HEAVY CHEMICALS AND ACIDS, 1945–46.

Items.		N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
Number of factories ..	..	77	47	12	4	5	2	147
Number of persons engaged	..	2,598	1,616	183	432	164	23	5,016
Value of land and buildings	£	1,173,129	571,805	48,324	(a)	(a)	(a)	2,188,040
Value of plant and machinery	£	1,653,323	1,006,232	64,837	(a)	(a)	(a)	3,410,401
Salaries and wages paid	£	926,556	570,604	51,762	(a)	(a)	(a)	1,750,604
Value of power, fuel, etc., used	£	221,789	117,839	14,545	(a)	(a)	(a)	458,996
Value of materials used	£	2,461,635	1,591,869	89,604	(a)	(a)	(a)	4,406,964
Total value of output	£	4,794,502	2,970,628	229,420	(a)	(a)	(a)	8,820,483
Value of production ..	£	2,111,078	1,260,920	125,271	(a)	(a)	(a)	3,954,523

(*a*) Not available for publication ; included with total for Australia.

PHARMACEUTICAL AND TOILET PREPARATIONS, 1945–46.

Items.		N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia.
Number of factories ..	..	142	48	4	10	8	3	215
Number of persons engaged	..	3,008	1,730	101	525	128	22	5,514
Value of land and buildings	£	934,413	426,781	23,439	(a)	(a)	(a)	1,534,058
Value of plant and machinery	£	222,062	291,255	4,936	(a)	(a)	(a)	598,484
Salaries and wages paid	£	700,899	414,543	21,168	(a)	(a)	(a)	1,278,233
Value of power, fuel, etc., used	£	25,249	17,279	473	(a)	(a)	(a)	56,780
Value of materials used	£	2,826,805	1,930,945	55,702	(a)	(a)	(a)	5,402,730
Total value of output	£	6,035,652	3,226,080	97,759	(a)	(a)	(a)	10,249,317
Value of production ..	£	3,183,598	1,277,856	41,584	(a)	(a)	(a)	4,789,807

(*a*) Not available for publication ; included with total for Australia.

4. **White Lead, Paint and Varnish.**—(i) *Details for each State.* The following table shows particulars of this industry for each State during 1945–46 :—

WHITE LEAD, PAINT AND VARNISH FACTORIES, 1945–46.

Items.		N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia
Number of factories ..	..	58	42	5	13	3	1	122
Number of persons engaged	..	2,180	678	69	236	28	6	3,197
Value of land and buildings	£	616,016	241,018	11,538	87,802	(a)	(a)	973,166
Value of plant and machinery	£	320,897	131,979	14,488	48,749	(a)	(a)	524,065
Salaries and wages paid	£	721,122	192,117	21,235	60,019	(a)	(a)	1,005,121
Value of power, fuel, etc., used	£	61,366	13,256	1,067	4,480	(a)	(a)	80,675
Value of materials used	£	3,072,433	1,060,878	165,188	390,678	(a)	(a)	4,775,075
Total value of output	£	4,776,482	1,624,138	234,183	551,911	(a)	(a)	7,304,167
Value of production ..	£	1,642,683	550,004	67,928	156,753	(a)	(a)	2,448,417

(a) Not available for publication ; figures are included in the total for Australia.

(ii) *Total for Australia.* The next table gives particulars for the years 1942–43 to 1945–46 compared with 1938–39 :—

WHITE LEAD, PAINT AND VARNISH FACTORIES : AUSTRALIA.

Items.		1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Number of factories ..	..	102	110	111	113	122
Number of persons engaged	..	2,271	2,169	2,350	2,501	3,197
Value of land and buildings	£	761,345	828,790	897,777	936,927	973,166
Value of plant and machinery	£	324,222	368,410	415,552	459,252	524,065
Salaries and wages paid	£	535,014	648,455	727,843	792,437	1,005,121
Value of power, fuel, etc., used	£	44,992	58,080	66,262	70,274	80,675
Value of materials used ..	£	2,275,027	3,180,267	3,943,679	4,465,958	4,775,075
Total value of output ..	£	3,905,104	4,844,646	5,931,990	6,694,321	7,304,167
Value of production	£	1.585,085	1,606,299	1,922,049	2,158,089	2,448,417

5. **Soap and Candle Factories.**—(i) *Details for each State.* The following table gives particulars of soap and candle factories in each State for 1945–46 :—

SOAP AND CANDLE FACTORIES, 1945–46.

Items.		N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia.
Number of factories ..	..	40	16	8	5	2	2	73
Number of persons engaged	..	1,721	738	308	173	61	19	3,020
Value of land and buildings	£	376,634	185,865	37,268	53,429	(a)	(a)	676,405
Value of plant and machinery	£	161,333	151,597	19,051	28,066	(a)	(a)	372,940
Salaries and wages paid	£	495,275	213,617	83,793	45,945	(a)	(a)	860,354
Value of power, fuel, etc., used	£	50,061	58,771	6,414	4,667	(a)	(a)	123,250
Value of materials used	£	1,686,739	905,628	232,739	131,583	(a)	(a)	3,051,046
Total value of output	£	3,408,769	1,613,919	425,757	202,795	(a)	(a)	5.801,953
Value of production ..	£	1,671,969	649,520	186,604	66,545	(a)	(a)	2,627,657

(a) Not available for publication ; figures are included in the total for Australia.

(ii) *Total for Australia.* The next table gives similar particulars for the years 1942–43 to 1945–46 compared with 1938–39 :—

SOAP AND CANDLE FACTORIES : AUSTRALIA.

Items.		1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Number of factories ..	..	65	66	65	67	73
Number of persons engaged	..	2,620	3,084	2,938	2,906	3,020
Value of land and buildings	£	665,546	691,066	686,091	675,578	676,405
Value of plant and machinery	£	576,732	461,918	422,467	376,788	372,940
Salaries and wages paid	£	501,174	802,011	805,919	779,341	860,354
Value of power, fuel, etc., used	£	76,283	147,061	139,713	126,739	123,250
Value of materials used	£	1,567,999	2,979,650	2,757,710	2,853,368	3,051,046
Total value of output ..	£	3,529,723	6,116,396	5,290,607	5,464,765	5 801,953
Value of production ..	£	1,885,441	2,089,685	2,393,184	2,484,658	2,627,657

(iii) *Raw Materials Used and Production.* The following statement shows the quantities of certain raw materials used and the production in soap and candle factories in Australia for the years 1942–43 to 1945–46 compared with 1938–39 :—

SOAP AND CANDLE FACTORIES : RAW MATERIALS USED AND PRODUCTION, AUSTRALIA.

Particulars.		1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Tallow used	cwt.	535,511	1,053,412	856,031	859,109	834,057
Alkali used	,,	229,881	233,856	201,992	203,697	160,304
Cocoa-nut oil used—refined and unrefined	,,	138,954	86,367	74,915	79,299	86,576
Soap made	,,	986,087	1,355,708	966,982	898,489	968,792
Candles made	,,	27,459	43,788	38,291	23,159	23,194

The output for the year 1945–46 comprised the following quantities of soap :—household, 622,009 cwt. ; toilet, 232,468 cwt. ; sand, 56,494 cwt. ; soft, 10,591 cwt. ; and industrial, 47,230 cwt. This excludes 12,090 cwt. of soap made in establishments not classified as Soap and Candle Factories.

6. **Chemical Fertilizers.**—(i) *Details for each State.* The following table gives particulars of the factories engaged in the manufacture of chemical fertilizers in each State during 1945–46. Details of the consumption, imports and exports of fertilizers will be found in Chapter XX. " Agricultural Production ".

CHEMICAL FERTILIZERS, 1945–46.

Items.		N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
Number of factories		6	8	6	7	6	5	38
Number of persons engaged ..		327	1,179	131	742	699	49	3,127
Value of land and buildings	£	111,425	465,131	68,630	342,110	546,431	38,221	1,571,948
Value of plant and machinery	£	113,074	655,372	81,095	705,604	838,685	15,538	2,409,368
Salaries and wages paid	£	121,735	419,340	43,299	248,476	240,471	17,954	1,091,275
Value of power, fuel, etc., used	£	12,405	59,758	1,828	31,774	74,431	1,222	181,418
Value of materials used	£	902,112	2,888,304	364,293	1,435,246	2,056,935	251,603	7,898,493
Total value of output	£	1,189,003	3,676,922	468,653	1,855,868	2,585,219	271,045	10,046,710
Value of production ..	£	274,486	728,860	102,532	388,848	453,853	18,220	1,966,799

(ii) *Total for Australia.* The development of this industry since 1938–39 is set out hereunder :—

CHEMICAL FERTILIZERS : AUSTRALIA.

Items.		1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Number of factories	..	36	34	36	38	38
Number of persons engaged ..	..	2,540	1,667	1,818	2,452	3,127

Value of production	£	1,599,998	903,008	1,121,412	1,640,607	1,966,799

7. **Iron and Steel Works and Engineering.**—(i) *General.* In 1945–46 the classification of factories was amended to provide for the tabulation in four separate groups of those industries previously included under Iron and Steel and Engineering. The first group (Smelting, Converting, Refining and Rolling of Iron and Steel) covers blast furnaces, steel works and rolling mills. The second group, Foundries (Ferrous), covers those engaged in the founding of iron and steel. The third group (Plant, Equipment and Machinery including Machine Tools) covers those industries engaged in the production of boilers, engines, machines including machinery, machine tools, structural steel fabrications, steel furniture, etc. The fourth group (Other Engineering) includes jobbing and general engineers not elsewhere included.

(ii) *Smelting, Converting, Refining and Rolling of Iron and Steel, including Foundries (Ferrous).* In the following table particulars are given for 1945–46 for each State for those industries included under the groups Smelting, Converting, Refining and Rolling of Iron and Steel and Foundries (Ferrous). It is not possible to show separate details for each group without contravening the confidential clause of the Census and Statistics Act.

SMELTING, CONVERTING, REFINING AND ROLLING OF IRON AND STEEL (INCLUDING FOUNDRIES (FERROUS)), 1945–46.

Items.		N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia
Number of factories ..	..	76	222	9	18	14	..	339

(ii) *Total for Australia.* The increased output of electrical energy in Australia within recent years, referred to in par. 40 below, caused a corresponding demand for electrical equipment. Difficulties, due to war, in obtaining electrical equipment from abroad have been responsible for considerable development in the manufacture of electrical goods and equipment in Australia, as shown in the following table.

ELECTRICAL MACHINERY, CABLES AND APPARATUS : AUSTRALIA.

Items.		1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Number of factories ..	.. ..	360	401	431	475	551

Total value of output ..	.. £	6,954,498	15,875,437	16,346,709	16,892,366	17,789,829
Value of production ..	.. £	3,654,872	7,900,057	8,348,592	8,710,048	9,495,657

10. **Railway and Tramway Workshops.**—(i) *Details for each State*, 1945–46. The railway and tramway workshops which form an important item in Class IV. are chiefly State-owned institutions and their development is a reflection of the growth of the railway and tramway systems of Australia. The following table includes, in addition, municipal establishments for manufacturing and repairing rolling stock. Private institutions numbering 10 in 1945–46 have been excluded :—

TRAMCARS, RAILWAY ROLLING STOCK AND CARRIAGES, ETC.(*a*), 1945–46.

Items.		N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
Number of factories ..	..	36	25	11	14	22	7	115

(*a*) Government and Municipal only.

11. **Motor Vehicles.**—The industries catering for the motor trade are included in Class IV. "Industrial Metals, Machines and Conveyances". In the table below a summary is given of the principal statistics for 1945–46 for each branch of industry associated with the motor trade of Australia.

MOTOR VEHICLES : CONSTRUCTION, ASSEMBLY, REPAIRS, ETC. : AUSTRALIA, 1945–46.

Items.		Construction and Assembly.	Body Building.	Repairs.	Accessories.	Total.
Number of factories	..	42	212	3,230	108	3,592
Number of persons engaged ..	..	4,077	10,682	21,012	3,935	39,706
Value of land and buildings ..	£	1,042,157	1,635,292	6,555,724	644,787	9,877,960
Value of plant and machinery ..	£	468,264	1,149,305	1,661,219	478,784	3,757,572
Salaries and wages paid ..	£	1,346,248	3,298,350	4,790,367	1,147,049	10,582,014
Value of power, fuel, etc., used ..	£	51,910	87,707	195,504	59,603	394,724
Value of materials used	£	2,207,317	3,151,005	5,301,402	1,183,549	12,143,273
Total value of output	£	4,042,078	7,579,250	13,337,929	3,097,050	28,356,307
Value of production	£	1,782,851	4,340,538	7,841,023	1,853,898	15,818,310

In the next table similar details are shown on a State basis for these branches combined.

MOTOR VEHICLES : CONSTRUCTION, ASSEMBLY, REPAIRS, ETC., 1945–46.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas. (a)	Australia

12. **Agricultural Machines and Implements.**—(i) *General.* The manufacture of agricultural implements is an important branch of industry in Australia because of the extensive agricultural activities. The articles manufactured include a wide range of implements for tillage, seeding and planting and the harvesting of crops. Other farm machinery made includes oil engines, windmills, chaff-cutters and machinery used in the dairying industry.

(ii) *Details for States.* The following table gives details of agricultural implement works in each State for 1945–46 :—

AGRICULTURAL MACHINES AND IMPLEMENTS, 1945–46.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia
Number of factories	57	57	15	34	9	..	172
Number of persons engaged ..	1,758	4,905	1,236	1,449	162	..	9,510
Value of land and buildings £	292,452	609,043	87,577	164,909	45,971	..	1,199,952

(iii) *Total for Australia.* Comparative statistics for 1938–39 and the years 1942–43 to 1945–46 are given hereunder :—

AGRICULTURAL MACHINES AND IMPLEMENTS : AUSTRALIA.

Items.		1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Number of factories	..	161	144	145	146	172
Number of persons engaged ..	..	6,563	9,457	9,178	9,149	9,510
Value of land and buildings ..	£	996,949	1,037,513	1,046,702	1,035,331	1,199,952
Value of plant and machinery ..	£	910,520	1,093,853	1,121,626	1,265,985	1,229,597
Salaries and wages paid ..	£	1,373,213	2,954,294	2,821,968	2,745,909	2,893,892
Value of power, fuel, etc., used ..	£	81,736	215,379	198,680	187,970	186,150
Value of materials used ..	£	1,485,018	2.762,748	2,822,460	2,817,698	2,717,302
Total value of output	£	3,403,091	6,727,818	6,604,402	6,589,942	6,701,344
Value of production	£	1,836,337	3,749,691	3,583,262	3,584,274	3,797,892

13. **Wireless and Amplifying Apparatus.**—The introduction of wireless broadcasting in 1923 gave rise to a new industry in Australia. Early statistical details of the industry are not available as they were grouped together with other electrical apparatus. In 1930–31 a new classification of factories was adopted and " Wireless Apparatus " was shown as a separate industry. The industry is confined almost entirely to New South Wales and Victoria. The number of broadcast listeners' licences increased from 331,128 in 1930–31 to 1,506,180 in 1945–46 and this increase reflects the advancement of the industry during that period. During the war years considerable expansion took place in the industry to meet the requirements of the fighting services but there was a recession in output in 1945–46.

WIRELESS AND AMPLIFYING APPARATUS : AUSTRALIA.

Items.		1938–39.	1942–43.	1943–44.	1944–45.	1945–46.
Number of factories	..	72	73	85	89	97
Number of persons engaged ..	..	4,828	9,554	11,020	10,534	8,709
Value of land and buildings ..	£	557,953	754,977	895,642	998,470	969,105
Value of plant and machinery ..	£	305,468	544,023	613,088	643,914	711,805
Salaries and wages paid ..	£	754,302	2,429,430	2,959,291	2,784,985	2,295,866
Value of power, fuel, etc., used ..	£	23,525	58,517	68,553	70,055	58,240
Value of materials used	£	1,355,683	2,944,653	3,379,511	3,445,575	3,446,056
Total value of output	£	2.502,338	6,180,276	7,190,028	7,290,352	6,514,935
Value of production	£	1,123,130	3,177,106	3,741,964	3,774,722	3,010,639

The number of domestic receiving sets assembled in 1945–46 was 93,048 and the number of domestic chassis made was 76,587 compared with 163,821 and 123,655 respectively in 1938–39.

14. **Cotton.**—(i) *General.* Cotton has been grown in Australia since 1860, but never on a very large scale. The average annual quantity of unginned cotton produced during the five years ended 1938–39 was 18 million lb. and slightly under 14 million lb. in the five years ended 1945–46. Arising out of the development in the local manufacture of cotton materials and the further expansion following the outbreak of war in 1939, plans were completed for an extension of the area devoted to the cultivation of this crop, but since the commencement of the Pacific War there has been a definite downward trend. The growing of cotton, which is restricted to Queensland, is referred to in some detail in Chapter XX. " Agricultural Production ".

(ii) *Ginning.* The ginning and marketing of cotton is controlled by the Queensland Cotton Board. The Board operates ginneries and processes by-products. The production of raw cotton is insufficient for local factory requirements and is supplemented by imports from overseas, chiefly from India and the United States of America.

(iii) *Spinning and Weaving.* The recent expansion in the spinning and weaving section of the cotton industry marks an important event in its development. New factories have been established and Australia is now producing an extensive range of cotton goods, including duck and canvas from cotton or flax, denims, drill, etc., tyre cord and tyre cord fabric. The number of establishments engaged in cotton spinning and weaving in Australia and other particulars of the industry are given in the following table for the four years ended 1945–46 in comparison with 1938–39.

COTTON SPINNING AND WEAVING : AUSTRALIA.

Items.		1938–39.	1942–43.	1943–44.	1944–45.	1945–46.

15. **Woollen Mills.**—(i) *Details for each State.* The importance of this industry is emphasized by the fact that Australia is the world's chief source of wool and the development of the woollen industry since its establishment at an early period in Australian history is of singular interest. The production consists chiefly of woollen cloth and tweed, worsted cloth, rugs, blankets and yarn, all of which have acquired a reputation for purity and durability. The following table gives particulars for 1945–46 :—

WOOLLEN MILLS, 1945–46.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia

(iii) *Raw Materials used and Production*, 1945–46. The main raw materials consumed in establishments manufacturing hosiery and other knitted goods during 1945–46 consisted of woollen yarn, 8,203,549 lb ; cotton yarn, 5,954,517 lb. ; and rayon yarn, 5,984,051 lb. Production comprised 30,142,339 garments, valued at £6,983,517 ; 1,194,839 dozen pairs of stockings, valued at £2,164,264 ; and 1,692,714 dozen pairs of socks, valued at £1,900,357.

17. **Tanning, Currying and Leather Dressing.**—(i) *Details for each State.* In Class VII. the most important industry is tanning. Formerly the production of tanneries in Australia was confined to the coarser sorts of leathers, but there are now very few kinds which cannot be produced locally, and an export trade has been built up in some varieties.

21. **Boot and Shoe Making and Repairing.**—(i) *Boot and Shoe (not Rubber) Factories* The boot and shoe factories hold an important place both in regard to employment afforded and extent of output. The following table relates to 1945–46 and refers to boot and shoe factories as distinct from those devoted to repairing and bespoke work. Factories engaged in the manufacture of rubber boots and shoes are excluded, being classified under Rubber Goods (Including Tyres made) ; *vide* para. 38.

BOOT AND SHOE (NOT RUBBER) FACTORIES, 1945–46.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia
Number of factories	134	195	22	18	10	4	383

Total value of output £	4,437,680	7,765,401	723,572	714,959	350,227	74,542	14,066,381
Value of production .. £	2,066,807	3,573,907	324,152	320,767	155,955	30,373	6,471,961

(ii) *Boot and Shoe Repairing, including Bespoke Work.* The introduction of small power plants in repairing shops brought this class of establishment within the meaning of a factory for statistical purposes. Shops using small power plants are widely distributed throughout Australia, and in 1945–46 numbered 1,477 employing 2,981 persons. The sum of £341,217 was distributed in salaries and wages, and the output was valued at £1,470,103.

(iii) *Quantity and Value of Production.* The number and value of boots, shoes and slippers made at factories in each State are shown for 1945–46 in the following table. Particulars relating to the output of rubber boots and shoes are not included :—

BOOT AND SHOE (NOT RUBBER) FACTORIES OUTPUT, 1945–46.

(ii) *Production of Flour and By-products.* The production of flour by the mills in each State for the years 1938–39 and 1942–43 to 1945–46 was as follows :—

FLOUR-MILLING : PRODUCTION OF FLOUR.

(Tons of 2,000 lb.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
1938–39 . .	547,162	436,829	84,314	146,262	138,583	19,582	1,372,732
1942–43 . .	363,452	288,134	102,864	97,826	126,274	16,812	995,362
1943–44 . .	496,853	409,190	125,603	149,892	159,799	17,153	1,358,490
1944–45 . .	516,168	393,036	124,473	194,967	161,690	22,534	1,412,868
1945–46 . .	451,895	315,525	96,984	164,986	166,791	22,657	1,218,838

The 1945–46 production of 1,218,838 tons of flour in Australia was valued at £12,083,745. In addition, 493,878 tons of bran and pollard, valued at £2,881,914, were made. The quantity of wheat ground was 63,416,122 bushels.

23. **Bakeries.**—Information regarding establishments in which the manufacture of bread, cakes, etc., was carried on in the year 1945–46 is given in the table below. It should be noted, however, that the details refer only to establishments coming within the definition of a factory, as explained in § 1, par. 1, page 1039. For that reason there is a large number of bakehouses omitted, and consequently the table does not give complete details of the industry. This is true of all other industries covered by the statistics of manufacturing production, but, in view of the omission of such a large number of establishments in this instance, special mention is deemed necessary.

BAKERIES (INCLUDING CAKES AND PASTRY), 1945–46.

Items.		N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.(*a*)	Australia
Number of factories ..	..	975	746	320	171	190	92	2,494

(*a*) Includes confectionery.

24. **Sugar-mills.**—(i) *General.* Sugar-cane is grown in New South Wales and Queensland and particulars of area, yield, etc., are given in extended detail in Chapter XX. " Agricultural Production ".

The products of the sugar-mill are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. Particulars of cane crushed and sugar produced embodied in the following two tables refer to the quantities treated during the years ended 30th June, irrespective of the season in which the cane was grown ; consequently the figures relating to cane crushed and sugar produced may differ slightly from those given in Chapter XX. " Agricultural Production ", which relate to harvest years.

(ii) *Details for New South Wales.* The following table gives details of the operations of sugar mills in New South Wales for the years 1911, 1938–39, and each year 1943–44 to 1945–46 :—

SUGAR-MILLS : NEW SOUTH WALES.

Items.		1911.	1938–39.	1943–44.	1944–45.	1945–46.
Number of factories	..	4	3	3	3	3

25. **Sugar Refineries.**—The establishment of the sugar-refining industry considerably antedates the establishment of the sugar-milling industry, the raw material operated on in the earlier years coming chiefly from Mauritius and the East. In 1945–46 there were two sugar refineries in the State of Queensland, and one in each of the States of New South Wales, Victoria, South Australia and Western Australia. The quantity of raw sugar treated amounted to 446,550 tons, for a yield of 428,130 tons of refined sugar, valued at £13,612,455.

26. **Confectionery Factories.**—(i) *Details for each State.* The figures for 1945–46 are given hereunder:—

SUGAR CONFECTIONERY FACTORIES, 1945–46.

Value of power, fuel, etc., used ..	£	97,521	206,461	269,996	327,558	260,079
Value of materials used ..	£	4,799,515	9,605,024	11,886,635	13,141,842	12,325,758
Total value of output	£	7,230,914	14,009,177	16,985,506	19,169,509	17,664,531
Value of production	£	2,333,878	4,197,692	4,828,875	5,700,109	5,078,694

During the 1939–45 War production of jams and jellies expanded greatly and a record output of 171 million lb. was attained in 1943–44. Production has since receded and stood at 148 million lb. in 1945–46. The peak output of fruit preserved in liquid occurred in 1940–41 when 161.1 million lb. were produced compared with the previous highest level of 157·8 million lb. attained in 1937–38. Production in 1945–46 was lower at

107,079,000 lb. On the other hand, there has been a marked development in the production of canned vegetables. In 1938–39 output totalled 10,255,000 lb. but, as a result of the war-time demand by the armed services, production reached the high level of 106,962,000 lb. in 1945–46, a figure a little below the record of 119,149,000 lb. in 1944–45.

(iii) *Production.* The following table shows the quantity and value of jams, pickles, sauces and other items manufactured in each State in 1945–46 :—

JAMS, PRESERVED FRUIT AND VEGETABLES, PICKLES AND SAUCES : OUTPUT, 1945–46.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.

(a) Not available for publication; figures are included in total for Australia. (b) Includes 1,127,206 lb. of cheese, valued at £48,921, made in establishments not classified as factories.

The butter, cheese and condensed milk industries are dealt with more fully in Chapter XXI. "Farmyard, Dairy and Bee Products".

30. **Meat and Fish Preserving Works.**—The industries included in this group are engaged chiefly in the freezing and preserving of meat. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. The substitution of chilled for frozen meat exported has already been referred to in Chapter XIX. "Pastoral Production".

MEAT AND FISH PRESERVING WORKS, 1945–46.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia
Number of factories	12	12	14	5	8	6	57
Number of persons engaged ..	911	1,089	4,181	238	224	98	6,741

Value of production .. £	473,962	747,857	1,909,068	66,622	172,124	69,000	3,438,633

Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in Chapter XIX "Pastoral Production".

31. **Breweries.**—(i) *Details for each State.* The following table gives particulars of breweries in each State for the year 1945–46. It should be noted, however, that the data shown below are not strictly comparable throughout, owing to the inability or failure of some breweries to furnish a separate return for each branch of activity. Consequently the figures for some States include details of employment, wages, output, etc., not connected with the brewing of beer, although associated with it. These extraneous activities include cooperage, malt works, aerated waters, etc.

BREWERIES, 1945–46.

Items.		N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	Australia
Number of factories ..	..	6	8	6	5	6	2	33
Number of persons engaged	..	1,162	1,526	475	379	490	89	4,121

Total value of output ..	.. £	9,030,309	9,736,720	9,969,828	10,151,935	10,476,340
Value of production ..	.. £	5,372,451	5,418,601	5,614,843	5,670,159	5,869,472

The quantity of ale, stout and beer brewed fell from 73.7 million gallons in 1928–29 to 49.8 million gallons in 1931–32, but thereafter increased each year to 109.2 million gallons in 1941–42. Under the Control of Liquor Order which operated between March, 1942 and March, 1946, the production of beer was restricted and consequently output remained static at about 100 million gallons from 1942–43 to 1944–45. Production rose to 107 million gallons in 1945–46 and to 128 million gallons in 1946–47.

The average annual consumption of ale, stout and beer prior to the economic depression of the early thirties exceeded 11 gallons per head of the population ; it dropped to 7.32 gallons in 1931–32, increased to 13.76 gallons in 1941–42 and declined again to about 13 gallons during the period of control. In 1945–46 the consumption per head increased to 13.45 gallons.

(iii) *Materials Used and Production.* The table below shows the quantities of raw materials used and the quantity and value of ale, stout and beer brewed in each State during 1945–46.

BREWERIES : MATERIALS USED AND PRODUCTION, 1945–46.

(*a*) Not available for publication : figures are included in total for Australia.

(ii) *Total for Australia.* This industry was among the first to be established in Australia. In 1861 New South Wales had eleven factories and Victoria one. The Australian market has for many years been largely supplied with local manufactures from the imported leaf. Imports during 1945–46 comprised—manufactured tobacco 129,417 lb., cigars 199 lb., and cigarettes 55,488 lb., and the quantities manufactured in Australian factories were respectively 17,866,000 lb., 125,000 lb., and 8,482,000 lb. The following tables show the extent of the industry in Australia for the four years 1942–43 to 1945–46 compared with 1938–39 :—

TOBACCO, CIGAR AND CIGARETTE FACTORIES : AUSTRALIA.

LEAF USED AND PRODUCTION.

Leaf used { Australian (Stemmed)	'000 lb.	4,489	4,974	4,951	4,658	4,685
Leaf used { Imported („)	„	16,011	19,374	19,202	18,704	18.822
Tobacco made	„	16,305	19,186	18,187	17,448	17,866
Cigars made	„	238	175	134	122	125
Cigarettes made	„	6,731	8,681	8,929	8,740	8,482

For many years the production of locally-grown leaf was comparatively small, and manufacturers were dependent on imported leaf for the supply of their raw material. Increased duties stimulated local production, and the quantity of Australian leaf used by manufacturers rose from 1.2 million lb. in 1929–30 to over 3 million lb. in 1930–31 ; in 1932–33 the quantity of local leaf used fell to 2.7 million lb., but it has since risen to 4.68 million lb. in 1945–46. In this connexion, see Chapter XX.—" Agricultural Production ".

34. **Sawmills, etc.**—(i) *Details for States.* The most important industry in Class X. is that of sawmilling. Because of difficulties associated with the classifying of sawmills into forest and town, they have been combined in the following tables, together with plywood and bark mills.

SAWMILLS, PLYWOOD AND BARK MILLS, 1945-46.

Value of production	£	5,789,211	7,601,671	8,081,734	8,672,925	9,158,519

The sawmill output of native timber, which declined from 740 million super. feet in 1925–26 to the abnormally low figure of 237 million super. feet during the depth of the depression, recovered to 717 million super. feet in 1938–39 and stood at 895 million super. feet in 1945–46. Further reference is made to the sawmilling industry in Chapter XXII.—" Forestry ".

35. **Cabinet and Furniture Making and Upholstery Factories.**—These industries constitute the principal manufactures in Class XI. The following table gives particulars for each State in 1945–46 :—

CABINET AND FURNITURE MAKING AND UPHOLSTERY FACTORIES, 1945–46.

36. **Printing Works.**—Printing and bookbinding works rank high in importance among the industries of Australia, and in 1945–46 afforded employment for about 26,000 employees, and paid nearly £7,469,000 in salaries and wages, while the value of output amounted to £23,853,000. The first table below gives particulars of establishments engaged in general printing in each State for 1945–46. These establishments include those engaged in lithographic printing, bookbinding, paper ruling and linotyping and Government printing works. Establishments producing newspapers and periodicals are shown separately in the second table to follow :—

GOVERNMENT AND GENERAL PRINTING WORKS, 1945–46.

37. **Paper Making.**—Although the paper manufacturing industry has been established in Australia for many years it was not until the manufacture of paper pulp from indigenous timber commenced in 1938–39 that any marked development occurred.

Plants producing pulp from eucalypt timber are operating in Victoria and Tasmania whilst in South Australia pulp is being produced from locally-grown softwoods. The production of pulp has risen from 6,000 tons in 1938–39 to nearly 83,000 tons in 1945–46.

The number of factories operating in 1945–46 comprised two in New South Wales, five in Victoria, one in Queensland, South Australia and Western Australia and two in Tasmania. In the latter State newsprint, writing and printing papers are produced and in the other States wrappings, other papers and boards. Particulars for this industry are given in the following table for the years 1938–39 and 1942–43 to 1945–46.

PAPER MAKING, INCLUDING PULP MILLS : AUSTRALIA.

(*a*) Not available for publication ; figures are included in total for Australia.

Since 1938–39, when the output of gas was 21 thousand million cubic feet, production has increased each year and reached almost 32 thousand million cubic feet in 1945–46.

CHAPTER XXV.

WATER CONSERVATION AND IRRIGATION.

A general survey of water conservation in Australia last appeared in Official Year Book No. 23.—1930 pp. 636–661. In view of the growing importance of this subject a comprehensive picture of current development is presented in the following special article which has been prepared by Mr. Ulrich Ellis, of Canberra. The co-operation of various Commonwealth and State Departments and other bodies connected with water conservation was sought and freely given, and valuable assistance was rendered by them, particularly in the direction of supplying basic information for incorporation in the article.

The statistics which in recent years have been contained in this chapter have been included in the article.

THE CONSERVATION AND USE OF WATER IN AUSTRALIA.

§ 1. Geographical and Climatic Factors.

1. **General.**—To appreciate the significance of the Australian water pattern it is necessary to relate the geographical configuration of the continent to climatic and other allied conditions. Chapter II. of this Year Book (page 27), deals with the physiography of Australia, and more detailed information is available in earlier issues. Therefore it is proposed to present in this article merely a simplified picture of the main geographical and climatic features.

2. **Topographical.**—Examining the continent from east to west, a narrow belt of coastal plain is found to extend along the eastern coast, bounded by the Great Dividing Range which extends from the far north of Queensland to the south-east of New South Wales, thence westward through Victoria. This mountain system is never more than 250 miles, and at one point only 27 miles from the coast. West of the range the country descends gradually until areas are reached, in the northern interior of South Australia, which are at or below sea level. Thence there is a gradual rise till the coastal mountains of Western Australia are reached, and the western shores are again flanked by a narrow coastal plain. The average elevation of the continent is approximately 900 feet but mountains in the Australian Alps (in the south-eastern highlands) rise to 7,300 feet. A predominant feature is the absence of high mountains over a large part of the continent.

3. **River Pattern.**—Most of the rivers are on the eastern coast, but owing to the proximity of their catchments to the sea, they are comparatively short. The longest river on the northern Coast is the Flinders (520 miles) which flows into the Gulf of Carpentaria, while the Burdekin, on the east coast of north Queensland, is 475 miles.

The Murray-Darling system drains one-seventh of the continent. The main Murray rises in the Australian Alps, and carries substantial quantities of water, especially in the winter and spring, through the semi-arid areas to the westward. Though its highland catchments experience a high average rainfall, exceeding 70 inches, and melting snows augment the streams, the volume is sometimes seriously affected by the variability of precipitation on the watersheds. Apart from the Murrumbidgee, which also rises on the southern highlands, and is snow fed, most of the other tributaries are irregular in flow, though sometimes contributing substantial quantities of flood waters. The Goulburn River in Victoria is fairly regular, and contributes large flows practically every year.

4. **Climate and Settlement.**—Australia is a continent 2,974,581 square miles in extent, in which climatic conditions range from the alpine to the tropical. Though average rainfall on the north coast of Queensland ranges up to 160 inches the annual average in a great part of the continent is less than 10 inches. It is estimated officially that 37.6 per cent. of the total area receives an average of less than 10 inches; 57.5 per cent. less than 15 inches; 68.4 per cent. less than 20 inches; 77.5 per cent. less than 25 inches; and 84.8 per cent. less than 30 inches per annum.

In terms of settlement these figures can be interpreted only if related to land use possibilities, soil conditions, incidence and variation of rainfall, temperature and evaporation, etc. For a fuller statement of climatic factors see § 2 "Climate and Meteorology of Australia" of Chapter II. of this Year Book (page 30).

A recent interpretation by Dr. A. E. V. Richardson, Chief Executive Officer of the Council for Scientific and Industrial Research, suggests these general conclusions :—

Thirty-four per cent. of the continent is of little value because the major portion of this area is true desert and uninhabitable, while the remainder is capable of carrying only sparse stock population.

Forty-two per cent. is likely to remain extensive sheep and cattle country for the most part, with only a sparse to moderate stock population.

Twenty-four per cent. receives a rainfall which is adequate for agriculture and intensive stock raising. A substantial part of this well-watered region is unsuited, however, by reason of rugged topography and barren soils, for the cultivation of crops.

Approximately one quarter of one per cent. may ultimately be regarded as suitable for irrigated culture, owing to the limited water resources of Australia.

Major population development has taken place in those areas in the east, south and south-west which have maximum water supplies derived under conditions favoring settlement ; but there is ample evidence that in these and other areas possibilities exist for further expansion and population growth. Though considerable areas of Australia may be classed as dry it should be noted that most other continents face difficult settlement problems because large areas of land are too hot, too cold, too rugged, too wet, or too dry to support substantial population with reasonable living standards.

§ 2. Water Resources and their Utilization.

1. **Surface Supplies.**—Though river gaugings have been recorded over considerable periods in some parts of Australia, records elsewhere are intermittent, of short duration, or non-existent. Therefore, it is impossible at present to estimate, with any degree of reliability, the total average annual flow of Australian streams. The streams of the Murray-Darling system provide an estimated annual average of 12,000,000 acre feet from a catchment of 414,000 square miles. The average for the rivers of Northern Queensland has been computed at a figure approximately 18,000,000 acre feet. The coastal streams of northern New South Wales and southern Queensland have been assessed at about 10 or 12 million acre feet.

The extensive and reliable records of the Victorian State Rivers and Water Supply Commission estimate the aggregate flow of all rivers gauged in that State, including Murray tributaries, at 14,000,000 acre feet.

As great volumes of water do not flow through other areas, it is doubtful whether the total annual average flow of all Australian rivers would exceed 60,000,000 acre feet, a figure small in comparison with the flow of rivers in other continents.

For purposes of comparison the following estimates of mean annual discharge in other parts of the world are stated here in millions of acre feet : Nile, 72 ; Danube, 228 ; Amazon, 1,780 ; Volga, 148 ; Mississippi, 474 ; and the ten main rivers of the United States of America, 900 (in the aggregate).

2. **Irrigation.**—(i) *History.* The history of irrigation in Australia commenced in Victoria after the droughts of 1877 and 1881, when it became recognized that the northern plains could be developed only with water artificially supplied. Thereupon, the Government began the systematic regulation of north-flowing streams. George Chaffey and his brother (who were successful irrigationists in California) were invited to investigate the possibilities of the Murray River from Echuca to Renmark. The Chaffey brothers later established irrigation settlements at Mildura (Victoria) and Renmark (South Australia). Though their efforts were at first clouded with difficulty and misfortune, the possibilities of irrigated culture in these areas were proved beyond doubt.

The Irrigation Act passed by the Victorian Government in 1886 influenced the whole future of water development in Australia. This Act vested in the Government the right to use water in any stream, lake or swamp; provided that no riparian rights could be established which might prevent the use of water for irrigation; authorized the construction of Government works; and provided finance for irrigation trusts elected by the people to conduct local schemes. Similar legislation followed in other mainland States.

(ii) *Extent and Nature.* Fifty per cent. of Australia's irrigated acreage is now in Victoria, and about 68 per cent. is situated along the Murray and its tributaries (including the Murrumbidgee) in the three States of New South Wales, Victoria and South Australia. In these areas served by the Murray and its tributaries irrigation water is used extensively for vines, orchards, pastures, fodders, and for domestic and stock purposes.

Approximately fifty per cent. of Queensland's irrigated acreage is devoted to sugar cane. Western Australia's small irrigated acreage is confined to areas in the south-west where fodders and pastures are served. Irrigation schemes have not been developed in Tasmania or the Northern Territory.

With the expansion of markets for primary products after the 1914–18 War, the irrigated acreage has gradually extended and is now more than four times as large as in 1917. The following statistical statements illustrate the extent and nature of irrigated culture :—

IRRIGATION : AREA IRRIGATED.

(*a*) Includes lucerne for grazing and cutting, 27,994 acres. (*b*) Includes fallow land (*c*) Includes tobacco, 1,551 acres.

(iii) *Statistical Aspects.* It should be noted that the basis of recording statistics of water use differs in various States. Therefore, while every attempt has been made to present a uniform statistical picture, it has been difficult to ensure that statistics quoted as between States are strictly comparable in detail. Some steps have been taken by State authorities with a view to securing uniformity of statistical data, but until this objective has been achieved allowance should be made for this factor in this article.

(iv) *Irrigation Trends.* In the past, Government policy has concentrated largely on supplying cheap water to the semi-arid fringe between the ten and twenty inch rainfall isohyets. Now that the limits of water availability are more clearly known, new trends are appearing. Increased attention is being given, for example, to the improvement of irrigation techniques in established areas. Science is tending to seek maximum results from existing supplies, and it is even admitted in some areas that less water, more efficiently applied, will yield better results.

There is also a growing appreciation of the benefits and necessity of irrigation in humid and sub-humid areas with a flush annual rainfall. While the annual average might be comparatively high in such areas, the bulk of the rain may fall in a few months of the year. Consequently it is being increasingly recognized that irrigation, where possible, is an advantage to stabilize production (both as to quantity and quality) over the dry months, or to balance the varying precipitation between the good and lean years.

Similarly, irrigation is being used along the Murrumbidgee and Murray to stabilize the stock industries, especially on an " extensive " basis. Water is being provided for parts of existing holdings (say one acre in ten or more) in certain areas, thereby enabling the best portions of holdings to be devoted to irrigated pastures and fodders, thus supplementing natural rainfall and natural feed.

In line with the construction of barrages at the mouth of the Murray, consideration is being given in other parts of Australia to the provision of weirs which will prevent the entry of salt water, thereby enabling fresh water to be drawn direct from coastal streams for farm, domestic and industrial purposes, enabling the reclamation of flats and swamps now unsuitable for productive purposes owing to the presence of tidal salt, and safeguarding existing farms from periodical deluges by salt water through floods and ocean storms.

A significant trend is the growing appreciation of the benefits to be derived from the " marriage of electric power and water ". Recent surveys indicate that while oil pumps and windmills are used extensively for pumping water, cheap electric power is being sought increasingly to aid pumping operations for stock, domestic and irrigation purposes. In the Inkerman-Home Hill area of North Queensland and in the Lockyer Valley in southern Queensland, electricity development policies have been specifically designed to assist and encourage irrigation. Special rates for power pumping are provided by the Clarence River County Council in northern New South Wales to permit farmers to pump water at night when normal power demands are low. This policy has had a particularly marked effect on the production of winter vegetables and tomatoes in the Coff's Harbour–Valla districts.

Finally, it can be said that an increase in the extent of spray irrigation has been recorded in recent years, aided by electric power and internal combustion engines.

(v) *Research.* Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following : High water tables due to the application of water to land where no natural drainage lines exist, or where drainage lines are too small to cope with extra water ; presence of salt in semi-arid soils, resulting in surface accumulation ; salinity of water, which makes it unsuitable for human beings, stock and plant life ; adverse reactions of semi-arid soil types to increasing quantities of water which affect the sub-soil ; increasing density of stock on irrigated pastures which leads to the spread of such diseases as foot rot and fluke in sheep, and mastitis and contagious abortion in cattle ; and growth problems affecting plants and trees.

The Commonwealth Scientific and Industrial Research Organization maintains the following research stations :—Merbein (Victoria), horticultural problems, mainly vines, soils, watering and diseases ; Griffith (New South Wales), mainly citrus and vegetable problems ; Deniliquin (New South Wales), pastures ; Werribee (Victoria), stock diseases. These stations are in close contact with the settlers. Merbein Station was originally financed partly by the settlers, but funds are now contributed, in addition, by primary industry boards, co-operative companies and associations, with contributions from the New South Wales Water Conservation and Irrigation Commission as well. The Griffith Station is maintained by the Organization in co-operation with the New South Wales Water Conservation and Irrigation Commission.

The Soils Division of the Organization has made detailed surveys of more than a million acres since 1927, with less detailed reconnaissance surveys over many millions of acres. The Division works closely with State authorities. The keynote of soil investigations is relationship between soil and land use, and there is an increasing tendency to seek such surveys before irrigation districts are established.

It is of interest to note in passing that the Organization is also conducting experiments to test the possibility of " making rain " by stimulating precipitation of moisture from clouds through the introduction of such substances as dry ice.

An important step forward in agricultural development in Australia has been taken in the creation of the Irrigation Research and Extension Committee with head-quarters on the Murrumbidgee Irrigation Areas. The scheme aims to provide the best possible service to farmers. It is regarded as an experiment in organization and regional administration which may have far-reaching effects. The objectives are :—

(*a*) The provision, by the proper authorities, of administrative machinery for the continuation and development of the agricultural extension services to the farmers in the defined sub-region.

(*b*) Providing a mechanism for advising on the formulation, review, and adjustment of local agricultural policy and organization.

(*c*) Providing means whereby farmer opinion will have due weight in the consideration of regional agricultural administration and policy.

(*d*) The bringing about of a unified approach to sub-regional extension in all branches of agriculture.

(*e*) The research needs of the sub-region and the co-ordination of the agricultural research of the various rural institutions working therein.

(*f*) The achievement of a close liaison between research and extension.

(*g*) Conducting research in extension methods.

The Committee is representative of the State Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales and certain farmers' organizations (including Extension Groups). Finance is provided by these authorities on an agreed basis. Introduced in the present form in 1947, the scheme is to operate initially for a period of seven years.

3. **Preservation of Catchments.**—As water conservation commences on the catchments, it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimize effects of floods, overstocking, bush fires, and destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reafforestation and the preservation of catchments. In recent years efforts to counteract soil erosion have been intensified and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

The Victorian Parliament passed the Soil Conservation and Land Utilization Act in 1947 to establish an authority to control land on catchments, to determine whether such land shall be used for forestry, grazing or other purposes, and to delegate to other authorities (such as the Forestry Commission and the Soil Conservation Service) the responsibility of carrying out necessary works to maintain catchment efficiency. The Act had not been put into operation when this article went to press. In New South Wales a Conservation Department was established in 1944 under single Ministerial control, linking the Water Conservation and Irrigation Commission, the Soil Conservation Service (established in 1938) and the Forestry Commission. In Queensland the Bureau of Investigation has been established under the Land and Water Resources Act of 1943 designed to bring about the co-ordinated development of land and water resources. Other States are also giving attention to this problem.

4. **Hydro-electric Power.**—Australia's main coal deposits lie within the well-watered regions, but with accelerated industrialization, increased interest is being displayed in the development of hydro-electric power for rural electrification, for stabilizing inter-connected systems, for contributing to metropolitan peak demands, and for general industrial and domestic purposes. On the mainland it is usual to allot water for irrigation purposes, combining this with hydro-electricity to whatever extent is possible. During summer, when irrigation is proceeding, there is ample discharge for power, but in the non-watering period the main objective is to store water.

Hydro-electric possibilities are confined almost exclusively to the eastern coastline of the mainland and to Tasmania. In 1932 the Power Survey Sectional Committee of the Standards Association of Australia estimated water power resources to be 4,750,000 h.p. of which 3,500,000 was located in Tasmania. Authorities are now inclined to believe that mainland sources could contribute approximately 2,000,000 h.p., bringing the total to 5,500,000. Recent investigations concerning the potential use of the Snowy River may increase the estimate further. The Committee also estimated that the water power potential in Papua and New Guinea was approximately 20,000,000 h.p.

It has been estimated that in 1946–47, of a total of 2,184,226 k.w. generated by all Australian power stations, the quantity derived from water power was 277,557 k.w., representing 12.8 per cent. of the total. The total hydro-electricity generated in each State (and the percentage of hydro-power to total electric power in that area) was as follows :—New South Wales, 26,845 k.w. (2.7 per cent.) ; Victoria, 51,906 (8.9 per cent.) ; Queensland, 4,360 (2.2 per cent.) ; and Tasmania, 194,446 (100 per cent.)

Hydro-electricity is generated in all States except South Australia and Western Australia and in the Northern Territory. Water is the sole source of electric power in Tasmania, all other States depending largely on steam and oil.

5. **Sub-surface Supplies.**—(i) *General.* While a more or less complete general picture of the available and potential surface water resources exists much remains to be done with regard to the location and development of sub-surface supplies, although the extent and potentials of the artesian basins—particularly the Great Artesian Basin—have been fairly accurately determined. In view of the importance of sub-surface waters as the basis of settlement over large areas of Australia, it is necessary to devote particular attention to these resources.

The use of sub-artesian supplies is also extensive and more development is possible, but the shallower groundwater supplies, particularly along alluvium valleys and coastal sandbed areas, have not been investigated and developed in any degree, except in a few localities. Increasing efforts are being made to locate and develop sub-surface supplies and comprehensive hydrological surveys have been initiated in many parts of Australia for the purpose of locating, further developing and utilizing these waters.

A good deal of investigational work has been carried out and many data have been recorded in respect of artesian basins, and the decreasing flow therefrom ; and this information is being progressively supplemented, as is also the information recorded in respect of sub-artesian supplies.

(ii) *Definitions.* The term "artesian" is applied when the water contained in an acquifer and tapped by a bore hole rises and flows under hydro-static pressure above ground level. When a water bearing stratum is intersected by a bore hole, and the water rises above the level at which it is tapped but does not rise sufficiently high to flow naturally above surface level, it is termed "sub-artesian".

The term "ground water" is generally applied to shallower waters found in alluvium or sand beds not confined between impervious strata, and these waters usually do not rise in a bore hole above the level at which they are met.

(iii) *Artesian and Sub-Artesian Supplies.* Pressure water, variable in quantity and quality, either artesian or sub-artesian, is obtainable in many parts of Australia, the various artesian basins extending over approximately one-third of the continent.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 550,000 square miles, comprising about 350,000 in Queensland, 76,000 in New South Wales, 100,000 in South Australia and 24,000 in the Northern Territory. Of the numerous defined major and minor water-bearing basins in Australia, the following are the principal :—

PRINCIPAL WATER-BEARING BASINS : AUSTRALIA.

Name.	State.	Geological Age.	Area.	Depth of Water.
			Square Miles.	Feet.
Great Artesian . .	Queensland, New South Wales, South Australia and Northern Territory	Cretaceous-Jurassic . .	550,000	Up to 7,000
Murray . .	Victoria, New South Wales, and South Australia	Miocene	107,000	100 to 900
Torrens . .	South Australia . .	Recent Pleistocene . .	4,000	Up to 600
Coastal Plain . .	Western Australia	Recent Jurassic . .	10,000	200 to 2,500
Adelaide . .	South Australia . .	Recent Oligocene . .	1,100	100 to 500
Gippsland . .	Victoria . .	Pleistocene-Oligocene	1,800	200 to 1,800
Port Phillip . .	Victoria . .	Pleistocene-Oligocene	300	Up to 600
Eucla	Western Australia, South Australia	Pliocene-Miocene . .	68,000	300 to 2,000
North-west . .	Western Australia	Tertiary Permian . .	40,000	400 to 4,000
Collie . .	Western Australia	Permian	500	. .
Desert . .	Western Australia	Permian	130,000?	200 to 3,000

(iv) *Discharge and Number of Bores.* The first artesian bore within the Great Artesian Basin was completed in 1878 at Kallara Station, near Bourke in New South Wales. Since then more than 3,000 artesian bores, ranging in depth from 10 to 7,000 feet have been constructed within the Great Artesian Basin which extends over the three States of Queensland, New South Wales and South Australia and into the Northern Territory.

The present daily free discharge from all bores continuing to flow in Australia is in excess of 350 million gallons, of which more than 90 per cent. is probably lost by evaporation and seepage.

The number of sub-artesian bores and wells throughout Australia is more than 200,000.

(v) *Quality.* Artesian water is used primarily for stock watering purposes and its availability has enabled vast areas to be settled which otherwise would be unoccupied. Indeed it is said that its use has doubled the stock-carrying capacity of Queensland alone. In some areas artesian waters have chemical properties which make them unfit for use even by stock, and in even wider areas sub-artesian waters contain such high proportions of dissolved salts as to be quite useless.

Artesian water generally, particularly throughout the Great Artesian Basin, is good stock water, but unsuitable for plant life, even if it were available (which it is not) in sufficient quantity for irrigation. In certain areas sub-artesian waters are suitable for all uses including irrigation, while a considerable amount of irrigation is carried out in some districts from shallow ground water supplies.

(vi) *Diminution Problems.* In common with other countries possessing artesian supplies, Australia, particularly with regard to the Great Artesian Basin, has been faced with the problem of flow diminution. Hydrologists and engineers in close touch with the early discovery and development of artesian supplies soon recognized the fact that flows were diminishing as more bores were drilled, but wastage continued (and still continues in many cases) despite continued warnings.

In Queensland the total flow from artesian bores, which in 1914 reached a peak of approximately 355 million gallons a day, diminished to about 230 million gallons in 1945, although the number of bores had been increased by more than 800. Similar conditions have applied in New South Wales and South Australia, many bores having ceased to flow ; and most of the older still-flowing bores now have only about 30 per cent. of their original flow remaining.

Although only a small proportion of the actual quantity of water stored in the Great Artesian Basin has been drawn off, much of the original pressure has been lost, the hydraulic gradient has been steepened, and most of the free flow has been lost for all time.

The Queensland Government appointed a Committee to investigate various aspects relating to the Great Artesian Basin, with particular reference to the problem of diminishing supply, and its first interim report was published in 1945. This report contends that less than one inch depth of water has been retrieved by all Queensland bores in the past fifty years, and as the water-bearing strata are hundreds of feet thick over a large area, this is a small fraction of the total storage. The Committee is now investigating the economic aspects.

It has been said that eventually all bores within the Great Artesian Basin would cease to flow naturally and that the water would have to be pumped to the surface for use. Investigations in both Queensland and New South Wales have refuted this impression. It is now considered that although many of the bores, particularly those located at higher surface levels, will ultimately cease to flow, many will not cease. They will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by the outcropping sandstones which form the intakes at or near the surface. These outcrops occur along the western slopes of the Great Dividing Range in Queensland and New South Wales and dip in a general south-westerly direction, with more or less continuity, and of variable thicknesses and depths, across the full width of the basin, to form the storage reservoir or acquifers from which the flows are derived.

The pressure which causes the water to flow from a bore penetrating an artesian acquifer, or rise in a bore penetrating a sub-artesian acquifer, is principally gravitational, although it is now considered that the "elastic factor" or "elasticity" of the sand-rock in which the water is stored also has an important bearing upon the pressure which causes water to flow. Flush flows from newly constructed artesian bores (or on re-opening of temporarily closed bores) are attributed to the elastic factor in the sand rocks. When the "elastic" effect has been more or less completely lost, flows tend to stabilize and become steady in conformity with the amount of intake and other hydraulic factors operating.

(vii) *Economic Aspects.* Investigations are now proceeding with regard to (*a*) wasteful methods of distribution of artesian water by open channels or "bore drains" which result in the loss by evaporation and seepage of most of the water, and (*b*) careless use of water.

Investigations in New South Wales into the possibility of distributing artesian water by pipe-line systems to eliminate most of the losses and wastage occurring when open channels are used, suggest that the capital and operational costs would be so high as to make them uneconomic for the pastoral industry.

Diminution in flows from artesian bores continues to be regarded as of serious consequence in some districts in the south-west of Queensland and north-west of New South Wales because of the difficulties and high cost of providing alternative stock and domestic water supplies when flows are no longer sufficient to meet requirements. Water authorities therefore suggest that it is imperative to eliminate wastage as much as possible and that the utmost use should be made of available supplies throughout the whole of the Great Artesian Basin.

The areas considered to be most seriously affected are those where sub-artesian supplies are not available, the terrain is unsuitable for surface water storage because of its poor run-off and other factors, and the depth to the artesian acquifer is so great as to make the construction of bores for pumping supplies practically prohibitive.

Fortunately the areas to which these conditions apply do not comprise a large proportion of the grazing areas of either New South Wales or Queensland, and by far the larger areas in both States will continue to meet the needs of the pastoral industries at costs not uneconomic, even if the water has to be pumped, supplemented by sub-artesian supplies, ground tanks, and other surface storage facilities.

It is significant that even in those areas where diminution of artesian flows has been most marked and flowing supplies have practically ceased, no land has gone out of use. Alternative means of watering stock, although perhaps at a higher cost, have always been found.

(viii) *Ground Water.* The development of shallow ground water supplies for industry, irrigation, stock and domestic purposes, is receiving considerable attention and can in future be depended upon for great expansion. Modern methods employed in several States for the development of such supplies contained in sands and gravel formations have recently produced encouraging results. These supplies are by no means inexhaustible and their development will require to be carefully watched, and possibly controlled, in order that the withdrawals do not exceed the capacities of the reservoirs, and the recharge thereof from rainfall.

Excessive pumping from ground water supplies in many parts of the United States has resulted in the serious depletion of supplies, necessitating strict control of further development and the artificial recharge of the water beds in order to maintain a reasonably stable water table.

Reference is made to the use of ground water on other pages, namely, Burdekin Delta (page 1126), Lockyer Valley (page 1126), and Eyre Peninsula (page 1131).

In passing, it should be noted that many urban supplies are drawn from artesian and sub-artesian sources in various parts of Australia, and that ground water has been developed for industrial as well as domestic purposes in recent years.

The most notable ground water scheme is that conducted by the Hunter District Water Board which supplies a population of 217,900 in the Newcastle area where substantial industries (coal, iron and steel, shipbuilding, etc.) exist. Water storages fed from surface sources are supplemented by ground water from the Tomago sandbeds near the mouth of the Hunter River. In an area of approximately 50 square miles, water-bearing sands (with an impervious bottom at about 60 feet) are charged with rainwater to within a few feet of the surface. The scheme consists of electric pumping units extracting the water by tube wells for delivery to spraying basins for aeration and elimination of gases. Secondary pumps deliver the water to the reticulation system. Each of fifteen pumping stations has an average capacity of a million gallons a day normally, but can deliver up to two million in favorable circumstances for short periods. Pumps and pipe lines are designed for a maximum delivery rate of 25 million gallons a day. Total quantity delivered since 1930, when the scheme was inaugurated, to the end of December, 1947, was 10,020 million gallons.

It is interesting to note that a number of water-bearing sandbeds of a similar nature have been located and examined by the Public Works Department at points along the north coast of New South Wales.

In southern districts of Sydney some industrial concerns obtain considerable supplies of ground water by means of shallow bores, and in both Perth and Adelaide surface resources are supplemented from artesian and sub-artesian sources.

(ix) *Windmills.* In the development of water resources—and especially underground water—windmills have played a substantial part. Without them millions of acres would remain undeveloped. Though it is impossible to obtain precise statistics an unofficial estimate assesses the number in use at approximately 250,000; and that the capital value of windmills now working, including pipes, pumps, tanks, troughs, etc. is in the vicinity of fifty million pounds.

The bulk of windmills are installed on farms and stations for watering live-stock, though they are also used for pumping town supplies and providing water for locomotives, irrigating vegetables, and for retrieving water for domestic use.

Large "direct-acting" windmills, measuring from 17 feet to 30 feet diameter of windwheel, predominate in the western districts of Queensland and New South Wales, in the northern areas of South Australia, in the Northern Territory, and in the Kimberley Division of Western Australia where large mobs of sheep and cattle are watered. The smaller, geared windmills, from 6 feet to 14 feet diameter, are used mainly on farms in coastal areas.

The smaller windmills are similar in general principle to American types, but the large "direct-acting" types appear to have been developed mainly in Australia. By "direct-acting" is meant that the windmills are not back-geared, and so there is one stroke of the pump to each revolution of the wind wheel The wind wheels of geared windmills revolve from 2.33 to 4 times according to size to give one pumping stroke. Small windmills revolve faster than large ones in the same wind velocity so that if they were not back-geared their pumping strokes would be so rapid that they would cause speedy deterioration of the pump parts and undue strains on working parts, etc.

The first windmills in Australia were made principally of wood and required greasing fairly frequently. Improved types have been introduced progressively as the result of experience. In recent years a large direct-acting windmill has been developed which is a fully enclosed, automatically oiled machine, made of steel and cast iron, which needs refilling with oil only once a year; and even then it is unnecessary to climb the tower as in earlier types, an oil pump being provided on the tower near the ground from which the oil is pumped into the crankcase.

6. **Industrial, Metropolitan and Country Town Supplies.**—Human consumption needs are the first objective of water conservation, and the growth and dispersion of communities must be related to the availability and use of water. The growth of large metropolitan populations, associated with the development of substantial secondary industries, has created water supply problems of considerable complexity. Changes in manufacturing processes, apart from the increase of population and industry, accentuate these problems. While manufacture a century ago was comparatively simple, the development of modern industries such as chemicals, paper manufacture, plastics and food processing, has increased the demand for water.

As an illustration, such factors as the increasing consumption of bottled and canned foodstuffs, the provision of amenities such as sewerage and even electric bath heaters, and the development of home gardens, are all reflected in the total demand. The growth of country towns, as well as the development of metropolitan areas, is consequently responsible for the adoption of long-term programmes in all parts of Australia designed to guarantee future supplies on an adequate scale. Details relating to urban water supply systems will be found in Chapter XIII.—"Local Government" of this Year Book (pp. 539–50).

§ 3. National and Interstate Aspects.

1. **Constitutional Phases.**—As the government of Australia is conducted under a Federal system, and as the Commonwealth Constitution makes special reference to water problems, both the Federal and the State Governments have an interest in the control and conservation of water. As main responsibility for control of water resources resides in the State governments, and as political boundaries sometimes intersect river valleys and catchments, co-operation between governments has been necessary to develop resources in certain cases.

Under the Constitution, the Commonwealth's trade and commerce power extends to navigation (including navigation on rivers), and Section 100 provides that "The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation."

The Commonwealth and the States of New South Wales, Victoria and South Australia entered into an agreement in 1914 for the control of the Murray River which serves the three States mentioned. In 1947 the States of New South Wales and Queensland entered into an agreement for the control and development of the Dumaresq and other rivers which intersect the border of the two States.

In the Report on Irrigation, Water Conservation and Land Drainage presented to the Commonwealth Government by the Rural Reconstruction Commission in 1945 national aspects of water conservation and use were emphasized. The report recommended the adoption of an all-Australian plan, having the assent of the various governments, to obviate lack of co-ordination resulting in attempts to develop too many schemes simultaneously, thus stimulating production in excess of markets, and competing for available finance, materials and manpower. It also recommended that the Commonwealth should endeavour to promote interstate co-operation and co-ordinated development generally.

In 1946 a conference between the Commonwealth and States agreed to revive the Irrigation Production Advisory Committee, first established under the authority of the Australian Agricultural Council in 1938. Its main function is to consider the relation of irrigated production to available markets and to advise on the expansion of irrigated production from a national viewpoint. It succeeded the Murray River Advisory Committee established many years earlier. The Commonwealth and the States are represented on the Committee.

Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following sections.

2. **Murray River Scheme.**—(i) *General.* The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 414,000 square miles or one-seventh of the area of the Australian continent, representing five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland, and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Murrumbidgee (1,050 miles), the Darling (1,760 miles), and the Goulburn (280 miles). The average annual flow of each of the chief contributory streams is as follows :—Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,400,000 acre feet ; Murrumbidgee River, 2,600,000 acre feet ; Goulburn River, 2,250,000 acre feet ; Darling River, 2,150,000 acre feet ; and Ovens River, 1,200,000 acre feet.

(ii) *History of Control.* Discovered in 1824, the Murray played a substantial part in early pastoral settlement. Navigation was the predominant initial interest, permitting cheap transport of supplies and production. Irrigation settlements which developed after 1887 commenced a new era in the River's history. In 1914 the three State authorities whose territories were served by the River agreed that joint control was necessary, and the following year the Parliaments of the Commonwealth, New South Wales, Victoria and South Australia passed the River Murray Waters Act. This ratified the River Murray Agreement, provided for the construction of works, the allocation of the water between the three States, and the appointment of a Commission to implement the Agreement. The Commission comprises four Commissioners, representing the Commonwealth and the three States respectively. The Commonwealth representative presides.

(iii) *Terms of Agreement.* Under the Agreement construction works are carried out by the States (who are also responsible for maintenance) subject to the approval and direction of the Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to fill Lake Victoria storage once, and with the aid of water returned from Lake Victoria, to maintain certain specified flows in the lower river varying from 47,000 acre feet per month in the winter months to 134,000 acre feet per month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. These flows are to meet domestic and stock requirements in South Australia, losses of water in the locks, and evaporation losses other than in the lakes at the Murray mouth ; together with 603,000 acre feet per annum for diversion from the Murray for irrigation in South Australia. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation.

Under the original agreement the major works comprised two large storages—one on the Upper Murray above Albury (the Hume Dam) and the other at Lake Victoria in Victoria near the South Australian border. In addition, provision was made for a number of weirs and locks along the Murray and Murrumbidgee Rivers. In 1934 the Agreement was varied to provide for the construction of a diversion weir at Yarrawonga (145 miles downstream from the Hume Dam), and the provision of barrages at the mouth of the River to prevent the entry of salt water. The amendment also limited the original proposal for 26 weirs and locks on the Murray and 9 on the Murrumbidgee to 13 on the Murray and 2 on the Murrumbidgee. At the same time it was agreed that the Hume Dam should be completed to a capacity of 1,250,000 acre feet with provision for later increase to 2,000,000. As a result of the amendment, navigation is limited to a route of 600 miles, extending from the mouth to a point some 50 miles above Mildura.

(iv) *Cost.* All works authorized under the amended Agreement (except the enlargement of the Hume Dam to 2,000,000 acre feet) have been carried out at a total cost of £12,000,000, of which approximately half represents the cost of the Hume Dam. Expenditure has been shared equally by the Commonwealth and the three States.

(v) *Hume Dam.* The Hume Dam is situated just below the junction of the Murray and Mitta Mitta Rivers, 10 miles above Albury, forming a lake of 33,000 acres. The design comprises a mass concrete spillway and outlet works extending 1,000 feet and an earthen embankment 100 feet high extending for 4,000 feet across the river flats. The length of the total structure is approximately 1 mile. Ultimate plans include provision for hydro-electric generation, for which planning is now in hand. Attention is also being given to the completion of the dam to its designed capacity of 2,000,000 acre feet and also to the enlargement of the inlet channel to Lake Victoria, necessary to permit greater storage of periodic flood flows of short duration.

(vi) *Weirs and Locks.* Yarrawonga Diversion Weir was completed in 1939 to raise the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two have been constructed on the Murrumbidgee—one between Hay and the Lachlan Junction ; and the other below the Lachlan Junction.

(vii) *Distributaries.* The Mulwala Canal, served by the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet per second, and will serve 1,500,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet per second, and is designed to serve 270,000 acres. Only a portion of both these areas will be irrigated.

(viii) *Lake Victoria.* Adjoining the river in New South Wales and 35 miles from the Murray-Darling Junction, Lake Victoria storage was completed in 1928 with a capacity of 551,700 acre feet and a surface area of 27,670 acres. The water is used by the South Australian settlements.

(ix) *Murray Mouth Barrages.* Five barrages across channels near the river mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

(x) *State Storages and Works.* In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The total capacities of such main storages are: New South Wales—Burrinjuck (Murrumbidgee), 771,640 acre feet; Wyangala (Lachlan), 304,000 acre feet; Victoria—Eildon (Goulburn), 306,000 acre feet; Waranga (Goulburn), 333,400 acre feet. No storages exist on the Murray in South Australia. More details of these and other State works on Murray tributaries will be found in the sections dealing with State systems.

(xi) *Extension of Agreement.* Towards the end of 1948 legislative action was taken to ratify an Agreement by the Commonwealth and the States of New South Wales, Victoria and South Australia to vary the original terms. The amended Agreement provides for the increase of the capacity of the Hume Dam from 1,250,000 to 2,000,000 acre feet, the widening of the inlet channel to Lake Victoria storage, and the production of hydro-electric power.

The States of New South Wales and Victoria have agreed to report annually on the condition of the catchment and to take any special action recommended by the Murray River Commission in regard thereto.

The parties have also agreed that the Commission shall have power to initiate proposals for the better conservation and regulation of the river and may have investigations and surveys made respecting additional water storage works which might be carried out by one or more of the contracting governments, subject to the Commission's control.

(xii) *Production.* Irrigated production in the River Murray basin is mainly in the form of wine, dried fruits, fresh fruits, dairy produce, wool, fat lambs, rice, vegetables, poultry, eggs and pigs. The value of production from these areas has been estimated at about £19,000,000 a year, apart from the value added by processing or manufacture. The Murray River Commission estimates that without irrigation the annual production of these areas would not have exceeded £2,000,000 a year.

(xiii) *Diversions.* The total estimated quantity of water diverted in 1947–48 for irrigation from the Murray and its tributaries (under the Murray River Agreement) was as follows (in acre feet): New South Wales (1,524,897); Victoria (1,807,194); South Australia (157,328); a total of 3,489,419 acre feet.

3. **New South Wales-Queensland Border Agreement.**—The Border Streams Agreement between New South Wales and Queensland, effective from 1st July, 1947, provides for the construction of works on portions of the valleys of the Barwon, McIntyre and Dumaresq Rivers, forming part of the boundary between the two States, on the basis of equal partnership in respect of works expenditure and use of water. The catchments (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. The scheme provides for a major dam on the Dumaresq, near Mingoola, 15 miles upstream from Texas, with a storage capacity of 120,000 acre feet, together with 12 weirs and 4 regulators, at an estimated cost of £1,140,000. Investigations suggest that 70,000 acres close to the storage are suitable for irrigation.

Climatic conditions are such that it is necessary to supplement rainfall from April to October by irrigation to stabilize and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry, is being examined. A Commission to carry out the Agreement is being appointed.

4. **Snowy River Scheme.**—(i) *General.* Investigations have been carried out for many years to determine the best means of fully utilizing the waters of the Snowy River, which rises in the alpine area to the east of the Snowy Mountains in the south-eastern corner of Australia. The main stream rises in New South Wales on the slopes of Australia's highest mountain, Kosciusko (7,305 feet), and enters the sea below Orbost in Victoria.

Estimates made by the New South Wales Water Conservation and Irrigation Commission suggest that the average run-off of the Snowy catchment above Orbost is approximately 2,229,150 acre feet per year, based on records for the 35 years from 1907 to 1941. The average run-off above Jindabyne (2,900 feet elevation) accounted for 928,005 acre feet of the total. The average for the river as a whole was exceeded in thirteen of these years. In 1934 the phenomenal figure of 7,003,474 acre feet was recorded.

On this upper catchment of 680 square miles the rainfall varies from 22 inches at Jindabyne to 90 inches at Kosciusko. An important feature of the catchment is that snow falls in considerable quantities during the winter months and may persist for a many as eight months in some areas. The effect of the accumulation of snow in winter is to reduce the discharge of the river at that time and to increase it in summer, thereby maintaining a more uniform flow throughout the year.

(ii) *Diversion Proposals.* Observing that this substantial quantity of water is collected at elevations considerably higher than the courses of adjacent westerly flowing rivers, investigators have from time to time proposed the diversion of the waters of the Upper Snowy catchment to augment supplies for irrigation, stock and domestic purposes in inland areas. As early as 1884 the New South Wales Surveyor-General suggested diversion to the Murrumbidgee by means of an open channel from a point about five miles upstream from Jindabyne.

Various proposals have also been made for the utilization of Snowy water for the production of hydro-electricity, and investigations were made concerning a proposal to divert the water to Sydney to augment the metropolitan supply.

The Government of the Commonwealth and the State Governments of New South Wales and Victoria have certain legal rights in relation to the use of the Snowy. Under a long-standing agreement with New South Wales, the Commonwealth was granted rights in connexion with the development of the Snowy for hydro-electricity to provide for the needs of the Australian Capital Territory. Experience of deficient flow in the Murrumbidgee, which affected the output of hydro-electric power at Burrinjuck and threatened the stability and expansion of the Murrumbidgee Irrigation Areas, led the New South Wales Government to appoint a special investigating committee which reported in 1944 in favor of diversion to the Murrumbidgee.

The Victorian Government also has an interest in the river by virtue of the fact that the Snowy flows through Victoria to the sea.

Furthermore, the Victorian Government has expressed interest in the diversion of the Snowy to the Murray (which rises to the south of Mount Kosciusko) as a means of supplementing electricity supplies and increasing the water available for irrigation purposes along the Murray River.

Following discussions at the Premiers' Conference in 1946 investigations were initiated with a view to utilizing the highland water and power potentialities in the best national interest. During 1947 and 1948 joint investigations were carried out by a technical committee representative of the Commonwealth and the States of New South Wales and Victoria. The members of the Committee had achieved a substantial measure of agreement concerning the works necessary to obtain a maximum quantity of electric power and water through the interlinking of highland and westerly flowing rivers, when this article went to press.

5. **Australian Pattern Summarized.**—From the foregoing it is obvious that water conservation and use has both a national and a local aspect. The following survey indicates the local pattern of water resources and the steps taken by State Governments to bring about their development. It will be seen that water policies in the various States tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria almost every form of water scheme is in operation. In New South Wales major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water for the stock industries (mainly underground sources), and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production.

Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest appertains to hydro-electric generation almost exclusively. The Northern Territory is primarily concerned with stock supplies and the safeguarding of long stock routes.

§ 4. States and Territories.

1. **New South Wales.**—(i) *Rainfall.* Northern districts receive most of their rain in summer months, the southern districts in the colder months, but in neither case is the pattern so clearly defined as in various sections of other States. Over a large area rainfall is not seasonal, and wet as well as dry periods may be experienced during any portion of the year. Rainfall on the coast and coastal highlands is higher than inland, especially on the northern sectors where cyclonic storms may bring a substantial proportion of the year's rain in a few days. Over an area of 310,272 square miles, comprising New South Wales (309,433 square miles) and the Australian Capital Territory (939 square miles) 19.7 per cent. receives an annual average rainfall less than 10 inches; 43.2 per cent. less than 15 inches; 60.7 per cent. less than 20 inches; and 84 per cent. less than 30 inches. Areas receiving more than 30 inches represent 16 per cent. of the total area of which the 30 to 40 inch areas comprise 9.9 per cent.

(ii) *History.* A Royal Commission under Sir William Lyne in 1887 recommended a system of canals served from diversion weirs on the Murrumbidgee below Wagga. As a result, a water conservation and irrigation branch was attached to the Department of Mines and Agriculture, but except in respect of water for travelling stock in dry areas, little progress followed. Colonel F. J. Home, Chief Irrigation Engineer of the Punjab (India) reported in 1897 that only the Murray and Murrumbidgee could be relied on for regular flows. Mr. H. G. McKinney, who had assisted the Lyne Commission, recommended a major storage at Burrinjuck which was approved by Parliament in 1906 and completed in 1924. In 1910 an Irrigation Trust was established to control the Murrumbidgee Irrigation Areas, served from Burrinjuck, and this system operated until the creation of the Water Conservation and Irrigation Commission established under the provisions of the Irrigation Act of 1912.

(iii) *Administration.* Since 1916, when the Irrigation Act was amended, the Commission has consisted of three members including the responsible Minister (who is chairman) and two appointed Commissioners. The operations of the Commission cover water conservation, control of irrigation areas, establishment, operation and maintenance of works for domestic and stock water supply, and irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, and a farm water supply scheme.

Under the Water Act the right to the use and flow, and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Crown. A system of licences also operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

(iv) *Schemes summarized.* The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam on the Lachlan, another tributary. None of the other rivers are regulated by large head storages, though weirs and dams have been provided for town supplies, etc. in many places, and head storages have been commenced on the Macquarie, Namoi and Hunter Rivers. Substantial use is made of artesian and sub-artesian water in pastoral areas.

(v) *Storages.* The capacities of the main storages (in acre feet) are :—

Murray:—Half share of Hume Dam, weirs and locks to Wentworth (736,420); Stevens Weir, Edward River (7,165).

Murrumbidgee:—Burrinjuck Dam (771,640); Berembed Weir (10,000); Maude Weir (6,740); Redbank Weir (7,360).

Lachlan:—Wyangala Dam (303,900); Lake Cargelligo (29,435); Jemalong Weir (1,790).

Water from the Hume Dam is used for domestic and stock purposes, to provide bulk supplies for country towns, for the irrigation of vines, fruits and fodder in the Curlwaa and Coomealla areas, for domestic and stock supply and irrigation in the Berriquin and Wakool Districts, and for water trusts for domestic and stock purposes and/or irrigation.

The Wyangala Dam is 30 miles upstream from Cowra in the Central West. It has a catchment of 3,200 square miles. Water from the dam, supplemented by the unregulated flow of the Belubula River, provides for domestic and stock purposes along the full length of the river (over 700 miles) and also for irrigation by land holders operating licensed pumps. The towns of Cowra, Forbes, Condobolin, Hillston and Booligal are supplied. A balance storage at Lake Cargelligo conserves water during periods of high flow for release as required. Water from the Lachlan, diverted at Jemalong Weir, supplies the districts of Jemalong and Wyldes Plains, serving an area of 223,936 acres. Wyangala is now producing hydro-electric power. Proposals for future development include provision of a head storage at Belubula River, the construction of a balance storage of 108,000 acre feet at Ballyrogan (now in hand), and the constitution of domestic and stock water districts, or development by licensed diversions.

(vi) *Distributaries.* The approximate total length of channels (including main canals) in New South Wales is 2,597 miles. The approximate length of drains and escape channels is 903 miles, and approximate total length of pipe lines is 9 miles, making a grand total of 3,509 miles of channels and pipe lines, etc.

(vii) *Scheme Types Enumerated.* New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including Irrigation Areas, Irrigation Districts, Water Trust Districts, and Flood Control and Irrigation Districts.

There are four Irrigation Areas: The Murrumbidgee Irrigation Areas consisting of 381,814 acres served with water through a channel system off-taking from the river at Berembed Weir; the Coomealla Irrigation Area of 35,450 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,550 acres, supplied from the Murray by pumping; and the Hay Irrigation Area of 6,806 acres, supplied with water pumped from the Murrumbidgee. All these areas are administered by the Commission, and details of the various schemes follow.

LAND UNDER IRRIGATED CULTURE : NEW SOUTH WALES, 1946–47.

(a) Particulars not available. (b) Perennial pastures only.

(viii) *Murrumbidgee Irrigation Areas.* (a) *Description.* These areas comprise about a third of the State's irrigated acreage and received (in 1946–47) 346,064 acre feet of the total water allocated for stock, domestic supply and irrigation (1,013,711 acre feet). They are served by the Burrinjuck Dam (capacity 771,640 acre feet), 40 miles north-west of Canberra, on the Murrumbidgee. The catchment above the dam is 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where rainfall exceeds 60 inches. Flow for the irrigation districts is supplemented by unregulated flow below the dam from the Tumut River. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation is supplied for the Irrigation Districts of Tabbita, Benerembah and Wah Wah and the flood irrigation districts of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter and spring freshets, fed by melting snows, and is released during the September-April irrigation season. It passes along the river channel to Berembed Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet per second. The main canal has been completed to beyond Griffith, 96½ miles from the off-take. Reticulation channels aggregate 840 miles and drainage channels 810 miles.

In addition 380 miles of supply channel run through adjacent irrigation districts in which the water supply is operated and maintained by the Commission, but land transactions are not under its control. The land on which the Murrumbidgee Irrigation Areas are situated originally comprised large sheep stations with a sparse population.

Population was 12,000 in 1923, 15,000 in 1929 and 20,000 at the 1947 Census. The population of the Yanco district (with Leeton as the centre) was then 9,000; and the population of the Mirrool Area (with Griffith at the centre) was 11,000.

(*b*) *Administration.* The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas, also the electricity supply undertaking. Other local government services, including town water supply, are provided by Shire Councils. Land is disposed of by the Commission under freehold or perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30th June, 1947 was 338,121 acres, including 45,951 held for short lease grazing, agriculture, etc.

(*c*) *Production.* Since the scheme was inaugurated in 1911 the value of total production has aggregated £39,000,000. During the year ended 30th June, 1947, production was valued at £3,169,100. Live-stock contributed £653,100, comprising sheep, £353,500; cattle, £32,000; pigs, £20,000; wool, £191,600; and dairy products, £56,000.

Rice (£803,200) and other crops (£202,000) contributed a total of £1,005,200. Horticulture accounted for £1,090,500, comprising almonds, apricots, citrus; drying grapes, table grapes, wine grapes, figs and olives, peaches and nectarines, pears, plums and prunes, quinces and apples. The greatest individual contributions were made by grapes, £283,800, peaches and nectarines, £202,800 and citrus, £278,200.

The total value of all vegetables was £379,000, including root crops, £157,100, tomatoes, £105,600, peas and beans, £64,000, cabbages, cauliflowers, onions and other products.

A total of £41,300 represented the value of miscellaneous products.

(*d*) *Rice.* Rice growing was initiated in 1924. Since then aggregate production has been 783,500 tons valued at £8,360,000. In 1946–47 the acreage sown was 31,989, and the quantity of water delivered was 198,340 acre feet. Water supplied for rice represents about one-half of the total delivered in the areas and a fifth of the water artificially supplied for irrigation in New South Wales. Before the war the rice crop was more than sufficient for Australian requirements. During and after the war the area planted was increased to the limit of water available. Rice has also been grown in the adjoining districts of Benerembah and Tabbita, while in 1945–46, 21,389 acre feet was used for 4,104 acres of rice in the Wakool Irrigation District on the Murray, representing nearly half the water delivered. No rice was grown at Wakool for the 1946–47 season.

(*e*) *Co-operation.*. Co-operation is a prominent feature in the Murrumbidgee Areas. Co-operative organizations in the Mirrool section handle 300,000 bushels of fruit per year (compared with 54,600 in 1927–28). Aggregate sales turnover of the Leeton cannery in the past five years was over £1,000,000. Settlers and government agencies co-operate extensively in all matters relating to irrigation practice.

(ix) *Other Irrigation Areas.* The Curlwaa, Coomealla and Hay Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which also is responsible for operation and maintenance of works to supply water at rates determined by the Commission.

Curlwaa Area, on the Murray near Wentworth, consists of 10,550 acres of which 2,143 acres comprised irrigated holdings at 30th June, 1947. Production consists of dried vine fruits, deciduous fruits and fodder crops of a total estimated value of £113,872.

Coomealla Area, 9 miles upstream from Curlwaa, comprises 35,450 acres of which 3,419 acres are occupied in the developed portion. Other land in the undeveloped part is leased for grazing. Production consists of vines, citrus and lucerne of an estimated value of £214,266. Vines account for 2,465 acres, citrus 240, and lucerne 29. Works are now under construction to provide 100 new farms for ex-servicemen.

Hay Area, on the lower Murrumbidgee, consists of 6,806 acres, of which 1,028 acres are occupied as irrigated holdings. Annual production, valued at £18,775, comprises dairy products, fat lambs, sheep, wool and fodders.

(x) *Irrigation Districts.* These Districts are set up under the Water Act for (*a*) domestic and stock water supply and (*b*) irrigation. They differ from water trusts as the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders. The following districts or provisional districts have been constituted :—

Irrigation District.	Area of Land Benefited.
	Acres.
Murray River—	
Wakool District (completed)	502,698
Berriquin Provisional District (almost complete)	625,494
Deniboota Provisional District (in progress)	303,064
Denimein Provisional District*	140,850
Jernargo Provisional District* (domestic and stock supply only)	130,850
Barramein Provisional District* (domestic and stock supply only)	88,651
Murrumbidgee River (completed)—	
Benerembah District	121,555
Tabbita	5,631
Wah Wah Provisional District	549,099
Lachlan River—	
Jemalong District (completed)	171,608
Wyldes Plains District (completed)	52,328
Total	2,691,828

* Works not yet commenced.

Since the completion of the Hume Dam several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the five million acres adjacent to the Murray in New South Wales, and therefore the schemes are based on "extensive" irrigation—that is water rights are allotted to holdings on the basis that only a portion of each holding (one acre in ten or twelve, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. "Water right" means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin and Wakool Districts is diverted through a main canal which will be 100 miles long when completed. At 30th June, 1947, 75½ miles had been constructed to those districts and a further length was under construction in the Deniboota District. Off-take capacity is 5,000 acre feet per day. Ultimately the water will serve Deniboota and other districts for which works have yet to be constructed.

Wakool, with 340 miles of channel, contains 215 holdings and it is expected that the area developed by irrigation will comprise about one acre in 13 of the total area. The total area irrigated in 1946-47 was 35,256 acres and water supplied was 38,270 acre feet. Crops comprised fodders, pastures, cereals and vegetables, but sheep raising is the main industry.

Considerable subdivision has occurred within the Berriquin District and it is expected that the proportion of total area to be developed for irrigation will be considerably higher than in the case of Wakool. Total irrigated acreage was 92,499. Sheep and wheat growing are main industries. The fat lamb industry is well developed and expanding. Dairying is making headway, and a butter factory has been established at Finley.

In the Benerembah, Tabbita and Wah Wah Districts, supplied from the channels of the Murrumbidgee Irrigation Areas, the quantity of water supplied during the 1946–47 season for irrigation was 76,639 acre feet, and the area irrigated was 46,772 acres, including rice and other cereals, pastures and fodder crops. The estimated value of production, included in the amount (viz., £3,169,000) for the Murrumbidgee Irrigation Area, was £396,500, including wool, live-stock, wheat and oats and rice.

For the same season 25,987 acre feet of water was supplied from the Lachlan River o irrigate a total area of 21,474 acres within the Jemalong and Wyldes Plains Districts. The total estimated value of production was £521,000, including wool and lambs £415,000, calves and pigs £33,000, wheat, oats and other crops £32,000 and lucerne £41,000.

(xi) *Water Trust Districts.* The Water Act provides for the constitution of Trust Districts for domestic and stock water and irrigation and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following water trusts—other than irrigation—have been constituted; the area in acres of each district is shown in parenthesis:—Murray River: Tuppal Creek (78,080), Bullatale Creek (68,320), Little Merran Creek (157,440), Poon Boon (32,985), Minnie Bend Flood Prevention (2,190); Murrumbidgee River: Yanko, Colombo and Billabong Creeks (1,001,210); Lachlan River: Torriganny, Muggabah and Merrimajeel Creeks (170,240), Condobolin West Weir (4,480), Marrowie Creek (295,040), Ulonga (71,655), Micabil Weir (11,500); Miscellaneous: Algudgerie Creek (9,760), Nidgery Creek (46,880), Great Anabranch of Darling River (995,200), Collarenebri Water Supply (88), making in all a total area of 2,945,068 acres.

Thirteen of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

(xii) *Irrigation Trusts.* These trusts are established under the same Act and are administered by trustees in a similar way. The following are the Trust Districts (area in acres is shown in parenthesis):—Hunter River: Blairmore (511½); Murray River: Bama (3,446), Goodnight (1,364), Bungunyah-Koraleigh (1,785), Glenview (2,750½), Bringan (4,933); Darling River: Pomona (1,241½), making in all a total area of 16,031½ acres.

(xiii) *Flood Control and Irrigation.* The Lowbidgee Provisional Flood Control and Irrigation District (367,090 acres) was constituted in 1945, being the first of its kind. Its purpose is to provide flood irrigation for 140,000 acres on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. There are 47 holdings. Another district (Medgun near Moree in the North-West) is being developed on similar lines.

(xiv) *Underground Water.* Extensive use is made of artesian, sub-artesian, and shallow underground water. Eighty thousand square miles in the north and western portions are covered by the Great Artesian Basin. Eighty Bore Water Trusts and twelve Artesian Wells Districts have been constituted. The Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts settlers maintain the drains. Bore Trusts and Artesian Districts cover nearly five million acres and water is distributed through 3,285 miles of open earth drains. The number of artesian bores giving a flowing or pumping supply at 30th June, 1947 was 876, and the estimated total daily flow from the 546 flowing bores was 65,849,000 gallons. The deepest bore is Boronga No. 2 (4,570 feet) which also has the greatest flow, namely, 1,115,360 gallons per day. Of the total number of bores sunk, 221 have been installed by the Government in connexion with public watering places. The estimated flow of all bores in 1914–15 was 99,350,419 gallons per day for 372 bores. In 1946–47 the flow had decreased to 65,849,000 gallons for 546 bores, confirming the similar experience of Queensland.

(xv) *Shallow Bores.* Since 1912 the Government has assisted settlers in shallow boring operations for which repayments are required over a period. To 30th June, 1947, the total constructed by the Commission's plants was 3,980 and their average depth was 293 feet.

(xvi) *Licences and Permits.* During recent years the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation has increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in lean months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

(xvii) *Farm Water Supplies.* The Farm Water Supplies Act was passed in 1946. Technical advice and assistance, and financial assistance is made available to aid individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams.

(xviii) *Future Programme.* The future programme envisages expenditure of £30,000,000 over the next 15 years to provide eighteen dams and storages, eight diversion weirs, flood mitigation and river protection works in various parts of the State. Construction has been commenced on head storages at Keepit on the Namoi, Glenbawn on the Hunter, Burrendong on the Macquarie, and a balance storage at Ballyrogan on the Lachlan. The Hunter River development concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. Total estimated storage of all proposed new storages is 5,500,000 acre feet.

(xix) *Hydro-electricity.* The Nymboida hydro-electric scheme was opened in 1924 with an initial capacity of 800 k.w. to supply Grafton, South Grafton, and Ulmarra over a transmission line of 31 miles. The Nymboida power station is situated on a tributary of the Clarence River in Northern New South Wales and now has a capacity of 5,600 k.w. The station now operates in conjunction with a diesel station at Lismore and an associated transmission network to provide supply throughout the north-eastern area from Kyogle in the north to Kempsey in the south, a distance of some 200 miles north and south. In 1946 the system was inter-connected with the Department of Railways system based on Newcastle. The Nymboida system is controlled by the Clarence River County Council.

The Bega Valley scheme was opened in 1944 to supply an area of 2,700 square miles extending from Bermagui to Eden. The power is derived from the waters of Rutherford Creek, a tributary of the Bemboka River, and the capacity of the present installation is 500 k.w. Two 750 k.w. generating units are to be installed in conjunction with a further development on George's Creek, another tributary of the same river, and a comprehensive programme of rural electrification has been initiated. This system is controlled by the Bega Valley County Council.

Wyangala Dam power station was brought into operation in 1947. This station, with an installed capacity of 7,200 k.w., utilizes the irrigation waters released from the dam to generate electricity, and in addition is designed to provide an essential stabilizing feature in the transmission system between Burrinjuck and Lithgow, to which the station is interconnected. The output of the station at any time is dependent on the release of water for irrigation purposes.

Major hydro-electric developments which are being investigated by the New South Wales Government are the developments on the Clarence River at the Gorge, and the development of the Shoalhaven River for irrigation, water supply and hydro-electric purposes.

The Clarence Gorge scheme, situated 140 miles from Brisbane and 240 miles from Newcastle, embraces not only hydro-electric development, but also may offer considerable benefits by reason of the flood mitigation effects of a large dam built at this location. It has been suggested that a dam 200 feet high would impound some two million acre feet and might enable the production of as much as 75,000 k.w. The Queensland Government is also interested in the proposal from the aspect of obtaining additional energy to assist the Brisbane Metropolitan System and to extend rural services to south-eastern Queensland.

The Commonwealth and States agreed in 1945 on hydro-electric development at the Hume Dam. This proposal is associated with the intention to increase the capacity of this dam to two million acre feet. An initial installation of two 21,000 k.w. water turbine generators has been proposed.

2. **Victoria.**—(i) *Rainfall.* While the annual average rainfall of Victoria is 24 inches, it ranges from 10 inches in the far north-west to over 70 inches in southern and eastern districts. Of the State's area of 87,884 square miles 22.4 per cent. has an average below 15 inches and 37.6 per cent. receives less than 20 inches. Over 40 inches is received by 10.4 per cent. of the State. There is also a substantial year to year variation. For example, the average in 1889 was 32.77 inches; in 1902, 18.55; in 1914, 14.66; in 1917, 30.77; and in 1927, 18.56. Victoria is fortunate, however, in having (in common with New South Wales) access to the high rainfall and the snows of the lofty south-east highlands in which rises the Murray River.

(ii) *Administration.* As indicated earlier, practical steps were taken to organize Victoria's resources before the turn of the century but the passage of the Water Act in 1905 marked the commencement of sustained progress. The State Rivers and Water Supply Commission established by this Act is vested with the control of all irrigation, rural domestic and stock supplies, town water supplies and flood protection and drainage undertakings outside the Metropolitan area, with the exception of the irrigation area operated by the First Mildura Irrigation Trust and the town water supplies operated by locally-constituted Waterworks Trusts or Local Governing Bodies.

The operations of the First Mildura Irrigation Trust and the various Waterworks Trusts and Local Governing Bodies, as well as the various Sewerage Authorities which control sewerage undertakings in country towns, are also subject to general supervision by the Commission.

(iii) *General.* Since 1902, when a great drought emphasized the need for a concerted attack on water problems, the total capacity of water storages has increased from 172,000 to 1,969,970 acre feet (including Victoria's share of the Hume Dam). By means of channels, bores, etc. one-fourth of the State is artifically supplied for stock and domestic purposes. Large areas, which would be largely unproductive without water, are now contributing to the State's wealth. The area actually irrigated has increased from 110,000 acres in 1906 to 708,000 acres in 1947, and irrigation channels command 2,000,000 acres.

The Commission controls 35 large reservoirs and 225 subsidiary storages. Irrigation channels extend 4,404 miles; domestic and stock channels, 8,390 miles and drainage and flood protection channels, 2,144 miles, a total of 14,938 miles. In addition the Commission controls 1,120 miles of piping, comprising 258 miles of mains and 862 miles of reticulation. Farm holdings served with water total 39,383. Urban districts supplied by the Commission's channels and pipelines contain 134,460 persons in 127 towns, and a further 132 towns with a total population of 313,190 persons are supplied by Trusts under the supervision of the Commission.

To 30th June, 1947, the total capital expenditure on irrigation, rural water supply, country town water supply, and flood protection and drainage works amounted to £34,000,000, one-half of which is in respect of irrigation.

The total capital liability in respect of irrigation, rural water supply, flood protection and drainage is £23,500,000, all of which is borne by the State, and for country town water supplies the total capital liability is £6,900,000, of which £4,300,000 is borne by the State and the balance by the ratepayers in the various towns.

(iv) *Production.* The influence of irrigation on Victorian production is illustrated by the following estimates prepared by the Commission of the value of production from irrigated areas:—1905–6, £500,000; 1925–26, £5,000,000; 1945–46, £12,000,000. A classification of 1945–46 production (gross values on the farm) follows:—Farm Products—Cereal, Hay and Grass Seeds (£700,000), Dried Vine Fruits (£2,400,000); Horticultural—Citrus (£700,000), Deciduous Fruits (£1,300,000), Vegetables (£1,000,000); Livestock—Dairying (£3,200,000), Other Cattle (£250,000), Pigs (£300,000), Sheep, Lambs and Wool (£1,600,000), Poultry (£500,000), Miscellaneous (£50,000); Total £12,000,000.

Although the area irrigated is less than 2 per cent. of the State, it yields approximately 16 per cent. of Victoria's rural production. The following table indicates the crops under irrigated culture, and the total land irrigated :—

LAND UNDER IRRIGATION CULTURE: VICTORIA, 1946-47.

(Acres.)

System.	Area of Districts.	Area Irrigated, including Lands adjoining a District.

(a) Area of Campaspe District only. (b) Area of First Mildura Trust District only.

(v) *Main Irrigation Systems.* (a) *General.* The capacities of total storages (1946–47) are shown below in acre feet.

> *Goulburn System*—Eildon Weir, 306,000 ; Goulburn Weir, 20,700 ; Waranga Basin, 333,400 ; *Murray–Loddon System*—Half share of River Murray Commission storages including Hume, Yarrawonga, Torrumbarry, Euston, Mildura and Wentworth, 736,420 ; Kow Swamp, Laanecoorie, Kerang North and West Lakes, Lake Boga and Lake Cullulleraine, 148,210 ; total, 884,630. *Wimmera–Mallee*—206,480 ; *Maffra–Sale*—104,540 ; *Coliban*—58,850 ; *Werribee*—34,900 ; *Bellarine Peninsula*—10,800 ; *Mornington Peninsula*—5,800 ; *Otway*—1,080 ; *Miscellaneous*—2,790 ; *Total*—1,969,970.

(b) *Goulburn.* The Eildon and Waranga Reservoirs, on the Goulburn River, supply half the irrigated acreage, and form the largest system in Victoria. Annual rainfall in the valley is only 18 inches and the annual discharge has varied from 567,000 acre feet in a drought year to 6,202,171 acre feet in a particularly wet season. Total regulated supply is 960,100 acre feet, comprising 660,100 held in storages and 300,000 divertible direct from the river.

Water from Eildon Reservoir flows down the Goulburn for 150 miles to the Goulburn Weir, which raises the summer level of the river about 45 feet to 408 feet above sea level, where water is diverted to two main channels. The eastern main channel conveys water to four irrigation districts surrounding Shepparton and the western main channel fills Waranga Basin in addition to supplying the eastern portion of the Rodney Irrigation District.

Waranga has been formed on the site of a natural swamp by the construction of an earthen embankment 4½ miles long, creating a reservoir covering 23 square miles to an average depth of 31 feet. Two main outlet channels issue from this reservoir, one serving the western part of the Rodney district; while the other serves districts as far west as Boort, and continuing to Beulah East, about 230 miles by channel from Waranga Basin or some 400 miles from Eildon, supplements the Wimmera-Mallee system.

Districts served comprise 202,400 acres east of the Goulburn; 608,350 acres between the Goulburn and Campaspe; 445,100 acres between the Campaspe and Loddon Rivers; and 79,900 acres west of the Loddon—a total of 1,335,750 acres. Main channels of the system have a total length of 213 miles and in addition there are 2,344 miles of distributaries, a total of 2,557 miles for the whole system.

The development of the fruit-canning industries in the Goulburn Valley is an index of the results of irrigation policy. Annual production from the Shepparton, Kyabram and Mooroopna canneries, together with that of city canneries—from Goulburn Valley fruit—aggregates 55,000,000 tins. This represents 70 per cent. of Australia's total production of canned peaches, pears and apricots. Other main products of the Goulburn districts are fat lambs, fodders, wine and table grapes and dairy products.

(*c*) *Murray River.* The waters of the River Murray are used to supply an area of more than 500,000 acres between Yarrawonga and Merbein, and channels totalling 1,450 miles are in service. The districts between Yarrawonga and Swan Hill, excepting Tresco, are supplied by gravitation and those down the river (Red Cliffs, Merbein, Nyah and Mildura) are supplied by pumping.

The Murray Valley Irrigation District, supplied from Yarrawonga, will serve 400,000 acres when completed At 30th June, 1946, 220 miles of main and distributary channels were completed and supplied 98,000 acres west of Yarrawonga.

The gravitation system based on Torrumbarry Weir (52 miles downstream from Echuca) serves an area of 415,500 acres with 846 miles of supply channels. The weir raises the level of the river some 16 feet and enables water to be diverted throughout the year. A lock enables the passage of small river craft. The weir comprises an original design evolved by Mr. J. S. Dethridge, comprising a series of steel trestles running on a concrete foundation and provided with wooden drop bars to keep the river up to diverting level. In flood times the bars are removed and the trestles are drawn out of the stream.

Red Cliffs Irrigation District comprises 31,000 acres. At present 11,300 acres are irrigated. This ranks first in importance among Victoria's pumping schemes. A system of main and distributary channels commands every holding in the district. The total length of channels is 125 miles, of which 115 have been lined with concrete for more efficient distribution. Effective drainage is provided by 85 miles of sub-surface drains and 5 miles of open drains. The district, originally for soldier settlement, has been subdivided into 700 blocks. The area planted comprises 11,000 acres of vines and citrus. The first harvest (1924) returned 570 tons of dried fruit in addition to table grapes. The average harvest is now 18,000 tons of raisins, currants and sultanas as well as large quantities of grapes for dessert and distillation.

Merbein Irrigation District comprises 10,350 acres and contains 436 holdings averaging 24 acres each. The main and distributory channels have a length of 54 miles, and most are lined with concrete. A reticulated pipe system supplies the town of Merbein, and the pumps also supply the Yelta Waterworks District of 51,200 acres.

Nyah Irrigation District is supplied with water diverted from the Murray by a high-lift pumping plant. Total length of channels, nearly all of which are lined with concrete, is 34 miles. They serve 3,800 acres in 220 holdings devoted mainly to orchards and vineyards.

(*d*) *Mildura.* The First Mildura Irrigation Trust—which is the only Irrigation Trust operating in Victoria—controls an area of 44,000 acres, of which 12,755 acres are irrigated. This area irrigated includes 11,320 acres of vines, 600 acres of citrus trees and small areas of apricots, peaches, prunes, figs, almonds, olives, lucerne and other fodders. The irrigation water is pumped from the River Murray and distributed through 168 miles of channels, approximately half of which are concrete lined to reduce seepage. Effective drainage is provided by 100 miles of sub-surface pipe drains which vary in size from 4 inches to 36 inches. The depths of the drains vary from 4 feet 6 inches—the minimum necessary to ensure satisfactory drainage of the root systems of the plants—to obtain the required grade. The present steam-driven pumping plants, which have a combined capacity of 200 cubic feet per second, include some plant installed by the Chaffey Brothers in 1890, but steps are now being taken to replace this with new units. The area produces approximately 15,000 tons of raisins, currants and sultanas each year.

(*e*) *Wimmera-Mallee System.* The Wimmera–Mallee scheme is regarded as the most extensive domestic and stock supply system in the world. The main supply is drawn from five reservoirs at the foot of the Grampians mountains with a capacity of 206,480 acre feet. Supplementary water is drawn from the Goulburn channels and the Loddon River. The system serves an area of 11,000 square miles or nearly one-eighth of the State which is largely devoted to wheat and pastoral industries. Without the artificial supply of water, development would be meagre.

Once a year, in the winter or spring, a volume of 90,000 acre feet of water is distributed through 6,600 miles of open channel and some 3,000 miles of farm channels. It is the responsibility of farmers to provide storages sufficient in size to meet their stock and domestic requirements for the ensuing year. At least 16,000 tanks are served. In addition forty-five towns with a total population of 40,000 obtain their water from the system. A total population of 80,000 depends upon the scheme. In the vicinity of Horsham and Murtoa, near the main storages, 3,000 acres are irrigated for soft fruits and pastures, but the limited water resources available will not permit any extension of irrigation.

The northern part of the system is affected by sand drifting into the channels, and in 1945, which was a year of extremely dry weather conditions, the effects of the drought were accentuated by unwise farming methods and overgrazing and it became necessary for the Commission to remove 12,000,000 cubic yards of sand from the channels.

Water distribution, sand removal, and other costs of this water supply system over the past 10 years have averaged £233,000 per annum, which represents 8d. per acre of the area of lands actually supplied with water. The cost of removing sand drift from the channels, which is included in this figure, has averaged £119,200, ranging from £70,000 to £323,000. This represents 4d. per acre per annum, which is 50 per cent. of the total maintenance costs of the whole system.

It is considered that a substantial reduction of the maintenance costs of this system could be obtained by better farming methods, particularly the cessation of the practice of burning stubble after harvesting, the elimination of overgrazing and improvements in fallowing methods. Efforts in this direction, including the use of recently given compulsory powers to prohibit the fallowing of land or burning of stubble within three chains of channels in light sandy country, have already resulted in marked savings in maintenance costs—the cost of sand drift removal for 1947 being reduced to £90,000.

(vi) *Farm Water Supplies.* The Farm Water Supplies and Drainage Advances Act (1944) is designed to give farmers an opportunity of establishing or improving domestic and stock water supplies on their farms. Advances are made by the Board of Land and Works in approved cases to farmers who cannot finance works to supply water to their farms. Water may be obtained from underground sources, from catchment and gully dams by diversion from existing streams and channels, by storage of sufficient water to meet a year's requirements and by installation of windmills or hydraulic rams. Advances are repayable over a period not exceeding ten years. The amount advanced may not exceed seven-eighths of the total cost of construction.

The Farm Water Supplies Branch has been set up by the State Rivers and Water Supply Commission to administer the Act and advise farmers even if finance is not required. A comprehensive booklet entitled "Farm Water Supplies for Domestic and Stock Purposes" has been issued concerning the scheme. It contains general advice on farm water supplies and plans of typical structures and layouts.

(vii) *Underground Resources.* A comprehensive survey of the underground water resources of Victoria has been commenced. It will compile records of bores in the Mallee, Wimmera and Glenelg regions, and provide a detailed description of the Murray Artesian Basin. Investigations have also been made into the underground water resources of local areas such as Orbost Flats, Llowalong Estate on the Avon River and at Bacchus Marsh where a number of observation bores have been installed.

The Murray Artesian Basin underlies an area of 107,250 square miles, of which 26,808 square miles are in Victoria, 28,269 square miles in South Australia and 52,173 square miles in New South Wales. The quality of the water varies in different parts of the basin. Over 300 bores exist in this State, with an average daily flow of 3,000,000 gallons. Bores range in depth from 50 to 3,000 feet.

(viii) *Future Programme.* Victoria has now reached the stage when the demand for water is far greater than the supply, and a programme which envisages an expenditure of £25,000,000 has been launched. This includes the Rocklands storage on the Glenelg River (264,000 acre feet) and the Cairn-Curran Reservoir on the Loddon (120,000 acre feet). Investigations have also reached an advanced stage concerning a proposed enlargement of the Eildon Reservoir on the Goulburn from 306,000 to 2,350,000 acre feet by the building of a large earthen embankment 250 feet high and 3,300 feet long at an estimated cost of £9,600,000. This would be Australia's greatest storage.

(ix) *Hydro-Electricity.* The Kiewa project in the Australian Alps is the largest single hydro-electric development in Australia. The Kiewa River is a tributary of the Murray. In 1937 approval was given by the Victorian Parliament for a scheme comprising four power stations with a total installed capacity of 117,000 k.w. Owing, however, to war-time shortage of material and labour, completion of this scheme has been much delayed. No. 3 station with an installed capacity of 24,000 k.w. began operating in 1944. Work is now in progress on No. 4. Since 1937, further investigation of the water-power resources of the area, particularly in the upper levels, has revealed the practicability of a large-scale extension of the scheme, with an increase in total installed capacity to 289,000 k.w. Proposals for such an enlargement are the subject of a report dated 21st November, 1947, which was submitted to the Victorian Government by the State Electricity Commission of Victoria. Basic both to the 1937 project and to the new proposals for a larger scheme are the storages at Pretty Valley and Rocky Valley on the Bogong High Plains. In the 1937 project these storages were to have been 95,000 acre feet and 13,000 acre feet respectively. Under the later proposals they are likely to be very substantially enlarged.

The Sugarloaf-Rubicon scheme was completed in 1928 and comprises five stations with an installed capacity of 26,500 k.w. Sugarloaf station on the Goulburn River is situated at Eildon Weir, which impounds 300,000 acre feet and serves extensive irrigation, domestic and stock districts. Power is generated at Sugarloaf during the summer months, when water is being released for irrigation, or when storage is full at other times. The four associated mountain stream stations on the Rubicon and Royston Rivers generate maximum power in the winter and spring, when water flow is at its greatest.

3. **Queensland.**—(i) *Rainfall.* The area of Queensland is 670,500 square miles. More than half the State (359,000 square miles) is in the tropics. Average rainfall varies from 5 inches in the south-west corner to falls exceeding 160 inches on the north-east coast, where the highest precipitation in Australia is recorded. Every part of Queensland receives the greater proportion of its rainfall in the six hottest months. Variability increases in proportion to the distance from the coast.

Areas which receive an annual average rainfall of less than 10 inches approximate 13 per cent. of the State; while 27.4 per cent. receives less than 15 inches; 47.1 per cent. less than 20 inches; and 65.9 per cent. less than 25 inches. Of the remaining 34.1 per cent. receiving 25 or more inches, 22.5 per cent. receives 30 or more inches.

(ii) *Administration.* The first comprehensive Water Act in Queensland was the Rights in Water and Water Conservation and Utilization Act of 1926. The Irrigation Act of 1922 made special provision for development of irrigation projects. From 1922 to 1931 these acts were administered by a Commissioner of Irrigation and Water Supply, but in 1931 the Land Administration Board was appointed to act as the Commissioner, and this continued until the Irrigation and Water Supply Commission Act of 1946 was proclaimed in 1947. Under this Act, the Corporation of the Commissioner of Irrigation and Water Supply was reconstituted. The Commissioner is responsible for carrying out the provisions of the Irrigation Acts 1922 to 1934 and the Water Acts 1926 to 1942. He is also responsible for investigations and planned development of water resources under the Land and Water Resources Development Acts 1943 to 1946.

(iii) *General.* Queensland's predominant interest in the past has been water for stock and domestic purposes in its great pastoral areas which contain half the Commonwealth's cattle, a fifth of the sheep and a third of the horses. More than half the State's rural production is derived from cattle and sheep. The cattle are spread throughout the State, but most thickly along the wet eastern coastline. The sheep are mainly pastured on the inland areas which form part of the Great Artesian Basin. Most of the dairy cattle are south of the Tropic of Capricorn along the moist coastlands and on the Darling Downs. Consequently, great interest has been concentrated on the stabilization of water supplies in the pastoral areas and the provision of water along stock routes for travelling stock. More recently, the development of irrigated pastures on the eastern seaboard for fattening stock adjacent to meatworks and markets has become an important aspect in the utilization of water resources.

The State's agricultural crops differ from those of other States in that a large proportion are tropical. Sugar is the greatest individual crop, representing in 1946-47 about 40 per cent. of total agricultural production. Approximately 11 per cent. of the sugar cane acreage is irrigated and represents more than half the irrigated acreage of Queensland.

(iv) *Control.* Following the lead given by the Victorian Water Act of 1905, the Rights in Water Act of 1910 abolished the old common law riparian rights and vested in the Crown the right to the use and flow and control of the water in watercourses, lakes and springs which flow through or past or form part of the land of two or more occupiers. This principle has passed unchanged into the current Acts. Artesian, sub-artesian and any other subterranean waters are also vested in the Crown. The Acts also provide that the bed and banks of any watercourse or lake forming the boundary wholly or in part of any alienated land shall remain the property of the Crown. Except for the general right of persons to use water for domestic and ordinary use and for watering stock, no person, except under licence, may divert or appropriate any water from a watercourse, lake or spring. In addition, riparian owners may use water for a garden connected with a dwelling, but must obtain the Commissioner's consent to construct any works required.

This map was re-drawn from that published in the Report of the Fifth Interstate Conference on Artesian Water, Sydney, 1928.

(v) *Great Artesian Basin.* (*a*) *General.* Western lands beyond the 22 inch rainfall belt are predominantly pastoral. Westerly-flowing rivers and interior streams do not generally lend themselves to large surface storage, but use of relatively shallow underground water on the river plains and small surface storages, wherever possible, is of great importance. In areas where artesian, sub-artesian, or surface water is not readily available excavated storage tanks up to 30,000 cubic yards capacity have been provided.

By far the most important factor in the development of the western pastoral areas of Queensland has been the Great Artesian Basin. This basin covers an area of some 350,000 square miles in Queensland and extends into New South Wales, South Australia and the Northern Territory. The supplies of this basin were first tapped by bores in 1884, and in 1946–47 some 2,071 bores were operating and represent a total of 3,145,054 feet of drilling.

If sub-artesian bores are added, total bores registered in the Basin would exceed 10,500 and the footage drilled about six million feet. Artesian water is usually distributed from the bores by small "delver" channels for the use of stock, and, on an average, 10,000 gallons per day are needed to serve one mile of channel or drain. Owing to evaporation and soakage, less than 5 per cent. of the water at the bore head is actually available for use by stock.

The falling off in the supplies from the bores of the Great Artesian Basin has been very noticeable since 1914, and in 1939 a Special Committee was appointed to enquire into the geology and hydrology of the Basin and the methods of utilization of its resources. A first progress report has been issued by this Committee. (*See* page 1103.)

(*b*) *Bore Areas.* The constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at costs beyond individual capacity and to conserve artesian supplies. Loans are made for acquisition of existing, or drilling of new, bores. The total number of areas is 67 and the length of drains served is 3,042 miles. At present, 20 of these areas are still under local Bore Area Boards and the balance are administered by the Commissioner. Water facilities such as bores, excavated and storage tanks, windmills and troughing, are also subsidized by the Government to make water available on dry stages of stock routes.

Additional information on underground sources in dry areas outside the artesian basin was obtained during the war when it became necessary to provide water along the new Mount Isa (Queensland) to Tennant Creek (Northern Territory) strategic highway, 403 miles long, of which 200 miles passed through country previously regarded as waterless. Twenty-two bores which were put down and equipped with pumping plant now deliver from 100 to 3,600 gallons per hour.

(vi) *Irrigation.* With the exception of the Dawson Valley Scheme, orthodox irrigation projects served by a channel system have not so far been constructed. Supplies for irrigation are pumped from streams or from natural underground storages. Most of this has been by private farmers operating under licence, and irrigation as a means of stabilizing production is receiving more and more attention, because even in the areas of high rainfall most of the precipitation is received from January to March. More than half the Queensland irrigators use internal combustion engines, but wherever it is available electricity is the more popular medium. The largest areas using electricity for pumping are in the Townsville–Burdekin areas and the south coast (near Brisbane). In the south-east, where the main crops are vegetables and fodders, spray lines are largely used, but in the northern districts growing sugar cane and maize, furrow irrigation is predominant.

Of the total area irrigated in the year ended 31st March, 1947 (79,030 acres), irrigated sugar lands accounted for 40,558 acres, of which 8,343 acres were located in the Maryborough district of Southern Queensland and 29,689 acres in the Townsville district of North Queensland.

The following table shows for each division of the State the area and principal crops irrigated for the year ended 31st March, 1947.

IRRIGATED AREAS : QUEENSLAND, YEAR ENDED 31st MARCH, 1947.

Division.	No. of Irrigators.	Total Area Irrigated.	Principal Crops Irrigated.						Irrigated Pastures

Growth of irrigation is illustrated by the following figures :—the total area of land irrigated in 1906 was 9,922 acres ; in 1916, 10,886 acres : in 1926, 24,250 acres ; in 1936–37, 44,509 acres; and in 1940–41, 60,961 acres.

Queensland irrigation practice bears little comparison with the pattern of southern States and it is interesting therefore to mention briefly the more important developments in tropical and sub-humid areas.

(vii) *Lockyer Valley.* West of Brisbane and within 50 miles of that metropolitan market is the Lockyer Valley, which is portion of the Brisbane River Basin. It is actually an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying considerable quantities of water suitable for irrigation. Although the rainfall averages 30 inches the year to year variation is considerable, and irrigation is necessary for continued fodder production. Recent surveys suggest that some 60,000 acres of good irrigable land are available. At present, 9,000 acres are irrigated by 464 well pumps and 6,000 acres by pumping from open water in the Lockyer Creek and its tributaries. Over 60 per cent. of the farmers operate electric pumps for irrigation purposes and a special policy designed to encourage electrified irrigation is pursued by the City Electric Light Company which serves the Valley. The Irrigation and Water Supply Commission has also constructed a number of small weirs on Lockyer Creek with a total storage capacity of 1,370 acre feet. These also tend to augment and conserve underground supplies. Though the Valley contains less than 5 per cent. of the State's cultivated area, it produces a third of Queensland's potatoes, practically all its onions, a fifth of the lucerne hay, a quarter of the green fodder (excluding oats), a quarter of the pumpkins, a tenth of the maize, and contributes a substantial quantity of dairy products. To study local problems an Irrigation Research Station has recently been established at Gatton Agricultural College.

(viii) *Burdekin River.* This large northern river joins the sea between Townsville and Bowen. Heavy floods are experienced in summer, but the flow decreases substantially in winter. In the Delta area the annual rainfall is about 41 inches, but the major part falls in the months December to March. Consequently, sugar growers and other farmers have tapped the underground water resources of the Delta to obtain supplies of water in the dry periods. Sugar is the main irrigated crop, but citrus, pineapples and vegetables are also irrigated. Irrigated acreage is 30,000 acres, and approximately 1,000 acre feet are drawn daily from underground sources.

The Home Hill-Inkerman irrigation areas are served by an electricity scheme unique in Australia. The electricity scheme was originally established by the irrigation authorities in 1921, transferred to the Inkerman Irrigation Board in 1933, and is now controlled by the Townsville Regional Electricity Board. The load demand at Home Hill is basically a demand for irrigation. The load totals 3,000 k.w. between 7 a.m. and

7 p.m., when the farmers are irrigating and this occurs for 110 to 290 days per year. Since all irrigation in the district is on the furrows system, unrestricted hours of electricity supply are being considered. Water is pumped from shallow wells by electric pumping units. In the Ayr district individual plants, including windmills, are extensively used.

The following table illustrates the relationship between electricity and water in the Home Hill–Inkerman area in years exhibiting wide variations in rainfall.

Year.	Rainfall.	Area Watered.	Total power sold for Irrigation.	Water Pumped per Acre.	Days of Watering.
	Inches.	Acres.	Units.	Acre Feet.	No.
1934–35..	10.21	6,405	3,710,000	2.47	290
1935–36..	56.84	6,117	2,740,000	1.91	213
1937–38..	21.59	6,793	3,735,000	2.35	266
1945–46..	35.00	6,158	2,715,678	1.87	237

The Burdekin River Trust was established in 1940 to safeguard the sugar areas of the Delta from erosion and floods. A farm established by military authorities during the war has recently been converted into an Irrigation Research Station to study the development of pastures under tropical conditions.

A major multi-purpose scheme, involving irrigation, flood control and electric power, is being investigated with a view to assisting the stabilization of the meat industry through provision of adequate irrigated pastures for fattening purposes. Aerial and ground surveys suggest that 400,000 acres might be irrigated from a head storage 99 miles from the mouth. A long range development programme, based on the possibility of storing 4,000,000 acre feet, is being examined.

(ix) *Dawson Scheme.* This scheme, south-west of Rockhampton, aimed at an extensive development of the resources of the Dawson River. The scheme, as originally proposed, consisted of a large dam at Nathan's Gorge (capacity 2,500,000 acre feet) and a diversion weir and other works to distribute water to some 70,000 acres. However, the large dam was not built and irrigation is practised at Theodore only. This area is served by two timber weirs with a combined capacity of 11,000 acre feet. Water is pumped from the weir at Theodore and supplies 2,000 acres through 28 miles of earth channels. Pastures, vegetables, cotton, agricultural produce and dairy products represent the main production. A cheese factory has been established at Theodore and, with the increase in dairying based on irrigated lucerne, the future of the scheme seems much more secure that it did a few years ago. Many of the earlier mistakes are being corrected and the development of permanent pastures as part of a programme to stabilize fat stock production will be an important factor in its growth.

(x) *Tobacco.* Tobacco crops are irrigated almost to the extent of available water in the Texas and Inglewood areas of southern Queensland, and, to a smaller extent, at Mareeba in North Queensland. It is proposed to construct weirs in the Inglewood area. Also, proposals for a dam at Walsh River (10,000 acre feet capacity) to irrigate 3,000 acres of tobacco and 2,000 acres of alternative crops are being examined.

(xi) *Bureau of Investigation.* Under the land and Water Resources Development Act of 1943, the Commissioner of Irrigation and Water Supply was directed to prepare comprehensive plans for the development of the water resources of the State. Also, a Bureau of Investigation has been established under the Act for the co-ordinated investigation of land and water resource development.

The Bureau consists of representatives from the authorities controlling water resources, lands and agriculture and the chairman is the Co-ordinator General of Public Works.

Preliminary reports issued by the Bureau suggest the feasibility of storing considerable quantities of water in the eastern part of the State. However, prospects for storing large quantities in the western areas are not promising. The Bureau considers, as a result of investigations, that a major feature of large-scale irrigation works will be pasture development. Surveys have been carried out to determine possibilities of using underground and surface supplies in a number of river valleys, including the Condamine, Callide and Burnett Rivers.

(xii) *Channel Country.* Extensive investigations of the "Channel Country" fed by the western inland rivers in the south-west corner are being carried out. This country has an extraordinary topography, being intersected by deep and irregular flood channels through which millions of gallons of flood waters pass. The stabilization of water supplies would permit the depasturing of thousands of cattle travelling to coastal markets from the Barkly Tablelands. Therefore, the possibility of developing storages to create artificial floods when most needed for pasture and water purposes is being closely investigated.

(xiii) *Bradfield Scheme.* The late Dr. J. J. C. Bradfield hoped to overcome natural climatic disabilities of the Lake Eyre Basin (South Australia) and Western Queensland by diversion of North Queensland rivers to the inland slopes. His schemes were based to some extent on the theories of Mr. E. T. Quayle, a meteorologist who contended, *inter alia*, that evaporation from new water surfaces aggregating 20,000 square miles would provide an additional annual rainfall of 4 inches over 500,000 square miles. The scheme has been closely examined by the Chief Engineer of the Stanley River Works Board (Mr. W. Nimmo) in the light of information gained during and since the war in the form of military contour maps produced from aerial surveys, ground surveys and extended records of rainfall and stream flow. His report to the Queensland Government in 1947 contends that portions of the scheme are physically impracticable, and that, for example, the major dam proposed by Dr. Bradfield at Hell's Gate on the Burdekin River could not be built to the height of 400 feet as he suggested, the practicable limit being 300 feet. Even if it could be built to 400 feet the surface level would be insufficient to permit a reasonable diversion to the Flinders. The report considers that water might be diverted from a smaller part of the Burdekin catchment through a conduit 200 miles long, half being by tunnel with a small gradient and lined with concrete. The cost of this modified scheme would be approximately £100,000,000 compared with £40,000,000 mentioned by Bradfield. In addition, the Nimmo report indicated that half the available flow of the Tully River has already been hypothecated for hydro-electricity, while the whole is likely to be used ultimately for this purpose. Furthermore, the Queensland Government is considering a large storage on the Burdekin for coastal use. A description of the Bradfield Plan appears in the eight Report of the Rural Reconstruction Commission on Irrigation, Water Conservation and Land Drainage (1945).

(xiv) *Hydro-Electricity.* High seasonal rainfall, variability and small catchments combine against the exploitation of water resources for hydro-electric generation, but the Queensland Government has planned development among the streams of the Cairns–Ingham area. The Barron Falls scheme came into operation in 1935, utilizing a head of 410 feet 14 miles north-west of Cairns. Present installed capacity comprises three 2,000 h.p. water turbines. The district receives supply by means of a 22,000 volt transmission network. Average rainfall varies from 80 inches to 150 inches along the ranges of the catchment to less than 35 in the western portion. There is an extreme variation from year to year, resulting in great fluctuation of stream flow which, at Kuranda, has varied from a maximum of 117,000 cusecs in 1911 to a minimum of 30 in 1915. As the river is not sufficiently entrenched to provide good dam sites, no large storages have been provided. During periods of low water flow electricity demands are supplemented by fuel plant.

As the result of an investigation in 1944 it is also proposed to develop the Tully River at Tully Falls, 80 miles south of Cairns and 120 miles north-west of Townsville. Initial development provides for a small dam and generating station of about 17,000 k.w. capacity, while ultimate capacity, using full storage, will be about 45,000 k.w. The Tully has characteristics similar to the Barron.

Other northern schemes which have been investigated include Freshwater Creek (3,500 k.w.); North Johnstone and Russell Rivers (30,000 k.w.); and South Johnstone River (25,000 k.w.). Development will be determined by future demands.

A small hydro-electric scheme is installed on the Mossman River, 5 miles from Mossman, North Queensland. Utilizing a head of 200 feet, two 120 h.p. water turbine sets are installed. Further development is not possible owing to lack of water storage to cope with dry periods.

The Somerset Dam, a few miles above the confluence of the Brisbane and Stanley Rivers (in South Queensland), is almost complete. Storage capacity will be 724,000 acre feet. The estimated cost, £2,000,000, is being shared between the Government and the cities of Brisbane and Ipswich. The dam is designed for flood mitigation and to stabilize the Ipswich and Metropolitan water requirements. Plans provide for a 3,000 k.w. hydro-electric plant using a head of 80 feet.

4. **South Australia.**—(i) *Rainfall.* South Australia has an area of 380,000 square miles of which 312,000 have an arid climate, 53,000 a semi-arid climate, and the remaining 15,000 (or 4 per cent.) a sub-humid or humid climate. Annual average rainfall varies from under 5 inches in Lake Eyre Basin to 46 inches in the Mount Lofty Ranges skirting Adelaide, and 96 per cent. of the State receives less than 20 inches. Evaporation losses range from 36 to over 100 inches. In the lower northern and mid-northern agricultural areas evaporation averages 60 inches or nearly four times the normal rainfall. At Cook, in the far west, evaporation is eighteen times the average rainfall. Metropolitan water storage losses due to evaporation in 1943–44 were calculated to be 1,239 million gallons in comparison with a metropolitan consumption of 8,841 million gallons.

(ii) *Administration.* Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department which administers the Waterworks Act governing the supply of water through mains in water districts for townships and farm lands. The Water Conservation Act provides for the construction of storages in non-reticulated areas and authorizes the Minister to "divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under or on any land entered upon for the purpose of supplying water to the inhabitants of any water district".

(iii) *General.* Early steps were taken to vest all running streams, springs and "soaks" in the Crown. Since the Water Conservation Act was passed in 1886 more than 550 dams, tanks and "rainsheds" have been built or acquired by the State, in addition to 460 wells and 340 bores, at a total cost of £1,185,841. The rainsheds comprise timber frameworks roofed with galvanized iron to catch precipitation which is delivered to storage tanks. Rainshed catchments vary from a few hundred square feet to four acres, discharging water into tanks ranging in capacity from 2,000 to 500,000 gallons. Over most of the State extraordinary precautions are taken to counteract evaporation. Pipelines in preference to open channels are used to reduce seepage and evaporation. Meters are attached to practically all services to check usage by individual consumers.

(iv) *Irrigation.* In South Australia irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped on to the land or gravitated from the river. The upper Murray of South Australia and the Mildura area of Victoria formed the cradle of Australian irrigation. South Australian irrigation commenced with an agreement between the Government and the Chaffey Brothers (*see* page 1097) in 1887 whereby 250,000 acres at Renmark were made available for irrigation settlement. The Department of Lands administers an area of 27,663 acres of high irrigable land, together with 9,365 acres of reclaimed swamp and 162,545 acres of non-irrigable land in the irrigation areas. In addition the Renmark Irrigation Trust controls 20,557 acres, of which 8,340 are irrigated. Water used for irrigation in 1946 in the area controlled by the Department of Lands was 115,328 acre feet compared with 88,638 in 1926. In the Renmark area water used for irrigation in 1946–47 was 25,780 acre feet. The production of the upper Murray areas is almost exclusively fruit and vines. Principal crops are sultanas, currants, lexias, apricots, peaches, nectarines, pears and figs (mainly for dried fruit), wine grapes, and citrus fruits. Before irrigation, these semi-arid lands were of little productive value. The following table shows the acreage devoted to various crops in the government-controlled and Renmark Irrigation Trust areas on the upper Murray, and the government-controlled Reclaimed Swamp Districts near the mouth of the Murray :—

IRRIGATED AREAS : SOUTH AUSTRALIA, 1946–47.

Jervois	94	3,391	3,485
Total	314	7,934	8,248

Total population of the upper Murray Irrigation Areas in South Australia is approximately 17,000 and 1,500 persons are settled on the reclaimed areas. The latter figure does not include the population of adjacent towns outside the area, but closely associated therewith.

The expenditure incurred by the Government in purchase of land, reclamation of swamps, preparation of irrigable lands for fruit growing, and purchase of pumping plants for drainage and water supply is approximately £4,250,000. A new irrigation development has been commenced at Loxton on the Murray, 180 miles from Adelaide, where it is anticipated that about 7,000 acres will be developed for planting of trees and vines for War Service Land Settlement. Water will be pumped from the Murray into open concrete channels and thence reticulated on to the blocks through pipelines. This land has previously been used for cereals and grazing.

Renmark Irrigation Trust is administered by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold, self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 80 miles of channel for the reticulation of 8,250 acres.

(v) *Underground Water.* The occupied portion of South Australia is, on the whole, well endowed with underground water. The extent of the several artesian basins is tolerably well known. There are also considerable areas, notably in the south-east of the State, in which ground water occurs. Quality varies widely, but a great deal is at least useful for watering stock, the major use to which it is put. Apart from numerous boreholes and wells tapping underground water for farms, stations and towns, two notable basins are being developed on Eyre Peninsula—one at Flinders (Streaky Bay) and the other at Uley-Wanilla, near Port Lincoln. Leigh Creek coalfield, some 350 miles north of Adelaide, derives its supply from a borehole at Sliding Rock mine, the water being pumped through a pipeline 25 miles long.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are large in proportion to the carrying capacity of the arid land. Deep boreholes have been drilled by the Government, however, to provide watering places along stock routes, and pastoralists rely largely on supplies in suspended basins at shallower depths.

There has been no regular measurement of flows from artesian bores, as in New South Wales and Queensland, but evidence of diminution exists. While the main intake areas for the Great Artesian and Murray Basins lie outside South Australia, there are considerable accessions within the State, and chemical contents of water of western origin are known to differ from those in the east. In South Australia absorption takes place in the channels of intermittent streams in times of flood, such streams being the Finke, Stevenson, Hamilton, Alberga and Arckaringa.

The minor intake areas of the Murray Basin are of the same character. The use of the waters of this basin is essential to settlement in the south-east, especially for farms, but also for township supplies for Mount Gambier, Naracoorte, Bordertown and Pinnaroo. In 1946–47 the ground water overlying the artesian water of the Murray Basin had been tapped by 121 boreholes drilled for new and prospective settlers. The maximum depth of these holes is 235 feet and the minimum 71 feet. Average tested yield is 14,808 gallons per day.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, for which the Government maintains about 15 drills. A large area within the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne and an examination of a large part of Kangaroo Island is being made to facilitate settlement.

The results of comprehensive surveys of underground supplies undertaken by geologists of the South Australian Government have been published in the State's geological survey bulletins in recent years.

(vi) *Farm Water Schemes.* While the Department of Mines and the Engineering and Water Supply Department give assistance to individual farmers in the provision of supplies from underground sources, a great part of the farming areas derive water supply under pressure from the extensive distribution systems connected to various reservoirs or the Murray River.

(vii) *Country Water Supply Schemes.* Areas extending for a distance of 90 miles north of Adelaide are supplied from the Warren and Barossa Reservoirs in the Barossa Ranges. The principal towns served are Gawler, Angaston, Nuriootpa, Kapunda, Eudunda, Freeling, Hamley Bridge, Riverton and Saddleworth.

Agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, with a connexion to the Warren system, the principal towns served being Port Pirie, Crystal Brook, Gladstone, Balaklava, Snowtown, Wallaroo, Moonta and Kadina.

The Morgan–Whyalla pipe line now provides an assured supply for the industrial town of Whyalla, also for Port Augusta, and generally augments the supplies to the northern areas.

Eyre Peninsula has, up to the present, been supplied from the Tod River Reservoir (9,167 acre feet) and three small reservoirs near the Franklin Harbour District. Tod River is the most important source of supply and water is pumped from this reservoir through 2½ miles of rising main to a service reservoir, the pumping lift being approximately 500 feet. From this service reservoir it gravitates for a distance of 240 miles in a northerly direction to Ceduna and the Port of Thevenard. Water from Tod River Reservoir is also used to supply Port Lincoln by gravitation, this town being 17 miles to the south. The principal towns served are Port Lincoln and Ceduna (Tod River system) and Cowell (Yeldulknie system). The demands of Eyre Peninsula have increased to such an extent in recent years that further sources of supply are necessary, and with this end in view a water-bearing area known as the Uley–Wanilla Basin is being developed. Boreholes are being sunk on this basin at selected points, pumping units installed and new mains and service reservoirs constructed. In addition to providing more water for the Tod River and Yeldulknie systems many miles of new mains are to be laid to serve areas hitherto without a distributed water supply.

Many other water supply schemes have been constructed in various parts of the State. These include pumping from the River Murray; supplies from sub-surface sources at Streaky Bay (Eyre Peninsula), Bordertown and Naracoorte and at other localities, including the recently established Leigh Creek coalfield; reservoirs to supply Victor Harbor, Strathalbyn and other southern districts; and a supply to Mount Gambier from the Blue Lake. More than 4,000,000 acres of country lands are provided with a reticulated supply.

(viii) *Morgan-Whyalla Pipeline.* The installation of a blast furnace at Whyalla and the extension of smelting activities of the Broken Hill Pty. Co. Ltd., combined with fears that existing supplies would be insufficient to prevent disaster to the agriculturalists of the north, led to the commencement of the pipeline in 1940. The work was completed in 1944 at a cost of £2,750,000 just in time to avert the threatened calamity. The total length of the pipeline, which brings water from the Murray at Morgan, is 223 miles. Water is pumped through 57 miles of 30 inch steel main to a summit storage at Hanson, 1,558 feet higher than Morgan; then gravitated through 166 miles of 26 inch to 21 inch pipe to Whyalla on the western shores of Spencer Gulf. Pipeline capacity is 2,150 million gallons per annum which can be boosted to 2,400 million. A power line from Adelaide, 119 miles distant, supplies the electricity for pumping. Under an agreement between the South Australian Government and the Commonwealth, an amount not exceeding 3,000,000 gallons in any week or 150 million gallons per year is to be made available at Port Augusta, this now being mainly required for railway purposes, including dwellings, workshops and locomotives. An agreement with the Broken Hill Pty. Co. Ltd. provides for a supply of not more than 3,000,000 gallons of water at Whyalla in any given period of 24 hours, for which the company pays a minimum of £40,000 a year irrespective of the amount used up to 343 million gallons. Above that figure payments are based on actual consumption.

(ix) *South-Eastern Drainage.* Nature has played an ironic prank in the south-east of South Australia where it has been necessary to construct costly drainage schemes to dispose of surplus water. The area comprises a series of valleys or flats separated by low ranges parallel to the coastline which prevent natural drainage. The highest "range" is approximately 50 feet above the adjacent flat and the most easterly flat, some 50 miles from the coast, is 200 feet above sea-level. The ranges are generally of poor soil or stony but the flats are fertile.

The Millicent Drainage System was completed in 1885, when 100,000 acres were reclaimed by 100 miles of drains at a cost of £150,000, which was included in the land allotment prices.

The South Eastern Drainage Area System, which is controlled by the South Eastern Drainage Board, comprises drains constructed by the Government at national cost, plus those undertaken by the Government in co-operation with the landholders. There are approximately 500 miles of drains, costing £720,000, of which the landholders are required to contribute £125,000. A scheme for the complete drainage and settlement of 400,000 acres in the western sector is under consideration.

(x) *Summary.* Water conservation and distribution works in South Australia have cost £20,000,000 (exclusive of river control and irrigation works on the River Murray which are dealt with elsewhere). A summary of statistical information concerning country supplies in 1946–47 follows :—Length of water mains, 5,400 miles ; approximate population served, 220,000 ; area served, approximately 4,000,000 acres ; and total capital cost, £13,688,324.

5. **Western Australia.**—(i) *Rainfall.* More than half Western Australia's area of 975,920 square miles receives an annual average rainfall of less than 10 inches and 87.2 per cent. receives less than 20 inches. Only 5.4 per cent. has an annual average above 30 inches, the bulk of which is associated with the low coastal ranges of the south-west. There are few rivers which run all the year, and underground supplies are generally regarded as poor, except in the artesian basins. Evaporation is high and records show that in the wheat belt (with an average annual rainfall of 10 to 20 inches) the average dam will lose annually between six and seven feet depth of water by evaporation. High evaporation rates, therefore, make special safeguards necessary, as for example, at Wicherina reservoir (105,000,000 gallons capacity) near Geraldton, where the storage has been roofed over an area of seventeen acres to prevent the loss of 40 million gallons annually. Eighty per cent. of the State's rainfall comes in five months, even in areas of adequate rainfall. Main irrigation areas in the south-west have an annual average of 40 inches. The bulk falls in May to September (inclusive). In December to March (inclusive) the annual average over a period of years has been half an inch per month.

(ii) *Administration.* Irrigation districts are administered under the Rights in Water and Irrigation Act of 1914–45 and the Government is advised by an Irrigation Commission representing the local irrigationists and government technical and financial branches. The Goldfields Water Supply is administered by a branch of the Public Works Water Supply Department and its responsibilities include control of water from this scheme for agricultural purposes. The metropolitan water supply is controlled by a separate department under the control of the Minister for Water Supply, Sewerage and Drainage. Under the Water Boards Act (1904) seventeen towns are administered by local water boards and nineteen are under direct Ministerial control. The Minister also controls three District Farming Schemes. Water rights over water flowing in streams and water courses is vested in the Crown unless specifically appropriated for irrigation purposes under the irrigation legislation.

(iii) *Irrigation.* The main irrigation areas are along the south-west railway line between Waroona (70 miles from Perth) and Dardanup (116 miles from Perth). The total area irrigated in 1946–47 was 17,947 acres and the total water allocated was 54,956 acre feet. In 1946–47 the total acre waterings (i.e. the number of acres watered multiplied by the average number of waterings) was 71,104 and the number of holdings 438.

In 1917 a concrete gravity dam with a capacity of 1,840 acre feet was built on the Harvey River to irrigate a district of 2,928 acres designed mainly for citrus culture. As the orchards proved a failure, the water was devoted to pastures and the demand soon exceeded supply. Accordingly, the reservoir was enlarged to 8,300 acre feet and Harvey District No. 2 was established. At the same time the Waroona District of 10,325 acres was constituted, and served from the Drakesbrook reservoir (1,855 acre feet). The Collie River District (28,762 acres) was also established, served by a reservoir of 27,800 acre feet.

To meet the demand for more frequent waterings, a dam has been constructed at Samson's Brook (6,540 acre feet) and the Stirling Dam was completed in 1947 with a capacity of 44,344 acre feet. The latter is the second largest storage in Western Australia and is regarded as the highest earth dam in Australia, the total height of the wall being 148 feet above stream level.

The following table, which shows acre waterings supplied to crops during each season 1935–36 to 1946–47, illustrates the growth of these irrigation schemes.

IRRIGATION, WESTERN AUSTRALIA: ACRE WATERINGS.

Year.	Pasture.	Fodder.	Potatoes.	Vegetables.	Orchard.	Flax and Broom Millet, etc.	All Crops.
1935–36	18,049	2,177	2,339	613	891	..	24,069

(iv) *Goldfields Scheme.* Western Australia has one of Australia's most spectacular water supply schemes. A substantial population gathered in the Kalgoorlie-Coolgardie goldfields after the discovery of gold in 1892. As the area is 400 miles from the coast and has an annual rainfall ranging from 4 to 9 inches, the Government spent £400,000 in providing water by boring, well-sinking and distillation. The goldfields were not connected with the coast by rail at that time and many difficulties arose in bringing water from a distance. Consequently a scheme propounded by the Engineer-in-Chief (Mr. C. Y. O'Connor) was adopted to provide a storage at Mundaring on the Helena River, 26 miles from Perth, from which water could be pumped through a pipeline to the goldfields. The job was commenced in 1898 and completed in 1903. Mundaring reservoir has a capacity of 4,650 million gallons and a catchment of 569 square miles. The water now passes through 430 miles of steel main, mostly of 30 inch diameter, aided by eight pumping stations, involving a total net lift of 1,280 feet.

Hundreds of miles of branch mains and pipes have been laid to mining districts, towns and farming districts, the most important being the Norseman extension of 101 miles. The system serves 34 towns and water is reticulated to 970,000 acres of farming lands. Total length of mains is 1,757 miles and the population served is 50,000. Total quantity of water pumped from Mundaring in 1946-47 was 2,225 million gallons. Total cost of system to the end of 1946–47 was £6,281,291.

(v) *Rock Catchments.* An interesting feature of the State's conservation system is found in the Barbalin, Narembeen and Kondinin District Farming Land Schemes in the wheat belt, where extensive granite outcrops have been used as catchments. The rain is caught at the foot of the rocks, and pumped to tanks from which the water is reticulated to farms. The Barbalin system comprises Barbalin Reservoir (41,000,000 gallons); Waddouring Reservoir (21,750,000 gallons) and Knungagin (7,750,000 gallons), the catchment areas being 272 acres, 160 acres and 87 acres respectively. Over 300 farms are supplied comprising 340,000 acres. Total mileage of pipes is 329, and these serve a number of small towns also. This scheme is now connected with the Goldfields pipeline to supplement supply in dry times. The Narembeen reservoir has a capacity of 9,500,000 gallons based on a catchment of 119 acres. It serves 86 farms totalling 88,000 acres. The Kondinin reservoir has a capacity of 9,500,000 gallons based on a catchment of 70 acres. The scheme supplies 38 farms totalling 40,000 acres.

(vi) *South-west Scheme.* The Commonwealth Government has agreed to assist a scheme to extend water for agricultural areas and towns in the south-west of Western Australia, which will be administered by the State Government. It is estimated that the scheme will cost £4,300,000 of which the Commonwealth will contribute £2,150,000. The scheme provides for raising the height of the Mundaring Weir and the Wellington Dam and increasing the capacity of pumping stations on the Goldfields pipeline to permit water diversions from that source. Twenty-three towns and over 4,000,000 acres of agricultural country will benefit.

(vii) *Underground Water.* Individual farmers, orchardists, market gardeners and others derive water from wells or windmills wherever available, and, where power is available, pumps and motors are used to tap such supplies. The Department of Public Works has twelve boring plants which are lent out to farmers to facilitate boring operations to an average depth of 150 feet. The Department also contracts with private firms to bore for communal farm supplies. Records are kept of all bores sunk (including exploratory bores) together with details concerning the strata encountered, and the quality and quantity of water obtained. These are made available to anyone who wishes to bore on his own account in the same locality.

During the past 53 years 296 artesian and sub-artesian bores have been sunk, mostly for private purposes. No bores may be sunk without a government licence. The most complete operation records exist in relation to bores in and around Perth which augment metropolitan supplies in the summer months. When these bores are brought into service at the beginning of each season (usually about the end of October), the pressures are sufficient to maintain the flow, but by February the pressures have to be boosted to maintain flow. The bores are usually closed down by the end of March, and from then the pressures gradually rise to the normal static maximum as no draw takes place for six to seven months, confirming the conclusions of the Queensland Artesian Investigation Committee.

The total depth of all recorded bores in Western Australia is 242,333 feet; daily flow is 80,418,500 gallons; and the average depth at which water is struck is 819 feet. Maximum depth of any bore is 3,325 feet and minimum 39 feet.

(viii) *Ord River Scheme.* The Ord River in the north-west of Western Australia traverses a tropical area served with monsoonal rains of irregular incidence and quantity, varying from 20 inches in the south to 30 in the north. The hottest months (December to March) are also months of highest rainfall. Communications and population are sparse. The Western Australian Government is considering a proposal to build a dam to conserve 2,000,000 acre feet of water, equipped with hydro-electric plant, which might supply irrigation water for an area of 100,000 acres if investigations show that the climate and soil conditions are suitable for vegetables, tropical fruits and rice. However, the economic production of these and other crops, as well as the possible use of such irrigation areas for interim fattening of cattle, is being examined at the Kimberley Research Station on the Ord River.

6. **Tasmania.**—(i) *Rainfall.* The area of Tasmania is 26,215 square miles. Mainly mountainous and in the temperate latitudes, the State has a high and comparatively regular rainfall. Of the total area, 56.5 per cent. receives an annual average exceeding 40 inches; 76.9 per cent. receives more than 30 inches; 11.4 per cent. receives between 25 and 30 inches; and 11.0 per cent. between 20 and 25 inches. Maximum rainfall in the Lake Margaret district has been known to exceed 175 inches (in 1924), and many mountainous areas receive over 100 inches.

(ii) *General.* Owing to its fortunate rainfall position, scarcity of water is not a serious problem in normal seasons. Conservation of water for hydro-electric generation is the predominant interest, and conservation for domestic and industrial purposes is more important than irrigation.

(iii) *Administration.* The State does not own all natural waters as in Victoria, and consequently the subject of water rights is a difficult one. The Mines Department has power to grant certain rights for mining operations, and the Hydro-Electric Commission must approve the abstraction of water from any stream or lake of potential value for power generation. There is no machinery other than the Courts for deciding the issue in cases where municipal councils or private individuals propose to divert water for town supplies or irrigation from streams in which neither of these two authorities is interested. The only exceptions are a few municipal and industrial undertakings which have statutory rights, such as the Hobart Corporation, two paper manufacturers, and a company producing paint ingredients.

(iv) *Irrigation.* There are no State irrigation projects and none are envisaged in the near future. All systems operating are privately owned and, with one exception (at Bushy Park), are single farm units. At Bushy Park a small system serves a group of properties. The larger proportion of the area under irrigation is watered by gravitational systems and the remainder concerns areas devoted to vegetables and served by municipal water supplies. Irrigation, as practised in Tasmania, was applied in 1946–47 to 9,326 acres devoted to: hops (1,153 acres); fruit (1,207 acres); pastures (6,191 acres); cereals, hay, etc. (240 acres) and other crops (535 acres).

(v) *Underground Water.* There is only one known flowing bore—at Speyrton, which yields 1,690 gallons per hour. Underground water is of poor quality and a small quantity exists over an area in the Midlands which has been exploited to a limited extent only by bores and windmills. Geological conditions do not appear to favor the utilization of ground water except on a minor scale.

(vi) *Farm Supply Schemes.* Conservation of water on farms is not practised to the same extent as on the mainland, probably because running streams and good rainfall are on a more generous scale. Provision of artificial storages (apart from house tanks) is rare.

(vii) *Industrial.* Three principal industrial schemes have been installed privately. The Australian Newsprint Mills pump approximately 6,000,000 gallons a day from the Derwent River at Lawaitta for the Boyer mills where it is coagulated and filtered. Associated Paper Mills pump several million gallons a day from Emu River at Burnie, and Titan Products Pty. Ltd. reticulate water from Chasm Creek to their factory at Weybridge. Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State, at present largely unsettled. Diversion to the eastern side of the watersheds is regarded as practicable.

(viii) *Hydro-Electricity.* (*a*) *General.* Tasmania's hydro-electric potential has been estimated at 3,500,000 h.p., making the State the major contributor to the Australian total. Installed capacity at the end of 1947 was 184,000 k.w. or approximately two-thirds of the Australian total of 205,400 k.w.

Tasmania depends entirely on water for power development, and its rich mineral and timber resources have contributed substantially to such development. When the Launceston City Council commenced the construction of a 75 h.p. station at Duck Reach on the Esk River in 1895, Tasmania pioneered the generation of water power for Australia. The undertaking was taken over by the Hydro-Electric Commission in 1944, when its capacity had been increased to 3,500 h.p.

The Commission now provides most of Tasmania's power requirements from three schemes—the Waddamana, Tarraleah and Shannon. The Mount Lyell Mining and Railway Co. Ltd. also operates a 10,000 k.w. plant at Lake Margaret to serve copper mines, and this station is interconnected with the Commission's network. Small stations operated by tin mining companies have a total capacity of 2,000 k.w.

(*b*) *Waddamana.* This scheme was completed in 1916 with an original capacity of 10,000 h.p., since increased to 66,000 h.p. Waddamana B was completed in 1944 with a capacity of 33,400 h.p. and since that date the total has been increased to 50,000 h.p. A further 16,700 h.p. plant is being installed. When this is installed, the total capacity of Waddamana will be 132,700 h.p. The scheme was commenced by the Hydro-electric Power and Metallurgical Co., formed to generate power from the Great Lake to treat complex ores by an electrolytic method, but was taken over by the Government when the company faced financial difficulties.

(*c*) *Shannon.* To meet the terms of a contract with the Electrolytic Zinc Co. of Australasia Ltd. in 1919, the Government decided to enlarge the Great Lake scheme by the construction of a dam at the outlet of the lake, 3,380 feet above sea level, to conserve the water on a catchment of 150 square miles, with a rainfall ranging up to 60 inches. The dam is situated at the source of the River Shannon. A canal, five miles long, to divert water from the River Ouse to the Great Lake, was completed in 1923 and the catchment increased by the addition of the run-off from 100 square miles of rugged country to the westward with a rainfall up to 80 inches. This canal was partially relined with concrete in 1943. Water from the Great Lake, representing a flow of 610 cusecs or 350 million gallons a day, passes down the Shannon River to the Shannon Power Station by pipeline and canal, where 14,500 h.p. is generated before the water passes into the Waddamana canal and power station. A second canal is under construction to provide water for operation of the additional plant being installed at Waddamana. Transmission lines connect the stations with Burnie, Launceston and Hobart.

(*d*) *Tarraleah.* This development is situated on the Nive River, and served by water from the River Derwent at Lake St. Clair and Clark Dam. The dam will ultimately have a hydro-electric installation. The system was completed in 1938 and now has a total capacity of 105,000 h.p. The water from Lake St. Clair flows down the Derwent to Butler's Gorge, where a 200 feet concrete dam will impound 243,000 acre feet of water. At the foot of the dam a power station is being built to produce an average of 12,000 h.p.

(*e*) *Lake Margaret.* On Mount Sedgwick, on the west coast, 2,168 feet above sea level, is the site of two stations with a combined capacity of 12,000 h.p. They are operated by the Mount Lyell Mining and Railway Co. Ltd. whose copper smelting works are 5 miles distant. The average rainfall on the catchment is 147 inches.

(*f*) *Future Programme.* The Hydro-Electric Commission is carrying out investigations to develop an additional 100,000 h.p. to meet increasing demands. Coupled with this is a long range development programme concerned with the provision of 500,000 h.p. in the next twenty years. The authorities consider the most economical development will be in the high catchment areas of the Derwent, Nive and Ouse Rivers. Within the next three years the Clark Dam will be completed to provide an additional 34,000 h.p. at an estimated cost of £2,000,000.

(*g*) *Summary*. The following table represents the development of Tasmania's hydro-electric power resources at the end of 1947 :—

HYDRO-ELECTRIC POWER RESOURCES : TASMANIA, 1947.

Name.	Installed Capacity.	Ultimate Capacity.	Average Flow per Year.
	K.W.	K.W.	Acre Feet.
Waddamana	85,000	97,000	430,000
Shannon	10,500	10,500	400,000
Tarraleah	75,000	90,000	634,000
Clark Dam	Nil	12,000	634,000
Launceston	2,000	2,000	211,000
Lake Margaret	10,000	10,000	56,000

7. **Northern Territory.**—(i) *Rainfall*. The Northern Territory (523,620 square miles) is located in the North-West Monsoon–South-East Trade Wind Belt and consequently has a pronounced summer incidence of rainfall. In northern sections approximately 85 per cent. of the annual precipitation occurs during the four months, December to March. It is not unusual for up to six of the coldest months to be quite rainless. In the south the seasonal variation is less marked and during winter months southern depressions not infrequently bring beneficial rains. Rainfall varies from 60 inches at Darwin to below 5 inches in the south-east corner. Over the total area, 26.6 per cent. receives an average annual rainfall of over 25 inches per annum ; 16.3 per cent. receives between 15 and 25 inches ; 57.1 per cent. receives below 15 inches.

The north to south variation in mean yearly temperature is not very pronounced, ranging from 85 degrees at Darwin to a little over 70 at Alice Springs. Moreover, this difference is largely accounted for by the difference in topography, Alice Springs being some 2,000 feet above sea level. Seasonal and diurnal variations are much more marked, being much greater in the south than the north. While Alice Springs experiences fairly severe frosts in the winter months, summer temperatures of up to 115 and even 120 degrees may occur in the desert to the south-east of the Territory. Darwin, on the other hand, is frost free and rarely registers temperatures over 100 degrees. In a large part of the Territory evaporation rates are high.

(ii) *Rivers*. The main topographical features are the Arnhem Land Plateau in the north-east, the Barkly Tableland in the east, and the MacDonnell Ranges rising out of a central peneplain in the south. About half the territory south of the 15 inch isohyet drains internally. In southern parts the rivers are really storm channels, and when they flow their waters are lost in the near-desert soils. In the north the coastal rivers flow continuously throughout the year, though their flow is markedly seasonal.

(iii) *Irrigation*. There are no large-scale water conservation projects in the Territory with the exception of the Manton Dam (80,350 acre feet) which serves Darwin with a reticulated supply. Irrigation has therefore assumed no current importance. Small agricultural activity exists in the higher rainfall areas near the coast, the rainfall being supplemented by small-scale irrigation only. Peanuts are grown under natural rainfall conditions north of Katherine. Market gardens and citrus orchards exist on a more intensive scale near Alice Springs, being dependent on small-scale irrigation practices.

The Katherine River appears to offer large-scale irrigation potentialities on the levee soils below the township. The river passes through a gorge some miles upstream under conditions apparently suitable for dam construction. No geological or drilling investigations have yet been made, but the Commonwealth Scientific and Industrial Research Organization is investigating the potentialities of the soil for agricultural production.

(iv) *Underground Water*. Artesian water is found mainly in the south-east where the Great Artesian Basin enters the Territory. Pastoral (beef) production accounts for over 90 per cent. of the Territory's income, and the marked seasonal conditions affect the industry's economy. During the wet summer season there is adequate water, but during the winter most natural watering points disappear, and pastures dry. Bores supplement the permanent watering points which are mainly along river frontages. The cattle industry is concentrated in the area in which the feed retains an appreciable nutritive value during the winter despite the dry conditions. This area is not in the wetter coastal regions, but in the inland belt of 15 to 25 inch rainfall and to the north of Alice Springs. Lack of bores is a limiting factor in the industry's economy, as cattle are able to thrive only within certain distances of reliable water.

In 1947 some 602 bores were recorded, comprising 339 put down by pastoralists, 106 established by the Government on stock routes, 12 leased by the Government to pastoralists, 2 maintained by the Postmaster-General's Department, and 143 put down north of Birdum by the military services during the war.

Complete records are not available concerning these bores. Stock route bores range in depth from 37 to 640 feet, and the total hourly capacity of the 106 bores concerned is approximately 136,615 gallons per hour. Statistics for the 143 service bores put down during the war show that depths range from 40 to 374 feet, and that total hourly capacity approximates 150,530 gallons per hour.

(v) *Control.* Under the Control of Waters Ordinance (1938) of the Northern Territory natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and diversion of water is prohibited except under conditions prescribed.

8. **Papua and New Guinea.**—(i) *Rainfall.* When all localities (32 stations) where gauges are kept are taken into consideration, the average annual rainfall, over periods varying from two to ten years, is about 159.21 inches. This figure includes both inland and coastal stations. Mean annual rainfall for the inland stations, which average 786 feet in height, is 134.77 inches and for coastal stations, 83.66 inches.

(ii) *General.* For a general description of these territories see Chapter X.—" The Territories of Australia ", pages 345, 346 and 353 of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development. The main water conservation interest in New Guinea at present is the hydro-electric potential.

Those portions of New Guinea administered by Australia are well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to 13,000 feet. Complete data concerning water resources are not available, but it is known that the opportunities for production of hydro-electric power are extensive. Some authorities estimate that 20,000,000 h.p. could be generated. Present investigations have been limited to those areas where a demand for power is likely to arise. New Guinea has a substantial native population and few major industries.

Explorations over the southern portion, known as Papua, have resulted in the collection of much information concerning water resources. The largest stream is the Fly River, at least 500 miles long, which is situated in the western division. Its large tributaries extend to the northern boundary of the Territory rising among lofty mountain ranges. Records show that at a point above the tidal influence, where the river is 600 yards wide and 40 feet deep, the stream travels at a rate of 3½ miles per hour and discharges 105,200,000 gallons per minute.

All the principal rivers flow from the main range in a southerly direction. Most of them carry a large volume from a great height over relatively short distances. They have a total catchment of about 50,000 square miles having an elevation between 2,000 and 13,000 feet.

(iii) *Hydro-Electricity.* The Government Geologist has estimated that if only 50 per cent. of the annual rainfall were utilized through a height of only 500 feet a total of 8,500,000 h.p. would be produced.

The Bulolo River, which delivers 400 to 500 cusecs at a point 2,600 feet above sea level, is being harnessed by a gold mining company for 20,000 h.p., but total power produced in New Guinea in 1945–46 was 10,000 h.p.

CHAPTER XXVI.

DEFENCE.

§ 1. Department of Defence.

1. **Introduction.**—At the outbreak of the 1939-45 War, the Department of Defence comprised the three Fighting Services. In November, 1939 separate Departments, each with its own Minister, were created for the control and administration of the Navy, Army and Air Force. The Defence Department as then reconstituted retained responsibility for over-all defence policy and for the conduct during the war of the business of the War Cabinet and the Advisory War Council.

2. **Post-war Functions and Organization.**—(i) *The Cabinet and the Council of Defence.* The determination of defence policy is the responsibility of Cabinet. It is assisted in this by the Council of Defence, which is a statutory body created under Section 28 of the Defence Act, its functions being to consider and advise upon any questions of defence policy or organization which are referred to it by the Prime Minister or the Minister for Defence. The Council consists of the Prime Minister and those Ministers most concerned in defence, the three Chiefs of Staff and the Secretary, Department of Defence.

(ii) *Functions of Department of Defence.* Subject to the authority of Cabinet and the Council of Defence, the Minister and Department of Defence are responsible for :—

(1) The formulation and general application of a unified defence policy relating to the Defence Forces and their requirements, including :—(*a*) co-operation in British Commonwealth defence and the defence aspect of the Charter of the United Nations ; (*b*) the supply aspect of defence policy, including the review of production programmes and capacity ; (*c*) the scientific aspect of defence policy ; and (*d*) the financial requirements of defence policy, and the allocation of funds made available.

(2) The defence aspect of Armistice and Peace Terms, Control Commissions, and Forces of Occupation.

(3) Matters of policy or principle and important questions having a joint service or inter-departmental defence aspect.

(4) The higher defence machinery, the control of the joint service machinery, and the Secretariat of the Council of Defence.

(5) The defence aspect of questions relating to the organization and machinery for :—(*a*) co-operation in British Commonwealth defence ; (*b*) co-operation in regional security, including obligations under the United Nations Charter ; (*c*) higher direction in war ; and (*d*) higher direction of the Services.

(6) The Commonwealth War Book, which is a summary of national plans for an emergency as developed in Departmental War Books.

(7) The administration of inter-service organizations, such as the joint intelligence machinery.

(8) The defence aspect of :—the strength and organization of the Forces, higher appointments in the Services, Honours and Awards, and civil defence policy.

(iii) *Joint Service and Inter-Departmental Machinery.* The joint service and inter-departmental advisory machinery of the Department consists of various committees headed by the Defence Committee and the Chiefs of Staff Committee. The Defence Committee is a statutory body consisting of the Secretary, Department of Defence, and the Chiefs of Staff of the three Services. In general, its function is to advise on defence policy as a whole, and on matters of policy or principle and important questions having a joint service or inter-departmental defence aspect. The main responsibility of the Chiefs of Staff Committee is the preparation of strategic appreciations and military plans. The major committees subordinate to the Defence Committee and/or the Chiefs of Staff Committee comprise the principal Administrative Officers Committee (Maintenance and Materials), the Principal Administrative Officers Committee (Personnel), the New Weapons and Equipment Development Committee, the Joint Planning Committee, the Joint Intelligence Committee and the Joint Administrative Planning Committee.

The Defence Scientific Advisory Committee is responsible for furnishing advice on the scientific aspect of defence policy.

3. **Post-war Defence Policy.**—(i) *Basis of Australia's Post-war Defence Policy.* The basis of Australia's post-war defence policy is stated in the following terms in the Government's announcement of 4th June, 1947:—

> " The Forces to be placed at the disposal of the United Nations for the maintenance of international peace and security, including regional arrangements in the Pacific ;
>
> The Forces to be maintained under arrangements for co-operation in British Commonwealth Defence ; and
>
> The Forces to be maintained to provide for the inherent right of individual self-defence ".

(ii) *Post-war Defence Programme.* The approved post-war defence programme, extending over a period of five years from 1947–48 to 1951–52, will cost £250,000,000 or an annual average vote of £50,000,000. The post-war defence programme is designed to secure a balanced scheme of defence providing for the Navy, Army and Air Force, Defence Research and Development, and Munitions and Supply, in proper proportions within the limits of the available resources that can be devoted to defence. The roles of the three Services are blended and inter-related and their strength and organization have been determined on the basis of the fulfilment of the objectives of policy stated above.

(iii) *Defence Research and Development.* The whole question of post-war policy is affected by the impact of scientific development on the types of weapons and armament for the various Services, and the results of these developments will be under constant notice. High priority is therefore given in the programme to defence research and development, for which an amount of £33,500,000 is being provided under the five year programme. The main individual item is the Long Range Weapons Project which is a joint United Kingdom-Australian undertaking. It is the first important step in the widening of Australia's responsibility in defence research and development in accordance with the policy of the strategic development and distribution of the resources of the British Commonwealth. The Department of Defence is responsible for questions of policy in this field, and the Department of Supply and Development is the responsible authority for executive action in respect of approved policy decisions.

(iv) *National Planning for an Emergency.* To achieve a balanced defence policy, it is necessary to ensure proper co-ordination of the Navy, Army and Air Forces, the supply organization and the civil economy which supports the direct military effort. The Government's policy provides for the co-ordination of these as integral parts of the national defence policy. The basis of planning for these matters and also for the civil defence measures necessary to protect the community against attack by modern weapons is the Commonwealth War Book and Departmental War Books. These are now being revised in the light of wartime policy and likely contingencies.

(v) *Flexibility of Post-war Policy.* It is important that the future developments in weapons and methods of war should be borne in mind when considering national defence, the shape and size of post-war forces, and the new problems of organization and training which they will create.

Australian policy, like that of the United Kingdom, will be kept flexible. At the same time, while the completion of the objectives laid down will be vigorously pursued according to the planned schedule of the programme, a continuous review will be maintained in regard to progress and the need for any variations that may arise.

4. **Co-operation in British Commonwealth Defence.**—The defence programme gives practical and substantial effect to the acceptance by Australia of a larger contribution towards the defence of the British Commonwealth in the Pacific, and the relief in corresponding degree of the burden for so long carried by the United Kingdom. The need for improved machinery for co-operation in British Commonwealth defence has been recognized and advocated by the Australian Government for some time, and proposals by it to achieve this objective, with particular application to the Pacific Area, have now been agreed to by the Governments of the United Kingdom and New Zealand.

5. **Australian Participation in the Occupation of Japan.**—By agreement between the Australian Government (acting on behalf of the Governments of the United Kingdom, Australia, New Zealand and India) and the United States Government, arrangements were confirmed in January, 1946 for a British Commonwealth Force under an Australian Commander to participate in the occupation of Japan. For the control and administration of this British Commonwealth Occupation Force (BCOF), the Australian Defence Committee was augmented by the inclusion of representatives of the other Governments concerned, and the Chiefs of Staff Committee was extended similarly to form the Joint Chiefs of Staff in Australia (JCOSA).

In February, 1946 the bulk of the contingents from the participating countries assembled in Japan under the command of Lieutenant-General J. Northcott, Australian Military Forces. The force consisted of a small Royal Naval Port Party, an army component consisting of brigades from each of the United Kingdom, India, New Zealand and Australia, and an air component of a Royal Australian Air Force Wing of three squadrons of Mustangs, two Royal Air Force Spitfire Squadrons, one Royal Indian Air Force Spitfire Squadron and a Royal New Zealand Air Force Squadron of Corsairs. A large proportion of the personnel required for the controlling head-quarters' staffs and base organization was provided from Australia. Arrangements were also made for Australia to act as the main source of supply of BCOF. Of a total BCOF strength of some 36,000 in February, 1946, 9,155 were Australian Military Force personnel and 2,185 were Royal Australian Air Force personnel. Apart from this contribution to BCOF, the Royal Australian Navy provided a naval support unit of two ships for service with the British Pacific Fleet in Japanese waters.

BCOF is charged with representing worthily the British Commonwealth in the occupation of Japan, maintaining its prestige in the eyes of the Japanese, and illustrating to them the British Commonwealth democratic way and purpose in life. In addition, extensive patrolling and garrison duties have been undertaken as well as the destruction of thousands of tons of Japanese warlike material and the repatriation of a large number of Japanese servicemen.

During 1946 there was little change in the over-all strength of the Force, although it assumed responsibility, under the Supreme Commander Allied Powers, for the Prefectures of Shimane, Yamaguchi, Tottori, Okayama, and the island of Shikoku, in addition to the original BCOF area of the Hiroshima Prefecture. In June, 1946 command of BCOF passed to Lieutenant-General H. C. H. Robertson, Australian Military Forces. Early in 1947, due largely to man-power difficulties and to settled conditions in Japan, the total strength of the Force began to decline. Substantial reductions were effected in the United Kingdom and New Zealand Contingents and later in the year the Indian Contingent was completely withdrawn. At the close of 1947 the total strength of BCOF was less than 16,000, the Australian Military Forces and Royal Australian Air Force strengths being respectively 8,573 and 2,048 all ranks. With agreement of the participating Governments the JCOSA organization was discontinued on 31st December, 1947, and responsibility for the control and administration of BCOF was then assigned to the Australian Government.

The demilitarization of the BCOF area has been completed without incident, and BCOF has played an important part in the success achieved by the military occupation and administration of Japan.

§ 2. Military Defence.

1. **State Systems.**—A detailed historical account of the Australian defence forces prior to Federation will be found in Official Year Book No. 2, pp. 1075–1080. *See* also Official Year Book No. 12, p. 999.

The strength of the military forces of the States on 31st December, 1900 (the eve of Federation) was :—New South Wales, 9,338 ; Victoria, 6,335 ; Queensland, 4,028 ; South Australia, 2,932 ; Western Australia, 2,696 ; Tasmania, 2,024 ; total for Australia, 27,353. This total was exclusive of cadets, reservists and rifle club members.

2. **Commonwealth Systems.**—(i) *General.* Under the terms of the Constitution Act 1900, the Commonwealth took over control of defence matters in March, 1901. The growth of the Commonwealth Military Forces may be considered to have taken place in fifteen phases. For particulars of the phases which cover the period from the welding together of the military forces of the States into one homogeneous army in 1902 up to the decision to increase the training strength of the militia to 70,000 in the year before the 1939–45 War (phases 1–7), *see* Official Year Book No. 36 and earlier issues.

The eighth phase was initiated by the Government on 2nd September, 1939, when the Governor-General issued a proclamation of the existence of war or of a danger thereof and for the calling out of the Citizen Forces for war service. The ninth phase was initiated on 13th October, 1939, when the organization of the Australian Military Forces into Commands came into operation. The objects of the Command Organization are as follows :—(*a*) to bring peace organization into line with war organization ; (*b*) to provide for the personal and whole-time guidance and supervision, by a higher commander, of divisional and other formation commanders, on questions of training and general preparedness for war ; and (*c*) to reduce the number of lower formations under the direct control of Army Head-quarters.

The tenth phase was initiated on 30th November, 1939, when a proclamation was issued under the Defence Act calling upon certain personnel to enlist and serve in the Defence Forces.

The eleventh phase : Owing to a considerable expansion in the administrative functions which the three main commands were called upon to perform, it was decided to relieve the G.Os.C. of these commands and their staffs of much of their administrative responsibilities in order that they might concentrate on operational matters. In January, 1942, therefore, Northern, Eastern and Southern Commands were divided into separate command and base head-quarters—the command head-quarters to handle operational, and base head-quarters administrative, matters.

The twelfth phase : As a result of the expansion in supply and other administrative installations in Australia, it was found necessary to revise the machinery for command administration of lines of communication areas and to decentralize control. A division into lines of communication areas was therefore made, and these areas corresponded with Northern, Eastern, Southern and Western Commands and 7th and 8th Military Districts. Command and general administrative control of the lines of communication areas were placed under the respective base head-quarters and 7th and 8th Military Districts and came directly under Army Head-quarters.

The thirteenth phase : In August, 1941 War Cabinet approved of Lieutenant-General Sir Iven Mackay as G.O.C.-in-C. Home Forces commanding the forces in Northern, Eastern and Southern Commands. The G.O.C.-in-C. was made superior to the G.Os.C. Commands for the direction of operations, but subordinate to the Military Board, which remained the body advising the Minister for the Army, and through him, War Cabinet.

The fourteenth phase : Shortly after the outbreak of war with Japan, a number of units of the United States Forces were routed to Australia. Subsequently additional forces arrived. By agreement among the Governments of the United States, the United Kingdom, the Netherlands and Australia in April, 1942, General Douglas MacArthur was appointed Commander-in-Chief, South-west Pacific Area. General Sir Thomas Blamey was assigned to the command of the Allied Land Forces in the South-west Pacific Area by General Head-quarters, South-west Pacific Area. With the appointment of General Sir Thomas Blamey as Commander-in-Chief Australian Military Forces, the Military Board ceased to function and Army Head-quarters became Allied Land Forces

Head-quarters, Australia. As from 9th April, 1942, the system of commands and bases was abolished and replaced by the field army and lines of communication areas which were established in each of the six States on the mainland plus Northern Territory and New Guinea. Field formations were formed as follows :—

First Australian Army—from Northern and Eastern Commands.
Second Australian Army—from Southern Command.
Third Australian Corps—from Western Command.
Northern Territory Force—from 7th Military District.
New Guinea Force—from 8th Military District.

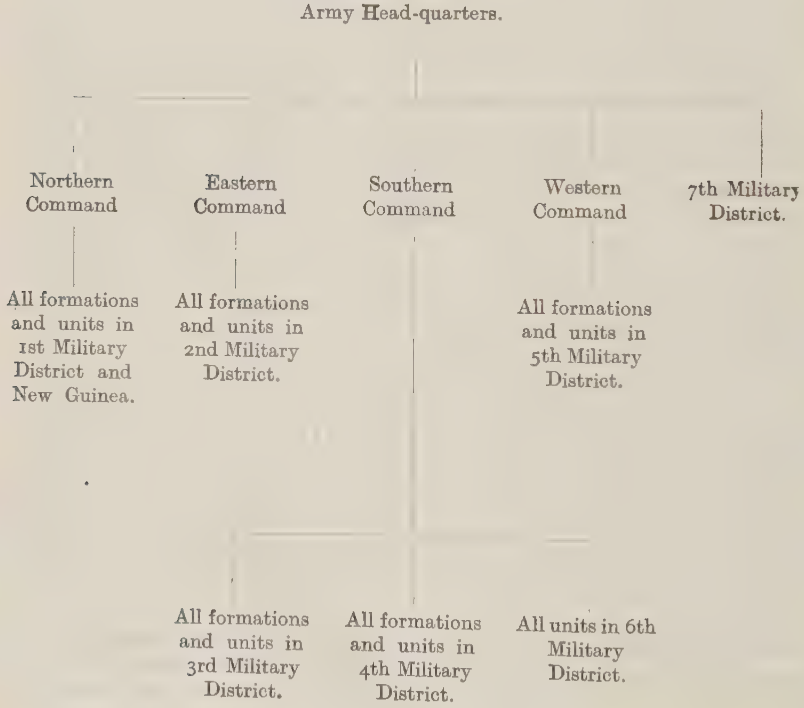
In March, 1943 First and Second Armies took over from Queensland, New South Wales and Victoria lines of communication areas the command of all coast and static anti-aircraft artillery defences and training establishments. On 16th June, 1944 Western Command was re-established and took over the combined responsibilities of Third Australian Corps and Western Australia Line of Communication Area.

The fifteenth phase : In March, 1946 the Military Board and the organization of commands and military districts was re-introduced.

(ii) *Population of Military Age, Census*, 1947. The following particulars show the numbers of males of military age in the population of Australia as at the Census of 30th June, 1947. The total number of cadet age, 12 and over, and under 18, was 333,373 ; at citizen soldier age, 18 and over, and under 26, 495,867 ; and 26 and over, and under 35, 532,210 ; making a total of 1,028,077, 18 and over, and under 35, which is considered the best period for military service. In addition to the above-mentioned, there were 1,186,141 males 35 and over, and under 60, in Australia at the 1947 Census.

(iii) *Allotment of Units.* Under the Command Organization (*see* above) units are raised on a territorial basis, each State supplying its proportion of the personnel required for the fighting services.

COMMAND ORGANIZATION.



Army Head-quarters.
Northern Command
Eastern Command
Southern Command
Western Command
7th Military District.
All formations and units in 1st Military District and New Guinea.
All formations and units in 2nd Military District.
All formations and units in 5th Military District.
All formations and units in 3rd Military District.
All formations and units in 4th Military District.
All units in 6th Military District.

Military Districts conform generally to State or Territory areas, as follows :—1st Military District, Queensland ; 2nd, New South Wales ; 3rd, Victoria ; 4th, South Australia ; 5th, Western Australia ; 6th, Tasmania ; 7th, Northern Territory. Third Military District includes a considerable portion of Southern New South Wales, and 4th includes Broken Hill.

(iv) *Strength of Military Forces.* There was little alteration in the numbers serving in the Australian military forces from the institution of the Commonwealth to the year of the introduction of the compulsory training system. From 1913 to 1918, however, the annual increase was considerable. As a result of the International Conference which met at Washington on 11th November, 1921, it was decided to continue the universal training law, but its operation was restricted to the more populous centres and to certain quotas only. From 1st July, 1922 to 30th June, 1925, training in the Senior Cadets was limited to two quotas instead of four, and in the Citizen Forces to two quotas instead of seven. On 1st July, 1925 Senior Cadet training was reduced to one quota only, while Citizen Force training was increased to three quotas. These conditions remained in force until 1st November, 1929, when the constitution of the forces on a voluntary basis was adopted. During the period last mentioned Senior Cadet training commenced on 1st July of the year in which Senior Cadets reached the age of 17 years, and on 1st July of the following year they were allotted to the Citizen Forces, in which training continued until 30th June of the year in which they attained the age of 21 years. Notwithstanding the reduction in training, all males residing within 5 miles of a training centre were required to register during the months of January or February of the year in which they reached the age of 14 years. Junior Cadet training of boys of the ages of 12 and 13 years, which was in abeyance during the years 1922–23 and 1923–24, was also supervised by the Defence Department during the period 1st July, 1925 to 31st October, 1929.

Under the voluntary enlistment system, personnel might enlist for a first period of three years, and on its completion the member concerned might be re-engaged for successive periods of two or three years until he reached the age for retirement.

The Commonwealth Government has approved a programme extending over a period of five years from 1947 to 1952. This programme provides for the raising of an Australian Regular Army of a total strength of 19,000 all ranks, and a Citizen Force of a total strength of 50,000 all ranks. Both the Regular and Citizen Forces are recruited by voluntary enlistment. The strength of the Australian Military Forces at the 31st December, 1947 was 24,792.

The Australian Cadet Corps is a voluntary organization comprised of Senior Cadet Detachments raised at educational establishments in all States of the Commonwealth. It serves as a training ground to provide, to some extent, the future officers and non-commissioned officers of the Australian Military Forces, and, as such, occupies a foremost position in the scheme of national defence. The minimum age for enrolment in school detachments is 14 years, and cadets, who receive a free issue of A.M.F. pattern uniform, may remain therein until they cease to be pupils of respective educational establishments. Provision is made for the appointment of officers, warrant and non-commissioned officers on an authorized scale from within school detachments which, as a matter of general policy, are not affiliated with units of the Military Forces, but may be so affiliated in special cases. The establishment for the whole Corps is 25,000, and by December, 1947 the number of Senior Cadet Units had been increased to 226 with an aggregate strength of approximately 21,283.

(v) *The Australian Staff College.* Until 1938 the training of staff officers was carried out in the various Military Districts throughout Australia, except in cases where officers were selected from time to time to attend courses abroad. In 1938 an Australian Command and Staff School, located in the original Officers' Mess at Victoria Barracks, Sydney, was established.

Early in the 1939-45 War this School was moved to Duntroon and in April, 1942 it was re-designated the Staff School (Australia). Later in this same year a senior wing was added to the original one. These two wings came under the general control and administration of the Commandant of the Royal Military College (*see* para. (vi) following), and the College was re-designated the Royal Military College and Staff School (Australia).

Officers were trained in this School for first and second grade staff appointments; students for second grade appointments were trained in the Junior Wing and students for first grade appointments were trained in the Senior Wing. A high standard of training was set from the inception of the School and it has since been continuously maintained. The symbols "SC" and "sc" were awarded to students who qualified at the Senior and Junior Wings respectively. The passing of these courses at the Staff School was laid down as an essential qualification for officers to be eligible for posting to staff appointments in field formations.

Concurrently with the commencement of the course at Duntroon, the First Australian Army Junior Staff School was established at Ashgrove in Queensland for the training of officers for third grade and unit staff appointments. This School was later absorbed into the Staff School (Australia) in 1944, when it was found necessary to centralize the training of staff officers throughout the Army.

Accordingly the two wings were moved from Duntroon to Cabarlah in Queensland, and together with the First Australian Army Junior Staff School's Wing became known again as the Staff School (Australia) which was organized into Grade 1, Grade 2 and Grade 3 wings, the functions of which were to train officers for 1st grade, 2nd grade and 3rd grade staff appointments respectively. An additional function of the Grade 3 wing was to provide training for unit staffs, i.e. adjutants and quartermasters.

The instruction at this School included the staff duties for all types of operations but it was restricted in each wing to the required scope and standard.

Early in 1946 the Staff School (Australia) was moved to Seymour in Victoria and it was re-designated the Australian Staff College in conformity with other Empire training establishments for training officers for command and staff appointments. The College was later moved to Queenscliff in Victoria, where it is at present situated.

The Grade 1 and Grade 3 courses were discontinued at the College in 1946. Grade 2 courses of six months' duration were introduced, which provided for the training of thirty selected students at each course. Since 1947 the courses have been of one year's duration and are held from February to December each year. In Australia students may also be nominated by the Royal Australian Navy, the Royal Australian Air Force and the Commonwealth Public Service.

In order to ensure common standards in organization, equipment, tactical doctrine and staff and command training throughout the Empire the closest liaison is maintained with other Empire Staff Colleges. Since the beginning of 1947 the Staff College courses throughout the Empire have been of one year's duration. The Australian Staff College is imperial in character, as the staff and students are selected from the Empire.

(vi) *Royal Military College.* The Royal Military College was established in 1911 at Duntroon in the Australian Capital Territory for the purpose of providing trained combatant officers for the Australian Regular Army, which was then known as the Permanent Military Forces. The College was officially opened on the 27th June, 1911. In January, 1931 the College was transferred to Victoria Barracks, Sydney, New South Wales, but it returned to Duntroon early in 1937. The conditions of entry are laid down in the "Royal Military College Regulations" and provide for admission by "normal entry", "service entry" and "special entry". The normal length of the course of instruction at the College for cadets admitted by normal entry is four years; for cadets admitted by service entry, three years; and for cadets admitted by special entry, one year. Fees are not charged for the equipment, instruction or maintenance of cadets. Cadets are paid a travelling allowance, an outfit allowance and a maintenance allowance. The maintenance allowance amounts to 7s. 6d. per diem for "normal entry" or "special entry" cadets, and £262 per annum for "special entry" cadets. This maintenance allowance defrays the cost of maintaining uniform and clothing, books, instruments, messing, washing and other miscellaneous items. The course of instruction is organized into military and civil departments. A Board of Studies advises the Commandant and reports to him on instructional matters, including the progress of cadets. The nature and duration of the course was temporarily modified during the late War. The number of staff cadets undergoing training at the College during the College year of 1947 comprised 103 Commonwealth cadets and 21 New Zealand cadets. New Zealand cadets have been trained at the College, since its foundation, for commissions in the New Zealand permanent forces under an arrangement made with the Government of that Dominion. The instructional staff of the College consists of military and civil members. On graduation, Commonwealth cadets are appointed to the Australian Regular Army in the rank of lieutenant and are then normally sent abroad for further regimental training.

(vii) *Rifle Clubs.* The Australian Rifle Club movement, which had its origin in 1888, is provided for in the Defence Act and comprises a Commonwealth Council of Rifle Associations, which functions in an advisory capacity to the Minister and in the promotion of inter-empire and interstate rifle competitions, State Associations, District Unions and Clubs. Prior to 1931 the administration of the organization was the responsibility of the Secretary for Defence. From that year its control reverted to the Military Board and Rifle Clubs were affiliated as reserves to Militia Force units. They continued in this role until the outbreak of the recent war, when, owing to the urgent demands of the A.I.F. and A.M.F., supplies of ammunition were cancelled and all rifles of members were impressed, mostly on payment. In 1941 rifle clubs were placed in recess and, with the exception of annual miniature rifle competitions, remained inactive until August, 1946, when approval was given for the re-establishment of the movement on a civilian basis under the control of the Secretary, Department of the Army. When placed in recess, the efficient strength of the rifle club movement was 1,018 clubs and 36,478 members. From available statistics it is estimated that, of the membership mentioned, approximately 20 per cent. served overseas and a further 60 per cent. performed home service duties during the recent war. Rifle shooting activities have been resumed, and the strength position as at 30th June, 1948 was 993 clubs and 46,300 members.

(viii) *The Australian Battles Nomenclature Committee.* The Minister for the Army gave approval on the 25th July, 1947 for the formation of the Australian Battles Nomenclature Committee and for its terms of reference to be as follows :—

(*a*) to tabulate those operations fought in the Pacific Zones in the 1939–45 War which involved the Australian Military Forces ;

(*b*) to classify these operations in accordance with a definite system of nomenclature which will denote their relative importance ;

(*c*) to define the geographical and chronological limits of each operation ;

(*d*) to advise the United Kingdom Battles Nomenclature Committee regarding operations in zones other than the Pacific Zone in which the Australian Military Forces participated.

The inaugural meeting of this Committee was held at Victoria Barracks, Melbourne on 16th December, 1947, under the chairmanship of General Sir Thomas Blamey. At this meeting sub-committees were appointed to study the various campaigns in order to classify the operations into battles, actions, and engagements. For the purpose of allotting work to the sub-committees, the Battles Nomenclature Committee divided the campaigns in the Pacific Zone into the following six phases :—

(1) Defence of the outer islands until the time Japanese troops landed at Lae and Salamaua in New Guinea in March, 1942.

(2) The campaign in Papua.

(3) The Wau-Salamaua campaign.

(4) The British New Guinea campaign.

(5) The battle in the Australian mandated territories.

(6) The campaign in Borneo.

3. **British Commonwealth Occupation Force.**—For information on the participation of the Australian Military Forces in the occupation of Japan *see* § 1. 5 above.

4. **1939–45 War.**—(i) *General.* For a detailed account of the part played by the Australian Military Forces in the 1939–45 War, together with a chronological list of important events, *see* Official Year Book No. 36, pages 1016 to 1022.

(ii) *Gross Enlistments.* The number of gross enlistments as at 28th June, 1947 was as follows :—

Australian Imperial Force	271,279
Australian Army Nursing Service (A.I.F.)	1,563
Australian Army Medical Women's Service (A.I.F.) ..	1,432
Citizen Military Force	423,749
Australian Army Nursing Service (C.M.F.)	2,352
Australian Army Medical Women's Service (C.M.F.) ..	6,371
Australian Women's Army Service (C.M.F.)	24,053
Voluntary Detachment Corps	4,982
Total	735,781

Transfers to A.I.F. of C.M.F. and P.M.F. Personnel were as follows :—

Citizen Military Force and Permanent Military Force Personnel	(*a*)209,766
Australian Army Nursing Service Personnel	1,878
Australian Army Medical Women's Service Personnel ..	3,013
Total	214,657

(*a*) Includes 2,725 transfers of Permanent Military Force to Australian Imperial Force.

(iii) *Disbandments during* 1947. The Australian Imperial Force was disbanded on the 30th June, 1947, and replaced by the Interim Army. The Australian Women's Army Service, which had been formed on the 29th September, 1941 with the object of enlisting women for the replacement of men in rear areas, was also disbanded on the same date.

(iv) *Casualties.* Particulars of casualties will be found in § 6. following.

(v) *Decorations and Awards.* A list of the numbers of the various decorations and awards conferred appears in § 7. following.

§ 3. Naval Defence.

1. **State Systems.**—Information regarding naval defence systems prior to 1901 will be found in Official Year Book No. 2, p. 1084.

2. **The Present System.**—(i) *General.* (*a*) *Royal Australian Navy up to end of* 1939–45 *War.* An outline of the development of Australian Naval policy was given in Official Year Book No. 3, p. 1060 and No. 12, p. 1012. Some account of the building of the Australian Fleet, the proposed and modified cost thereof, the compact with the Imperial Government, etc., appears in Official Year Book No. 15, pp. 921 *et seq.* An account of the growth and activities of the Royal Australian Navy during the 1939–45 War is given in Official Year Book No. 36, pp. 1023 *et seq.*

(*b*) *Post-war Programme.* In June, 1947 the post-war defence policy of the Commonwealth Government was announced by the Minister for Defence. A sum of £250,000,000 was to be expended over a period of five years in the carrying out of an approved programme (*see* § 1. 3 (ii) above). Of this amount, the Navy was to receive £75,000,000 allotted at the rate of £15,000,000 annually.

The following is a summary of the naval programme :—

(1) Ships in Commission—

Squadron : It is proposed that by the end of the programme, the Squadron should consist of :—2 Light Fleet Carriers, 2 Cruisers, 6 Destroyers.
Escort Forces : 3 Frigates.
Surveying Duties : 3 Survey ships and their tenders.
Training Ships : 1 Frigate, 2 Australian Minesweeping Vessels, 3 Air/Sea Rescue Vessels.
Auxiliary Vessels : 1 Ocean-going Tug, 1 Ammunition Carrier, 2 Boom Defence Vessels.

(2) Ships to be retained in Reserve and maintained in good condition against any future emergency—

One Cruiser, 2 Destroyers, 6 Frigates, 31 Australian Minesweepers, 39 Miscellaneous Vessels.

(3) Personnel—The total personnel required for the Royal Australian Naval Forces in 1947–48, exclusive of war commitments, is 10,450, comprising 4,040 sea-going forces and 6,410 for shore establishments and pools. The comparable figures to be reached in 1951–52 are 6,756 sea-going forces and 7,997 for shore establishments and pools—a total of 14,753.

(4) Naval Aviation—The first stage of the naval aviation plan is proposed to be implemented in 1947–48. This includes the acquisition (but not the commissioning) of the first carrier, the placing of the order for initial aircraft, and the setting up of recruiting, training and stores establishments for the naval aviation organization. The personnel required in the first year is 448, rising to 3,936 in 1951–52. The amounts provided over the five years for naval aviation total £11,976,000 for capital expenditure and £11,432,000 for maintenance.

(5) Ship Construction and Repair—Provision is made for the maintenance in Australia of a nucleus ship construction and repair industry capable of expansion in war. An average sum of £2,500,000 is proposed to be expended annually on the completion of the present destroyer programme of two under construction and four to be laid down. This will make possible a continuous building programme at Cockatoo Dockyard, Sydney, and the Naval Dockyard at Melbourne.

(6) Shore Establishments—There will be the shore establishments essential for bases for commissioned ships and to provide administrative storing, repair and training facilities.

(c) *Naval Aviation.* Aircraft having become integral elements of a naval force, and, as the modern fleet is built around aircraft carriers, the main feature of the naval programme is the provision of two Light Fleet Carriers, each with a war-time complement of 36 aircraft. The status of Naval Aviation in relation to the Air Force is still under consideration.

(d) *The Relation of New Weapons.* Careful consideration has been given to the implications of new weapons, and the decisions in regard to the Navy are based on the broad conclusions of the great naval powers that these weapons should be introduced by the normal process of evolution, first into existing ships, and later perhaps into an entirely new form of fighting ship. The same authoritative opinion is of the view that there will be no rapid development which will render vessels such as carriers, cruisers and destroyers obsolete within the near future.

(e) *Manus Island* (*Admiralties*). It is proposed to establish an R.A.N. base at Manus Island, which will replace the present New Guinea Base at Dreger Harbour, New Guinea.

(ii) *Naval Board.* With the introduction of a Naval Aviation Branch to the Australian Navy, a Naval Member for Air has been added to the Board which now consists of the Minister for the Navy with four Naval Members, one Finance Member and the Secretary, Department of the Navy (ex-officio); the seat of administration remains at Melbourne.

(iii) *Naval College.* Twenty-eight Cadet Midshipmen entered the Naval College for training in the year commenced January, 1948. In addition, there were six seventeen-year-old youths who entered for training for the Supply and Secretariat Branch. This is the largest number of entries since the year 1919, when 32 Cadets were admitted.

(iv) *Training Establishments.* Flinders Naval Depot, Victoria, remains the principal training establishment for ratings in the permanent forces, while several advanced training schools are established in Port Jackson, New South Wales.

(v) *System of Payment.* Since the close of hostilities in August, 1945, the entire pay code of the R.A.N. has been revised and a new code is now operative. The Government is at present giving active consideration to the change-over of the system of deferred pay for permanent personnel to a scheme of pensions comparable to the pension system already existant in the Royal Navy.

(vi) *The Naval Station.* On 28th March, 1947 the following limits of the Australian Naval Station were defined :—

East—From the equator at 169° East, south to 1° South, thence east to 170° East, thence south along this meridian to 30° South, thence to 45° South, 160° East, thence south along this meridian.

West—From 13° South, 95° 15′ East, south along this meridian to 30° South, thence west along this parallel to 80° East, thence south.

North—From the equator at 169° East to 134° East, thence to 5° North, 127° East, thence to 4° 15′ North, 120° East, thence to 2° North, 120° East, thence to 7° 45′ South, 115° 50′ East, thence through centre of Lombok Strait to 10° South, 115° 50′ East, thence to 13° South, 95° 15′ East.

(vii) *BCOF.* The contribution of the R.A.N. to the Occupational Forces of Japan early in 1948 was the maintenance of two destroyers on the Japanese Station and the constant employment of H.M.A.S. *Kanimbla* as a troopship.

3. **Ships of the Royal Australian Navy.**—The following table shows particulars of ships of the R.A.N. in commission and in reserve in October, 1947 :—

SHIPS OF THE ROYAL AUSTRALIAN NAVY, OCTOBER, 1947.

Vessel.	Description.	Displacement.	Power.
In Commission—		Tons.	H.P.
Australia	Cruiser	9,870	80,000

4. **Strength of Royal Australian Navy.**—The strength of the Royal Australian Naval forces, both permanent and reserves, at 31st December, 1947 is shown below :—

STRENGTH OF ROYAL AUSTRALIAN NAVAL FORCES (PERMANENT AND RESERVES), 31st DECEMBER, 1947.

Particulars.	Numbers Borne.		
	In Training.	Officers.	Men.
Royal Australian Navy—Sea-going	..	621	10,036
Emergency List ..	..	45	..
Retired	..	9	..
Royal Australian Naval Auxiliary Services ..	..	13	45
Cadet Midshipmen undergoing training at R.A.N. College	77	..	..
Royal Australian Naval Reserve (Sea-going) ..	..	51	..
Royal Australian Fleet Reserve	..	..	20
Royal Australian Naval Reserve	..	47	84
Royal Australian Naval Volunteer Reserve ..	..	61	4
Total	77	847	10,189

5. **Casualties, 1939–45 War.**—A table showing the numbers of casualties in the European and Pacific zones of operations is included in § 6.

6. **Decorations and Awards, 1939–45 War.**—Particulars of decorations and awards appear in § 7. following.

§ 4. Air Defence.

1. **General.** A statement respecting the preliminary steps taken in connexion with the development of air defence will be found in Official Year Book No. 18, p. 610, and one on the expansion and development, and zones and operations of the Royal Australian Air Force during the 1939–45 War appears in Official Year Book No. 36, p. 1027.

2. **Administration and Organization.**—The Department of Air is responsible for policy, for organization and control of the Royal Australian Air Force. The Air Board is responsible, subject to approved policy, for the control and administration of the Royal Australian Air Force, and is constituted as follows :—Chief of the Air Staff, Air Member for Personnel, Air Member for Engineering and Maintenance, Air Member for Supply and Equipment, and Finance Member. The Secretary, Department of Air, is ex-officio a member of the Air Board.

Head-quarters of the Royal Australian Air Force is located at Melbourne. An Overseas Head-quarters is located at London and an Air Attaché at Washington, U.S.A.

With the exception of certain technical units which are allotted to the direct command of a Maintenance Group and those units (including three fighter Squadrons) located in Japan with the British Commonwealth Occupation Forces, the units of the Royal Australian Air Force are organized in five geographical areas throughout Australia.

The geographical areas of command are—

Southern Area—Head-quarters Southern Area controls Air Force units in Victoria, Tasmania and South Australia.

Eastern Area—Head-quarters Eastern Area controls Air Force units in New South Wales and Southern Queensland.

North-Eastern Area—Head-quarters North-Eastern Area controls Air Force units in northern Queensland, New Guinea and adjacent islands.

North-Western Area—Head-quarters North-Western Area controls Air Force units in Northern Territory.

Western Area—Head-quarters Western Area controls Air Force units in Western Australia.

The organization of the Royal Australian Air Force includes the following types of units :—

(*a*) R.A.A.F. Stations ;
(*b*) Bomber, Fighter, Transport, Tactical Reconnaissance, Survey, Target Towing, Communication and Search and Rescue Squadrons ;
(*c*) Aircraft Depots ;
(*d*) Stores Depots ;
(*e*) Transportation and Movement Offices ;
(*f*) Flying Training, Ground Training, Navigation, Radio and Air Armament Schools ;
(*g*) Royal Australian Air Force College ;
(*h*) Telecommunication Units.

3. **Aircraft.**—Some of the aircraft which are at present being used in the Royal Australian Air Force are Mustangs (fighters), Lincolns, Liberators, Mosquitos and Beaufighters (bombers), Dakotas (transports), Catalinas (general reconnaissance aircraft), and Ansons, Tiger Moths, Oxfords and Wirraways (training aircraft).

4. **Establishment.**—The present interim establishment of the Royal Australian Air Force is approximately 15,000 officers, members of R.A.A.F. Nursing Service and airmen. The interim establishment is being decreased continually with the completion of many war-time commitments and will be reduced to a Permanent Air Force establishment of approximately 12,000 officers, members of R.A.A.F. Nursing Service and airmen, plus officers and airmen of the Citizen Air Force.

5. **Casualties, 1939–45 War.**—For details of casualties incurred by R.A.A.F. personnel during the 1939–45 War *see* § 6. following.

6. **Decorations and Awards, 1939–45 War.**—The numbers of decorations and awards won by members of the R.A.A.F. during the 1939–45 War are shown in § 7. following.

§ 5. Enlistments in the Australian Services.

1. **Net Enlistments.**—The following table shows the number of net enlistments for full-time duty in each of the Services as at various dates in the years 1939 and 1941 to 1947. " Net enlistments " represents " gross enlistments " less discharges and deaths, and may be regarded as a measure of the strengths of the Services at those dates. It should be remembered, however, that deductions are not made for prisoners-of-war, deserters, and personnel absent sick, without leave, etc. and the figures are therefore higher than the " effective " strengths at the same dates. Totals for the last two years include British Commonwealth Occupation Force and Interim Force personnel.

NET ENLISTMENTS : AUSTRALIAN SERVICES.

At End of—	Royal Australian Navy.		Australian Military Forces.		Royal Australian Air Force.		All Services.		
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Persons.
Sept., 1939 ..	7,982	..	3,432	..	3,489	..	14,903	..	14,903

June, 1947 ..	11,145	31	31,375	817	11,943	101	54,463	949	55,412

2. **Gross Enlistments, 1939–45 War.**—The gross enlistments of war service personnel, plus permanent personnel at the beginning of the war, plus gross enlistments in the permanent forces, about the end of 1945 or early in 1946, numbered 993,000, and of these 66,100 were of females. Totals for each service, males and females respectively, were :—R.A.N., 45,800, 3,100 ; A.M.F., 691,400, 35,800 ; R.A.A.F. 189,700, 27,200.

§ 6. Casualties : Australian Services, 1939-45 War.

1. **General.**—This section contains revised information, in greater detail than was published in the previous issue of the Official Year Book, on casualties to members of each of the Australian Fighting Services during the 1939–45 War. The information is dissected into nature of casualty, theatre of war and zone of operations. A separate table is devoted to each of the following classes of casualties—(i) Battle Casualties, (ii) Non-battle Casualties on Operations or in Operational Areas, and (iii) Casualties not on Operations or in Operational Areas. A summary table is also included, showing all casualties in each service according to the nature of casualty. The figures for the respective Services are as comparable as inherent differences in the nature of the Services, their methods of operation and their systems of records will permit. The letterpress accompanying each table contains such explanation as is considered necessary to amplify or qualify the figures shown.

All casualties to servicemen and women during the 1939–45 War are included in these tables. Deaths and illnesses, etc. from natural causes are *not* included, and complete information for all services is not available. Deaths, however, numbered 3,667 (R.A.N., 148 ; A.M.F., 3,155 ; R.A.A.F., 364) and illnesses for the A.M.F. alone numbered 1,557,651 cases.

It should be noted that while the figures for "Killed" and "Prisoners-of-war, escaped, etc." refer to *persons*, those for "Wounded and injured" refer to *cases*. Thus totals represent the number of casualties, and not the number of persons who suffered therein.

2. **All Casualties, Australian Services, 1939–45 War.**—The following table is a summary of all casualties to members of the Fighting Services during the 1939–45 War.

ALL CASUALTIES: AUSTRALIAN SERVICES, 1939–45 WAR.(*a*)

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
Killed, died of wounds, injuries, etc. ..	2,004	21,558	10,264	33,826
Prisoners-of-war escaped, recovered or repatriated	263	20,920	1,876	23,059
Wounded, injured, etc. (cases) ..	579	177,049	3,236	180,864
Total	2,846	219,527	15,376	237,749

(*a*) Excludes deaths and illnesses from natural causes.

3. **Battle Casualties, Australian Services, 1939–45 War.**—The table hereunder shows particulars of battle casualties under the headings of "War against Germany" and "War against Japan". The following brief explanations are considered necessary for the sake of preciseness.

R.A.N.: "Wounded and injured" includes all cases of wounded and injured in action *and on service.* Separation into operational and non-operational areas is not practicable.

A.M.F.: Figures include 222 deaths and 34 wounded in sinking of A.H.S. *Centaur* off the east coast of Australia and 15 deaths and 138 wounded in air raids on Darwin and Port Hedland.

R.A.A.F.: Figures refer to casualties incurred in operations against the enemy.

BATTLE CASUALTIES: AUSTRALIAN SERVICES, 1939–45 WAR.(*a*)

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
WAR AGAINST GERMANY.				
Killed—				
Killed in action and missing, presumed dead	873	2,688	5,036	8,597

Total killed	876	3,539	5,116	9,531
Prisoners-of-war escaped, recovered or repatriated	26	7,055	1,459	8,540
Wounded and injured in action (cases)	26	8,578	529	9,133
Total	928	19,172	7,104	27,204

(*a*) Excludes deaths and illnesses from natural causes.

BATTLE CASUALTIES: AUSTRALIAN SERVICES, 1939–45 WAR(*a*)—*continued*.

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
WAR AGAINST JAPAN.				
Killed—				
Killed in action and missing, presumed dead	852	8,635	1,140	10,627
Died of wounds	38	1,093	65	1,196
Died of wounds while prisoner-of-war	63	48	126	5,597
Died of sickness, disease and injury while prisoner-of-war		5,360		
Total killed	953	15,136	1,331	17,420
Prisoners-of-war escaped, recovered or repatriated	237	13,865	417	14,519
Wounded and injured in action (cases)	553	13,275	253	14,081
Total	1,743	42,276	2,001	46,020
ALL THEATRES OF WAR.				
Killed—				
Killed in action and missing, presumed dead	1,725	11,323	6,176	19,224
Died of wounds	41	1,794	123	1,958
Died of wounds while prisoner-of-war	63	103	148	5,769
Died of sickness, disease and injury while prisoner-of-war		5,455		
Total killed	1,829	18,675	6,447	26,951
Prisoners-of-war escaped, recovered or repatriated	263	20,920	1,876	23,059
Wounded and injured in action (cases)	579	21,853	782	23,214
Total	2,671	61,448	9,105	73,224

(*a*) Excludes deaths and illnesses from natural causes.

4. **Non-Battle Casualties on Operations or in Operational Areas, Australian Services, 1939–45 War.**—The next table shows particulars of casualties, other than in battle, incurred on operations or in operational areas, classified according to theatre of war.

R.A.N.: "Killed, etc." represents mainly fatal accidents on service, including drownings. All personnel injured on service are included in the previous table.

A.M.F.: Figures include all casualties in operational areas other than actual battle casualties.

R.A.A.F.: Figures represent casualties in operational areas, but not directly the result of operations. They include all casualties in the United Kingdom other than those incurred in operations.

NON-BATTLE CASUALTIES ON OPERATIONS OR IN OPERATIONAL AREAS: AUSTRALIAN SERVICES, 1939–45 WAR.(a)

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
WAR AGAINST GERMANY.				
Killed, died of injuries, etc.	40	352	1,496	1,888
Wounded, injured, etc. (cases) ..	..	9,196	845	10,041
Total	40	9,548	2,341	11,929
WAR AGAINST JAPAN.				
Killed, died of injuries, etc.	45	736	689	1,470
Wounded, injured, etc. (cases) ..	..	24,200	633	24,833
Total	45	24,936	1,322	26,303
ALL THEATRES OF WAR.				
Killed, died of injuries, etc.	85	1,088	2,185	3,358
Wounded, injured, etc. (cases) ..	..	33,396	1,478	34,874
Total	85	34,484	3,663	38,232

(a) Excludes deaths and illnesses from natural causes.

5. **Casualties not on Operations or in Operational Areas, Australian Services, 1939–45 War.**—The figures hereunder relate to all casualties other than those in paras. 3 and 4 above.

R.A.N.: "Killed, etc." represents fatal accidents mainly ashore. All personnel injured on service are included in Battle Casualties.

A.M.F.: Figures include all casualties during training and from traffic accidents, etc.

R.A.A.F.: Figures for "Australia" include all training casualties in Australia; those for "Overseas" include all casualties incurred in Canada and Rhodesia. Only the more serious cases which were reportable to next-of-kin are represented. Figures for others are not available.

CASUALTIES NOT ON OPERATIONS OR IN OPERATIONAL AREAS : AUSTRALIAN SERVICES, 1939–45 WAR.(*a*)

Particulars.	Royal Australian Navy.	Australian Military Forces.	Royal Australian Air Force.	All Services.
		AUSTRALIA.		
Killed, died of injuries, etc.	64	1,795	1,441	3,300

(*a*) In addition, 45 decorations or awards were made to British personnel in Australian Services, and one to a civilian with the Australian Services. (*b*) In addition, 18 decorations or awards were made to British or Allied personnel on loan to A.M.F., 41 to civilians with A.M.F., and 363 to natives with A.M.F. (*c*) Excludes decorations and awards to R.A.F. personnel on loan to R.A.A.F. and to members of R.A.F. who were Australian by birth—particulars are not available.

Foreign awards include those of the United States of America, Russia, Greece, Poland France, Holland, Belgium and Lebanon.

§ 8. Australian Troops (1914–18 War).

Particulars of the enlistments, casualties, honours and decorations won, and engagements of the Australian Imperial Force during the 1914–18 War are given in Official Year Book No. 16, pp. 628 *et seq.*

§ 9. Department of Munitions.

1. **General.**—Information regarding munitions production prior to the 1939–45 War appears in earlier issues of this publication (*see* No. 18, pp. 612–616 and No. 32, p. 241). A statement of the main developments in the organization and output of the Department of Munitions during the 1939–45 War—covering the period to 30th June, 1945—will be found in Official Year Book No. 36, pp. 1037–1068.

The end of the war with Japan, although it came suddenly on 15th August, 1945, had been anticipated, so that departmental plans for a "tapering off" of munitions production had already been prepared. An essential part of the plan was the lifting of "controls" to the greatest extent practicable, so that civilian requirements of manufactured goods might be put into production at the earliest possible moment, thus providing immediate employment for the displaced labour. So effective was the transition of the munitions organization from war to peace-time conditions that the change-over passed unnoticed in its effect upon employment. Nevertheless, the personnel employed, which stood at 28,398 on 30th June, 1945, had become 12,413 by 30th June, 1946, including some 3,000 engaged solely upon manufacturing for commercial industry.

2. **Functions of the Department.**—An outline of the functions of the Department was given in Year Book No. 36. They are founded on the principle that the Department acts as the medium for producing the munitions requirements of the armed forces, and such other requirements as may be found necessary. Responsibility for the provision of funds necessary to meet all expenses incurred in production, or in the development of productive capacity in connexion with any demand for supplies, rests on the body or authority making the demand.

3. **Controls Exercised by the Department of Munitions.**—As the war position became easier, the Department was able progressively to relax the controls operated by it during the war. On 3rd December, 1945 any remaining controls of materials (including ferrous and non-ferrous metals) over which jurisdiction had still been retained were transferred, as far as the Commonwealth was concerned, to the Department of Works and Housing.

Control of machine tools, ball and roller bearings, electrical machinery, and radio and signal parts was relinquished by the end of December, 1945, the control of hand tools on 17th June, 1946, and of industrial chemicals in October, 1945. In March, 1946 control of timber was transferred to the Department of Works and Housing.

4. **Government Munitions Factories and Establishments.**—On the defeat of Germany, planning commenced for a reduction of war activities in the factories and a readjustment towards peace-time activities. At 30th June, 1945 there were 23 of the war-time peak number of 47 factories still in operation, but 14 ceased manufacturing during the year, leaving 9 to be continued as a post-war organization.

The following is a list of the 9 remaining munitions factories which operated together with the Drawing Office and ancillary Stores and Transport Branches, showing capital valuations as at 30th June, 1946.

GOVERNMENT MUNITIONS FACTORIES AND ESTABLISHMENTS: CAPITAL VALUATIONS, 30th JUNE, 1946.

Total	252,235	16,692,811	18,859,620	35,804,666

(a) Included in Ordnance Factory, Maribyrnong.

5. **Munitions Production.**—Substantial decreases in practically all grades of weapons and ammunition followed the falling-off in the demands received from the Services during the year 1945–46. Main items produced were rifles, small arms and light anti-aircraft ammunition, as well as a certain amount of bombs and mines, machine guns and mountings. There was no production of mortars, Hispano and Polsten cannon, Bofors, anti-aircraft, or tank-attack guns.

Other types of production included electrical equipment, field cable, engineering equipment, fabric mesh, trailers, refrigeration units, radio transmitters and receivers, signal equipment and small craft.

6. **Value of Output.**—The following figures of value of output of the Government munitions establishments provide an over-all picture of the rise and fall in munitions production between 1939 and 1946. They cover not only production connected with the fulfilment of Service orders for munitions, but also the manufacture of equipment such

as tools and gauges for use within the factories, as well as work performed on capital account, e.g., manufacture of machine tools, plant installation costs, and minor construction work. For 1945–46 the figures include £606,000 on commercial account. As far as the Laboratories are concerned, the figures cover expenditure connected with the scientific functions of the establishment, as well as costs of production of respirators, and repair, reconditioning and servicing of instruments, etc.

The figures do not represent value of finished product in any one year, but are the total costs of production during each of the years 1939–40 to 1945–46 and include, therefore work in progress at the end of each year.

To avoid over-statement, stores or components issued by one Government factory to another have been excluded from the value of production of the factory which received them.

GOVERNMENT MUNITIONS FACTORIES : VALUE OF OUTPUT.

Year.	Ammunition.	Explosives.	Ordnance.	Small Arms.	Munitions Laboratories.	Total.
	£	£	£	£	£	£
1939–40 ..	1,501,493	729,046	846,998	421,448	192,895	3,691,880

7. **Employment.**—Employment in administrative sections of the Department of Munitions and at munitions factories and establishments at the 30th June, 1939 to 1946 was as follows. The table illustrates the rise and decline of female employment in the factories.

ADMINISTRATIVE OFFICES AND GOVERNMENT MUNITIONS FACTORIES AND ESTABLISHMENTS : EMPLOYMENT.

30th June—	Administrative Offices.			Government Munitions Factories and Establishments.			Total.		
	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.
1939	12	6	18	4,481	574	5,055	4,493	580	5,073
1940	199	94	293	10,315	1,642	11,957	10,514	1,736	12,250

1942–43	1,725,626	17,470,114	529,237	19,724,977
1943–44	1,953,774	14,827,086	83,458	16,864,318
1944–45	1,707,721	8,632,992	56,695	10,397,408
1945–46	1,291,521	4,566,846	1,497	5,859,864

9. **Production Directorates.**—(i) *General.* During the war years eight directorates were set up to develop industries for the production of various groups of munitions. At the peak period of production these directorates and associated directive bodies totalled sixteen. By June, 1945 twelve of them were still active. At 30th June, 1946 seven production directorates were still in existence—Gun Ammunition, Explosives Supply, Ordnance Production, Machine Tools, Radio and Signal Supplies, Small Craft and Materials Supply. A brief description of the operations of these directorates follows.

(ii) *Gun Ammunition.* Created in May, 1940, this directorate came into being when arrangements had been made for the creation and supervision of annexes used in producing bombs, fuses, mines, shot and shell. During the year 1945–46 annual capacity was greatly reduced following liquidation and transfer of production units, though some programmes, such as 25-pounder shell, fuses, bright nuts and bolts, etc., were continued. When production in annexes ceased, plant and installations were released in a rapid transition from war to peace production.

(iii) *Explosives Supply.* The objectives of this directorate were the manufacture of high explosives, and the filling of ammunition and pyrotechnic stores for the fighting services.

During 1945–46 the war-time production programme tapered off rapidly. The peace-time production of ammonium sulphate, methanol, etc., was being proceeded with, the necessary additions being undertaken at existing plants.

(iv) *Ordnance Production.* This directorate's function was to create and maintain production of various types of equipment for the fighting forces. The falling away in production is illustrated by the fact that, whereas at the beginning of July, 1945 the programme consisted of 195 active projects (value £6,500,000), in June, 1946 only 27 of these projects remained, the value being less than £200,000.

(v) *Machine Tools and Associated Equipment.* This directorate controlled production, reconditioning and disposal of machine tools, ball-bearings, electrical equipment, hand tools, etc. Up to 30th June, 1946, 24,214 machine tools were issued to the fighting services ; 1,380 to other governments ; 12,655 to Commonwealth departments other than that of Munitions ; 54,422 to the Department of Munitions ;, and 436 to Technical Schools. Deliveries within Australia totalled 2,596. Machines sold to Australian firms and others numbered 13,025, valued at £3,455,149 ; 12,588 were sold at disposal sales.

(vi) *Radio and Signal Supplies.* The function of this directorate was to organize and control production in commercial industry of radar equipment, radio frequency communication equipment, and non-radio signal equipment, for the Services.

At the end of June, 1945 the Directorate still had 151 projects in hand. Undelivered equipment at that time totalled £5,868,000, and deliveries were being made at the rate of £400,000 worth of equipment per month, with about £250,000 worth of orders being received monthly.

At the end of the war, about £5,500,000 worth of electronic equipment was still on order. Arrangements were put in hand to proceed with the production of civilian radios in anticipation of the changing over of radio firms from defence to civil production.

The total value of equipment delivered to the Services to 30th June, 1946 was £17,500,000.

(vii) *Small Craft Construction.* Following the end of the war in the Pacific, many orders which had been received from the Royal Australian Navy, the Australian Army, and United States of America authorities were cancelled. A summary of production as at 30th September, 1945 showed that 1,823 powered and 4,165 non-powered vessels had been completed and handed over, with 29,366 miscellaneous craft. By 30th June, 1946 the only outstanding Service orders were—for the Australian Army, 10 craft (9 complete); Royal Australian Navy, 27 craft (3 complete); Royal Australian Air Force, 2 craft; Royal Navy, 2 craft; and Netherlands East Indies, 6 craft (5 complete).

(viii) *Materials Supply.* The primary function of this directorate was the bulk purchase and distribution of reserves of materials required by munitions factories and annexes for production. Under the Control of Essential Materials Order about 600 items, including iron and steel, non-ferrous metals and chemicals were under control. Following the end of hostilities, controls on solder, horse-shoe and chain manufacture and collapsible tubes were revoked in September, 1945. Sales in July and August, 1945 of surplus materials such as copper wire bars, glycerine, zinc, soda nitrate, antimony, tin, zinc oxide, tallow, and aluminium powder amounted to £3,898,099. The directorate closed down on 7th November, 1945. Sales during the last month of its activity totalled £74,000.

10. **Liquidations.**—The total cost of surplus munitions property disposed of during the twelve months ended 30th June, 1946 was £19,000,000. The value of the balance of declared property for disposal at cost at 30th June, 1946 was £20,500,000.

11. **Directorate of Stores and Transport.**—This directorate's functions during the war included the warehousing of munitions materials and products, and their transport by rail, road or sea, as well as the storage and transport of materials and products for other departments. When the war ended, the Department of Munitions occupied 4¾ million square feet of storage space, of which 3¾ million square feet was Government-owned and 1 million held under tenancy. By 30th June, 1946, 550,000 square feet of the latter had been vacated and returned to the owners.

12. **Finance and Accounts.**—(i) *General.* During 1945–46 practically all the energies of the Branch were devoted to winding-up war-time operations. These activities included:—(*a*) the settlement of claims by contractors; (*b*) termination of war-time agreements; (*c*) securing repayment of loans to contractors for war purposes; (*d*) closing down of annexes and consequent adjustment of advance accounts.

(ii) *Expenditure.* (*a*) *Summary.* In the table following the total expenditure incurred on account of munitions in 1945–46 is compared with the previous year:—

MUNITIONS: TOTAL EXPENDITURE.

Particulars.	1944–45.	1945–46.
	£'000.	£'000.
Parliamentary Appropriations (including Reciprocal Lend-Lease) and Lend-Lease	25,620	23,656
Trust Fund Accounts	83,083	46,059
Munitions Department for other Administrations	2,851	3,924
Total	111,554	73,639

Details of expenditure under Parliamentary Appropriations may be found in § 6, Chapter XV.—"Public Finance".

(*b*) *Trust Funds.* The table hereunder shows the comparison between expenditure from the various Munitions Trust Funds during the years 1944–45 and 1945–46 :—

MUNITIONS : TRUST FUND EXPENDITURE.

Fund.	1944–45.	1945–46.
	£'000.	£'000.
Government Munitions Factories and Establishments ..	20,501	14,245
Manufacture of Munitions	53,831	27,064
Machine Tools	2,675	1,019
Materials	6,074	3,708
Aluminium Production	2	23
Total	83,083	46,059

13. **Australian Aluminium Production Commission.**—Basic plans for the manufacture of aluminium ingot in Australia, as a defence measure designed to make this country independent of overseas supplies, were approved by the Commonwealth Government in April, 1941. In April, 1944 an agreement was made between the Commonwealth and Tasmanian Governments for the establishment of the industry in Tasmania, cheap power being available from the hydro-electric resources of that State. Covering legislation was introduced, and received Royal Assent on 7th December, 1944. The Australian Aluminium Production Commission was constituted on 1st May, 1945; it consists of two representatives and two deputies acting for the Commonwealth, and an equal number of representatives and deputies for Tasmania.

Workable deposits of bauxite (aluminium ore) exist in Victoria, New South Wales and Tasmania, the highest grade deposits being located in the Boolarra-Mirboo North district of Victoria. Deposits also exist in Queensland and Western Australia.

Analysis of Tasmanian and Victorian bauxite samples sent to New York for testing has demonstrated that it is possible to establish an Australian aluminium production industry on a sound and practical basis. Finance for the undertaking is provided by a fund to which contributions on a £1 for £1 basis are made by the Commonwealth and Tasmanian Governments.

§ 10. Aircraft Production.

1. **General.**—An account of aircraft production activities during the 1939–45 War and up to the year 1945–46 appears in Official Year Book No. 36, pp.1068–1073. In this issue activities during 1946–47 are dealt with.

From 1st July to 31st October, 1946 all Commonwealth Government functions in regard to the manufacture of fighter, bomber and trainer aircraft and of aero engines and of other aircraft components required for Royal Australian Air Force purposes were administered by the Department of Aircraft Production. Aircraft repair and overhaul activities carried out for the R.A.A.F. in civilian establishments, as distinct from the Service workshops conducted by the R.A.A.F., were also a function of the Department of Aircraft Production, together with the responsibility of supplying aircraft and engine spare parts.

As from 1st November, 1946 the activities of the Department of Aircraft Production and those of the Department of Munitions were amalgamated and the aircraft production and repair and overhaul activities were conducted by the Division of Aircraft Production of the Department of Munitions.[*]

2. **New Aircraft Projects.**—On 23rd August, 1946 Cabinet approved the production in Australia of jet-propelled fighter aircraft to introduce into the R.A.A.F. the most modern types of operational aircraft. The project was based upon (*a*) the manufacture by the Commonwealth Aircraft Corporation of 60 Rolls-Royce "Nene" turbo-jet engines, plus spares; and (*b*) the manufacture by De Havilland Aircraft Pty. Ltd. of 50 De Havilland "Vampire" jet-propelled fighter aircraft, plus spares, including the installation in the aircraft of Nene engines as manufactured by the Commonwealth Aircraft Corporation.

In approving these projects, Cabinet was influenced by the necessity (*a*) to commence the replacement of reciprocating-engined aircraft with the modern turbine-jet types in order to keep the R.A.A.F. up to date; (*b*) to provide a programme to assist in maintaining in work two of the major aircraft production units retained in accordance with the National Defence Policy of having available at all times a nucleus of aircraft manufacturing capacity whose output could be rapidly expanded in an emergency; (*c*) to establish and maintain potential capacity for the manufacture and development of the latest types of jet-propelled aircraft; and (*d*) to give practical effect to the decision to equip the R.A.A.F., for strategic reasons, with aircraft and engine types which were also standard equipment for the Royal Air Force.

The gas-turbine engine was developed during the years immediately prior to and following the outbreak of the 1939-45 War and was brought into operational use by both the Germans and the Allied Forces before the war in Europe ended. It was recognized as being a revolutionary new type of prime mover that was expected quickly to become standard equipment for fighter types of aircraft and eventually to supersede the piston type engine for all high speed operational aircraft. Its production introduced new workshop techniques and new alloy materials which were unknown to Australian industry. Consequently a strong team of engineers and workshops technicians from the Commonwealth Aircraft Corporation's factory was sent to the United Kingdom early in 1946 to make a detailed study of the production equipment and manufacturing processes used in the Rolls-Royce Company's Nene engine factory in order to supervise the introduction of the new project into the Australian workshop on their return. The Vampire aircraft is a single-engined, single-seated fighter with maximum continuous level speed of approximately 550 miles an hour, operational service ceiling of 40,000 feet, and economical cruising range of 1,000 miles.

3. **Aircraft, Engine and Other Production.**—Aircraft manufactured during 1946-47 comprised thirteen Lincoln four-engined heavy bombers from the Government Aircraft Factories, thirteen Mosquito fighter-bomber aircraft by De Havilland Aircraft Pty. Ltd. and four Mustang fighters and one Wirraway advanced trainer by the Commonwealth Aircraft Corporation. The Tudor project, which had been developed by the Government aircraft factories on the basis of production of twelve military transport aircraft, was restricted during the year to not more than two aircraft.

Production of Rolls-Royce Merlin engines continued at the Aircraft Engine Factory conducted at Lidcombe, New South Wales, by the Commonwealth Aircraft Corporation for the Commonwealth. These engines are required for installation in Lincoln aircraft but, because the rate of production of that type of aircraft had been restricted to a minimum to meet R.A.A.F. requirements, the Merlin engine production programme has also been retarded and the only engine completed during 1946-47 was one required by the Government Aircraft Factories for engineering purposes.

During 1946–47 annexes established during the war for the manufacture of propellers, retractable undercarriages and heavy forgings in light alloy metals continued in operation as part of the nucleus of aircraft manufacturing capacity retained for policy reasons.

---

[*] As from the beginning of April, 1948 the Supply functions of the Department of Supply and Shipping were also amalgamated with the functions of the Department of Munitions and the Division of Aircraft Production became a section of the Department of Supply and Development.

The following table shows the numbers of the various types of aircraft and engines produced during the years 1939–40 to 1946–47.

AIRCRAFT AND ENGINES : PRODUCTION, AUSTRALIA.

Type.	1939–40.	1940–41.	1941–42.	1942–43.	1943–44.	1944–45.	1945–46.	1946–47.

DH. Dragon	..	..	..	87	..	..	..	..
Mosquito	..	..	..	..	6	80	91	13
Gliders	..	..	..	6	2	..	..	..
Total	83	691	1,091	549	456	529	291	31
ENGINES.								
Twin-row Wasp ..	..	..	66	231	343	228	2	..
Single-row Wasp ..	76	195	291	86	32	..	..	..
Gipsy Major	..	319	318	461	202	..	..	..
Rolls-Royce " Merlin " ..	..	..	..	..	..	..	..	1
Total	76	514	675	778	577	228	2	1

Of the total aircraft produced (3,721), 43 per cent. were operational type and 57 per cent. trainer type. Government aircraft factories produced 67 per cent. of the operational aircraft, the Commonwealth Aircraft Corporation Pty. Ltd. 21 per cent. and the De Havilland Aircraft Pty. Ltd. 12 per cent. The last two organizations shared the whole of the trainer production, 45 per cent. and 55 per cent. respectively.

4. **Repair and Overhaul.**—It is the policy of the R.A.A.F. as far as practicable to return aircraft and aero engines requiring major overhaul to the aircraft and engine manufacturing establishments in which they were produced. Certain other R.A.A.F. aircraft and engine repair and overhaul is also allotted to civilian contractors for policy purposes instead of being undertaken in the R.A.A.F workshops. Under this arrangement R.A.A.F. Dakota transport aircraft were repaired and overhauled in workshops conducted by the Division of Aircraft Production at Parafield, South Australia, and Lincoln heavy bomber aircraft at the Government Aircraft Factories at Fishermen's Bend. Twin-row Wasp engines are allotted for overhaul to the Commonwealth Aircraft Corporation's factory at Fishermen's Bend and Rolls-Royce Merlin engines are handled by the same company at the Lidcombe engine factory. During 1946–47, under an arrangement with the Royal Air Force Head-quarters at Singapore, twin-row Wasp engines commenced to arrive in Australia for overhaul at the Commonwealth Aircraft Corporation's plant at Fishermen's Bend.

5. **Beaufort Housing Project.**—When hostilities ceased in 1945, War Cabinet directed that surplus capacity becoming available in Munitions and Aircraft Production establishments could be used to relieve the acute housing position, if practicable. To this end, the Department of Aircraft Production had collaborated with the Department of Works and Housing and with the Victorian Housing Commission in the design of a prefabricated steel house which could be manufactured on factory mass production lines in the Government Aircraft Factories. A prototype of the house, erected in Melbourne in June, 1946 for public inspection, was very favourably received, but the Victorian Government refrained from placing an order for the large-scale production of the houses until the prospective availability of light gauge sheet steel (then in extremely short supply), as required for the walls and roof panels of the house, had been thoroughly examined.

During February, 1947, however, an order for 5,000 Beaufort houses at a cost of £1,050 each—covering production and assembly on site but not site works (roads, paths, etc.) or land purchase—was placed on the Commonwealth by the Victorian Government through the Victorian Housing Commission. Acceptance of the order was approved by Cabinet during the same month and concurrently Cabinet approved the extension of the project to cover the production and erection of 5,500 houses for the War Service Homes Division of the Department of Works and Housing, at a cost of £1,100 each. These houses included certain refinements not provided for in the Victorian Housing Commission order, but essentially the houses were the same.

The establishment of facilities for the quantity production of the Beaufort house was immediately commenced, together with the procurement of supplies of raw materials and fittings and the manufacture of tooling. The project was being steadily developed, but the decision of the Victorian Government in January, 1948 to cancel the order for houses for the Victorian Housing Commission and to discontinue supplies of light gauge steel sheet to the Government Aircraft Factories for house construction brought about the abandonment of the whole project as from the completion of 85 houses, for which arrangements were already in hand.

6. **Australian Shipbuilding Board**.—(i) *General*. The Australian Shipbuilding Board was created on 26th March, 1941. The Board, which was directly responsible to the Minister and Director-General of Munitions, consisted of a Chairman, the Director of Shipbuilding, a person appointed on the nomination of the Naval Board, a public accountant known as the Finance Member, a person representative of the employees, and any other person considered necessary by the Minister.

Following an exhaustive survey made in order to select from existing shipyards those deemed most suitable for the Board's projected operations, the Government decided to provide financial assistance to the undermentioned contractors to enable them to expand their facilities to the required extent:—Mort's Dock and Engineering Co. Ltd., Sydney; Melbourne Harbour Trust Commissioners, Williamstown (now H.M.A. Naval Dockyard); and Evans Deakin & Co. Ltd., Brisbane. Facilities were also provided at Cockatoo Island, Sydney—which is Commonwealth property leased to the Cockatoo Docks & Engineering Co. Pty. Ltd. The Broken Hill Pty. Co. Ltd. shipyard at Whyalla, South Australia, was built at the Company's own expense. Arrangements were made between the Commonwealth and the State for expansion of the facilities at the New South Wales Government Engineering and Shipbuilding Undertaking, Newcastle.

(ii) *Construction Programme*. The original scheme was to undertake a long-range building programme covering the construction of 60 "A" class 9,000-ton standard merchant ships to be launched at the rate of twelve ships per annum, but the outbreak of war with Japan, and the consequent unprecedented volume of ship repair work which followed, rendered this impracticable.

It was finally decided to construct 13 "A" class 9,000-ton standard merchant ships, 10 "B" class 6,000-ton freighters, 10 "C" class 4,000-ton freighters, 10 "D" class 2,500-ton freighters, 10 "E" class 550-ton freighters, 32 300-ton wooden merchant ships, 3 "A" type ocean-going tugs, 3 "B" type harbour tugs, and a 1,000-ton steel floating dock.

At 30th June, 1946 the following portion of this programme had been completed—twelve "A" class vessels were finished and in service, and early completion of the thirteenth was expected; the frame of the first of the "B" class vessels was half finished, and prefabrication of the second was well advanced; design work of the "C" class ships was still in progress; three "D" class freighters had been put into service, three were within a month of launching, and work was going forward on two; more hull construction of "E" class ships was proceeding; two 300-ton wooden cargo vessels had been partly completed; and early handing over of the 1,000-ton floating dock was anticipated. The tug programme has been cancelled.

(iii) *Ship Repair Facilities*. This important phase of activity in the shipyards of the Commonwealth is well provided for in the following dry docks, which are capable of taking large merchant ships:—Cockatoo Docks, Sutherland, Fitzroy, Woolwich and Balmain Dry Docks—all in Sydney; Mort's Dock, Sydney; Newcastle Floating Dock; H.M.A. Naval Dockyard and Alfred Graving Dock, Williamstown; and Duke & Orr's Dry Docks, Melbourne.

From August, 1942 to 15th March, 1946, 12,160 Australian and Allied merchant ships of a total tonnage of 53,079,182 underwent repair and/or maintenance, while 1,869 merchant ships, totalling 6,464,211 tons, were dry-docked or slipped. During the same period an equal volume of Naval and other Service vessels also received attention.

§ 11. Expenditure on Defence.

Details of expenditure on Defence, War (1939–45) Services and Post-war Charges will be found in Chapter XV.—"Public Finance," A.—Commonwealth Finance, § 6, pp. 653–5.

§ 12. War Gratuities.

1. **1914-18 War.**—Reference is made in earlier issues of the Official Year Book (*see* No. 15, p. 930) to the bonus payable in accordance with the War Gratuity Acts of 1920 as a war service gratuity to soldiers and sailors who served in the 1914–18 War. Owing to limitations of space this information cannot be repeated, but it may be noted that the gratuity was paid in Treasury Bonds, maturing not later than 31st May, 1924, and bearing interest at 5½ per cent. In necessitous cases payment was made in cash when desired by the person entitled. The first gratuities were made available about the beginning of June, 1920. The total amount paid to 30th June, 1948 was £27,515,036 and bonds amounting to £11,790 had not been redeemed at that date.

2. **1939–45 War.**—Briefly, the War Gratuity Act 1945–47 provides for payment to members of the Forces of war gratuity (*a*) at the rate of £3 15s. per month of oversea service, subject to a qualifying period of 90 days continuous or 180 days in the aggregate in twelve months, and of certain subsequent periods in Australia, and (*b*) at the rate of 15s. per month of Australian service after 6th December, 1941, subject to a qualifying period of six months' service, other than that for which payment at the overseas rate is made. All members who perform oversea qualifying service will be paid a minimum of twelve months' gratuity at the oversea rate, irrespective of whether the full twelve months period had been completed or not.

In cases of death due to war service either overseas or in Australia, where members of the family were totally dependent on the deceased member, a minimum payment equivalent to three years' gratuity calculated at the oversea gratuity rate may be made. In respect of all other cases of death, overseas and in Australia, due to war service, gratuity at the rate accruing to the member at the date of notification of his death will be continued for a further seven months.

The period of entitlement to gratuity terminated at the date of discharge or on 30th June, 1947, whichever was the earlier. Payment will be made on 3rd March, 1951, or at earlier dates in certain circumstances, and will include compound interest at the rate of 3.25 per cent. per annum on the yearly credit balances. For greater detail on the provisions of the Act *see* Official Year Book No. 36, pp. 1073–4.

A Registrar of War Gratuities controls the register in which are kept the accounts of all persons entitled to war gratuity. The total liability on account of war gratuity is estimated to be about £80,000,000. Expenditure during the years 1945–46, 1946–47 and 1947–48 was, respectively, £143,285, £2,881,932 and £3,360,402. Provision is made for financing the Act by appropriation from Consolidated Revenue Fund and by borrowing. The War Gratuity Appropriation Act 1948 created a trust account for the payment of gratuities and, from credits of the Import Procurement Suspense, Marine War Risks Insurance, Overseas Shipping and War Damage Fund Trust Accounts, amounts totalling £17,000,000 in all were made available for that purpose during 1948–49. The total expenditure on war gratuities estimated for 1948–49 was £26,000,000.

CHAPTER XXVII.

REPATRIATION.

§ 1. General.

An outline of the activities leading up to the formation of the Commonwealth Repatriation Commission was given in Official Year Book No. 15, p. 931. Some account was given also in the Official Year Book referred to, and in subsequent issues, of the policy and general activities of the Department, while detailed information was incorporated in regard to such matters as sustenance rates and pensions to soldiers and dependants. (*See* Official Year Book No. 17, pp. 598–601.) In 1943 the Australian Soldiers' Repatriation Act was amended by the incorporation of the recommendations of the Parliamentary Committee appointed to inquire into pensions and repatriation benefits. A general increase was made of approximately 20 per cent. in the rates of war pensions and increases were also made in other repatriation benefits.

The main activities of the Repatriation Commission at 30th June, 1947 were confined to the grant, review and assessment of war and service pensions, the provision of medical treatment, payment of re-employment allowances, vocational training of the more seriously disabled members, the renewal and repair of artificial replacements and surgical appliances, the grant and review of sustenance and living allowances, and the administration of the Soldiers' Children Education Scheme.

§ 2. War Pensions.

1. **General.**—Provision for the payment of war pensions to soldiers and their dependants was made by the Commonwealth Parliament in the War Pensions Act 1914, which came into operation on 21st December, 1914. This Act was repealed in 1920 by the Australian Soldiers' Repatriation Act. Particulars regarding pensions payable under both these Acts as amended are given on page 210 of the Official Year Book No. 34. Owing to limitations of space only some of the main features relating to war pensions under the Australian Soldiers' Repatriation Act 1920–1947 are shown in the following paragraphs :—

(i) *Eligibility for Pension.* There has been a considerable widening of the provision in this respect, to the benefit, mainly, of members of the Citizen Military Forces who have not served outside Australia. These provisions are summarized as follows :—

- (*a*) A member of the Forces who served (1) outside Australia, (2) in the Territories of Australia, such as Papua and New Guinea, or (3) within Australia in circumstances which can be regarded as actual combat against the enemy, is covered for war pension purposes in respect of incapacity or death which may result from any occurrence happening during the whole period of service.
- (*b*) In other cases where a member served only in Australia, incapacity or death to be pensionable must have been attributable to service.
- (*c*) There is a third ground applicable to all in (*a*) and (*b*) who have had at least six month's camp service. This provides that, where a condition pre-existed enlistment, a pension may accrue if it is considered that such condition was aggravated by service.

(ii) *Ordinary Rates.* Where the daily rate of service pay was not in excess of 19s., the ordinary rate of pension for total incapacity is £5 per fortnight. Where the daily service pay exceeds 19s., the ordinary rate of pension for total incapacity increases to a maximum rate of £6 16s. per fortnight according to the rate of pay. The wife of a totally incapacitated member of the Forces receives £2 4s., and for each child under 16 years of age 18s. per fortnight.

(iii) *Supplementation of Pension.* Where a member in receipt of a pension at the maximum rate is, because of his war disability, temporarily (for at least three months) precluded from earning, an additional pension, not exceeding £2 8s. per fortnight in the case of a married member and 30s. in the case of a single member, may be granted.

(iv) *Women's Nursing and Auxiliary Services.* Members of Women's Services are now entitled to pensions and other benefits as prescribed in the Act. Pension scales are those applicable to male members of the Forces in receipt of similar rates of pay.

(v) *Tuberculosis Cases.* In the case of a member of the Forces who served in a theatre of war, and, at any time after discharge became or becomes incapacitated, or died or dies, from pulmonary tuberculosis, war pension is payable, and medical treatment is provided on application as if the incapacity or death resulted from an occurrence on service. (*See also* § 3. Service Pensions.)

(vi) *Special Rates.* Those who have been totally blinded as the result of war service and those who are permanently totally incapacitated receive, as from 10th July, 1947, special pensions of £10 2s. per fortnight. In addition, an attendant's allowance of £2 8s. per fortnight is payable to the war-blinded and to certain others who are deemed to be in need of an attendant. The wife and any children receive the same rates as shown in para. (ii).

(vii) *Specific Disabilities.* In cases where the disability is amputation of a limb or total loss of vision in one eye, amounts ranging from 9s. to £5 2s. per fortnight are payable as from 10th July, 1947, in addition to the statutory rate of pension and, in certain double amputation cases, allowances are payable for an attendant.

(viii) *Time Limit for Wives.* The time limit within which women must marry in order to be eligible as wives for pension in respect of the 1939–45 War has been extended from seven years to fifteen years from the date of discharge of the member. The children of any such marriage, whenever born, are also eligible. For the 1914–18 War the time limit for wives, i.e., 30th June, 1938, remains, but in certain cases where a member of the Forces has married since that date an allowance not exceeding £2 4s. per fortnight may be granted to him in respect of his wife, provided, by reason of his war disability, she performs duties essential to his welfare.

(ix) *Rates of Pensions in respect of Death.* (*a*) *Widows.* Where a member, whose daily rate of service pay was not in excess of 27s. 6d., dies as a result of war service, the rate of pension payable to his widow as from 10th July, 1947 is £5 10s. per fortnight. Where the service pay exceeds 27s. 6d., the rate of pension is higher, ranging from £5 19s. to £7 6s. per fortnight.

(*b*) *Children of Member.* The first child (under sixteen years) receives a pension of 35s. and each subsequent child 25s. per fortnight. From 2nd October, 1947 a domestic allowance of 15s. per fortnight is paid in the case of a widow and child, or widow and 2 children, to bring the incomes of such families into better proportion with those of widows and 3 or more children. In the case of children both of whose parents are dead, the rates payable are—each child up to 14 years of age, 35s. and each child over 14 years and up to 16 years of age, 40s. per fortnight. An additional amount of 12s. may be paid to double orphans, but certain conditions apply, including a means test.

(x) *Widowed Mother on Death of Member.* A pension varying from £2 10s. to £6 16s. per fortnight, according to the rate of pay of the member, may be granted to a widowed mother, provided widowhood occurred either prior to or within three years after the death of the member.

2. **Appeal Tribunals.**—The principal Act was amended as from 1st June, 1929 to create tribunals to hear appeals in regard to war pensions. The War Pensions Entitlement Appeal Tribunal is empowered to hear and decide any appeal by or on behalf of ex-members of the Forces or their dependants against a decision of the Repatriation Commission that an inacapacity or the death of an ex-member did not arise out of war service. Assessment Appeal Tribunals were created to hear and decide any appeal against a current assessment or a "Nil" assessment of war pension made by the Repatriation Commission in respect of an incapacity of an ex-member of the Forces which had been accepted as arising out of war service. Provision was made by subsequent legislation to enable the Tribunals to hear appeals by certain members for service pensions.

3. **Summary of War Pensions, 1946–47.**—At 30th June, 1947 the number of war pensions for the 1914–18 War was 161,959 and for the 1939–45 War 232,678, and the amount paid £8,309,448 and £6,746,192 respectively. The outstanding features for 1946–47 for each war were as follows :—

WAR PENSIONS : SUMMARY, AUSTRALIA, 1946–47.

Particulars.	1914–18 War.	1939–45 War.	Both Wars.
New claims granted	811	51,019	51,830
Restorations..	294	380	674
Claims rejected (gross)	572	31,266	31,838
Pensions reviewed	13,157	51,258	64,415
Pensions cancelled or discontinued	5,619	6,921	12,540
Deaths of pensioners	3,284	892	4,176
Number of pensions in force at 30th June, 1947 ..	161,959	232,678	394,637
Annual pension liability at 30th June, 1947 £	8,163,025	6,841,567	15,004,592
Amount paid in pensions during the year 1946–47 £	8,309,448	6,746,192	15,055,640

4. **Classes of War Pensions, 1946–47.**—At 30th June, 1947 special rate pensions of £9 12s. per fortnight (increased to £10 2s. as from 10th July, 1947) were being paid to the following classes of members of the Forces :—

WAR PENSIONS : MEMBERS ON SPECIAL RATES, 30th JUNE, 1947.

Class.	1914–18 War.	1939–45 War.	Both Wars.
Blinded members	161	117	278
Tubercular members	1,092	1,393	2,485
Totally and permanently incapacitated members	2,763	522	3,285

The following is an analysis of the total number of new claims granted during 1946–47 :—

WAR PENSIONS : NEW CLAIMS GRANTED, 1946–47.

Class.	1914–18 War.	1939–45 War.	Both Wars.
Members	232	17,113	17,345
Wives of members (or husbands of members) ..	230	12,740	12,970
Children	227	19,486	19,713
Other dependants	122	1,680	1,802
Total	811	51,019	51,830

In the following table the number receiving pensions at 30th June, 1947 is shown for each war for each class of pensioner :—

WAR PENSIONS IN FORCE, 30th JUNE, 1947.

Class.	Number of Pensioners.		
	1914–18 War.	1939–45 War.	Both Wars.
Orphan children	1,430	11,662	13,092
War widows	11,944	8,890	20,834
Members	68,375	83,995	152,370
Children	17,795	67,457	85,252
Wives (or husbands)	54,891	54,249	109,140
Parents	7,185	6,187	13,372
Brothers and sisters	132	174	306
Others	207	64	271
Total	161,959	232,678	394,637

5. **Number of War Pensioners and Expenditure, 1946–47.**—The following table shows the number of pensioners for each war at 30th June, 1947, and the places where payments were made during 1946–47 :—

WAR PENSIONS : NUMBER OF PENSIONERS AND EXPENDITURE, 1946–47.

Where Paid.	Number of War Pensioners.				Expenditure.
	Incapacitated Members of the Forces.	Dependants of Deceased Members.	Dependants of Incapacitated Members.	Total.

§ 3. Service Pensions.

1. **General.**—The payment of service pensions was provided for in the Australian Soldiers' Repatriation Act 1935, and the scheme has operated since 1st January, 1936.

Originally fixed on a lower scale, the rate of service pension for a member of the Forces now conforms to the rate of the age or invalid pension which from 10th July, 1947 was £3 15s. per fortnight. The maximum rate for the wife of a member is 44s. per fortnight, whilst 10s. per fortnight is payable for the eldest child under 16 years of age and 5s. per fortnight for each of the younger children up to three in number. The actual rate payable in any case is determined after taking into consideration all other income received and property (apart from the home and certain other exempted items) owned by the pensioner, and no service pension can be paid where such other income and/or property exceeds certain specified limits. From July, 1947 the "allowed income" is £149 10s. per annum for a single man and £299 per annum in the case of a member and eligible wife. If a member has property exceeding in value £650 (£1,300 for a member and eligible wife) that alone precludes payment of a pension. Pension is assessed according to the amount of income ; if the income from all sources is less than the amount shown above, service pension is assessed at such rate as will, with that other income, bring the total income of the pensioner (including service pension) up to the "allowed income", provided that the pension cannot exceed the maximum rate specified for the particular class of case. If assessable property is held, then a deduction is made from the pension assessed according to income only, the deductions being made at so much for each complete £10 of property in excess of £50 (or £100 in the case of member and eligible wife). The deductions are as follows:—for each £10 from £50 to £400, 9d. per fortnight; for each £10 of the portion from £400 to £650, 1s. 6d. per fortnight.

Female members of the forces were made eligible in 1936 for consideration of service pensions if they embarked for service abroad; previously they must have served in a theatre of war. In the same year an institutional rate of service pension not exceeding 12s. per fortnight was made available. This pension rate from 10th July, 1947 was 26s. per fortnight, and benefits, particularly, inmates of mental asylums, who were previously excluded from the scheme.

Eligibility for service pensions may be established on the following grounds:—

(*a*) Sixty years of age or more, provided the member served in a theatre of war, but eligibility on this ground applies only to the member and not to his wife or children. In the case of a female member of the forces, the qualifying age is 55 years, and service abroad, not necessarily in a theatre of war, is sufficient.

(*b*) Permanently unemployable, provided the member served in a theatre of war (or, in the case of a female member, served abroad). Under this class pensions may be paid to the member, his wife and children—up to four in number.

(*c*) Pulmonary tuberculosis, whether the member served in a theatre of war or not. Under this class, also, pensions are payable to the wife and children—up to four in number.

Only those members who qualify under Class (*c*) are entitled to receive both service and invalid pensions at the same time.

The eligibility of wives and children for service pension is as follows:—

1914–18 War: wife married, or child born, before 2nd October, 1931.

1939–45 War: wife married within 15 years after discharge of member; any child born of such a marriage.

During the year 1941–42 the scheme was extended to veterans of the South African War 1899–1902, and by amending legislation in 1943 was further extended to members of the Forces of the 1939–45 War.

2. **Operations, 1946–47.**—The following are the important details of the service pension scheme during 1946–47:—

Claims granted during year—	
Members of the Forces	2,030
Wives	563
Children	94
Total	2,687
Claims rejected during year—	
Members of the Forces	643
Wives	290
Children	191
Total	1,124
Service pensions cancelled or discontinued during year	1,103
Deaths of pensioners during year	677
Pensions in force at 30th June, 1947	14,475
Annual pension liability on 30th June, 1947	£997,184
Amount paid in pensions during the year 1946–47	£904,120

3. **Number of Service Pensioners and Expenditure, 1937–38 to 1946–47.**—The following table shows the number of service pensions in force and the expenditure for the ten years 1938 to 1947 :—

SERVICE PENSIONS : SUMMARY, AUSTRALIA.

Year ended 30th June—	Number of Service Pensions in Force—						Amount Paid in Pension. (a)
	Old-age-Members of Forces.	Permanently Unemployable.		Suffering from Pulmonary Tuberculosis.		Total.	
		Members of Forces.	Dependants.	Members of Forces.	Dependants.		
							£
1938 ..	2,805	2,712	3,918	544	872	10,851	329,871
1939 ..	3,397	3,393	4,667	619	1,032	13,108	407,127
1940 ..	3,858	3,706	4,814	623	999	14,000	472,263
1941 ..	4,008	3,705	4,734	655	979	14,081	511,103
1942 ..	4,294	3,772	4,591	650	939	14,246	579,656
1943 ..	4,270	3,695	4,221	452	646	13,284	660,109
1944 ..	4,235	3,628	4,025	290	406	12,584	652,534
1945 ..	4,437	3,702	3,807	258	362	12,566	648,996
1946 ..	4,971	3,896	3,633	244	345	13,089	804,880
1947 ..	5,894	4,312	3,657	254	358	14,475	904,120

(a) Includes amounts in respect of 1939–45 War as follows :—1942–43, £2,314 ; 1943–44, £6,403 ; 1944–45, £7,528 ; 1945–46, £11,372 ; and 1946–47, £15,786.

§ 4. Medical Treatment of Returned Soldiers Suffering from War Service Disabilities.

At 30th June, 1947 there were 5,933 in-patients, including a number whose care was undertaken by the Repatriation Commission on behalf of other countries or Commonwealth Departments. There were 278,057 out-patient attendances for treatment during the year, excluding treatments by the 1,884 local medical officers resident in metropolitan and country areas and New Guinea. The expenditure to 30th June, 1947 was £17,109,530.

§ 5. General Benefits and Miscellaneous.

1. **Other Departmental Activities.**—(i) *General.* Since the outbreak of the 1939–45 War, the ordinary activities of the Department in the way of general benefits for the welfare of members and dependants have continued without interruption. They were mainly education and training of children under the Soldiers' Children Education Scheme, medical benefits for widows and children of deceased members and for widowed mothers of deceased unmarried members, funeral expenses for certain classes of members and dependants, and allowances to certain classes of dependants in lieu of pension.

By amending legislation passed during the 1939–45 War, these benefits were extended for members engaged in that war, and new benefits designed for the re-establishment of members after discharge from the Forces were made available. The re-establishment benefits administered by the Repatriation Commission are :—payments of re-employment allowance while awaiting employment ; provision of tools of trade and equipment where they are necessary to the member's employment ; transportation expenses to meet the cost of fares and removal of household belongings, where a member, or member and family, take up employment, a business, or settle on the land; supplementation of wages of apprentices whose apprenticeships were interrupted by war service; re-establishment loans to enable members and widows to establish themselves in businesses, practices or other occupations, including (until the Commonwealth Director of War Service Land Settlement began operations early in 1946) agricultural occupations; gifts up to £75 for furniture to married members who are blinded or totally and permanently incapacitated, also to widows with children; free passages to Australia for wives, widows and children of members who married abroad (and passages outward from Australia in certain cases of members and dependants).

In the Commonwealth Reconstruction Training Scheme, the Commission's part is the re-establishment of the more seriously disabled where ordinary training is not sufficient, and special means have to be found to overcome each problem. Prior to the inauguration (in 1945) of the full scheme, however, the Commission conducted a tentative scheme to train members who were unable, through war disablement, to return to their pre-war occupations. Up to the time the larger scheme took over those still in training, the Commission had dealt with some 430 cases.

(ii) *Review of General Benefits.* The following paragraph gives particulars (number of cases and expenditure) of the more important general benefits over the period from 8th April, 1918 to 30th June, 1947.

(*a*) *Employment*—

1914–18 *War:* Number of applications, 251,200; Expenditure—sustenance while awaiting employment, £1,768,000; tools of trade and fares, etc. (gift), £554,000; tools of trade (loan), £21,800.

1939–45 *War:* The placing of members in employment was carried out by the Commission for only a short period prior to the inauguration of the Department of Labour and National Service, but the Commission has the responsibility of payment of re-employment allowance, provision of tools of trade and payment of fares and removal expenses. Number of cases and expenditure to 30th June, 1947 are as follows:—Re-employment allowances—64,755, £504,236; tools of trade (gift)—161,949, £1,179,391; (loan)—6,630, £107,059; fares and removal expenses, —9,597, £137,333.

(*b*) *Vocational Training*—

1914–18 *War:* Number of members completed training in full-time courses, 27,696; expenditure, £4,849,600.

1939–45 *War:* Members completing apprenticeships,—11,686, £1,547,095.

(*c*) *Business Loans*—

1914–18 *War:* 6,130, £421,800.

1939–45 *War:* 14,161, £2,749,565. Allowances pending productivity of business—720, £43,874. Fares and removal expenses to member proceeding to a business, £414.

(*d*) *Furniture Grants*—

1914–18 *War:* Expenditure—gift (to members blinded or totally and permanently incapacitated and to widows), £75,190; loan (to other classes of members), £1,031,570; total number of cases, 35,400.

1939–45 *War:* Gift (no loan cases)—widows, 3,754, £239,618; members, 58, £2,811.

(*e*) *Free Passages*—

1914–18 *War:* £509,120

1939–45 *War:* To Australia—4,393, £251,997; from Australia—51, £4,490.

(*f*) *Soldiers' Children Education Scheme*—

Main Scheme : Full-time training as from 13 years of age.

Particulars.		1914–18 War.	1939–45 War.
Applications		29,320	3,726
Approved		27,676	3,626
Completed training		21,439	896
Withdrawn during training		3,888	153
Awaiting next stage of training		63	58
In training		2,286	2,519
Expenditure	£	2,729,937	131,835

Minor benefits prior to entrance to main scheme : 1914–18 War, £37,000 ; 1939–45 War, £3,851.

(iii) *Total Expenditure on General Benefits.* The total expenditure on general benefits, apart from war and service pensions, from 8th April, 1918 to 30th June, 1947, was as follows :—1914–18 War, £27,676,151 (including loan, £1,676,014) ; 1939–45 War, £10,903,566 (including loan, £2,857,344). Of the grand total of £38,579,717, the largest amounts were absorbed by medical treatment with £17,000,000, vocational training with £6,500,000, and expenses of providing employment, £5,000,000.

2. **Expenditure of Repatriation Commission, 1946–47.**—The expenditure of the Commission for the year ended 30th June, 1947 was £25,388,465, distributed as follows :—

Repatriation benefits—		£
Loans to members		1,921,234
Grants to members and general expenditure (including maintenance of training schools, medical institutions, etc.)		5,880,953
Assistance to members in necessitous circumstances		16,364
Allowances to dependants of members not provided for under the Act		386
Total		7,818,937
Soldiers' Children Education Scheme		130,872
War and Service Pensions		16,064,563
Administrative costs—	£	
Salaries	1,138,745	
Contingencies	235,348	
		1,374,093
Grand total		25,388,465

3. **Losses on Soldier Settlement, 1914–18 War.**—Reference to losses incurred in connexion with settlement of returned soldiers and sailors of the 1914–18 War will be found in Chapter IV., "Land Tenure and Settlement."

CHAPTER XXVIII.

MISCELLANEOUS.

§ 1. Patents, Trade Marks and Designs.

1. **Patents.**—(i) *General.* The granting of patents is regulated by the Commonwealth Patents Act 1903–1946, which, in regard to principle and practice, has the same general foundation as the Imperial Statutes, modified to suit Australian conditions. The Act is administered by a Commissioner of Patents. Fees totalling £10 are sufficient to obtain letters patent for the Commonwealth of Australia and the Territories of Papua, New Guinea and Norfolk Island. Renewal fees are payable as follows :—£1 before the expiration of the fifth year and an amount progressively increasing by ten shillings before the expiration of each subsequent year up to the fifteenth, when the fee becomes £6. If a renewal fee is not paid when it becomes due, an extension of time up to twelve months may be granted on grounds specified in the Act, and subject to the payment of prescribed fees. An amendment to the Act in September, 1946 permits the public to inspect an application, complete specification and provisional specification (if any) after the complete specification has been lodged. Previously specifications were made public only after an application had been accepted, in many cases as much as a year after the date of lodgment.

(ii) *Summary.* The number of separate inventions in respect of which applications were filed during the years 1939 and 1944 to 1947 is given in the following table, which also shows the number of letters patent sealed in each year :—

PATENTS : AUSTRALIA.

Particulars.	1939.	1944.	1945.	1946.	1947.
No. of applications	5,740	5,860	7,349	9,072	8,358
No. of applications accompanied by provisional specifications	3,161	2,548	3,600	4,321	3,727
Letters patent sealed during each year ..	3,141	1,243	1,248	1,901	2,773

(iii) *Revenue.* The revenue of the Commonwealth Patent Office during the years 1939 and 1944 to 1947 is shown hereunder :—

PATENTS : REVENUE, AUSTRALIA.

Particulars.	1939.	1944.	1945.	1946.	1947.
	£	£	£	£	£
Fees collected under Patents Act ..	45,581	56,482	65,479	83,871	90,278
Receipts from publications ..	1,828	1,351	1,668	2,293	2,100
Total	47,409	57,833	67,147	86,164	92,378

2. **Trade Marks and Designs.**—(i) *Trade Marks.* Under the Trade Marks Act 1905 the Commissioner of Patents is also Registrar of Trade Marks. This Act has been amended from time to time, the last amendment having been made in 1936. Special provisions for the registration of a "Commonwealth Trade Mark" are contained in the Act of 1905, and are applicable to all goods included in or specified by a resolution passed by both Houses of Parliament that the conditions as to remuneration of labour in connexion with the manufacture of such goods are fair and reasonable.

(ii) *Designs.* The Designs Act 1906, as amended by the Patents, Designs and Trade Marks Act 1910 and the Designs Acts 1912, 1932, 1933 and 1934, is now cited as the Designs Act 1906–1934. Under this Act a Commonwealth Designs Office has been established and the Commissioner of Patents appointed "Registrar of Designs".

(iii) *Summary.* The following table shows the applications for trade marks and designs received and registered during the years 1939 and 1944 to 1947 :—

TRADE MARKS AND DESIGNS : AUSTRALIA.

Applications.	1939.	1944.	1945.	1946.	1947.
RECEIVED.					
Trade Marks	1,992	1,935	2,792	4,142	4,041
Designs	865	458	981	1,544	1,256
REGISTERED.					
Trade Marks	1,580	669	1,003	1,649	2,447
Designs	736	224	668	771	879

(iv) *Revenue.* The revenue of the Trade Marks and Designs Office during the years 1939 and 1944 to 1947 is shown hereunder :—

TRADE MARKS AND DESIGNS : REVENUE, AUSTRALIA.

Particulars.	1939.			1944.			1945.			1946.			1947.		
	Trade Marks.	Designs.	Publications.	Trade Marks.	Designs.	Publications.	Trade Marks.	Designs.	Publications.	Trade Marks.	Designs.	Publications.	Trade Marks.	Designs.	Publications.
	£	£	£	£	£	£	£	£	£	£	£	£	£	£	£
Fees collected under Commonwealth Acts ..	15,951	1082	19	4,519	987	8	14,644	1509	12	19,245	2220	15	26,913	1552	10

No fees in respect of Trade Marks have been collected under State Acts since 1922.

§ 2. Copyright.

1. **Legislation.**—Copyright is regulated by the Commonwealth Copyright Act 1912–1935 wherein, subject to modifications relating to procedure and remedies, the British Copyright Act of 1911 has been adopted and scheduled to the Australian law.

Reciprocal protection of unpublished works was extended in 1918 to citizens of Australia and of the United States of America under which copyright may be secured in the latter country by registration at the Library of Congress, Washington. The Commonwealth Government promulgated a further Order in Council which came into operation on 1st February, 1923, and extended the provisions of the Copyright Act to the foreign countries of the Copyright Union, subject to the observance of the conditions contained therein.

2. **Applications and Registrations.**—The following table shows under the various headings the number of applications for copyright received and registered, and the revenue obtained for the years 1939 and 1944 to 1947 :—

COPYRIGHT : AUSTRALIA.

Particulars.	1939.	1944.	1945.	1946.	1947.
Applications received—					
Literary	1,438	1,479	1,469	1,613	1,571
Artistic	53	34	86	66	63
International	3	..	..	..	..
Applications registered—					
Literary	1,359	1,162	1,448	1,291	1,674
Artistic	38	23	53	69	66
International ..	1	..	..	..	..
Revenue .. .. £	411	395	377	438	432

§ 3. Local Option and Reduction of Licences.

For information on local option concerning the sale of fermented and spirituous liquors and the reduction of licences *see* previous issues of the Official Year Book. Issue No. 22 (pp. 1005–8) contains details, by States, of polls taken and of the operations of the Licences Reduction Boards.

§ 4. Lord Howe Island.

Lord Howe Island is situated in latitude 31° 30′ south, longitude 159° 5′ east, about 436 miles north-east of Sydney, and has an area of 3,220 acres. The climate is mild and the rainfall abundant, but on account of the rocky formations of its surface only about 300 acres are suitable for cultivation, most of which are devoted to the production of Kentia Palm Seed. The land belongs to the Crown and is occupied rent-free on sufferance

Discovered in 1788, the Island was first settled by a small party of Maoris in 1853 ; afterwards a colony was settled from Sydney. Constitutionally the Island is a dependency of New South Wales and is included in King, one of the electorates of Sydney. A Board of Control at Sydney manages the affairs of the Island and supervises the palm seed industry. The population was 179 at the Census of 30th June, 1947.

§ 5. Commonwealth Council for Scientific and Industrial Research.

1. **General.**—By the Science and Industry Research Act 1926, the previously existing Commonwealth Institute of Science and Industry was reorganized under the title of the Council for Scientific and Industrial Research.* An account of the organization and work of the former Institute was given in earlier issues of the Official Year Book. (*See* No. 14, p. 1061).

---

* Under the Science and Industry Research Act 1949 the Commonwealth Scientific and Industrial Research Organization was established, effective from 19th May, 1949.

2. **Science and Industry Research Act 1920–1945.**—This Act provides for a Council, consisting of—

(*a*) Five members nominated by the Commonwealth Government;
(*b*) the Chairman and Vice-Chairman of each State Committee constituted under the Act; and
(*c*) such other members as the Council, with the consent of the Minister, co-opts by reason of their scientific knowledge.

The Commonwealth nominees form an Executive Committee which may exercise, between meetings of the Council, all the powers and functions of the Council, of which the principal are as follows:—(*a*) To initiate and carry out scientific researches in connexion with primary or secondary industries in Australia; (*b*) to train research workers and to establish industrial research studentships and fellowships; (*c*) to make grants in aid of pure scientific research; (*d*) to establish industrial research associations in any industries; (*e*) to test and standardize scientific apparatus and instruments; (*f*) to establish a Bureau of Information; and (*g*) to act as a means of liaison between Australia and other countries in matters of scientific research.

3. **Science and Industry Endowment Act 1926.**—Under this Act, the Government established a fund of £100,000, the income from which is used to provide assistance (*a*) to persons engaged in scientific research; and (*b*) in the training of students in scientific research. Provision is made for gifts or bequests to be made to the fund, which is controlled by a trust consisting of the Commonwealth nominees on the Council. In accordance with the Act, arrangements have been made to send a number of qualified graduates abroad for training in special fields of work.

4. **Work of the Council.**—The activities of the Council for Scientific and Industrial Research have necessitated a widespread and adaptable organization. Undesirable centralization has been avoided mainly in two ways. In the first place, the policy has been followed of establishing laboratories in different places in the Commonwealth wherever the necessary facilities, contacts and other suitable conditions could best be found. Secondly, a State Committee, widely representative of scientific and industrial interest, has been established in each of the six States. These Committees advise the Council on general matters and on particular questions of investigation and research.

For about twelve years after its establishment, the work of the C.S.I.R. was devoted mainly to the solution of problems affecting the agricultural and pastoral industries. Unlike manufacturing concerns, which can often employ their own scientific staffs, the farmer and the pastoralists are dependent on outside help for the solution of their problems which require research. It was a recognition of the greater need of the primary producer which directed the Council's early policy. However, in 1937, the Commonwealth Government decided to extend the activities of the C.S.I.R. so as to provide assistance to secondary industries, and the Council proceeded to establish several laboratories for work in that field; it was thus in the fortunate position of being able to render to these industries assistance of vital importance almost immediately after the outbreak of war. In fact, the remarkable technological advances and developments in secondary industrial production during the war would to a large extent have been impossible had it not been for the assistance rendered by scientific research, and this may well serve as a forceful illustration of what may be accomplished in times of peace.

For the purpose of carrying out its research work the Council has established a number of Divisions and Sections. The Divisions, of which there are now fifteen, comprise the major establishments for which special laboratory buildings have been erected and equipped; the Sections generally include establishments which have not reached a stage of development, so far as the scope and magnitude of their operations are concerned, to justify their designation as Divisions. As the Council's investigations extend on a Commonwealth-wide basis and as many of the investigations which are being conducted—particularly those concerned with problems affecting the agricultural and pastoral industries—necessitate experimental work in the field, a number of field stations have been established in various parts of Australia.

The Divisions which have been established are as follows :—

(1) Plant Industry, with main laboratories at Canberra and field stations.
(2) Economic Entomology, with main laboratories at Canberra and field stations.
(3) Animal Health and Production, with main laboratories in Melbourne and Sydney and field stations.
(4) Biochemistry and General Nutrition, with main laboratories at Adelaide and field stations.
(5) Soils, with main laboratories at Adelaide and extensive operations in the field.
(6) Forest Products, with main laboratories in Melbourne and field experiments.
(7) Food Preservation and Transport, with main laboratories at Homebush, New South Wales, and a subsidiary laboratory in Brisbane.
(8) Fisheries, with main laboratories at Cronulla, New South Wales, and experimental work in coastal waters of Australia.
(9), (10), (11) Metrology, Physics and Electrotechnology comprising the National Standards Laboratory at Sydney.
(12) Radiophysics, with main laboratory at Sydney.
(13) Aeronautics, with laboratories in Melbourne.
(14) Industrial Chemistry, with laboratories in Melbourne.
(15) Tribophysics, with laboratories in Melbourne.

The following are the Sections :—

(1) Research Station, Murray Irrigation Area, Merbein, Victoria.
(2) Irrigation Research Station, Griffith, New South Wales.
(3) Radio Research Board, Sydney.
(4) Dairy Products, Melbourne.
(5) Mineragraphic Investigations, Melbourne.
(6) Ore-dressing Investigations, Melbourne and Kalgoorlie.
(7) Building Research, Melbourne.
(8) Flax Research, Melbourne.
(9) Nuclear Physics, Melbourne.
(10) Physical Metallurgy, Melbourne.
(11) Meteorological Physics, Melbourne.
(12) Wool Textile Research, Geelong.
(13) Coal Survey, Sydney.

In addition to its investigational work, the Council maintains an Information Service which deals with inquiries covering a wide range of scientific and technical subjects. Since the outbreak of war the Council has established Scientific Research Liaison Offices in London and Washington. There is also a Section of Mathematical Statistics, with head-quarters at the University of Adelaide; the main functions of this Section are (*a*) to provide the various Divisions and Sections of the Council with advice as to the proper planning of experimental work so as to obtain results which are of the highest degree of accuracy, (*b*) to assist the Divisions and Sections in the analysis of experimental data and (*c*) to carry out research in statistical theory and its application to practical problems.

The Council's Head Office, with administrative and executive staff and central library, is in Melbourne. The funds for the Council are provided from two main sources, viz., from Commonwealth revenue by Parliamentary appropriation and from industry directly or indirectly by way of contributions and special grants. The fact that contributions and grants account for over one-eighth of the total annual expenditure indicates that C.S.I.R. has succeeded in a very large measure in gaining the confidence of the public

The activities of C.S.I.R. are now so comprehensive in their scope and so widely distributed that it is not an easy matter to present in a concise form an adequate picture of them. For details of the investigations in progress reference should be made to the Annual Reports of the Council.

§ 6. Australian Institute of Anatomy.

1. **Foundation of Institute.**—The Australian Institute of Anatomy, situated in Canberra, occupies a monumental building erected by the Commonwealth Government under the Zoological Museum Agreement Act of 1924. Prior to the passing of this Act, the Commonwealth Government had expressed regret that the Australian Nation possessed neither a collection of specimens of the unique and fast disappearing fauna of Australia, nor a Museum in which such specimens could be preserved for future generations. Comparative anatomy is the basis of medical science, and while the importance of a study of Australian animals in the solution of various medical problems had for years been recognized by other countries and steps taken by them to procure specimens for their museums, national effort in this direction was neglected in Australia. The late Sir Colin MacKenzie, the first Director of the Institute of Anatomy, however, very kindly presented to the Commonwealth Government his entire private collection, and this magnificent gift was acquired and provision was made for its proper housing under special legislation by the Commonwealth Government. In 1931 the Institute became an integral part of the Commonwealth Department of Health.

2. **Additions to Original Collection.**—In addition to the original collection, which has been greatly augmented, the following gifts have been made to the Australian Nation, and are on view in the Institute :—

(1) *Horne-Bowie Collection.*—Dealing with the life of Central Australian aborigines and throwing valuable light on the psychology of this Stone Age people.

(2) *Burrell Collection.*—This deals with the life history of the platypus, and is unique in the world. The platypus is the most primitive mammal known to science, and is the link between the bird, the reptile and the mammal.

(3) *Milne Collection.*—This is an anthropological and ethnological collection dealing with the aborigines of New South Wales, and contains many valuable and now unobtainable native weapons and implements.

(4) *Murray Black Collection* of anatomical material representative of the aborigines of Southern Victoria and the River Murray.

(5) *Nankivell Collection*, illustrating the anatomy of the aborigines of the Murray Valley.

(6) *Harvard University Collection.*—This includes a collection of specimens from the Harvard University, U.S.A., representing a carefully worked out epitome of archaeology of the United States of America, and, together with two rare skeletons of primitive North American Indians, was a goodwill gift from the University to the Institute of Anatomy.

(7) *The Sir Hubert Murray Collection.*—The ethnological and osteological collection of the late Sir Hubert Murray, formerly Lieutenant-Governor of Papua. This deals especially with the anthropology of Papua.

(8) *The Rabaul Ethnological Collection.*—This concerns chiefly the ethnology of the Mandated Territory of New Guinea.

(9) *The Basedow Collection.*—This collection has been recently purchased by the Commonwealth Government. It deals especially with the anthropology of Central and Northern Australia and was assembled, after many years of research, by the late Dr. Herbert Basedow of Adelaide, who was formerly Protector of Aborigines.

(10) *The Crowther Collection* of stone artifacts of the extinct Tasmanian race. This collection was a gift of Dr. W. E. L. H. Crowther of Tasmania.

(11) *Keith Goddard Australian Ethnological Collection.*—This collection has been donated by Mr. R. H. Goddard of Sydney and represents an important ethnological collection dealing with the aborigines of the Northern Territory. It includes also some specimens from the Pacific Islands.

(12) Many hundreds of specimens and books received from numerous interested scientists, the most outstanding being those from Mr. E. Hill, of Nagambie, Victoria ; Mrs. Harry Burrell, New South Wales ; and medical books for the Library from the estates of the late Drs. Molloy, David Grant and Robert Stirling.

3. **Endowments for Orations and Lectures.**—In addition to the aforementioned donations of material, there have been several endowments for Orations and Lectures as follows :—

(1) *The Anne MacKenzie Fund.*—Founded with a gift of £1,000 by the late Sir Colin MacKenzie in memory of his mother. The interest from the fund to be used to arrange for an oration or symposium to be delivered or held from time to time as circumstances warrant. The purpose of the lecture or symposium is to emphasize the importance of the prevention of disease.

(2) *The Kendall Lecture in Veterinary Science.*—Endowed by the sons of the late Dr. W. T. Kendall who was the founder of the first Veterinary School in the Southern Hemisphere.

(3) *The Charles Mackay Fund.*—Endowed by Miss C. Mackenzie with a gift of £607 as a memorial to her grandfather, an educationalist, who arrived in Melbourne in 1852 and died at Kilmore, Victoria. The purpose of the fund is to arrange a lecture or symposium known as the Charles Mackay Lecture or Symposium to be held from time to time as circumstances warrant. The lecture or symposium is to deal with the history of medical science.

4. **The Scope of the Institute.**—The building occupies a site which adjoins that reserved for the Australian National University.

The Institute consists of two separate and distinct entities. Portion of the original collection of anatomical specimens assembled by the late Sir Colin MacKenzie is arranged in two large museums which are open to the general public. The material in these museums has been arranged so as to present simple lessons in human hygiene as well as to display the anatomical features and especially the peculiarities of Australian fauna.

The remainder of the building houses research units which are studying problems in the biological and medical sciences. The large collections of bony anatomical material donated by Murray Black have provided most interesting and valuable data on aboriginal diseases.

In 1938, following upon the retirement due to ill-health of Sir Colin MacKenzie, the activities of the Institute were extended to interpret more fully the ideas of the founder. In the later years of his life Sir Colin had been keenly interested in the relationship of nutrition to the development of the child. When a section for the study of child growth and development was established by the Commonwealth Department of Health in 1938, the head-quarters were transferred to the Institute.

The section devoted to the study of nutrition has been considerably enlarged and many important problems relating to nutrition of the Australian people have been studied.

§ 7. The Commonwealth Observatory.

1. **Foundation of Observatory.**—The Observatory was founded primarily to prosecute astrophysical research, including the study of the relations between solar and terrestrial phenomena. A short history of the foundation of the Observatory appears in Official Year Book No. 19, p. 979.

2. **Site of Observatory.**—The Observatory is situated on Mount Stromlo which forms part of a ridge of hills about seven miles west of Canberra. The highest point in the ridge is 2,560 feet above sea level, that is, about 700 feet above the general level of the surrounding country.

3. **Equipment.**—Some of the major items of astrophysical equipment have been obtained through the generosity of private donors. Thus a 30-inch reflector was donated by J. H. Reynolds, Esq.; a 9-inch refractor was presented by the late Mr. James Oddie; and the trustees of the late Lord Farnham made available a 6-inch refractor. Other major equipment comprises a solar tower telescope with an 18-inch coelostat and a 3-inch reversible transit instrument. The Observatory was the successful tenderer at a public sale for the purchase from the Victorian Government of the long disused 48-inch reflector of the now closed Melbourne Observatory. It is proposed to modernize this instrument so as to adapt it to the general astronomical programme of the observatory. A 74-inch reflector is being purchased.

4. **Functions of Observatory.**—In addition to covering the type of astrophysical research for which the Observatory was founded, the field of work has been extended to include experimental and theoretical investigations of the ionosphere, and the determination of time. The observatory is now responsible for the accuracy of the Australian Time Service, and considerable attention is being given to the development of this work. Investigations in the fields of double star astronomy, stellar spectroscopy, variable stars, terrestrial magnetism and cosmic rays are also being carried out.

§ 8. Standards Association of Australia.

The Standards Association of Australia is the national standardizing organization of Australia, and issues Australian standard specifications for materials and codes of practice.

The Association was established in July, 1929 by the amalgamation of the Australian Commonwealth Engineering Standards Association and the Australian Commonwealth Association of Simplified Practice. It is an independent body in close touch with modern industrial requirements and has the full recognition and support of the Commonwealth and State Governments and industry.

The sole executive authority of the Association is vested in the Council on which industry is fully represented, together with official representatives of the Commonwealth and State Governments and their technical departments, and of scientific, professional and commercial organizations. Voluntary assistance is rendered in the drafting of specifications and codes by more than 4,500 individuals who are experts in their particular fields and are organized into more than 500 committees. These committees are grouped under an internationally established classification, covering civil engineering and building construction, mechanical engineering, electrical engineering, automotive industry, transportation, naval architecture and marine engineering, shipbuilding, ferrous metallurgy, non-ferrous metallurgy, chemical industry, textile industry, mining, agriculture, wood industry, pulp and paper industry, glass and pottery, household and domestic economy, miscellaneous and general.

These committees are comprised of nominated representatives of manufacturing, distributing and purchasing organizations, and of scientific and other expert authorities in the particular field of the project being dealt with. The operations of these committees are co-ordinated and supervised by committees broadly representative of the whole industry, according to the foregoing classification, within which the respective projects are included.

The specifications of the Association provide a suitable standard of performance, quality and dimension and an equitable basis for tendering. They help to eliminate redundant qualities and sizes. They enable purchasers to obtain their requirements with greater assurance of satisfaction, with more rapid delivery and without the necessity of drafting individual specifications.

The underlying principles covering the preparation of the specifications and codes are that they shall be in accordance with the needs of industry; that the common interests of producer and consumer be maintained; that periodical revision should keep the work abreast with progress; and that standardization be arrived at by general consent without coercion.

Organizations, companies, firms and individuals interested in the work of the Association are eligible for subscription membership. Members are entitled to free copies of the publications of the Association and to the use of the library and its Special Information Service. Research is undertaken for committees, members of the Association, and industry in general. Many hundreds of inquiries were answered during the last year.

The Association has international affiliations and the standards of all British and foreign countries are filed in the library and are accessible to members. It also administers the Australian National Committees of the International Electrotechnical Commission, the World Power Conference and the International Commission on Large Dams. The Association is also a member, representing Australia, of the International Organization for Standardization (ISO) and is an elected member of the ISO Council for the years 1947–1950 inclusive.

The Association is also the representative of the British Standards Institution, and all British standards may be purchased from head-quarters and branch offices in the various States. British Air Ministry (D.T.D.) specifications are also on sale.

The head-quarters of the Association are at Science House, Gloucester-street, Sydney, and branches of the Association are situated at Temple Court, 422 Collins-street, Melbourne; Empire Chambers, cr. Queen and Wharf-streets, Brisbane; Alliance Building, Grenfell-street, Adelaide; Gledden Building, Hay-street, Perth; Premier's Department, Murray-street, Hobart; Department of the Interior, Canberra; and Howard Smith Chambers, Watt-street, Newcastle.

§ 9. Film Censorship.

1. **Legislation.**—The censorship of imported films derives its authority from Section 52 (*g*) of the Customs Act, which gives power to prohibit the importation of goods. Under this section, regulations have been issued prohibiting the importation of films except under certain conditions and with the consent of the Minister. The regulations provide, *inter alia*, that no film shall be registered which in the opinion of the Censor is (*a*) blasphemous, indecent or obscene; (*b*) likely to be injurious to morality, or to encourage or incite to crime; (*c*) likely to be offensive to the people of any friendly nation; (*d*) likely to be offensive to the people of the British Empire; or (*e*) depicts any matter the exhibition of which is undesirable in the public interest.

The regulations governing the exportation of Australian-made films are similar, with the addition that no film may be exported which in the opinion of the Censorship is likely to prove detrimental or prejudicial to the Commonwealth of Australia.

The Censorship consists of a Censorship Board of three persons and an Appeal Censor, the head-quarters being in Sydney. There is also a right of appeal to the Minister.

In addition to the censorship of moving pictures, the Censorship may refuse to admit into Australia any advertising matter proposed to be used in connexion with the exhibition of any film. Such control does not, however, extend to locally-produced publicity.

2. **Import of Films.**—Imported standard size (35 millimetre) films dealt with by the Censorship for the year 1947 were as follows :—2,131 films of 4,076,716 feet passed without eliminations, 50 films of 299,226 feet passed after eliminations, and 4 films of 29, 726 feet rejected in the first instance, making a total of 2,185 films of 4,405,668 feet (one copy). The countries of origin were as follows :—United States of America, 888 films of 2,975,723 feet; United Kingdom, 816 films of 1,050,452 feet; and 481 films of 379,493 feet from other countries.

There were also imported during 1947 3,164 miniature films (16 millimetres) of 2,069,247 feet and 295 miniature films (9.5 and 8 millimetres) of 89,613 feet.

3. **Export of Films.**—The number of films exported for the year 1947 was 929 of 1,311,094 feet, of which 694 films of 1,132,357 feet were sent to places in the British Empire including Mandated Territories.

§ 10. Australian National Film Board.

1. **Constitution and Functions.**—The Australian National Film Board was inaugurated in April, 1945. Its duties as set out in the Cabinet Agendum authorizing its formation are " to expand, promote, assist and co-ordinate the production and distribution and the importation of films for purposes of school and adult education, rehabilitation, social development, international understanding, trade and tourist expansion and immigration."

The Board's constitution and functions were based on the recommendations of a Commonwealth Government inter-departmental committee which considered the suggestions of a conference of interested individuals and Commonwealth and State officials, including the Directors of Education, called in November, 1944 by the Ministers for Information and Post-war Reconstruction.

The Board consists of seven members appointed by the Commonwealth Government, one on the nomination of the Education Departments of the States. It is attached, for administrative purposes, to the Department of Information, through which Department and the Commonwealth National Library it carries out its functions.

The Department of Information produces, or supervises the production by commerical enterprises of, all films authorized by the Board and arranges for their theatrical distribution generally and their non-theatrical distribution outside Australia.

The Commonwealth National Library arranges for the acquisition of films other than Board productions, and has control of their non-theatrical distribution within Australia. There is an Advisory Committee to the Board in each of the States which acts as the agent of the Library in the non-theatrical distribution of films.

2. **Organization and Production.**—The film-making section of the Department of Information is a well-equipped organization with a staff of approximately 75 persons. Its nucleus was the Cinema and Photographic Branch of the Department of Commerce and Agriculture, which had been making publicity films for the Commonwealth Government for nearly twenty years before the war, and the Official War Photographers' unit of the Department of Information, which had its films processed by the trade in Sydney. The Cinema and Photographic Branch carried out its film-making activities in Bright-street, Melbourne. Unfortunately, its premises, together with the greater part of its equipment, were destroyed by fire in March, 1946.

For the next two years the Film Division worked under extreme difficulties. The Commonwealth Government plans eventually to build a film centre at Canberra, but housing and other urgent building requirements will probably delay a start being made on the venture for five or seven years. Temporary premises to house the various sections of the Film Division could not be found. A small laboratory was improvised in Melbourne to process 16mm. films, but the major activities of the Division were carried out in various trade establishments in Sydney. Recently, however, the Division entered into possession of a studio at Burwood, Sydney, which had been converted from a school hall lent for the purpose by the Education Department of New South Wales, at a cost of approximately £20,000. This studio has excellent editing, cutting and sound recording facilities, but processing of all 35mm. film has still to be carried out by the trade in Sydney.

The Film Division makes, on an average, about 35 films a year (most of them single reelers, although two 4-reel and several 2-reel productions have been completed) as well as a number of national appeal shorts. The single reel films include a monthly film magazine known as the Australian Diary. The programme authorized by the Board includes films required by other Commonwealth Departments for information or publicity purposes.

During the year 1947–48 the Board authorized the production of films worth nearly £75,000, of which films sponsored by other Commonwealth Departments accounted for nearly £20,000.

The Department has a number of film units operating continuously, but also places contracts with commercial organizations.

3. **Distribution.**—Board films are designed primarily for informational and educational purposes, but a good many of them have been accepted for theatrical release in Australia and New Zealand. Some are being released theatrically in the United Kingdom and Malaya, while others are being televised in the United States of America. All of them are being shown non-theatrically in overseas countries where the Commonwealth Government is represented officially. Several Board films have attracted favorable attention from overseas film societies and three have been entered for the Documentary Academy Award in America.

As in the field of production, the Department of Information co-operates closely with the film trade in the field of distribution. It has its representative on the National Films Council which arranges for the theatrical distribution of Government publicity shorts on subjects of national importance.

4. **Non-Theatrical Distribution.**—The Commonwealth National Library has built up a very comprehensive collection of documentary, educational and instructional films and other visual aids from all countries, having acquired them either by purchase, gift or exchange. Together with its agents in the States it has made great progress in the non-theatrical distribution of films.

§ 11. Australian Broadcasting Commission.

1. **General.**—The Australian Broadcasting Commission was established in 1932 to take over control of national broadcasting in Australia from the Australian Broadcasting Company, which had been in existence since 1924. In establishing the Commission the expressed object of the government of the day was to raise the standards of broadcasting in Australia. Control of the Australian Broadcasting Commission was vested in five commissioners, and it derived its finances from a portion of the licence fees paid by persons owning radio sets. This method of control and finance remained practically unchanged until December, 1948, when an Act was passed increasing the number of the commissioners to seven, one of whom was to be an officer of the Treasury and one an officer of the Postmaster-General's Department; the Act also changed the method of finance so that the Australian Broadcasting Commission now receives its income from an annual government grant, which bears no direct relation to the total amount collected in licence fees. The technical services of the Australian Broadcasting Commission are, as laid down in the Act of 1932, still provided by the Postmaster-General's Department.

Broadcasting in Australia is a compromise between the system in operation in Great Britain and that in the United States, and the duty of the Australian Broadcasting Commission is to maintain the standards of radio without either dictating to its listeners or playing down to the lowest tastes. Space does not permit of a complete review of its activities since 1932, but in the following paragraphs are set out a few facts of interest concerning some of its departments.

2. **Music.**—The Australian Broadcasting Commission is to-day the biggest concert-giving organization in the Commonwealth, and the immense growth of interest in music in this country is illustrated by the fact that Australian listeners in increasing numbers now welcome the opportunity of hearing fine music on the air and in the concert hall and have magnificently supported the presentation of orchestral concerts and of recitals by the best musicians from their own country and from overseas. In 1936 small regular orchestras were formed by the Australian Broadcasting Commission in Sydney, Melbourne, Adelaide, Brisbane, Perth and Hobart, and from these foundations have grown our present orchestras. Those in Sydney and Melbourne measure up to first class orchestras overseas, whilst those in the other capital cities are showing rapid improvement and are now the equal of those in many places of comparable size in Europe or America. Until 1946 the financing of these orchestras was the sole responsibility of the Australian Broadcasting Commission, but since then arrangements have been made in Sydney, Brisbane and Hobart for local government and municipal bodies to bear part of their cost. This close co-operation between a broadcasting organization, city authorities and State Governments to establish and maintain symphony orchestras is unique in the world.

The policy of the Australian Broadcasting Commission so far as individual artists are concerned has always been to develop local talent and at the same time to give its audiences the opportunity of hearing famous international musicians.

3. **Drama.**—There are many thousands of Australians to-day who have not only never seen a stage play but have never even had the opportunity of doing so. Radio drama has been able to bring to them the best plays of all ages and countries. The Australian Broadcasting Commission has two regular weekly drama programmes—"Saturday Night Drama" which presents the more popular material, and "Radio Repertory" in which classical and outstanding contemporary plays are broadcast. In addition, "National Theatre of the Air", which is a monthly feature, presents rather longer plays of the type of "Radio Repertory".

During the year 1947–48 the Australian Broadcasting Commission presented a total of 491 plays, including serials, of which half were original works written by Australian writers. Many of the other plays broadcast were adapted for radio by Australian playwrights. The Drama Department encourages the submission of original work by local dramatists, and is always anxious to receive material for consideration.

4. **Youth Education.**—The Australian Broadcasting Commission provides a regular series of broadcasts to schools as an addition to normal class-room education. The total number of listening schools at the end of 1948 was 5,773, which represents about half of the schools in Australia. Many of the school broadcasts are presented in dramatized form, as this method makes the material more vivid and interesting to the young listener. For the very young children, the Commission broadcasts every week day the "Kindergarten of the Air", which originated in Western Australia during 1942, at a time when kindergartens were closed by the threat of Japanese invasion. These broadcasts were the first of their kind anywhere in the world and are now not only presented in every State of the Commonwealth, but have recently been introduced in Canada and some European countries.

5. **Talks.**—The aim of the Talks Department is to provide programmes which will keep the listener well informed on current affairs and on general and historical topics. Many of the talks in the first category are now presented in a magazine type of session consisting of a number of short items linked by a narrator. This form of programme has proved popular with listeners but has by no means replaced the straight talk which usually runs from ten minutes to a quarter of an hour.

Two sessions which are designed to encourage discussion are the "Nation's Forum of the Air", and the talks designed for listening groups. In the former, a topic of a controversial nature is discussed by four speakers before a studio audience. After their initial speeches, the speakers are questioned by members of the audience or by local listeners who send their questions by telephone. The full proceedings of the Forum are published in book form. In the talks to listening groups, supplementary material relating to the broadcasts is provided for groups of listeners, organized by the Australian Broadcasting Commission, who meet in their homes or elsewhere to discuss points arising from the broadcast.

6. **Rural Broadcasts.**—The Rural Broadcasts Department was commenced in 1945 to serve the needs of country listeners. It has proved to be of great value to men and women on the land throughout Australia, by giving them the latest market reports and information on general conditions, and by keeping them informed on rural development overseas. Programmes are exchanged with radio organizations in England, Canada, the United States and elsewhere, and several visits to Australia by well-known farm radio personalities have also been arranged. The department has encouraged the work of Junior Farmer's Clubs in Australia, and has sponsored competitions for members in connexion with the Royal Agricultural Shows in Sydney and Melbourne.

7. **News.**—On the 1st June, 1947 the Australian Broadcasting Commission's independent News Service came into full operation. Since that date the Commission has collected the news for its bulletins independently of the press and it now has, in addition to a large staff throughout Australia, a London news room for the selection and transmission of overseas news secured from the great news agencies. Nine national news bulletins are broadcast daily, and are followed by State bulletins of news of State interest. In addition, two regional bulletins are broadcast by local stations in country areas. The Commission also rebroadcasts, by arrangements with the British Broadcasting Corporation, two overseas news bulletins each day.

8. **Other Activities.**—The broadcasting of the proceedings of Federal Parliament commenced as a regular service in July, 1946, and Australian listeners are now able to hear full debates from the House of Representatives, and occasionally the Senate. At present these broadcasts are confined to one of the two transmitters in each capital city, but it is hoped that eventually country listeners will also be able to hear these broadcasts through the medium of shortwave transmissions.

The Children's Session is presented on each week day for children between the ages of 7 and 17. An important feature of this session is the Argonauts Club which children may join, and which encourages its members to contribute to the programmes and to do creative work such as painting, needlework, writing, poetry, etc. Part of the children's session is regularly devoted to an exchange of opinion on topical questions by members of the Argonauts Club. At present the club has more than 47,000 members.

The Australian Broadcasting Commission's variety and sporting programmes provide the lighter side of listening to the public. In its variety sessions the Australian Broadcasting Commission does everything possible to assist local artists in order to increase the amount of first class talent in this country. The Commission's dance bands in Sydney and Melbourne provide the accompaniment for the more important variety shows broadcast in these states, and are regarded as being two of the most outstanding bands in Australia.

The Australian Broadcasting Commission's coverage of sport at home and abroad is comprehensive. On Saturday afternoons the sporting panel provides listeners with the progress results and scores, and also descriptions from half a dozen or more fields of sport. Events of international interest such as Test Matches, the Davis Cup etc., are covered by simultaneous descriptions from Australian Broadcasting Commission commentators. In covering events overseas, the Australian Broadcasting Commission is indebted to the British Broadcasting Corporation for its collaboration in Great Britain, and the New Zealand Broadcasting Service for events in New Zealand.

In December, 1948 the Australian Broadcasting Commission's programmes were transmitted by 37 medium wave and 7 short wave stations. The 37 stations in operation at 30th June, 1947 are shown in Chapter V.—"Transport and Communication", § 6. "Radio Telegraphy and Telephony", page 217. The seven new stations were as follows:—Medium wave Stations—2NB (Broken Hill), 2NU (Manilla), 2TR (Taree) and 5AL (Alice Springs); Short wave Stations—VLT (Port Moresby) and VLI (Sydney). The short wave stations are used for giving service to listeners in the sparsely populated parts of Australia, and in New Guinea and adjacent islands. Twenty-five of the medium wave stations are situated outside the capital cities, and further regional stations will be constructed in the near future. When the additions have been made, the regional network combined with the short wave stations will transmit the Commission's programmes with clear reception to every part of Australia.

§ 12. The National Safety Council of Australia.

The National Safety Council of Australia was founded in Melbourne in 1927 for the purposes of developing, mainly by means of education, safety on the road, at work and in the home, and its activities have developed in other directions wherever the need for reducing the toll of accidents has been shown. In various States it issues, by courtesy of the Traffic Authorities, a booklet with every motor driver's licence, and conducts continuous propaganda through the press and other sources. It also forms Junior Safety Councils in the schools for developing a safety conscience among children.

The children themselves are officers of these Councils and patrol the roads in the neighbourhood of the schools and conduct the scholars across in safety. Posters are available to schools at cost in connexion with Health and Safety lessons in the schools. Small films specially taken are available for children's and home safety instruction.

A "Safe Driving" campaign for individual motor drivers is conducted as well as a "Freedom from Accidents" competition among employee drivers, those completing a year free from any accident for which they are responsible being given a certificate to that effect. An industrial service of four posters per month, together with slips for pay envelopes, constitutes a regular service for the dissemination of safety advice, and was supplied to over 100,000 workers in factories last year. Committees deal with specific problems regarding traffic, films, safety in industry, air safety and home dangers. The Air Safety Committee has issued a 32-page booklet "Air Sense" for distribution with pilots' private licences through the Civil Aviation Department, and has a plan for emergency night landings for aircraft in difficulties.

The Council is supported by a Government Grant, public subscription and sales of service, and is a non-profit organization. Its work is carried on by a small paid staff controlled by committees and governed by an executive. The following committees, whose work is of an entirely honorary nature, are in operation, namely, Executive, Traffic, Industrial Safety, Home, Air Safety and Propaganda.

§ 13. Commonwealth Disposals Commission.

1. **Constitution and Functions.**—The Commonwealth Disposals Commission was established under National Security (Disposal of Commonwealth Property) Regulations of June, 1944, for the purpose of disposing of surplus Commonwealth property acquired or used for defence purposes. In addition, the Commission was empowered under Executive Council Minute No. 69, dated 8th November, 1944, to dispose of surplus property, with the exception of land, acquired or used for other purposes. Provision for the continuance of the disposals regulations after the expiration of the National Security Act 1939–46 was made in the Defence (Transitional Provisions) Act.

Originally under the jurisdiction of the Minister for Supply and Shipping, the Commission now functions under the ministerial direction of the Minister for Supply and Development.

2. **Policy and Procedure.**—The principles of policy and methods of disposal which have been developed by the Commission are based upon broad fundamental objectives which, briefly stated, are designed to achieve an orderly, rapid and widespread distribution of surplus war goods at fair market prices and under conditions which will not prejudice the national economy or the maintenance of full employment in the post-war period. In general, the disposals programme has embraced the release and distribution of a wide variety of consumer goods in short supply during the period of re-adjustment to normal production, as well as the expeditious transfer to peace-time uses of plant and materials urgently required for governmental reconstruction work and general industrial rehabilitation and development. The commission has maintained a close liaison with industry and the Secondary Industries Division of the Department of Post-war Reconstruction, and surpluses of industrial buildings and plant have been disposed of as far as possible in those quarters where they could be most effectively utilized.

While concentrating upon the more positive aspects of its work, however, the Commission has kept constantly in mind the possibility that the dumping of large quantities of consumer goods on the civilian market might react adversely on current production and hence on the capacity of industry to afford full employment. Surpluses which are beyond the absorptive capacity of the Australian market are therefore made available for disposal overseas, and, through continued consultation with trade advisory panels set up in collaboration with the Associated Chambers of Commerce and Manufactures, courses of action which might be detrimental to the national economy have been avoided.

The following principles and methods of sale form the basis on which detailed disposals procedures have been developed :—(*a*) All sales, including those to Government Departments, are made at fair market prices and the closest association is maintained with the Prices authorities on all aspects of price policy ; (*b*) where suitable, goods are first offered to Commonwealth and State Government Departments and semi-governmental instrumentalities ; (*c*) disposal through trade channels in the case of commercial goods ; (*d*) sale by public tender ; (*e*) sale by auction ; and (*f*) sale by private treaty. Sales are conducted within categories (*b*) to (*e*) except where it is established beyond reasonable doubt that sale by private treaty is the only practicable course. The Commission does not sell retail, but special consideration has been given to the needs of UNRRA, the Red Cross and other relief organizations, as well as to the requirements of hospitals and bodies engaged in educational, charitable, health and general community activities.

3. **Administrative Organization.**—The head office of the Commission is in Melbourne. while regional and district offices have been established in the capital cities and at other points in remoter areas, such as New Guinea and the Islands, the Northern Territory and North Queensland.

Certain categories of goods, viz., motor transport, land, buildings and aircraft, as well as goods submitted to auction, are disposed of by the Commission's organization direct, while surpluses of other types are handled by various Commonwealth departments under a delegation of authority from the Commission. For the most part the agency departments consist of those departments and authorities which were responsible during the war years for the procurement or control of the supplies concerned.

Apart from its direct selling function, therefore, the task of the Commission's organization has been largely one of supervision to ensure that liquidation is effected as rapidly as possible and in accordance with the policies and procedures laid down. To assist in speedy liquidation, responsibility has been decentralized as widely as possible by the delegation of authority to executive officers, regional representatives and agency departments to enable them to complete transactions within prescribed financial limits and subject to the observance of disposals policy and procedure.

4. **Outline of Activities.**—The Commission began operations on 4th September, 1944. During the first year of its activities the Commonwealth was still at war and although goods to the value of £10,200,000 on realization were disposed of, this period was primarily one of preparation. The organization was established on a firm basis and policies and procedures were worked out along lines which enabled subsequent development to take place smoothly and efficiently. The close of the first year coincided approximately with the termination of hostilities and immediately the flow of surpluses rapidly increased.

Throughout the second year a heavy and continuous pressure for the disposal of surpluses was maintained owing to the withdrawal of troops from various areas for demobilization. This was the most active period of the disposals programme and the financial return for the year amounted to nearly £56,000,000. In its geographical aspect the task was a formidable one. Not only were the goods scattered throughout the mainland of Australia, often in remote areas, but to the north of the continent surpluses were awaiting disposal at points extending around a large part of the New Guinea coast line and right across the northern seas from the Solomons to Borneo. The tempo of operations continued to mount until October, 1946, when realizations for the month amounted to over £7,500,000. From a financial standpoint the period from May to November, 1946, during which monthly realizations averaged over £5,800,000, was the high water mark of the disposals' programme.

The gradual decline which commenced at the end of 1946 continued in 1947 and by 31st August of that year the rate of return was again down to slightly over £2,000,000 per month. The total realizations for the third year of the Commission's operations, however, were again considerable, amounting to £45,500,000. During that year the Commission's programme in New Guinea and the islands was brought to a close. Operations in that area made up one of the most interesting phases of the Commission's activity ; losses were taking place through rapid tropical deterioration and other causes and the most vigorous action on the part of the Commission was necessary. After large quantities of materials had been sold to the Civil Administration and to local residents to assist in the rehabilitation of the area, several auction sales were held. To these mainland buyers were taken by specially chartered sea and air transport. By the end of 1946 only residues of equipment remained at isolated points, and in June, 1947 the Commission withdrew its staff and handed over to the Civil Administration the responsibility for disposing of any surpluses which might come forward in those areas in the future.

During 1948 the volume of surpluses coming forward declined still further. In June, 1948, operations in the Northern Territory were concluded and the Commission's Darwin office was closed. In other States, where there has been a falling off in activity, the staff has been reduced. In addition, administrative economies have been effected by integration, where possible, of the disposals' organization with the Directorate of Supply, Department of Supply and Development.

At 31st August, 1948 the Commission completed its fourth year of operations and returns for the year stood at £22,500,000. This brought total realizations from disposals since the inception of the programme to £125,500,000. This figure does not include bulk transfers of equipment in the Borneo-Morotai area to the Netherlands East Indies Government, the total estimated book value of which was £10,000,000

5. **Principal Commodity Categories.**—The following details show the principal commodity categories and the amounts realized to 31st August, 1948 :—

> Motor Vehicles, Cycles and Spare Parts, £16,196,978 ; Textile Basic Manufatures, £13,278,082 ; Metal-working Machinery, £11,528,943 ; Real Property (land and buildings), £10,874,339 ; Apparel, Footwear and Fabricated Textile Products, £9,679,895 ; Non-ferrous Metals. £9,051,421 ; Foodstuffs, £5,567,629 ; Ships, Small Watercraft and Marine Propulsion Machinery, £3,858,966 ; Steel, Iron and Iron and Steel Scrap, £3,721,972 ; Agricultural Machinery Implements including Tractors, £3.569,371 ; Chemicals, £2,861,056 ; Goods sold at auction (unclassified), £9.922,424 ; and Other Items, £25,402,907 ; Total, £125,513,983.

6. **Future of the Commission.**—By the end of the fourth year of the Commission's existence, the bulk of surpluses had been disposed of, and notwithstanding the fact that realizations still exceeded £1,000,000 per month, it was felt that the time had arrived to consider the desirability of stabilizing disposals arrangements on a departmental basis. The matter was reviewed by Cabinet which decided that for the time being the disposals organization should continue in its present form. When the Commission ceases to function the responsibility for the disposal of goods will be vested in the Department of Supply and Development, with the exception of real property (land and buildings) which will be handled by the Department of the Interior. In the meantime, action to integrate the Commission's activities, wherever possible, with those of the Department of Supply and Development will be continued, and in this way the ultimate transfer of the major portion of disposals' responsibility to that Department will be facilitated.

§ 14. Division of Industrial Development.

1. **General.**—The Division of Industrial Development within the Department of Post-war Reconstruction was originally established in 1945, on a temporary basis, as the Secondary Industries Division to carry out the administrative work of the Secondary Industries Commission which had been established in October, 1943. In January, 1948 the name was changed to the Division of Industrial Development. Gradually, wider functions have been undertaken.

In August, 1948 the Division was established on a permanent basis. Its chief functions are set out hereunder.

2. **Functions.**—(i) *Encouragement and advancement of industrial development necessary for Commonwealth responsibilities.* Many industrialists, both local and overseas, wishing to establish new industries or expand existing industries have sought information regarding secondary industry in Australia, size of markets, availability of factory space, etc. Such information has been supplied by the Division of Industrial Development. All possible assistance has been rendered to industrialists wishing to expand industrial production. The Division systematically records data relating to manufacturing activity in Australia.

(ii) *Exercise of Commonwealth responsibilities with respect to the national policy of decentralization.* The Division has been responsible for the sale or lease of government-owned factories which were built during the war. Many of these factories are located in Queensland, South Australia, Tasmania, Western Australia and the country areas of Victoria and New South Wales. Some 186 leases and 19 sales of such factories have been effected and a wide range of products is now being manufactured in decentralized areas.

(iii) *Promotion of efficiency in industry ; study of technical, production and managerial problems ; encouragement and assistance in dissemination and application of new knowledge and new methods.* Manufacturers in Australia are kept informed by the Division regarding any technical and scientific information from overseas of which it becomes aware. Reports prepared by the scientific and technical missions in ex-enemy countries are disseminated, and a micro-film service, under which copies of German machine tool drawings, original German summary documents and Patent Applications and Specifications can be made available to industrialists, is provided by the Division. The Materials Handling Bureau of the Division, upon request, advises manufacturers regarding problems of materials handling and also arranges public demonstrations showing the latest methods employed in handling materials. Advice on chemical problems is tendered by the Chemical Section of the Division.

(iv) *Undertaking for publication continuing studies of structure and operation of Australian manufacturing industries.* Continuous study of a wide range of Australian industries is being undertaken by the Division. Up to 30th November, 1948, brief reviews of the following industries had been published by the Division :—Footwear, tractor, cosmetics, cotton textile, furniture, agricultural implements, rubber, leather and carpet.

§ 15. Daylight Saving.

The Commonwealth Government, under National Security Regulations, operated a scheme of daylight saving during summer time of the years 1941–42 to 1943–44 throughout Australia, with the exception for the last year of Western Australia. For particulars of the actual periods of operation *see* Official Year Book No. 36.

§ 16. Rent Control.

1. **Need for Rent Control.**—Prior to the outbreak of the 1939–45 War, rent control legislation existed in Victoria and Queensland only. When hostilities commenced, the need became immediately apparent for more rigid control of the relationship between landlord and tenant in order to avoid rent inflation arising from increased spending power and from the exploitation of the acute shortage of housing accommodation in areas surrounding military camps and war-time industries.

On 9th September, 1939, a conference on war-time controls between the Premiers of all States and Commonwealth authorities resolved that all the States would co-operate with the Commonwealth in setting up the machinery necessary for rent control, and that in effecting this the existing instrumentalities would be retained as far as possible.

2. **National Security (Fair Rent) Regulations, September, 1939.**—On 29th September, 1939, the Commonwealth, under its emergency powers, issued the National Security (Fair Rent) Regulations in order to provide a basis for action in those States lacking rent control legislation. These regulations empowered the Governor-in-Council of a State to constitute Fair Rents Boards and also gave him discretionary power to fix the maximum rents of certain classes of premises at the 31st August, 1939 level during the period ending 31st December, 1939. The two main features of the regulations were the provisions enabling Fair Rents Boards to determine fair rents, and those protecting tenants against eviction.

The powers given to the States under the regulations were accepted by Victoria, Queensland, and Tasmania, where rents were pegged at the rates in operation on 31st August, 1939, and Fair Rents Boards were constituted. The Commonwealth regulations were also introduced in the two territories administered by the Commonwealth, and Fair Rents Boards were constituted at Canberra and Darwin. In the other three States steps were taken to give effect to the decision of the Premiers' Conference by the introduction of State legislation.

An important feature of rent control in the Commonwealth up to this stage was that the fair rents regulations could not be enforced in any State by the Commonwealth Government, and their introduction was left to the discretion of the Governor-in-Council of the State concerned.

3. **National Security (Landlord and Tenant) Regulations, November, 1941.**—On 28th November, 1941, new regulations under the name of National Security (Landlord and Tenant) Regulations were brought into operation. Their general effect was to give greater security to tenants and to extend that security to tenants in States where, in the opinion of the Government, local legislation was inadequate. They covered all premises except those ordinarily let for holiday purposes only, premises licensed for the sale of spirituous and fermented liquors, and premises of agricultural properties, and they applied to any part of any premises separately let, and to furnished premises.

The provisions of the regulations relating to termination of tenancies, the recovery of possession of premises and the ejectment of tenants from premises were expressed so as to apply in each State and Territory of the Commonwealth. Moreover, the Minister could, by order, apply the other provisions of the regulations to any State or Territory where he was satisfied that the law of that State or Territory did not sufficiently carry out the object of the regulations. Orders to this effect were made in respect of New South Wales on 28th November, 1941, the Australian Capital Territory on 29th December, 1941, Tasmania on 7th March, 1942, Victoria on 26th March, 1942, Queensland on 13th April, 1942, and Northern Territory on 29th January, 1943.

These regulations were subjected to considerable amendment between their introduction and the date upon which they were repealed. Generally speaking, however, their main features were the following :—

(i) *Determination of Rents.* The maximum rent of all premises to which the regulations applied was fixed at the amount ruling at the "prescribed date" declared by the Minister in respect of the State or Territory in which the premises were situated. In the cases of Victoria and Queensland the 31st December, 1940 was fixed as the prescribed date, while, in the cases of New South Wales, Australian Capital Territory, Tasmania and Northern Territory, the date so fixed was the 31st August, 1939. The regulations also made provision whereby the landlord or tenant could apply to a Fair Rents Board for a determination of the fair rent of the premises.

(ii) *Termination of Tenancies.* The regulations provided that a landlord should not undertake any proceedings for the ejectment of his tenant or the termination of the tenancy except in the manner prescribed. The regulations limited the grounds on which notice to quit might be given and prescribed the period of the notice.

4. **Conference with Magistrates, March, 1943.**—At the end of March, 1943, a conference with magistrates at Canberra recommended that some central organization should be set up which would be in a position to give advice when required, and which could co-ordinate the activities of the Fair Rents Boards and take action to ensure as far as possible that a uniform policy was followed in determining rents.

Partly as a result of this conference, it was decided that steps should be taken to repeal the old regulations and to replace them by new regulations, which were not, however, gazetted until 15th June, 1945. Their operation was postponed until 2nd July, 1945, in order to enable the public to become acquainted with them.

5. **New Regulations, June, 1945.**—The most outstanding change in the new regulations was in the field of rent control, provision being made for the appointment of a Commonwealth Rent Controller with power to fix the rent of rooms and other shared accommodation. In the cases of all other premises, the determination of rents was still left with the Fair Rents Boards. It was felt that this change would not only afford relief to the Fair Rents Boards which had in many cases been overtaxed by the number of applications before them, but would also permit a more simple and speedy determination of room and apartment rents. The regulations provided for appeal from the Controller to a Fair Rents Board.

These regulations, as before, not only protected tenants against excessive rents but also gave them security of tenure. The provisions of the regulations governing rent control applied throughout the Commonwealth except in South Australia and Western Australia. The remaining provisions of the regulations applied in all States and Territories of the Commonwealth.

The Minister had power by order to exclude any premises from the operation of the regulations, and, by an order dated 2nd July, 1945, the following premises were excluded :—

(1) Premises licensed for sale of spirituous or fermented liquors.
(2) Premises ordinarily leased for holiday purposes only.

The new regulations, when first issued, were administered by the Minister for Trade and Customs. On 16th October, 1945, however, their administration was transferred to the Minister of State for Works and Housing under whom it was extended to 31st December, 1947 by the Defence (Transitional Provisions) Act 1946.

6. **Appointment of Commonwealth Rent Controller and Deputy Rent Controllers.**—On 2nd July, 1945 a Commonwealth Rent Controller was appointed, and on the same date he appointed deputies in the various States and Territories of the Commonwealth. The Deputy Rent Controllers dealt with applications for determinations of rent in the case of shared accommodation, investigated any breaches of the regulations and took all steps necessary to ensure compliance with them.

The Controller did not personally engage in the determination of rents of shared accommodation. His task was to co-ordinate the activities of his various Deputies and to ensure as far as possible their uniform carrying out of policy. All matters for prosecution were referred to him for consideration before any proceedings were commenced.

7. **Further Amendments to Regulations.**—In order to prevent unscrupulous lessors from defeating the regulations, "holiday premises" were re-defined, in December, 1946, to ensure that only *bona fide* holiday lettings were excluded from the operation of the regulations.

The next important change was the abolition of the divided jurisdiction in fixing fair rents. Because of the legal atmosphere surrounding the determination of fair rents of premises, other than shared accommodation, and the absence of facilities for investigating complaints, Cabinet decided to transfer the jurisdiction of the Fair Rents Boards to the Controller. A right of appeal to a Fair Rents Board (consisting of a magistrate sitting alone) was, however, provided in the amendment of the regulations taking effect from 30th December, 1946.

Further amendments, of a legal or procedural nature, were made in March, 1947. They included the restriction of eviction proceedings to courts of summary jurisdiction, the disallowing of appeals over eviction cases except on questions of law, the protection (for a period of six months after the transaction) from a notice to quit of tenants of houses sold by the lessor, and the prevention of traffic in tenancies by including, as new grounds for an eviction order, the transfer of a lease by the lessee or a sub-lease without the approval of the lessor.

Finally, on 26th February, 1948, amendments were found necessary to resolve administrative difficultues created by a decision of the High Court, which held that the Controller was unable to vary determinations of his own motion.

8. **The Defence (Transitional Provisions) Act and the Referendum.**—At the Premiers' Conference in August, 1946, the continuance of various war-time controls exercised by the Commonwealth was considered, and it was resolved that rent and eviction control should continue to be exercised by the Commonwealth supported by appropriate complementary State legislation. Legislation giving effect to this resolution was at length passed by all State Parliaments, although there was variation from State to State in the period of operation (e.g. the Victorian Act expired on 30th June, 1947 and was not re-enacted).

Meanwhile, Federal Cabinet had decided to pass substantive legislation to replace the Regulations which depended on the National Security Act. Time did not allow for preparation of this legislation, and, instead, the Defence (Transitional Provisions) Act was passed on 14th December, 1946. This had the effect of continuing in operation various regulations, including the National Security (Landlord and Tenant) Regulations, for a further period.

The regulations were dependent for their validity upon the defence power contained in the Constitution, and the danger of a successful challenge in the High Court became increasingly great as time passed. Serious doubts also existed whether the various economic controls could be effectively exercised by the individual States, especially as the Victorian precedent introduced doubts as to the retention of the necessary legislation in the other States. Accordingly the Government held a referendum to obtain approval for the Commonwealth to legislate on rents and prices (including charges). On the defeat of this referendum, the Commonwealth Government decided to return various controls, including that over rents and evictions, to the States. The transfer was effected on 16th August, 1948, so far as New South Wales, Victoria, South Australia, Western Australia and Tasmania were concerned, and on 1st September, 1948, in the case of Queensland. The change in regard to South Australia and Western Australia related only to evictions as both these States controlled rents under State law.

9. **Statistics.**—In the period of two and a half years ended 30th June, 1948, determinations of rent of shared accommodation totalled 35,768; 20,954 rents were decreased by rent control action, 6,147 increased and 8,667 were unchanged. The net effect of 35,768 determinations was a reduction of about 13 per cent. in total weekly rentals from nearly £50,000 prior to determination to about £43,000 after rents were fixed. In the eighteen months during which the Controller exercised jurisdiction over rents of complete units of accommodation, 20,312 determinations were made; the rents of 5,491 complete units were reduced, 10,499 increased and 4,322 were unchanged.

Eviction proceedings in the two and a half years ended 30th June, 1948 resulted in 15,593 applications being granted and 11,291 refused, a total of 26,884 applications dealt with.

10. **Regulations for Protection of Members of Forces and War Workers.**—While the National Security (Landlord and Tenant) Regulations applied to civilian tenants, various provisions were inserted in other regulations to give special protection to members of the forces and to war workers. Thus National Security (War Service Moratorium) Regulations, administered by the Attorney-General, contained rent provisions which conferred additional protection on persons who were "protected persons" within the meaning of the regulations, and also enabled a protected person to require the owner to let to him a dwelling house which was vacant or about to become vacant. Protection was also extended to members of the Civil Construction Corps and their dependants by a provision in National Security (Allied Works) Regulations. Special provision for war workers in regard to rents and rented premises was also made in National Security (Housing and Accommodation) Regulations.

§ 17. Housing Division.

In July, 1945 the Commonwealth Government created the portfolio of Works and Housing, thus amalgamating under one Minister a number of housing functions previously shared by several Commonwealth Departments. Within the new department the Housing Division was charged with the exercise of most of these functions.

The chief responsibility of the Division is the administration of the Commonwealth and State Housing Agreement, under which the Commonwealth and State Governments are co-operating in a plan to provide good standard homes for families in the moderate income groups. A feature of the rental provisions of the agreement is a system of rental rebates, whose basic principle is that a family with income at the basic wage level need not pay more than one-fifth of its income in rent, regardless of the economic rent of the dwelling. As the family income rises above or falls below the basic wage, so does the rebate diminish or increase. The Commonwealth bears three-fifths, and the State concerned two-fifths, of all losses occasioned by the rental rebate system. The agreement also provides for the sale of dwellings to tenants.

From the inception of the Commonwealth and State Housing Agreement in April, 1944 to 30th June, 1948, the five States operating under the agreement (South Australia, although a signatory, has not yet operated under the agreement) had completed 15,271 dwellings. A further 10,090 dwellings were under construction at that date. In the period mentioned, the Commonwealth advanced £31,115,000 to the States to finance the acquisition and development of land and the construction of dwellings.

The Housing Division, in administering the agreement, examines technical and financial aspects of housing by the State Housing Authorities. Close attention is given to uniform treatment, as between the States, in applying the different provisions of the agreement, and to ensure that the Commonwealth's interests are safeguarded and the terms of the agreement observed.

As part of its policy of assisting the Australian housing programme, the Division is engaged in many tasks, including the development, under the aegis of the Standards Association of Australia, of housing specifications and codes for low income group housing, the review of local supplies of materials, components, fittings, equipment and tools, examination, with other bodies, of the application of new types of materials and methods of construction to low-income housing and proposals for the importation of complete dwellings and components.

To keep Australia abreast of housing developments, the Division undertakes technical and economic research on various aspects of housing, and maintains a close watch on the latest thought and practice in developments overseas. Methods and policies that might be useful to State Housing Authorities and other interested bodies are published in *Australian Housing*, a bulletin issued by the Division at regular intervals, and a regular flow of informative material is maintained to authorities in all States.

The Division has been responsible for the development of the Australian Housing Cost Index as part of its continuous task of examination and analysis of house building costs. The index is published at quarterly intervals, and shows the trend in housing costs in the six capital cities of the Commonwealth.

Finally, the Division is concerned with other tasks related to the housing programme. Recently, these have included such questions as the special problems arising from slum clearance, the housing needs of different sections of the community—e.g., old persons—review of prefabricated housing proposals and decentralization.

§ 18. War Service Homes.

The provision of War Service Homes is now a function of the Department of Works and Housing and the administration of the War Service Homes Act is under the immediate control of the Director of War Service Homes.

Since the inception of operations under the War Service Homes Act (figures in parentheses indicate cases where eligibility has been established and assistance granted as a result of service during the 1939–45 War) 56,949 (11,373) applications have been approved ; 23,309 (1,757) homes have been built, or for which assistance to build has been given ; 16,221 (3,083) homes have been purchased ; and 4,433 (1,293) mortgages have been discharged. The total number of homes provided under the War Service Homes Act to 30th June, 1948 was 43,963, including 6,133 to persons who served during the 1939–45 War.

During 1947–48 5,349 (5,091) applications were approved ; 1,247 (1,199) homes were built or for which assistance was given ; 1,758 (1,689) homes were purchased ; and 672 (632) mortgages were discharged. The total number of homes provided during the financial year 1947–48 was 3,677 (3,520).

The total capital expenditure from inception to 30th June, 1948 was £37,082,438, including £4,438,681 for 1947–48. Receipts from inception to 30th June, 1948 amounted to £39,025,925, including £1,627,375 during 1947–48. Of the total receipts, £17,387,418 has been paid to the National Debt Sinking Fund, including £1,115,247 for 1947–48.

As at 30th June, 1948 the total amount of insurances in force, including cover notes, amounted to £24,136,195. The premium income for 1947–48 amounted to £29,831, and expenditure from the War Service Homes Insurance Trust Account to £15,013.

As at 30th June, 1948, arrears of instalments outstanding amounted to £301,286 or 0.88 per cent. of the total instalments due.

§ 19. New Building.

1. General.—The statistics in this section relate to the operations of private contractors, Government authorities and owner-builders, with the exception of those relating to employment, which exclude the numbers of persons working on owner-built houses. In general, they relate to *new* building only, and data on alterations, additions, renovations and repairs to buildings are excluded, because of the difficulty in obtaining complete lists of persons who engage in these operations. Figures for houses exclude converted military huts, flats and shop dwellings. Some houses built on farms are excluded but these do not affect the figures materially.

The following definitions of terms used in this section are necessary to understand the data presented :—

Owner-Builder. A person who is actually building his own house or is having his house built under his own direction without the services of a contractor.

Commenced. A building is regarded as having been commenced when work on foundations has begun. Owing to the difficulty of defining the exact point that this represents in building operations, it is probable that interpretations placed upon it by informants are not entirely uniform.

Completed. A building is regarded as having been completed when the builder has fulfilled the terms of the contract. As with commencements, the interpretations placed upon this definition may vary.

Under Construction. A building remaining uncompleted at the end of a period is regarded as being under construction, regardless of whether construction was actively proceeding on that particular date.

Employment. The figures of employment relate to persons actually working on new buildings on a specified day. They include working principals, employees, men working as, or for, sub-contractors and men temporarily laid off on account of weather. In addition, they include some employees engaged on alterations, additions, renovations or repairs to buildings *when these jobs are undertaken by a contractor who builds new buildings.* The figures exclude persons working on owner-built houses.

Values. All values shown exclude the value of land and represent the estimated value of buildings on completion.

2. **Value of New Buildings.**—(i) *Completed,* 1947–48. The following table shows the value of all new buildings completed in each State during 1947–48, according to the kind of building. It should be remembered that all values shown exclude the value of land and represent the estimated value of buildings on completion.

NEW BUILDINGS COMPLETED, 1947–48 : VALUE.

(Including Estimated Value of Owner-built Houses).

4. **Numbers of New Flats.**—The figures in the foregoing tables do not include particulars of new flats. The summary below shows the numbers of new flats commenced, completed and under construction in Australia for the years 1945–46 to 1947–48, together with State details for 1947–48. It should be noted : (i) that the figures are additional to the numbers of houses shown in other tables, (ii) that each flat is counted as a separate unit, and the numbers shown therefore relate to individual flats, and (iii) that new flats only are included, i.e., the conversions of old buildings into flats are omitted.

(*a*) Actually working on jobs.

§ 20. Clothing and Food Rationing.

1. **General.**—The rationing of clothing and certain foodstuffs was established early in the 1939–45 War, but has since been discontinued with the exception of butter and tea which in 1949 still remain on the list of rationed goods. For greater detail as to the scale of rationing *see* Official Year Book No. 36, pp. 1084–1090.

2. **Clothing.**—Clothing rationing, except for some further easing in the incidence of its severity, was continued during 1947 and into 1948 on the same general lines as those set out in the previous issue. The principal reason for its continuance was shortage in supply of woven piece goods, in particular cottons from overseas. Woven cotton piece goods represent approximately two-thirds of Australian consumption requirements for outer clothing and household uses, the remaining third being about equally divided between rayon and wool. With the lifting of export controls in the United States of America early in 1947, licences were issued to merchants for extensive quantities of cotton and rayon piece goods for import from this source, and although many of the materials were in types of lesser utility (fancy dress cloths and furnishings), it nevertheless appeared likely that these imports would meet the overall deficiences in supplies available from the United Kingdom and India. With the prospect of the early arrival of the main portion of the goods licensed, trade representations for an easing in the rationing scale were considered and resulted in a reduction, from 1st July, 1947, of approximately 28 per cent. in the average coupon ratings of clothing and clothing piece goods. No change, however, was considered practicable for household cloths, i.e., sheetings, etc., the supply of which remained precarious, and consumption even at the severely rationed level was maintained only at the expense of a gradually reducing stockpile.

Taking into account prospects of continuing supplies, at least of utility cloths, from the United States, the coupon reductions made at 1st July were regarded as a first step towards a complete de-rationing of clothing by or before the end of 1947. The dollar crisis which developed soon afterwards, however, as well as virtually precluding the import of further piece goods from America, resulted in a review of all licences already granted against which the goods had not been imported. This review resulted in the cancellation of portion of the undelivered goods concerned in these licences.

Supplies from the United Kingdom and India, which are unrestricted by the Australian Government, are completely inadequate to meet our consumption needs, even on a rationed level and, during the continuance of restriction on the use of dollars, imports can be supplemented only by quantities available from those continental countries where exchange is favourable to sterling. Australian domestic production of woven cotton and rayon piece goods is negligible in comparison with our total requirements and cannot be quickly expanded owing to lack of suitable plant, experienced labour and, in particular, of supplies of cotton and rayon yarn.

Consumption of woollens and worsteds, accelerated by the favoured coupon ratings extended to these since 1945, kept pace with the expected improvement in production, there being about 20 per cent. increase in both production and consumption over the two years 1946 and 1947.

Rationing of clothing was kept under review, however, and on 16th June, 1948 the Prime Minister stated that it was considered that the general supply position warranted its early abandonment. The ending of clothes rationing was therefore announced on 21st June, 1948.

3. **Food.**—(i) *Review of Food Rationing.* Food rationing in Australia was introduced as a war-time necessity in 1942, in order to ensure that the foodstuffs in demand were so allotted as to meet the requirements of the Armed Services based upon Australia, and to provide for an equitable distribution among civilians.

The commodities subject to coupon rationing were Tea, Sugar, Butter and Meat. Sugar rationing was introduced on 31st August, 1942, and ended on 2nd July, 1947. The ration rate throughout the period was 1 lb. per head per week, plus an allowance for jam making of 10 to 12 lb. per head per annum. The rationing of meat commenced on 17th January, 1944 and ceased on 21st June, 1948. The adult rate varied from 2¼ lb. per head per week in 1944 to about 1.8 lb. per head per week in 1945, remaining at this level until rationing ended in 1948.

The continuance of tea rationing into 1949 is due to the shortage of world supplies. The original ration rate was 1.6 oz. per head per week, but on 19th October, 1942 it was increased to 2 oz. and has since remained at that level.

Although adequate supplies of butter are available to meet local requirements, rationing at the rate of 6 oz. per head per week is still maintained in 1949. The purpose of continuing the rationing of butter is to restrict local consumption so as to provide a maximum quantity for export to meet short supplies overseas, particularly in the United Kingdom.

(ii) *Consumption of Rationed Foodstuffs.* The following table, showing the annual civilian consumption in Australia of foodstuffs which were rationed during the 1939–45 War, illustrates the reduced civilian consumption of these commodities brought about by rationing.

ANNUAL CIVILIAN CONSUMPTION OF RATIONED FOODSTUFFS (*a*) : AUSTRALIA.

Period.	Tea.	Sugar.(*b*)		Butter.	Meat.	
		As Sugar.	In manufactured products.		Couponed Meat.(*c*)	Other Meat.(*d*)
	Rationed from July, 1942.	Rationed from August, 1942 to July, 1947.	Not subject to coupon rationing.	Rationed from June, 1943, and reduced June, 1944.	Rationed from January, 1944 to June, 1948.	Not subject to coupon rationing.
Average, 3 years ended	'000 tons.	'000 tons.	'000 tons.	'000 tons.	'000 tons.	'000 tons.
1938–39	21.1	216.5	110.1	101.0	692.2	83.9
1943	17.1	205.0	121.0	96.5	644.5	63.0
1944	18.0	210.7	129.0	80.7	566.4	82.2
1945	19.5	220.8	123.5	78.5	531.2	79.6
1946	22.1	231.6	167.5	82.8	567.1	98.0
1947(*e*) ..	22.2	245.3	177.7	82.3	576.7	99.9

(*a*) Includes catering permits, but only the estimated civilian proportion of industrial permits. (*b*) In terms of refined sugar. (*c*) Fresh beef, mutton, lamb and pork (in terms of carcass weight); this includes some pork consumed in smallgoods which was not rationed. It includes in addition, meat consumed on farms and in unrationed areas. (*d*) Canned meat, bacon and ham and offal expressed in terms of carcass weight. (*e*) Subject to revision; includes consumption by the Armed Services.

In addition to the commodities mentioned above, other items of foodstuffs were subjected to some measure of control under war-time conditions. These were not subject to coupon rationing, but their availability for civilian consumption was determined after other priorities had been met. The items included Bacon and Ham, Eggs, Milk, Cream and Rice. By 1949 there was little lack of supplies in these items, except for cream and rice.

Restrictions on the sale of cream are still imposed, and civilian supplies of rice are being diverted to meet the requirements of rice-eating peoples overseas. The only supplies of both items entering civilian consumption in Australia are restricted to hospitals and approved medical cases, but resident Asiatics also receive a weekly allowance of rice.

§ 21. Consumption of Foodstuffs and Beverages.

1. **Quantities Consumed.**—Previous issues of the Year Book included a statistical survey of the movement in the consumption in Australia, in total and per head of population, of a selected number of commodities over a period of years up to 1940–41 (*see* Official Year Book No. 36, pp. 1098–1100). In this issue these long-term comparisons are replaced by more detailed information covering consumption of the principal foodstuffs and beverages in annual periods since 1944, in comparison with average annual consumption during the three years ended 1938–39.

The estimates of total consumption and consumption per head of population in Australia in the two tables following have been compiled by deducting net exports from production and allowing for recorded movements in stocks of the respective commodities. While the estimates may generally be accepted as reasonably accurate, there are some deficiences to which attention should be directed. These relate chiefly to the quantities of poultry, game and fish (fresh and shell) and the quantities of visible oils and other fats entering consumption. In addition, little information is available on the quantities of vegetables, fruit, eggs, etc., which householders produce for their own requirements and the extent of wastage occurring in the marketing of foodstuffs. In all these cases careful estimates have been compiled from the best available data, and the quantities shown as entering consumption in Australia have been adjusted to allow for these circumstances. Other difficulties occur in the compilation of statistics of consumption for which no allowance has been made. These include (i) the consumption by the Services during the war years of some minor commodities, (ii) the absence of particulars of stock movements in a limited number of cases, (iii) the disposal of surplus Army stores after the close of the war and (iv) the purchase of foodstuffs on the civilian market and the despatch of these quantities overseas as gifts in bulk and by parcel post. These deficiencies, however, do not seriously impair the accuracy of the estimates compiled.

The estimates of consumption per head shown in the second table following have been checked, wherever possible, with data from other sources which confirm the reliability of the methods used. The data were obtained principally from the Food Consumption Survey conducted in 1944 by the Nutrition Committee of the National Health and Medical Research Council.

There has been a general upward movement in the consumption per head of population of most foodstuffs and beverages in Australia from the levels of consumption during the three years immediately preceding the 1939–45 War. The principal commodities which show a decline in consumption are meat, butter and tea, each of which has been subject to consumer rationing.

More detailed information on the consumption of foodstuffs and beverages is contained in the publication, *Report on Food Production and the Consumption of Foodstuffs and Nutrients in Australia,* issued by this Bureau.

(*a*) Excludes consumption by the Armed Services. (*b*) Subject to revision. (*c*) Included with fresh meat at its carcass weight. (*d*) In terms of weight of shell eggs. (*e*) Includes fresh equivalent of manufactured products. (*f*) Probably understated due to lack of complete data. (*g*) Not available. (*h*) Included under fresh vegetables at its fresh equivalent. (*i*) Excludes breakfast foods from maize and rice. (*j*) Figures for 1944 and later years are for years ended June of year shown, and include consumption by the Armed Services.

2. **Level of Nutrient Intake.**—The table below shows details of the estimated supplies of nutrients available for consumption in Australia during annual periods since 1945 in comparison with the annual average for the three years 1936–37 to 1938–39. The table

has been compiled by the Nutrition Committee of the National Health and Medical Research Council, and is based on the estimates of quantity consumption per head of population shown in the preceding table.

(a) Excludes consumption by Armed Services. (b) Subject to revision.

§ 22. Marketing of Australian Primary Products.

Prior to the outbreak of war the necessity for Commonwealth marketing legislation arose principally from difficulties encountered by the various Australian primary industries in overseas markets. Legislation of this kind usually resulted from consultations held between the Commonwealth Government and producers with a view to discovering a means whereby these difficulties could best be overcome. The essential element of this legislation was the establishment of producer-controller industry boards, whose function was to control the overseas marketing of the product concerned. Agreement was reached by the Governments of the United Kingdom and the Commonwealth which enabled exports from Australia to proceed normally even before any contracts for the sale of commodities had been concluded.

On the outbreak of hostilities, the existence of statutory boards for the meat, dairy produce and fruit industries facilitated war-time organization. However, war-time conditions so dislocated the normal facilities for marketing many of our other primary products that, in the interests of producers and the community generally, it became necessary for the Commonwealth Government to organize the marketing of some commodities previously unaffected by marketing legislation. The experience already gained in marketing control enabled the Commonwealth Government to proceed quickly with the formation of committees and/or boards in the industries concerned, namely, wool, wheat, barley, potatoes, tobacco, apples and pears, hides and leather, sheep skins, rabbit skins, tallow and eggs. In the case of other commodities it was found essential to expand the controls already in existence and in some instances this involved the establishment of an authority in the industry additional to that already constituted under pre-war marketing statutes. For the greater part, these war-time authorities were set up by virtue of regulations under the National Security Act. Several of the war-time organizations set up under the National Security Act have since been superseded by permanent boards established by the Commonwealth Government to control overseas marketing.

Full details of the operations of both permanent and war-time boards and other authorities appointed to assist or control the marketing of Australian primary products are included in Chapter XIX.—Pastoral Production, Chapter XX.—Agricultural Production and Chapter XXI.—Farmyard, Dairy and Bee Products.

§ 23. Valuation of Australian Production.

1. **Net Value of Production.**—(i) *Australia.* The value of production for Australia is computed in accordance with the decisions reached at the Conferences of Australian Statisticians and principally by the Conference held in 1935. The figures published below have been compiled by the State Statisticians from the best data available. The adoption of substantially uniform methods of valuing production and of estimating elements of costs of production and marketing render the results comparable as between States.

Attention is directed to the fact that the value shown in the table refers only to recorded production and excludes the building and construction industry, those industrial establishments not classified as factories, and agricultural and farmyard produce obtained from areas of less than one acre.

The following is a brief explanation of the terms used in the table :—

(*a*) " Gross value " is the value placed on recorded production at the wholesale price realized in the principal markets. (In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are presumed to be the principal markets.)

(*b*) " Local value " is the gross production valued at the place of production and is ascertained by deducting marketing costs from the gross value. (Marketing costs include freight, cost of containers, commission and other charges incidental thereto.)

(*c*) " Net value " represents the net return to the producer after deducting from the gross value costs of marketing and of materials used in the process of production. Materials used in the process of production include seed, power, power kerosene, petrol and other oils, fodder consumed by farm stock, manures, dips, sprays and other costs. No deduction has been made for depreciation and maintenance costs. This matter is more fully dealt with in *Production Bulletin* No. 41. Part II., issued by this Bureau.

It should be noted that costs of maintenance of farm buildings and fences have not been deducted from the value of production of rural industries, as particulars are not available for all States. In addition, there is an overstatement in the net value of production for New South Wales by the inclusion of power costs in rural industries. These costs, which amounted to £1,892,000 in 1940–41, have not been ascertained in later years. The value shown for Mines and Quarries in Tasmania is understated owing to the omission of Quarries. This understatement, however, is more or less offset by the inclusion of production costs in Mining. Production costs are not available for all States in respect of Fisheries, and Local Values have been used for this industry with consequent overstatement.

Tables showing the total and per capita value of production are published, by States, for each of the ten years ended 1945–46. Except for trapping and mines and quarries, the tables on each industry will be found in the chapter dealing with that industry.

GROSS, LOCAL AND NET VALUE OF RECORDED PRODUCTION: AUSTRALIA, 1945–46.

Industry.	Gross Production valued at Principal Markets.	Local Value—Gross Production valued at place of Production.	Net Value of Production (without deduction of depreciation or maintenance).

2. **Productive Activity.**—The two tables, and comment thereon, usually published in this paragraph relative to measurement of productivity are omitted from this issue pending revision in the light of changes in age composition of the population as revealed by the Census of 1947, and of changes in age and sex composition of persons engaged in production in recent years.

§ 24. Indexes of Production.

In the tables below, indexes of price and quantity production are given for the following industrial groups, namely :—Agriculture, Pastoral, Farmyard and Dairying, Gold and Other Minerals, and for all groups combined. The method used in calculating these indexes is the fixed base weighted aggregative method. Prices for any year are obtained by dividing value of production by quantity produced in that year, and the price indexes are computed by using as fixed quantity-multipliers, for the commodities involved, the average quantities produced over the period 1923–24 to 1927–28. For the quantity indexes the fixed multipliers are weighted average prices over the same period, which are obtained by dividing the total value of any commodity for the period by the total quantity produced. Exactly the same method is used for the combined group indexes (i.e., for All Farming and Total) as for the indexes for individual groups.

§ 25. League of Nations.

In issue No. 35 and earlier issues of the Official Year Book information was given concerning the League of Nations. The dissolution of the League and the transfer of certain of its functions to the new body, the United Nations, are now being effected (*see* § 26 following).

§ 26. The United Nations.

1. **General.**—The Moscow Declaration of 1943 concerning a new international organization for the maintenance of international peace and security marked the end of the League of Nations. The dissolution of the League, and the transfer of certain of its functions to the new body, the United Nations, are now being effected.

The Charter of the United Nations was drawn up by the delegates of fifty nations at the United Nations Conference on International Organization at San Francisco from 25th April to 26th June, 1945. Australia's ratification was deposited on the 1st November, 1945. The Charter has been ratified by 58 States in all: Afghanistan, Argentina, Australia, Belgium, Bolivia, Brazil, Burma, Byelorussia, Canada, Chile, China, Colombia, Costa Rica, Cuba, Czechoslovakia, Denmark, Dominican Republic, Ecuador, Egypt, El Salvador, Ethiopia, France, Greece, Guatemala, Haiti, Honduras, Iceland, India, Iran, Iraq, Lebanon, Liberia, Luxembourg, Mexico, Netherlands, New Zealand, Nicaragua, Norway, Pakistan, Panama, Paraguay, Peru, Philippine Commonwealth, Poland, Saudi Arabia, Siam, Sweden, Syria, Turkey, Ukraine, Union of South Africa, Union of Soviet Socialist Republics, United Kingdom, United States of America, Uruguay, Venezuela, Yemen, Yugoslavia.

The full record of the Conference is contained in the Report by the Australian Delegates on the United Nations Conference on International Organization held at San Francisco, United States of America, from 25th April to 26th June, 1945.

The Australian delegates to the Conference were the Rt. Hon. F. M. Forde, M.P., and the Rt. Hon. H. V. Evatt, K.C., M.P.

At San Francisco an Executive Committee and a Preparatory Commission were established, and when these bodies had completed their work of preparation for the first meeting of the United Nations, the General Assembly met in London on 10th January, 1946. At this meeting the Assembly carried out the elections to the other major organs of the United Nations. These major organs are the General Assembly, the Security Council, the Economic and Social Council, the Trusteeship Council, the International Court of Justice and the Secretariat.

2. **General Assembly.**—This is the forum of the United Nations. In it each member state is represented and has one vote. It meets in regular annual sessions and has provision for special sessions. It has power to discuss any matter within the scope of the Charter and to make recommendations upon it; an exception to this is provided by disputes which are before the Security Council. The Assembly elects the non-permanent members of the other major organs and considers annual reports from them. Upon the recommendation of the Security Council, it may expel a member which has persistently violated the principles of the Charter.

3. **The Security Council.**—This has the primary responsibility for the maintenance of international peace and security. It is composed of certain permanent members, namely China, France, the United Kingdom, the Union of Soviet Socialist Republics and the United States of America, and six non-permanent members with two year periods of office. On procedural matters, decisions are taken by an affirmative vote of any seven members. But on all other matters, decisions can only be made on the affirmative vote of seven members, including the concurring votes of all the permanent members However, the powers which are parties to a dispute for peaceful settlement do not vote

At the first election, three non-permanent seats were filled for one year only. Member states elected for this period were Egypt, Mexico and the Netherlands. Australia, Brazil and Poland were elected for two-year periods.

The Security Council is assisted by a Military Staff Committee consisting of the Chiefs of Staff of the permanent members of the Council. In the event of measures other than armed force failing to remove a threat to peace, plans for the application of armed force are made by the Security Council with the assistance of this committee. The forces required are to be drawn from the member states as a result of particular agreements between those states and the Security Council.

4. **The Economic and Social Council.**—This body consists of eighteen members, each elected for a period of three years. Its main functions are to make studies and recommendations upon educational, economic, social, cultural, health and related matters. It may set up commissions for these subjects and establish working relationships with relevant international agencies.

The first election staggered the periods of office, and resulted as follows :—Canada, Chile, China, Belgium, France and Peru were elected for three year terms ; Cuba, Czechoslovakia, India, Norway, United Kingdom and Union of Soviet Socialist Republics, for two year terms ; and Colombia, Greece, Lebanon, Ukraine, the United States and Yugoslavia, for one year terms.

Australia was elected at the Second Annual Session of the General Assembly to ESC for three years, commencing 1st January, 1948.

5. **The Trusteeship Council.**—The Charter states that the political, social, cultural and economic advancement of the non-self-governing territories is a sacred trust. In addition, a Trusteeship Council is to be set up composed of those members administering trust territories together with a number of members without trust territories. Territories which may be placed under trusteeship in accord with individual trusteeship agreements are those now held under mandate, those detached from enemy states of the second World War and those dependent territories placed under the system by the states responsible for their administration. The Council cannot be set up until the conclusion of trusteeship agreements. Australia is automatically a member of the Trusteeship Council, as an administering Power.

The Council has among its duties the consideration of annual reports submitted by the trustee state, the carrying out of periodic inspections by agreement with it, and the formulation of questionnaires on the welfare and advancement of the dependent peoples.

6. **The International Court of Justice.**—This consists of fifteen judges, no two of whom may be nationals of the same state. Its jurisdiction comprises all cases which the parties refer to it, and all matters especially provided for in the Charter or in treaties and conventions in force. States may declare that they recognize as compulsory its jurisdiction in all disputes of an international legal character.

The judges first elected are :—Nine year term : Professor Jules Basdevant (France), Dr. J. G. Guerrero (El Salvador), Sir Arnold McNair (United Kingdom), Dr. Alejandro Alvarez (Chile), and Dr. J. P. de Barros Azevedo (Brazil) ; Six year term : Dr. Charles de Visscher (Belgium), Professor S. B. Krylov (Union of Soviet Socialist Republics), Lic. Isidro Fabela Alfaro (Mexico), the Hon. Green H. Hackworth (United States of America), and Dr. Juris. H. Klaestad (Norway) ; Three year term : Dr. Hsu Mo (China), H. E. Abdel Hamid Badawi Pasha (Egypt), Mr. J. E. Read, K.C. (Canada), Dr. Milovan Zoricic (Yugoslavia), and M. Bohdan Winiarski (Poland). At the Second Annual Session of the Assembly the five retiring judges were re-elected.

7. **The Secretariat.**—The Secretary-General is the head of the Secretariat of the organization. He is appointed by the General Assembly upon the recommendation of the Security Council, and he appoints his staff in accordance with the rules approved by the General Assembly. M. Trygve Lie (Norway) was appointed first Secretary-General.

§ 27. Diplomatic and other Representatives Overseas and in Australia.

The following statement shows the various diplomatic and other representatives overseas and in Australia as at 28th February, 1949. Full details of British and foreign representation in Australia—diplomatic and consular—may be obtained from a publication issued by the Department of External Affairs, Canberra, entitled " Diplomatic and Consular List, including British Commonwealth Representatives and Trade Commissioners in Australia ".

AUSTRALIAN DIPLOMATIC AND OTHER REPRESENTATIVES OVERSEAS.

His Majesty's Ambassador Extraordinary and Plenipotentiary to—

United States of America, Washington, D.C.—
The Hon. N. J. O. Makin.
China, Nanking—
F. K. Officer, O.B.E., M.C.
France, Paris—
Lieut.-Colonel W. R. Hodgson, O.B.E.
Union of Soviet Socialist Republics, Moscow—
A. S. Watt.

His Majesty's Australian Envoy Extraordinary and Minister Plenipotentiary to—

Brazil, Rio de Janeiro—
Vacant.
First Secretary, W. T. Doig (Chargé d'Affaires), *ad interim*.
Chile, Santiago—
Vacant.
First Secretary, Dr. J. S. Cumpston (Chargé d'Affaires), *ad interim*.
The Netherlands, The Hague—
Vacant.
First Secretary, J. P. Quinn (Chargé d'Affaires), *ad interim*.

High Commissioners for Australia in—

United Kingdom, London—
Rt. Hon. J. A. Beasley.
Canada, Ottawa—
Rt. Hon. F. M. Forde.
Ceylon, Colombo—
Hon. C. W. Frost.
Eire, Dublin—
W. J. Dignam, K.C.
India, New Delhi—
H. R. Gollan, D.S.O., M.C.
New Zealand, Wellington—
A. R. Cutler, V.C.
Pakistan, Karachi—
Vacant.
Official Secretary, J. M. McMillan.
South Africa, Pretoria—
A. T. Stirling, O.B.E.

Australian Military Mission in—

Germany, Berlin—
Head, Major-General F. G. Galleghan, D.S.O., O.B.E., E.D.

Australian Mission—

Japan, Tokyo—
Head, P. Shaw.
United States of America, United Nations—
Minister, J. D. L. Hood.

Australian Commissioner for—

Malaya, Singapore—
C. Massey.

Consuls-General—

United States of America, New York—
C. V. Kellway.
United States of America, San Francisco—
Lieut.-General E. K. Smart, D.S.O., M.C.
Siam, Bangkok—
A. J. Eastman.
The Philippines, Manila—
J. K. Waller.
The Netherlands East Indies, Batavia—
Charles Eaton, O.B.E., A.F.C.

Consuls—

New Caledonia, Noumea—
H. S. Barnett.
Portuguese Timor, Dili—
H. D. White.

Trade Commissioners for the Commonwealth of Australia—

United Kingdom—
C. E. Critchley, M.B.E., London.
Canada—
C. J. Carne, Ottawa.
F. R. Gullick, Vancouver.
China—
H. Wrigley, Hong Kong.
Egypt—
C. L. Steele, Cairo.
India—
A. G. Hard, Calcutta.
S. D. Shubart, Bombay.
Malaya—
J. Payne, Singapore.
New Zealand—
Vacant.
South Africa—
G. R. B. Patterson, Johannesburg.
United States of America—
Trade Commissioners—
R. R. Ellen, New York.
S. F. Lynch, San Francisco.
Commercial Counsellor—
J. U. Garside, Washington, D.C.
Japan—
H. C. Menzies, Commercial Counsellor, Tokyo.
France—
H. Sullivan, Commercial Counsellor, Paris.

DIPLOMATIC REPRESENTATIVES IN AUSTRALIA.

Belgium—Envoy Extraordinary and Minister Plenipotentiary, Sydney—
His Excellency Monsieur Paul B. Verstraeten.
Brazil—Envoy Extraordinary and Minister Plenipotentiary, Canberra—
Vacant. (Chargé d'Affaires *ad interim* : Dr. M. Santos.)
Canada—High Commissioner, Canberra—
His Excellency Mr. K. A. Greene, O.B.E.
Ceylon—High Commissioner, Canberra—
His Excellency Mr. J. A. Martensz.
China—Ambassador Extraordinary and Plenipotentiary, Canberra—
His Excellency Dr. Kan Nai-kuang.
Denmark—Envoy Extraordinary and Minister Plenipotentiary, Canberra—
His Excellency Mr. Chr. M. Rottböll.

DIPLOMATIC REPRESENTATIVES IN AUSTRALIA—*continued.*

France—Envoy Extraordinary and Minister Plenipotentiary, Canberra—
His Excellency Monsieur Pierre Augé. (In charge of Embassy of the Republic of France).

India—High Commissioner, Canberra—
His Excellency Lieut.-Colonel Daya Singh Bedi.

Ireland—Representative of Ireland in Australia, Canberra—
His Excellency Dr. the Hon. T. J. Kiernan (personal rank of Minister).

Italy—Envoy Extraordinary and Minister Plenipotentiary, Sydney—
His Excellency Don Giulio del Balzo.

Malta—Commissioner, Melbourne—
Captain Henry C. Curmi, O.B.E.

Netherlands—Envoy Extraordinary and Minister Plenipotentiary, Canberra.
His Excellency Mr. P. E. Teppema, Kt. N.L., O.O.N.

New Zealand—High Commissioner, Canberra—
His Excellency Mr. J. G. Barclay.

Norway—Envoy Extraordinary and Minister Plenipotentiary, Sydney—
His Excellency Mr. L. J. H. Jorstad.

Sweden—Envoy Extraordinary and Minister Plenipotentiary, Sydney—
His Excellency Mr. O. C. G. Lundquist.

Union of Soviet Socialist Republics—Ambassador Extraordinary and Plenipotentiary, Canberra—
His Excellency Mr. N. M. Lifanov.

United Kingdom of Great Britain and Northern Ireland—High Commissioner, Canberra—
His Excellency the Rt. Hon. E. J. Williams.

United States of America—Ambassador Extraordinary and Plenipotentiary Canberra—
His Excellency Mr. Myron M. Cowen.

TRADE COMMISSIONERS OF OVERSEAS GOVERNMENTS IN AUSTRALIA.

Canada—
Senior Canadian Government Trade Commissioner, Sydney—
C. M. Croft.
Canadian Government Trade Commissioner, Melbourne—
F. W. Fraser.

India—
Indian Government Trade Commissioner, Sydney—
G. P. Pillai.

Indonesia—
Trade Commissioner, Melbourne—
J. Van der Noordaa.

Pakistan—
Trade Commissioner, Sydney—
K. H. Rahman.

New Zealand—
Senior New Zealand Government Trade Commissioner, Sydney—
W. Taylor.
New Zealand Government Trade Commissioner, Melbourne—
B. R. Rae, M.B.E.

United Kingdom—
His Majesty's Senior Trade Commissioner, Canberra—
J. B. Greaves, O.B.E.
His Majesty's Trade Commissioners, Sydney—
J. R. Adams.
A. Hartland.
K. H. Henderson.
His Majesty's Trade Commissioners, Melbourne—
H. F. Gurney, O.B.E.
W. G. Lamarque.
His Majesty's Trade Commissioner, Brisbane—
S. A. Deacon, O.B.E.

§ 28. Consular Representatives of Foreign Countries in Australia.

The following tabular statement shows the number of consular representatives of foreign countries in each State at 1st January, 1949 :—

CONSULAR REPRESENTATIVES OF FOREIGN COUNTRIES IN AUSTRALIA.

Country.	Number of Consular Representatives in—						
	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Total Aust.

(*a*) Includes a Consul for the Netherlands in the Northern Territory.

Particulars of the names and addresses of the various consular representatives, with their rank and year of appointment, are contained in the publication issued by the Department of External Affairs, Canberra, entitled "Diplomatic and Consular List including British Commonwealth Representatives and Trade Commissioners in Australia."

CHAPTER XXIX.

STATISTICAL ORGANIZATION AND SOURCES OF INFORMATION.

§ 1. General.

Development of Australian Statistics.—(i) *General.* An outline of the history and development of statistics in Australia is published in Official Year Book No. 19 (*see* p. 988) and previous issues, particular reference being made to the Crown Colony Blue Books, Statistical Registers, Prominent State Statisticians, Statistical Conferences, the Foundation of the Federal Bureau, and Uniformity of Statistical Control. It is not proposed to repeat this information in this issue.

(ii) *Present Organization.* The organization for the collection, tabulation, etc., of statistical data as between the State and Commonwealth Statistical Bureaux, and State and Commonwealth Government Departments, is described in Official Year Book No. 19, p. 990. Limits of space preclude its repetition in this issue.

§ 2. Statistical Publications of Australia.

1. **General.**—The official statistical publications of Australia may be divided bibliographically into two main divisions, namely :—(1) Commonwealth publications dealing both individually and collectively with the several States of Australia ; and (2) State publications dealing with individual States only. Besides these, there are many other circulars, press notices, etc., issued regularly which, though not wholly statistical, necessarily contain a considerable amount of statistical information.

2. **Commonwealth Publications.**—Commonwealth publications may be grouped under two heads, namely :—(i) Publications issued by the Commonwealth Statistician ; and (ii) Parliamentary and Departmental Reports and Papers.

(i) *Publications issued by the Commonwealth Statistician.* The following is a list of the principal statistical publications issued from the Commonwealth Bureau of Census and Statistics since its inauguration to May, 1949 :—

Australian Life Tables, 1901–1910. *Australian Joint Life Tables*, 1901–1910.
Australian Life Tables, 1920–1922.
Australian Life Tables, 1932–1934. *Australian Joint Life Tables*, 1932–1934.
Australian Primary Industries.—Report prepared for the Empire Producers Conference, Sydney, March, 1938.
Census (1911) *Results.*—Bulletins. Vols. I. (Statistician's Report), II., and III., with Appendix "Mathematical Theory of Population."
Census (1921) *Results.*—Bulletins, Nos. 1 to 26. Parts I. to XVI., forming Vol. I., and Parts XVII. to XXIX., forming, with the Statistician's Report, Vol. II.
NOTE.—Part XXVII., Life Tables.
Census (1933) *Results.*—Bulletins, Nos. 1 to 25. Parts I. to XIV., forming Vol. I., Parts XV. to XXVIII., forming Vol. II., and Parts XXIX. to XXXVII., forming, with Statistician's Report and Australian Life Tables 1932–34, Vol. III.
Census (1947) *Results.*—Bulletins, Nos. 1 to 16. For details *see* back page.
Crop Summary.—Annually, 1943–44 to 1947–48.
Dairying Summary.—Monthly ; first issue, September, 1937.
Finance.—Bulletins, 1907 to 1916–17 annually ; 1917–18 and 1918–19 (one vol.) ; 1919–20 and 1920–21 (one vol.) ; 1922–23 to 1947–48 annually.
Food Production and the Consumption of Foodstuffs and Nutrients in Australia.—Half-yearly, 1946–47, 1947 and 1947–48.
Fruit Summary.—Annually, 1944–45 to 1947–48.
Labour and Industrial Statistics.—Memoranda and Reports, various, to 1913.
Labour Report.—Annually, 1913 to 1947.

Live-stock Summary.—Annually, 1943 to 1948.

Local Government in Australia.—July, 1919.

Monthly Review of Business Statistics.—First issue, October, 1937.

Occupation Survey (1945) *Results.*—Detailed tables.

Official Year Book of the Commonwealth of Australia.—Annually, 1907 to present issue (1946 and 1947).

Oversea Trade.—Bulletins, annually, 1906 to 1946–47.

Pocket Compendium of Australian Statistics (formerly Statistical Digest).—1913, 1914, 1916, and 1918 to 1948 annually.

Population and Vital Statistics.—Bulletins and Reports, various, 1906–1910. *Demography,* 1911 to 1946 annually.

Production.—Bulletin, annually, 1906 to 1945–46. From 1936–37 issued in two parts: Part I. Secondary Industries; Part II. Primary Industries and Total Recorded Production.

Professional Papers.—Various. A full list appears in Official Year Book No. 13, p. 3.

Quarterly Summary of Australian Statistics.—First issue, No. 70, December, 1917, replacing *Monthly Summary of Australian Statistics* (Bulletins Nos 1 to 69).

Social Insurance.—Report to the Hon. the Minister of Trade and Customs, 1910.

Social Statistics.—Bulletins, 1907 to 1915 annually, and 1918.

Superannuation for the Commonwealth Public Service.—Report to the Hon. the Minister for Home Affairs, 1910.

Transport and Communication.—Bulletins, 1906, 1908 to 1916 annually, 1919 to 1930 annually, and 1932 to 1946–47 annually.

Vegetable Summary.—Annually, 1942–43 to 1947–48.

Wages and Prices.—January, 1932.

Wealth.—The Private Wealth of Australia and its Growth as ascertained by various methods, together with a Report on the War Census in 1915.

Wheat Summary.—Periodically; first issue, July, 1936.

(ii) *Commonwealth Parliamentary and Departmental Reports and Papers.* Lists of the principal official reports and other documents containing statistical information issued from the inauguration of the Commonwealth appear in the Official Year Books up to No. 15, but limits of space preclude the incorporation of this information in the present volume.

3. **State Publications.**—The chief statistical publications of each State are set out hereunder. Limits of space preclude a further enumeration of the various Departmental Reports, statements of accounts, etc., issued by officials, boards, local government bodies, etc., in each State.

(*a*) New South Wales—Statistical Register (annual); Official Year Book of New South Wales (annual); Pocket Year Book (annual); Statistical Bulletin (monthly to December, 1919, quarterly to June, 1943, then discontinued to September, 1948); Monthly Summary of Business Statistics.

(*b*) Victoria—Statistical Register (annual to 1916, then discontinued); Victorian Year Book (annual); Statistical Abstracts (quarterly to 1917, then discontinued to December, 1946).

(*c*) Queensland—Statistical Register (annual); Official Year Book, 1901; A.B.C. of Queensland Statistics (annual to 1936, then discontinued); the Queensland Year Book (annual 1937 to 1941, then discontinued to 1945).

(*d*) South Australia—Statistical Register (annual); Official Year Book, 1912 and 1913; Statesman's Pocket Year Book (annual); Quarterly Summary of Statistics.

(*e*) Western Australia—Statistical Register (annual); Statistical Abstracts (quarterly, previously issued monthly to July, 1917); Pocket Year Book of Western Australia (annual).

(*f*) Tasmania—Statistical Register (annual); Pocket Year Book (annual); Monthly Review of Business Statistics.

§ 3. Select List of Representative Works Dealing with Australia.

(Compiled by the Librarian of the Commonwealth National Library.)

Under each heading a list is first given of the principal standard books which are still in print. This is followed by lists of selected books published during the current period and of official publications, excluding annual reports, of the same period. In the present list the period covered is 1st January, 1946 to 31st December, 1947. A few books which, though published earlier, were received after the compilation of the last issue are also included.

Technical works on Law, Medicine and the pure sciences are excluded.

Where known, the retail price in the country of publication is given, but this is subject to fluctuation.

A copy of each of the works mentioned is preserved in the Library and access thereto may be had by any Commonwealth official or other authorized person.

The Library also publishes an annual catalogue of Australian publications, official papers and books on Australia published overseas. Copies of this are obtainable from the Government Printer at a price of 2s.

General and Descriptive.

AUSTRALIAN ENCYLOPAEDIA, THE: *editors*, A. W. Jose, H. J. Carter and T. G. Tucker: 3rd ed. 2 v (Angus & Robertson, 55s.) Sydney, 1926–27 (o.p., but new ed. in preparation).

DIARY OF PRINCIPAL ECONOMIC EVENTS.

The principal economic events for the years 1931 to 1938 were shown on pp. 968 to 977 of the Official Year Book No. 33, and for the years 1939 to 1944 on pp. 1129 to 1141 of the Official Year Book No. 36.

1945.

Discharges from the services, mainly under the scheme (started in 1943) of special releases recommended by the Manpower Directorate, continued during the first half of the year at the rate of about 6,000 to 8,000 men and 800 to 1,000 women per month. Thereafter the figures rose rapidly, and in the last three months of the year, after the start of general demobilization, 160,000 men and 10,000 women were discharged. Excluding rural and household domestic employment, employment of males was 14,000 higher in December, 1945 than in December, 1944, while employment of females was 28,000 lower. The steel-coal-shipping strikes (*see* 8th November and 3rd December) caused some difficulties in employment conditions at the end of the year.

Economic developments during the year were affected by the very bad 1944–45 harvest as a result of which it was necessary to import substantial quantities of wheat, barley and oats from the United States of America and Canada mainly for stock feeding purposes. Steps taken by the Commonwealth Government to encourage sowing of wheat resulted in a very substantial increase in the acreage sown for the 1945–46 season. The number of sheep had been falling fairly rapidly, and the decline continued during 1945 with the result that the 1945 wool clip dropped about 8 per cent. below the previous year.

With the price stabilization scheme continuing in operation, internal prices (wholesale and retail) remained steady. Import prices also were practically unchanged but export prices rose about 15 per cent. during the year. There were no significant variations in rates of wages, and average earnings were unchanged.

19*th January.*—National Works Council projects involving an expenditure of £153,546,000 approved by Federal Cabinet.

31*st January.*—British Empire Communications Mission arrived in Australia to discuss with Commonwealth Government future of communications within the Empire.

15*th February.*—Conference opened at Lapstone, New South Wales, of Western Pacific section of UNRRA.

24*th February.*—Egg priority system and reduced meat ration scale introduced.

7*th March.*—Commonwealth Parliamentary Committee recommended gratuity scheme for soldiers, involving about £63,000,000 to June, 1945.

18*th April.*—Director-General of Land Transport (Sir Harold Clapp) submitted report on provision of standard railway gauge of 4 ft. 8½ in. in Australia, involving ultimate expenditure of about £200,000,000, including new locomotives and rolling-stock.

25*th April.*—First plenary session of the UNCIO met at San Francisco.

8*th May.*—British Prime Minister announced cease-fire in Europe. (Ratification of surrender of German forces signed in Berlin, 9th May.)

30*th May.*—Commonwealth Government's "White Paper" dealing with transition from war-time to peace-time economy tabled in the House of Representatives.

4*th June.*—Plans adopted by Federal Cabinet for housing programme involving the erection of 24,000 houses in year ended June, 1946.

13*th June.*—Commonwealth Rent Controller appointed, with power to determine rent of rooms and apartments.

20*th June.*—Re-establishment and Employment Bill, providing for re-establishment in civil life of members of Australian Forces, passed all stages in Senate.

27*th June.*—War Cabinet approved expenditure of £1,330,000 on buildings to provide technical college facilities for ex-service personnel.

1*st July.*—Unemployment and Sickness Benefits Act came into operation.

15th August.—Official announcement of end of war with Japan.

16th August.—Act providing for establishment and operation of National Airline Services by Commonwealth assented to.

20th August.—Premiers' Conference at Canberra. Decided to proceed with standardization of Australian railway gauges.

21st August.—Banking Act, to regulate banking, and Commonwealth Bank Act, to re-organize the Commonwealth Bank, proclaimed and operative.

22nd August.—President Truman announced termination of Lend-Lease.

2nd September.—Formal surrender of Japanese Empire signed in Tokyo Bay.

7th September.—Commonwealth Budget for 1945–46 brought down, providing for expenditure of £492,000,000 and revenue of £340,000,000. Estimated expenditure on War (1939–45) Services was £360,000,000 and on Social Services, £65,000,000. A Social Services Contribution from 1st January, 1946, to meet part of the cost of Social Services, and a reduction in Income Tax were provided for—the combined charge for contribution and tax to be 12½ per cent. lower than the existing charge and the annual yield to be about £20,000,000 less. Proposed concessions would reduce the yield from Sales Tax by £2,800,000 a year.

19th September.—Final Report of Commonwealth Housing Commission stated that 700,000 new dwelling units required within ten years to overcome housing shortage.

1st October.—General demobilization of about 500,000 men and women in armed forces commenced in all States.

11th October.—Wool Realization Act assented to, approving an agreement for the disposal of stocks of Empire wool and the setting-up of the Australian Wool Realization Commission.

2nd November.—Announced that export selling price of wool reduced by 6 per cent.

8th November.—Steelworkers', coalminers' and printers' industrial dispute, involving 23,000 workers in New South Wales.

3rd December.—Seamen's dispute began in Sydney, Newcastle, Melbourne and Brisbane. Miners in New South Wales ceased work.

Drastic rationing of gas and electricity, and curtailment of rail services in New South Wales, Victoria and South Australia.

14th December.—Full Court held invalid the provisions of the National Airlines Act, which would have prevented the issue of new licences for services in competition with those of the Australian National Airlines Commission.

17th December.—Miners resumed work in most coal-mines in New South Wales. Meeting of Seamen's Union decided to resume work, with certain exceptions; ironworkers remained on strike.

20th December.—Australian Shipping Board established under National Security Regulations to give unified control of shipping.

1946.

The year 1946 was one of reconversion from war to peace. Demobilization continued throughout the year, about 316,000 men and 27,000 women being discharged. Employment (excluding rural and household domestic) increased by 276,000 during the year (259,000 males and 17,000 females). Unemployment remained negligible throughout the year. At the end of the year there was some increase in Victoria following the commencement on 16th October of the metal trades industrial dispute which lasted till May, 1947.

Production of wool and meat during 1945–46 was below the previous year, but the wheat harvest was considerably greater. Unfavourable seasonal conditions during the year caused a substantial fall in the 1946–47 wheat harvest in New South Wales and Queensland, with a consequent fall in total Australian production, but 1946–47 production of meat and wool improved. Work on post-war housing programmes was increasing and during the year about 25,000 houses were completed.

Export prices were higher than in 1945 and rose rapidly towards the end of the year, and the total value of exports was considerably higher than in the previous year. Import prices increased about 13 per cent. Retail prices and the basic wage remained steady throughout the year until the 7s. increase in the basic wage granted in December. Average factory earnings increased slowly during the year and in the December quarter were about 4 per cent. above the 1945 December quarter.

2nd January.—Opening of new Industrial Finance and Housing Loan Departments of the Commonwealth Bank.

5th January.—Steelworkers at Newcastle mass meeting decided to resume work immediately (*see* 8th November, 1945). New South Wales Branch of Federal Ironworkers' Association re-registered by full bench of Industrial Commission.

8th January.—Commonwealth Government asked Governments of States to confer on five years' plan for stabilization of wheat price at 5s. 2d. a bushel, f.o.b. Australia. (*see* 16th April.)

10th January.—First meeting of General Assembly of United Nations Organization opened in London. Minister for Navy (Mr. N. J. O. Makin) led the Australian delegation.

26th January.—Arrangements made between United Kingdom and Australia, New Zealand, India and South Africa for operation of air trunk routes in various parts of the world. Each partner to be responsible for ground organization on portion of routes, and revenue to be pooled between operators.

30th January.—Notification by Commonwealth Government to Registrar of Arbitration Court that Government would intervene in claim by Printing Industry Employees' Union for 40-hour week.

7th February.—In response to a request from Council of UNRRA, Federal Cabinet decided to make a further contribution of £12,000,000 if necessary.

11th February.—Commonwealth Government decision to provide substantial funds for rehabilitation of Australian mining industry and for development of mining projects generally which offer promise of contributing materially to the national development, employment and economic welfare.

14th February.—Mr. L. G. Melville to attend as an observer the first meeting in America of the Board of Governors to establish International Monetary Fund and International Bank for Reconstruction and Development.

25th February.—Commonwealth Government plans increased annual immigration intake.

1st March.—Cessation of man-power controls over employment of male labour.

5th March.—Under agreement between British and Australian Governments, free passages will be granted to British service personnel and dependants, and assisted passages to British civilians and dependants, who wish to emigrate to Australia.

22nd March.—Tasmanian Legislative Council rejected a bill to grant price control to Commonwealth for three years.

26th March.—A.C.T.U. lodged with Arbitration Court applications on behalf of 47 unions for right to intervene in claim by Printing Industry Employees' Union for a 40-hour week.

28th March.—Bills introduced by Attorney-General to amend the Constitution regarding—(1) Social Services, (2) Marketing of Primary Products, (3) Industrial Employment. (Subsequently passed by both Houses and submitted to electors. *See* 28th September.)

29th March.—Approval by Federal Cabinet of draft for submission to the United States of America for a reciprocal air transport agreement. (Agreement signed 3rd December, 1946.)

1st April.—Meat workers' industrial dispute in Queensland, involving approximately 7,000 workers. (Lasted until 7th July.)

13th April.—States Grants (Tax Reimbursement) Act, 1946, continuing uniform taxation, assented to.

16th April.—Agricultural Council of Federal and State Ministers for Agriculture decided that uniform legislation should be introduced in the several Parliaments to give effect to Commonwealth Wheat Stabilization Scheme.

2nd May.—Inauguration of Commonwealth Employment Service (which functioned formerly as the Commonwealth man-power organization).

6th May.—Commonwealth Government's proposals for complete medical service for Australia, free of charge, brought before conference of State Ministers of Health.

7th May.—Victorian Government sub-committee report on brown coal development submitted to full State Cabinet plan for making Victoria independent of New South Wales black coal supplies.

16th May.—Announced by General Manager of Commonwealth Aircraft Corporation Pty. Ltd. (Mr. L. J. Wackett) that De Havilland Vampire jet-propelled fighters would be built in Australia.

20th May.—Hearing of 40-hour week case commenced in Commonwealth Arbitration Court. Wharf labourers throughout Australia resumed work after a wool-loading dispute lasting a fortnight.

23rd May.—Agreement reached between Australian and United Kingdom Governments for relief from double taxation. (*See* also 2nd August.)

24th May.—Failure of a conference of State Transport Ministers to reach agreement on Commonwealth uniform rail gauge proposals.

1st June.—Announced that unions and employers had jointly agreed to interim maximum number of 16,600 ex-servicemen to be trained in building trades under Commonwealth Reconstruction Training Scheme.

2nd June.—Substantial reductions announced in telegram charges between British Empire countries and United States of America.

4th June.—Cabinet decided to strengthen and expand Trade Commissioner Service.

6th June.—Extension announced of re-establishment benefits to members of forces of all Empire Countries, in addition to the United Kingdom, the United States of America, and other Allied countries specifically approved.

10th June.—Final settlement of Lend-Lease and reciprocal aid between Australia and United States of America.

13th June.—Appointment of Commonwealth Insurance Commissioner under Life Insurance Act 1945 (assented to 16th August, 1945), to supervise activities of life insurance companies.

21st June.—Wheat Industry Stabilization Bill introduced in House of Representatives. (Act assented to 9th August.)

Announced by Minister for Trade and Customs that when auction sales recommenced after 30th June, a subsidy would be paid Australian manufacturers using wool in goods for domestic consumption.

Overseas Telecommunications Bill to provide for establishment and operation of overseas telegraphic, telephone and similar services by the Commonwealth introduced. (Act assented to 7th August.)

1st July.—Joint organization, known as United Kingdom and Dominion Wool Disposals Ltd., commenced operations.

13th July.—United States House of Representatives passed bill to grant Britain total credit of 4,400 million dollars.

24th July.—Coal Industry Bill introduced in House of Representatives providing *inter alia* for the setting up of a joint Commonwealth-State authority. (Act assented to 15th August. Complementary State Act assented to 25th September.)

2nd August.—Details of double taxation relief agreement between Britain and Australia announced. (Agreement signed 29th October; amending Act to Income Tax Assessment Act incorporating agreement assented to 3rd June, 1947.)

Railway Standardization Agreement Bill authorized the Commonwealth to act in an agreement with New South Wales, Victoria and South Australia. (Commonwealth Act assented to 15th August; State complementary Acts—South Australia, 10th December; Victoria, 21st December, 1948. New South Wales has not yet (December, 1948) ratified agreement.)

15th August.—An Australian conversion of $20,000,000 for a ten year period at 3¼ per cent. floated in New York. (First of a series of operations undertaken by the Commonwealth in New York.)

20*th August.*—Premiers' Conference decided that price control and control of land sales should be continued after end of National Security Regulations on 31st December.

22*nd August.*—Commonwealth and State Governments agreed to carry out programme of housing to provide employment in building construction industry for a minimum of 130,000 men over next ten years.

31*st August.*—South Australian electricity undertakings passed from private to State control.

2*nd September.*—Wool sales by auction resumed in Sydney following termination of war-time appraisement system.

15*th September.*—Australian National Airways Pacific fortnightly service Sydney–Vancouver commenced.

28*th September.*—Constitution Alteration Referendum held to decide whether Commonwealth should be granted powers in regard to Social Services, Organized Marketing of Primary Products and Industrial Employment. Although a majority of electors were in favour of each of the proposals, only for Social Services was a majority of voters in a majority of States obtained. (Act assented to on 19th December.)

9*th October.*—New South Wales Government approved expenditure of £33,000,000 on 15-year project to store water.

16*th October.*—Ironworkers' and moulders' industrial dispute commenced in two iron foundries in Victoria. (By 24th October it extended to all iron foundries, and employees in engineering and allied trades were later involved. Dispute lasted until 7th May, 1947.)

21*st October.*—Victorian train and Melbourne tram industrial dispute commenced (Lasted until 29th October.)

23*rd October.*—Industrial dispute involving 227 chemical workers in Sydney. (Lasted until 29th August, 1947.)

30*th October.*—Commonwealth Government moved in Arbitration Court for investigation of basic wage. Announced that Court had "accepted broadly" that 40-hour week should be basis of working hours in Australia.

31*st October.*—Basic wage inquiry, adjourned in 1940, to be re-opened.

8*th November.*—Locomotive Engine-drivers', Firemen's and Cleaners' Union dispute in Western Australia. Nearly 90,000 workers immediately thrown out of work. (Lasted until 22nd November.)

14*th November.*—Commonwealth Budget for 1946–47 introduced, providing for expenditure of £444,000,000 and revenue of £385,000,000. Estimated expenditure on Defence and Post-war Charges was £221,000,000 (including £35,000,000 for re-establishment and repatriation), on social services £68,000,000 and on new works £26,000,000. Clothing and household drapery would be exempted from Sales Tax, the general rate of Sales Tax to be reduced to 10 per cent. and Customs and Excise duties to be lowered. With income tax reductions made earlier in the year, these concessions would reduce the annual yield from taxation by about £37,000,000.

18*th November.*—Interstate executive of A.C.T.U. decided to apply to Arbitration Court for increase of £1 in basic wage.

20*th November.*—Experimental rocket range and supporting establishments for guided projectiles to be set up at Mount Eba (South Australia). Estimated cost £6,000,000. (Site subsequently changed to Woomera, 90 miles south-east of Mount Eba.)

21*st November.*—Defence (Transitional Provisions) Bill introduced in House of Representatives. (Act assented to 14th December.)

7*th December.*—Construction commenced on new Burrendong dam on Macquarie River, 20 miles from Wellington, New South Wales, to provide a catchment area of 5,360 square miles, at a cost of £2,000,000.

11*th December.*—Members of Gas Employees' Union in Melbourne decided to strike until claims for wage increases met. (Recommendation of A.C.T.U. to return to work on 16th January, 1947 accepted by gas workers, including those involved in Sydney and Adelaide.)

13*th December.*—Interim basic wage rise of 7s. in all capital cities (except Hobart, 6s.) announced. To operate from first pay period in December.

Prime Minister announced partial relaxation of War-time Wage Pegging Regulations.

14th December.—Qantas Empire Airways Agreement Act, authorizing Government to acquire United Kingdom's interest in Qantas Empire Airways Ltd., assented to.

31st December.—With expiry of National Security Act, at midnight, 183 sets of regulations which restricted activities of citizens during war ceased to operate; 61 sets of regulations continued to operate for a further year under Defence (Transitional) Provisions Act. Ceiling price control on shares, and conditions regarding minimum holding period of shares before resale now removed.

1947.

During 1947 approximately 30,000 men and 3,000 women were discharged from the Services, rather more than two-thirds of them in the first half of the year. Employment (excluding rural and household domestic) increased by about 141,000 (114,000 males and 27,000 females). Unemployment remained negligible during the year; shortage of labour was a common complaint by employers. The free and assisted migration scheme came into operation during the year and an excess of 12,000 permanent departures over permanent arrivals in 1946 was converted into an excess of 12,000 arrivals over departures.

Seasonal conditions generally were very favourable and despite some losses due to rust and wet weather during the harvesting period, the 1947–48 wheat harvest was an all-time record of about 220,000,000 bushels. Wool, meat and butter production was higher than in the previous season. During 1947 nearly 39,000 houses were completed.

Export prices continued to rise rapidly, and at the close of the year were about 35 per cent. above the level at the beginning of the year. Total value of exports was over £300,000,000 and about 20 per cent. higher than in 1946. Import prices increased 17 per cent. above the level at the end of 1946; imports nearly 60 per cent. as compared with 1946, notwithstanding the imposition during the second half of the year of increasingly severe restrictions on imports from dollar areas. Retail prices increased by less than 6 per cent. in the year and wholesale prices by about 13 per cent. After the removal of control at the end of 1946 share prices advanced substantially. Following the settlement of the metal trades dispute in Victoria margins prescribed in the metal trades award were substantially increased, and similar increases were subsequently granted in other industries. Average factory earnings in the last quarter of the year were 13 per cent. above the previous year.

After a period of relative stability over the previous five years, national income started to rise, and gross private investment, which had been 12 per cent. of gross national product in 1945–46, rose to about 20 per cent. in 1947.

6th January.—Stock exchanges conducted business on free market, following lifting after five years of Government restrictions on share dealings.

Abandonment of war-time price stabilization subsidies by Commonwealth Government commenced with withdrawal of subsidy on tobacco, resulting in immediate price increase.

4th February.—Wharf labourers' dispute over holiday pay held up many ships at Australian ports. (Settlement announced 12th February.)

14th February.—Termination of fourth and final stage of demobilization of Australian fighting forces reached. Forces reduced to 60,000.

25th February.—Federal Cabinet approved reductions in income tax, to operate from 1st July, some pensions to be increased. (Act assented to 3rd June.)

4th March.—Announced that Australia would make gift of £A.25,000,000 to Britain, in form of reduction of Britain's sterling debts in Australia. (Act appropriating grant assented to 11th June.)

5th March.—Industrial Arbitration (Forty-hour Week) Amendment Bill introduced in New South Wales Legislative Assembly. (Act assented to 28th March.)

6th March.—Federal Government decided to appoint committee to investigate suggested establishment of National Superannuation Fund, to take over payment of all Government pensions and provide retiring allowance for every Australian. (Plans for establishment abandoned 18th February, 1949, following presentation of report, because of excessive cost.)

10*th March.*—Seventy ships held up as result of Sydney wharf labourers' industrial dispute because of Stevedoring Industry Commission's order to work overtime. (Dispute ended 25th March; compromise terms accepted.)

13*th March.*—International Monetary Agreements Bill approving Australia becoming a member of International Monetary Fund and International Bank for Reconstruction and Development introduced. (Act assented to 2nd April. Australia's application for membership approved 25th May.)

17th *March.*—Victorian State Cabinet approved £9,600,000 Eildon Weir enlargement project (capacity to be 2,350,000 acre feet.)

19*th March.*—Majority of Full Arbitration Court decided that Basic Wage and 40-hour Week cases would be heard separately.

23*rd March.*—Extension of dispute in Victoria involving members of Amalgamated Engineering Union caused stoppage of all tramway buses, and cuts in suburban and country rail services. (*See* 16th October, 1946.)

3*rd April.*—Wage pegging regulations to be relaxed to give all industrial authorities (Commonwealth and State) power to alter rates of pay in any type of case, provided the Chief Judge of the Commonwealth Arbitration Court is satisfied that an alteration is not opposed to national interests.

23*rd April.*—Full Arbitration Court ordered deregistration of Amalgamated Engineering Union, to take effect after fourteen days unless the union instructed its members to return to work in meantime. (Further move in dispute originating with ironworkers and moulders in Victoria on 16th October, 1946. *See* above.)

30*th April.*—Amending Commonwealth Conciliation and Arbitration Bill providing for appointment of additional conciliation commissioners with extended powers passed in House of Representatives. (Act assented to 20th May.)

5*th May.*—After compulsory conference of parties to the industrial dispute in Victoria, representatives of Unions and employers agreed on terms of settlement of Metal Trades dispute which had existed in Victoria since October, 1946. (*See* 16th October, 1946, and subsequent dates.)

8*th May.*—Two hundred Local Government bodies in Australia directed to bank with the Commonwealth Bank from 1st August.

28*th May.*—Writ lodged in High Court by Melbourne City Council challenging validity of Banking Act.

3*rd June.*—Work commenced on Commonwealth Government's new £11,000,000 scheme to convert Kingsford Smith aerodrome at Sydney into greatest airport in Australia.

Federal Cabinet approved expenditure of £250,000,000 on defence in next five years.

19*th June.*—Announced that immigration offices would be opened at Oslo, The Hague, Paris, Berlin, San Francisco, New York, Shanghai, New Delhi and Cairo.

26*th June.*—Following settlement of metal trades dispute in Victoria (*see* above), Federal Arbitration Court granted substantial marginal increases to metal trades' employees in higher classifications but not to those in lower paid positions.

30*th June.*—Census of Australia. First since 1933.

1*st July.*—New scale of income tax deductions, involving reductions ranging from 100 per cent. in low-income group to 7.9 per cent. on highest levels, introduced as from first pay period in July.

Forty-hour week comes into operation in New South Wales for all employees working under State awards. (*See* 5th March.)

3*rd July.*—Purchase by Commonwealth Government of shares in Qantas Empire Airways Ltd. held by Queensland and Northern Territory Aerial Services Ltd. (approving Act assented to 24th June, 1948). Qantas Empire Airways Ltd. now completely owned by Commonwealth Government. (*See* 14th December, 1946.)

15th July.—Sterling acquired in current trade transactions became convertible under terms of loan agreement between United Kingdom and United States of America. (Arrangements temporarily suspended 20th August.)

23rd July.—Australia agreed to take 4,000 displaced persons as migrants this year through International Refugees Organization, and 12,000 each following year if Organization can supply shipping.

1st August.—Charges imposed by Commonwealth Government on airline operators in Australia for use of civil airways facilities provided by Commonwealth.

4th August.—Approval announced of £4,000,000 water scheme in Western Australia for supply of water to Great Southern and North-eastern wheat belts.

6th August.—Announced that British Government in October would establish Overseas Food Corporation with working capital of £50,000,000 to develop food production in Australia and other Dominions and Colonies. (*See* 17th October.)

13th August.—Full High Court declared invalid Section 48 of Banking Act 1945 requiring municipal councils to transfer their accounts from private banks to Commonwealth Bank. (*See* 8th and 28th May.)

22nd August.—Government authorized resumption of private trading with Japan.

Prime Minister announced heavy reduction of all imports from dollar areas and severe restrictions on dollar advances for travellers.

8th September.—Federal Arbitration Court gave judgment reducing standard weekly hours of work in industry from 44 to 40 as from 1st January, 1948.

19th September.—Commonwealth Budget for 1947–48 presented, providing for expenditure of £427,000,000 and revenue of £397,000,000. Estimated expenditure on Defence and Post-war Charges was £168,000,000 (including £39,000,000 for re-establishment and repatriation), on social services £77,000,000 and on new works £33,000,000. The abolition of War-time Company Tax, the suspension of the Gold Tax and concessions in Sales Tax, with the income taxation reductions made earlier in the year, were estimated to reduce the taxation yield by about £42,000,000 a year.

14th October.—Industrial dispute of builders' labourers in Sydney and Newcastle affecting about 38,000 employees. (Settled 20th October.)

15th October.—Banking Bill to nationalize Australian trading banks introduced into House of Representatives. (Act assented to 27th November.)

17th October.—British Food Minister announced that Australia will be asked to launch a great food-growing scheme to help Britain. It provides for long-term contracts for the supply of meat, wheat, dairy products, nuts and other food for which Britain will pay by increased exports. (*See* 6th August.)

5th November.—Defence (Transitional Provisions) Bill introduced in House of Representatives to continue for another year controls on food, prices, rent, capital issues and land sales. Other regulations were amended or discontinued. (Act assented to 11th December.)

18th November.—Text of General Agreement on Tariffs and Trade reached at Geneva tabled in House of Representatives. (Act approving acceptance by Australia of General Agreement on Tariffs and Trade and Havana Charter for an International Trade Organization—*see* below—assented to 17th December, 1948.)

21st November.—Draft charter for proposed International Trade Organization prepared at Geneva submitted to World Trade Conference at Havana. (*See* above.)

27th November.—Constitution Alteration (Rents and Prices) Bill introduced into House of Representatives. (Bill subsequently passed both Houses. *See* 29th May, 1948, for referendum results.)

28th November.—Trading banks and States of Victoria and South Australia (Western Australia later) applied to High Court for writs to prevent Federal Government acquiring monopoly of banking business. (*See* 15th October.)

11th December.—Agreement signed for development of Blair Athol coal-fields in Queensland through expenditure of about £18,000,000 of British capital.

18th December.—Announcement of big wheat deal, under which Australia contracted to sell to Britain 80,000,000 bushels from 1947–48 harvest at 17s. per bushel (Australian currency) and 25,000,000 bushels to India at 18s. 6d.

1948.

Employment continued to increase during 1948, the total increase (excluding rural and household domestic) being about 88,000 (63,000 males and 25,000 females). The number on unemployment benefit remained negligible during the whole year and labour shortages continued fairly generally. The migration programme was carried on during the year with increasing vigour and permanent arrivals exceeded permanent departures by 48,000.

Although black coal production for the whole of Australia reached 14,800,000 tons, there were at times serious shortages resulting in restrictions in electricity and gas supplies and in transport services. Seasonal conditions continued favourable, the 1948–49 wool clip being slightly larger than in the previous year, and the wheat crop considerably above average although well below the previous year. There were about 48,000 new houses completed during 1948.

Exports rose to over £500,000,000, an increase of 60 per cent. over 1947, and imports to about £380,000,000, an increase of 40 per cent. over 1947. Export prices increased more than 25 per cent. over the year and import prices by 6 per cent. Retail prices increased about 10 per cent. over the year, wholesale prices about 14 per cent. Average factory earnings in the last quarter were 13 per cent. above the last quarter of 1947.

Partly as a result of increasing prices, national income continued to rise, and gross private investment continued at about 20 per cent. of gross national product.

1st January.—Forty-hour week became effective throughout Australia.

4th January.—Commencement in Melbourne of tram and tramway bus industrial dispute because of dissatisfaction with new 40-hour week roster (settled 16th January).

9th January.—Food talks began between British Ministry of Food and Commonwealth Government to find ways and means of stimulating Australian primary production to meet Britain's food crisis.

16th January.—Emergency Transport Bill giving sweeping powers to Victorian Government to maintain essential services in any future emergency, passed by Victorian Legislative Assembly. (Assented to 20th January, proclaimed 15th November.)

23rd January.—Secretary to the Treasury (Mr. S. G. McFarlane) appointed fourteenth director of the International Monetary Fund and Bank of World Reconstruction and Development. The Commonwealth Statistician (Dr. Roland Wilson) to be alternate director.

2nd February.—Railway dispute on wages awards in Queensland involving about 19,000 railwaymen. (Lasted till 4th April.)

9th *February.*—Bank nationalization case opened in Full High Court in Melbourne. (*See* 15th October and 28th November, 1947, and 11th August, 1948.)

12th February.—£6,000,000 Victorian Beaufort Homes project cancelled.

18th February.—New South Wales Government decided to open State operated coal mines in Burragorang Valley, Awaba-Dora Creek area and Muswellbrook district.

20th February.—Major water conservation works in £25,000,000 plan for "Drought proofing" Victoria, involving, amongst other works, the enlargement of Eildon reservoir, commenced.

26th February.—United Nations Trade and Employment Agreement tabled in Parliament. (*See* 18th November, 1947.)

27th February.—Drastic powers assumed by Queensland Government to end railway dispute. State of emergency declared.

2nd March.—Six 3,000 h.p. marine diesel engines to be built by Munitions Department, in consultation with Australian Shipping Board, two being required in 1949.

10th March.—Queensland Government Industrial Law Amendment Act of 1948 assented to, granting police extraordinary powers to prevent "picketing". (Act repealed 16th September.)

25th March.—International trade charter signed in Havana. (*See* 18th November, 1947.)

5th April.—The Commonwealth Government decided to pay half the capital cost of £4,300,000 of a scheme to reticulate water to certain rural areas of Western Australia, to towns along the Great Southern Railway, and to increase the supply to the eastern gold-fields areas. (*See* 4th August, 1947. Western Australia Grant (Water Supply) Act assented to 25th November.)

22nd April.—International Wheat Agreement Bill introduced into Parliament. (Assented to 24th June. Failure of United States of America and other nations to ratify agreement rendered it inoperative.)

29th April.—Minister for Defence announced five-year defence programme of £250,000,000 including £33,500,000 for scientific research.

5th May.—Minister for Housing in New South Wales announced scheme for £8,000,000 housing project to meet industrial expansion, involving 5,000 homes in the Wollongong–Port Kembla district. Scheme will take five years to complete.

10th May.—Australian buyers will be licensed to import £2,000,000 worth of Japanese goods, principally textiles. Japan to take Australian wool in return.

29th May.—Constitution Alteration (Rents and Prices) Referendum, to decide whether Commonwealth should retain control of rents and prices, resulted in majorities in all States against proposal. Total voting—1,793,712 for, 2,618,183 against.

1st June.—Commonwealth Pharmaceutical Benefits Scheme commenced.

3rd June.—Australian Iron and Steel Ltd. plans to spend £20,000,000 in the next ten years on extensions to its Port Kembla works to include a new tinplate mill and blast furnaces on an area of more than two square miles.

21st June.—Conference between Prime Minister and State Premiers to discuss organization of price control by the respective states when control is relinquished by Commonwealth in September.

22nd June.—Meat and clothes rationing ceased throughout Australia.

3rd July.—Prime Minister left for London to discuss empire trade and other problems.

5th July.—Joint New South Wales-Queensland irrigation scheme at cost of £2,500,000 planned for the Dumaresq and Macintyre Rivers.

12th July.—Announcement of modified wheat stabilization plan guaranteeing a price of 6s. 3d. per bushel f.o.r. ports for bulk wheat. (Subsequently adopted by majority of growers in four main wheat producing States and ratified by Commonwealth—Wheat Industry Stabilization Act assented to 25th November—and State Governments, the plan will operate for the five years 1948–49 to 1952–53).

26th July.—Announced that the Victorian Government intended spending between £50,000,000 and £60,000,000 on the development of brown coal and power resources in the State.

11th August.—Judgment delivered by Full High Court declaring invalid certain vital sections of Banking Act 1947. (*See* 9th February.)

16th August.—Control of rents passed from Commonwealth to States.

17th August.—Announced that new trade agreement concluded with Sweden.

19th August.—New Zealand currency restored to parity with sterling.

24th August.—Australian Loan Council approved borrowing programme of £100,000,000 for 1948–49.

Announcement of increase from £360,000,000 to £569,000,000 in national works programme of public works to cushion a possible depression during the next five years, covering 6,245 works projects throughout Australia.

26th August.—Announced that a plant extension programme by John Lysaght (Aust.) Pty. Ltd. at Port Kembla was expected to increase Australian sheet steel production from 240,000 tons to 600,000 tons per year by 1955.

2nd September.—Minister for Commerce and Agriculture announced that, under terms of a seven-year agreement operating from June, 1948, Australia will ship to United Kingdom the total exportable surplus of butter and cheese, less agreed quantities for other markets.

8th September.—Commonwealth Budget for 1948–49 introduced, providing for expenditure of £511,000,000 and revenue of £493,000,000. Estimated expenditure on Defence and Post-war Charges was £199,000,000 (including £10,000,000 United Kingdom Grant, £38,000,000 for re-establishment and repatriation and £23,000,000 to be set aside for war gratuities), on social services, £88,500,000 and on capital works and services, £38,000,000. Reductions in Income Tax, Social Services Contribution, Sales Tax and Excise Duty were expected to reduce the yield from taxation by about £29,000,000 a year.

20th September.—Control of prices taken over by individual States from Commonwealth. Thirty thousand items released from price control, but control continued on essential commodities and services, and house and agricultural land sales (about 20,000 items).

30th September.—Bill introduced into House of Representatives providing for acceptance by Australia of the Charter of International Trade Organization and a General Agreement on Tariffs and Trade. (*See* 18th November, 1947).

1st October.—Minister for External Territories stated that an agreement between Commonwealth and New Zealand Governments provides for joint acquisition of Christmas Island Phosphate Company as at 31st December, at a cost of £2,750,000.

6th October.—Coal miners' dispute in Southern coal-fields, New South Wales (Kemira Tunnel Dispute), resulting in general stoppage of coal production. (Settled 8th November).

18th October.—Price control lifted from all new buildings in Victoria.

19th October.—Federal control over shipping freights and passenger fares relinquished.

20th October.—Defence (Transitional Provisions) Bill introduced to extend for further twelve months certain National Security Regulations. (Act assented to 21st December.)

24th October.—Announced that Joint Coal Board would spend £16,000,000 on mechanizing and modernizing Australian coal mines.

10th November.—Judicial Committee of Privy Council granted Commonwealth Government leave to appeal against the judgment of the High Court of Australia, which declared Section 46 of the Banking Act 1947, invalid. (On 26th July, 1949 the Privy Council announced the dismissal of the Government's appeal.)

12th November.—Announcement of new agreement under which Britain will buy more than half of Australia's dried fruit production for the next five years.

15th November.—Victorian Government proclaimed as law the Essential Services Act. (*See* 16th January.)

20th November.—Food mission from India arrived to discuss agreement for purchase of 25,000,000 bushels of 1948–49 wheat crop.

22nd November.—Legislation approved to establish and constitute an Australian Shipping Board to run a Commonwealth line of ships. (Shipping Bill introduced in Senate 9th December ; Act assented to 25th March, 1949.)

29th November.—New Australian made car, the " Holden ", displayed publicly for first time.

22nd December.—Commonwealth Government relinquished remaining controls on sale of new motor vehicles.

APPENDIX.

(Recent information and returns which have come to hand since the various chapters were sent to press are given hereunder.)

CHAPTER III.—GENERAL GOVERNMENT.

§ 1. Scheme of Parliamentary Government.

Number and Salary of Members of the Legislatures, p. 61.—The following table shows the number and annual salaries of ordinary members in each of the legislative chambers at 31st December, 1948.

MEMBERS OF COMMONWEALTH AND STATE PARLIAMENTS, AND ANNUAL SALARIES, 31st DECEMBER, 1948.

Members in—	C'wealth.	N.S.W.	Vic.	Q'land.	S. Aust.	W.Aust.	Tasmania.	Total
				NUMBER OF MEMBERS.

(*a*) Representation Act 1948 provided for the increase in numbers of the Senate to 60 and of the House of Representatives to 121 (excluding 2 members for the Territories) to take effect after the next general elections. (*b*) Abolished in 1922. (*c*) Electoral Districts Act of 1949 provided for an increase in the number of members and electorates to 75, to apply from beginning of Thirty-second Parliament (in ordinary course of events to be elected in 1950). (*d*) Increased from £1,000 as from July, 1947. (*e*) From September, 1948. (*f*) Increased from £350 and £650 as from July, 1948. Plus £100 for other than metropolitan electorates. (*g*) According to distance of electorate from Adelaide. Increased from £600 as from September, 1948. (*h*) Increased as from October, 1947 from £600 plus basic wage adjustment. Plus £50 where electorate is more than 50 miles from Perth. (*i*) According to area of electorate and distance from the Capital. Increased from £370–£500 and £400 £500 as from August, 1948. (*j*) Increased from £875 as from July, 1947. (*k*) Increased from £850 as from July, 1948

§ 2. Parliaments and Elections.

The Commonwealth Government, p. 62.—The Representation Act 1948 (assented to on 18th May, 1948) provides for the increase in the numbers of members of the Senate from 36 (six from each State) to 60 (ten from each State), thereby enabling an increase to be made in the numbers of the members of the House of Representatives from 74 to 121, excluding the member for the Northern Territory and the member for the Australian Capital Territory (provision has been made in the Australian Capital Territory Representation Act 1948 for the election of a member with similar powers and privileges to those enjoyed by the member for the Northern Territory). The numbers of members in the

House of Representatives for the individual States will be: New South Wales, 47; Victoria, 33; Queensland, 18; South Australia, 10; Western Australia, 8; Tasmania, 5; Australian Capital Territory, 1; and Northern Territory, 1. The increase in numbers will be effected in the new Parliament after the next general elections.

Commonwealth Referenda, p. 64.—On 29th May, 1948 a referendum was taken to decide whether power should be granted to the Commonwealth Government to control rents and prices (including charges). The results showed a majority in each State against the proposal. Particulars were as follows :—

CONSTITUTION ALTERATION (RENTS AND PRICES) REFERENDUM, 29th MAY, 1948.

State.	Yes.	No.	Informal.	Total.
New South Wales	723,183	1,012,639	26,269	1,762,091

Percentage(*a*)	40.66	59.34	..	..

(*a*) Excludes informal votes.

Parliamentary Retiring Allowances Act 1948.—On 21st December, 1948 an act to provide for contributory retiring allowances for ex-members of the Commonwealth Parliament was assented to. The act operates from 1st December, 1948 and applies only to present and future members. It provides for the establishment of a trust, constituted by the Treasurer, two senators and two members of the House of Representatives, and a fund, from which all benefits will be paid, to consist of contributions and repayments of members and ex-members of Parliament, payments by the Commonwealth and income from investments. Principal benefits payable are as follows :—

(i) To a member *not* retiring voluntarily—(*a*) with service not less than eight years and having reached the age of 45 years, or if not, on reaching that age—a pension of £8 per week for life; (*b*) with service less than eight years—refund of contributions plus a payment equal to one and a half times the contributions paid (the " Commonwealth supplement ").

(ii) To a member retiring voluntarily—(*a*) with service not less than twelve years and having reached the age of 45 years—a pension of £8 per week for life; (*b*) in any other case—refund of contributions.

(iii) To a widow of a member or ex-member—a pension of £5 per week for life, but ceasing on re-marriage; *or* the sum of the contributions paid and the Commonwealth supplement less any amounts of pensions received by, or accrued to, the deceased person before death.

In cases where the period of service is longer than eight years, the Commonwealth supplement is one and a half times the contributions paid during the last eight years.

Contributions to the fund by members are at the rate of £156 per annum, and the Commonwealth will pay into the fund an amount equal to 60 per cent. of each pension payment and an amount equal to the Commonwealth supplement payable to any person.

The Parliament of Victoria.—*Parliamentary Contributory Retirement Fund Act* 1946, *p.* 68. The Parliamentary Contributory Retirement Fund Act 1948 amended the original act, *inter alia*, by increasing the amount deducted from a member's salary from £1 to £2 per fortnight, and by extending the scope of the scheme regarding payments to widows of members.

The Parliament of Queensland.—*Constitution, p.* 68. Under the Electoral Districts Act of 1949 the number of members in the Queensland Parliament, and the number of electorates, were increased from 62 to 75. These increases are to apply from the beginning of the Thirty-second Parliament which, in the ordinary course of events, will be elected in 1950. The Act divided the State into four zones; Zone 1, the "Metropolitan Zone", is divided into 24 electoral districts returning 24 members, Zone 2, the "South-Eastern Zone" into 28 districts returning 28 members, Zone 3, the "Northern Zone", 13 districts and members, and Zone 4, the "Western Zone", 10 districts and members. A commission of three, to be appointed by the Governor-in-Council, will completely distribute the prescribed zones into the number of electoral districts prescribed by the Act. In doing this the Commissioners are to consider community or diversity of interest, means of communication, physical features, and boundaries of Petty Sessions Districts and of areas of Local Authorities.

Parliamentary Contributory Superannuation Fund Act 1948. This Act provides for the establishment of a fund from which annuities and refunds of contributions will be paid in respect of Members of the Legislative Assembly who die or cease to be members on or after 1st January, 1949. The rates of annuity vary, depending on length of service, from £5 to £7 per week. Qualifications in an ex-member for an annuity are service for at least nine years, payment of contributions amounting to not less than £200, and attainment of the age of 60 years (50 years if defeated on re-election, not selected to stand, or able to produce other sound reasons for resigning or not seeking re-election).

Persons otherwise qualified for an annuity, but who have not paid at least £200 in contributions, may become entitled by payment into the fund of the amount deficient. Provision exists for annuities to widows of annuitants and qualified members at two-thirds of the weekly rate appropriate to the length of service of the husband. Members, or the widows of members, unable to qualify for an annuity are entitled to a refund of contributions. The Contributory Superannuation Fund is financed by (i) payments of £4 per fortnight from each member, (ii) monthly payments by the Treasurer of amounts equal to the contributions paid or payable during each month, and (iii) such additional sums as may be necessary each year.

The Parliament of South Australia.—*Parliamentary Superannuation Act* 1948. Under this Act provision is made for the establishment of a fund for payment of superannuation pensions in respect of persons who have served as Members of Parliament who die or cease to be members after the passing of the Act. The rate of pension payable is dependent on length of service £250 per year in respect of 12 years, plus £20 per year for each complete additional year of service up to a maximum of £370 per year. Qualifications for entitlement of an ex-member to a pension include service for at least twelve years, attainment of 50 years of age, payment of contributions amounting to at least £351 and fulfilment of certain conditions in the event of resigning before, or retiring after, expiration of his term. A person not having paid the requisite amount to the fund, but otherwise qualified, may become entitled to a pension by paying in the deficient amount. Pension rates for widows are three-fifths of the annual rate appropriate to the husband's service. Refunds of contributions are provided for in respect of members who retire or die with less than twelve years' service. Contributions to the fund comprise (i) payments by members at the rate of £58 10s. per year, (ii) monthly payments by the Treasurer of sums equal to the contributions paid or payable each month, and (iii) such additional sums as may be necessary each year.

The Parliament of Western Australia.—*Particulars of Elections, p.* 70. The number of electors enrolled for the 1948 Legislative Council elections were 60,874 males and 25,985 females, total 86,859. The number of electors who voted in contested electorates were: males, 20,709 (43.00 per cent.); females, 7,862 (35.32 per cent.); total, 28,571 (40.57 per cent.).

Members of Parliament Fund Act 1941–1944, *p.* 70. This Act was repealed by the Parliamentary Superannuation Act 1948, which provides for the payment on loss of membership of a pension in place of the lump sum payable under the repealed act. Contributions to the Parliamentary Superannuation Fund are at the rate of £48 per annum. To become eligible for a pension, a member must have served at least seven years, any period for which deductions were made under the repealed act counting as service. Where a contributor has completed not less than fourteen years' service and deductions have been made accordingly, the pension is at the rate of £6 per week for ten years and thereafter £3 per week for a further ten years. If the deductions were for less than fourteen years, the benefit is five-sixths of these rates. Where a member has served not less than seven years, with corresponding deductions, the pension is £3 per week for ten years, but if the period of deductions is less than seven years the benefit is £2 10s. per week for ten years. Where service has been for less than seven years, provision exists for refund of contributions plus interest. The widow of an ex-member is eligible for a pension at half the rate for which the contributor had qualified, except that, where a contributor dies while still a member, the pension for the first five years is two-thirds of the relevant ex-member rate.

The Parliament of Tasmania.—*Particulars of Elections, p.* 71. The numbers of electors enrolled for the 1948 House of Assembly elections were 79,544 males and 81,544 females, a total of 161,088 persons. Those who voted in contested electorates numbered 74,697 males (93.91 per cent.) and 73,891 females (90.61 per cent.), a total of 148,588 persons (92.24 per cent.). At the last contested elections for the Legislative Council, in 1947 and 1948, there were, respectively, 12,545 and 21,762 electors on the roll, 10,102 and 17,800 votes recorded and the percentages of enrolled electors who voted 80.53 and 81.79.

§ 3. Administration and Legislation.

Governors-General and Ministries, p. 72.—Recent changes in the Commonwealth Ministry are as follows:—

(*c*) SECOND CHIFLEY GOVERNMENT, FROM 1ST NOVEMBER, 1946.

DEPARTMENTS.	MINISTERS.
Previously *Minister for Supply and Shipping* now *Minister for Shipping and Fuel*	*Senator The Hon. W. P. Ashley (N.S.W.).*
Previously *Minister for Munitions* now *Minister for Supply and Development*	*Senator The Hon. J. I. Armstrong (N.S.W.).*

State Ministers, pp. 74 and 75.—Recent changes in the Victorian, Queensland, Western Australian and Tasmanian Ministries are as follows :—

VICTORIA (7th December, 1948).

Premier and Treasurer—

The Hon. T. T. Hollway.

Minister of Transport, Minister in Charge of Electrical Undertakings, and a Vice-President of the Board of Land and Works—

Colonel The Hon. W. S. Kent Hughes, M.V.O., O.B.E., M.C., E.D.

Attorney-General and Solicitor-General—

The Hon. T. D. Oldham.

Minister of Agriculture, Minister of Forests, and a Vice-President of the Board of Land and Works—

Lieut.-Colonel The Hon. A. H. Dennett.

Commissioner of Public Works and a Vice-President of the Board of Land and Works—

The Hon. J. A. Kennedy, M.L.C.

Minister in Charge of Housing, Minister in Charge of Materials, and Minister in Charge of State Development—

The Hon. A. G. Warner, M.L.C.

Chief Secretary—

Lieut.-Colonel The Hon. W. W. Leggatt, D.S.O., M.C., E.D.

Minister of Public Instruction—

Brigadier R. W. Tovell, C.B.E., D.S.O., E.D.

President of the Board of Land and Works, Commissioner of Crown Lands and Survey, and Minister of Soldier Settlement—

The Hon. R. C. Guthrie.

Minister of Water Supply and Minister of Mines—

The Hon. H. E. Bolte.

Minister of Health—

The Hon. C. P. Gartside, M.L.C.

Minister of Labour—

The Hon. A. E. McDonald, M.L.C.

QUEENSLAND (15th May, 1947).

As from 17th March, 1949, another Cabinet Minister was appointed, making the new total of eleven Ministers. Changes in portfolios were as follows :—

Secretary for Public Lands and Irrigation—

The Hon. T. A. Foley.

Secretary for Mines and Immigration—

The Hon. W. M. Moore.

WESTERN AUSTRALIA (1st April, 1947).

Premier, Treasurer and Minister for the North-West—

The Hon. D. R. McLarty, M.M.

Minister for Education, Local Government and Industrial Development—

The Hon. A. F. Watts.

Minister for Housing, Forests and Native Affairs—

The Hon. R. R. McDonald, K.C.

Minister for Lands and Labour—

The Hon. L. Thorn.

Chief Secretary and Minister for Mines and Police—

The Hon. H. S. W. Parker, D.S.O., M.L.C.

Minister for Works and Water Supply—

The Hon. V. Doney.

Attorney-General and Minister for Health and Fisheries—

The Hon. A. V. R. Abbott.

Minister for Railways and Transport—

The Hon. H. S. Seward.

Honorary Minister for Supply and Shipping—

The Hon. A. F. G. Cardell-Oliver.

Honorary Minister for Agriculture—

The Hon. G. B. Wood, M.L.C.

TASMANIA (25th February, 1948.)

Premier, Minister for Education and Minister administering Hydro-Electric Commission Act—

THE HON. R. COSGROVE.

Attorney-General—

THE HON. R. F. FAGAN.

Treasurer and Minister for Transport—

THE HON. J. L. MADDEN.

Minister for Agriculture and Agricultural Bank—

THE HON. J. J. DWYER, V.C.

Minister for Lands and Works and Minister for Mines—

THE HON. E. E. REECE.

Chief Secretary—

THE HON. A. J. WHITE.

Honorary Ministers—

THE HON. E. R. A. HOWROYD
(Minister for Forests and Minister controlling the Tourist and Immigration Department).
THE HON. R. J. TURNBULL
(Minister for Health).
THE HON. C. B. AYLETT
(Minister for Housing).

§ 5. Cost of Parliamentary Government, pp. 87–8.

The cost of Parliamentary Government, Commonwealth and individual States, for the years 1946–47 and 1947–48 was as follows :—

COST OF PARLIAMENTARY GOVERNMENT.

Year.	C'wealth.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
				TOTAL.				
	£	£	£	£	£	£	£	£
1946–47 ..	800,542	346,970	145,532	171,460	114,360	143,957	77,970	1,800,791
1947–48 ..	905,476	335,006	192,063	158,258	123,412	173,073	71,956	1,959,244
				PER HEAD OF POPULATION.

(a) At 30th June, 1947. (b) Includes £5,987,000 Central Office expenditure.

§ 6. Radio Telegraphy and Telephony, p. 216.

Radio-communication Stations Authorized.—A change has been made in the arrangement of the statistics of the different classes of the wireless licences issued by the Postmaster-General's Department for stations in the States and Territories of the Commonwealth, the new particulars referring to "stations authorized" instead of "licences issued". The change has been made necessary mainly because of the need for inclusion of certain stations authorized in recent times, but for which licences have not been issued (e.g. stations established by the Postmaster-General's Department, services conducted by the Administration of Papua—New Guinea and aeronautical stations of the Department of Civil Aviation). Another factor in the change is that, in a number of instances, single licences have been issued for a group of stations. Figures representing stations authorized for use in ships and in aircraft are shown separately as totals for the Commonwealth and Territories combined, because it is no longer practicable to classify them according to States, etc., as hitherto. Figures relate to radio-communication (radio telegraph and radio telephone) stations only; particulars of broadcasting stations and of broadcast listeners are shown in the two tables following.

RADIO-COMMUNICATION STATIONS AUTHORIZED.

State for which Authorized.	Class of Station.									Grand Total.
	Transmitting and Receiving.						Receiving only.			
	Aeronautical. (a)	Coast. (b)	Land. (c)	Mobile (general). (d)	Miscellaneous.	Total.	Land. (c)	Mobile (general). (d)	Total.

,, 1945–46	525,070	1.91	525,869	1.81	4,273	0.73	1,055,212	1.85

(*a*) Includes Australian Capital Territory. (*b*) Includes Northern Territory.

CHAPTER XI.—TRADE.

NOTE.—The values in the following tables are expressed in Australian currency, but, unlike the figures in Chapter XI.—Trade of this issue, they represent f.o.b. value at port of shipment for *both* imports and exports. The figures for imports therefore *do not include the statutory* 10 *per centum imposed for value for duty purposes* which is included in the import figures of Chapter XI. This change is in accordance with the amendment to the Customs Act 1901–1936 referred to at the top of p. 397 *ante*.

§ 7. Oversea Trade.

Summary of Movements, pp. 399 and 400.—The table hereunder is a summary of the total oversea trade movements of Australia during the year 1947–48.

TOTAL OVERSEA TRADE : AUSTRALIA, 1947–48.

Item.	Australian Currency Values.
	£A'000 f.o.b.
Merchandise—Exports	404,988
Imports	338,085
Commodity Balance	66,903
Bullion and Specie—Exports	4,966
Imports	1,661
Bullion and Specie Balance	3,305
Total Balance	70,208

§ 8. Direction of Oversea Trade.

Imports according to Country of Origin and Exports according to Country of Destination, pp. 402 and 404.—The following table shows particulars of the values of total imports and total exports of Australia, including bullion and specie, according to countries of origin or of destination, for the year 1947–48 :—

TOTAL OVERSEA TRADE, AUSTRALIA : COUNTRIES OF ORIGIN OR OF DESTINATION, 1947–48.

Country of Origin or of Destination.	Imports.	Exports.
	£A'000 f.o.b.	£A'000 f.o.b.
United Kingdom	132,238	155,933

CHAPTER XII.—LABOUR, WAGES AND PRICES.

A. RETAIL PRICES AND PRICE INDEXES.

§ 7. Tabular Statements of Retail Price Index-Numbers.

All Items (" C " Series) Retail Price Index p. 447.—The following table shows the " C " Series index-numbers for the December quarters, 1947 and 1948 for each capital city and for the six capital cities combined, showing separate series for each of the four main groups of items :—

ALL ITEMS (" C " SERIES) RETAIL PRICE INDEX-NUMBERS (*a*) : CAPITAL CITIES.

(*Base of each Group : Weighted average of Six Capital Cities*, 1923–27 = 1,000.)

December Quarter—	Sydney.	Melbourne.	Brisbane.	Adelaide.	Perth.	Hobart.	Six Capitals. (*b*)
GROUP I.—FOOD AND GROCERIES.							
1947	1,138	1,160	1,092	1,112	1,132	1,180	1,138
1948	1,326	1,355	1,280	1,305	1,324	1,416	1,330
GROUP II.—HOUSING (4 AND 5 ROOMS) (*c*).							
1947	1,045	974	864	899	887	936	977
1948	1,047	974	866	905	890	938	980
GROUPS I. AND II.—FOOD, GROCERIES AND HOUSING (" B " SERIES INDEX).							
1947	1,099	1,084	1,001	1,026	1,034	1,082	1,073
1948	1,214	1,203	1,116	1,146	1,152	1,226	1,190
GROUP III.—CLOTHING.							
1947	1,639	1,649	1,619	1,618	1,647	1,653	1,639
1948	1,831	1,801	1,817	1,809	1,835	1,807	1,818
GROUP IV.—MISCELLANEOUS.							
1947	1,245	1,201	1,157	1,266	1,160	1,140	1,217
1948	1,279	1,273	1,249	1,350	1,242	1,191	1,277
GROUPS I. TO IV.—ALL ITEMS (" C " SERIES INDEX).							
1947	1,242	1,227	1,163	1,198	1,189	1,216	1,221
1948	1,359	1,345	1,291	1,327	1,316	1,344	1,341

(*a*) The index-numbers given in the separate parts of the table cannot be compared with each other in order to show the relative cost of food and groceries, housing, etc., since the cost in 1925–27 in each group or combination is made equal to 1,000. (*b*) Weighted average. (*c*) The rent index-numbers measure the proportionate rise and fall in the average weekly rentals paid for houses of four and five rooms taking corresponding houses throughout. *See* footnote (*b*) on page 443.

B. WHOLESALE PRICES AND PRICE INDEXES.

§ 1. Melbourne Wholesale Price Index.

Index-numbers, p. 456.—The table hereunder gives the index-numbers for each group, and for all groups combined, of those commodities included in the series for the years 1947 and 1948 :—

INDEX-NUMBERS (*a*) : MELBOURNE WHOLESALE PRICES.

(*Base of each Group : Year* 1911 = 1,000.)

Year.	I. Metals and Coal.	II. Wool, Cotton, Leather, etc.	III. Agricultural Produce, etc.	IV. Dairy Produce.	V. Groceries.	VI. Meat.	VII. Building Materials.	VIII. Chemicals.	All Groups.
1947	2,390	2,690	2,019	1,763	2,174	2,748	3,800	2,843	2,360
1948	2,829	3,619	2,383	2,104	2,435	2,976	4,631	3,180	2,824

(*a*) Figures are not directly comparable horizontally.

§ 2. Basic Materials and Foodstuffs.

Index-numbers, pp. 457–8.—Index-numbers for each group of commodities and for all groups combined for the new index of wholesale prices of basic materials and foodstuffs are shown below for each of the twelve months and year 1947–48 and for the six months July to December, 1948.

INDEX-NUMBERS (*a*) : BASIC MATERIALS AND FOODSTUFFS.

(*Base of each Group : Average* 3 *years ended June,* 1939 = 1,000.)

Period.	Metals and Coal.	Oils, Fats and Waxes.	Textiles.	Chemicals.	Rubber and Hides.	Building Materials.	Foodstuffs and Tobacco.	Goods principally Imported. (*b*)	Goods principally Home Produced.	All Groups.
1947–48—

November ..	1,876	1,734	3,484	1,592	1,349	1,966	1,732	2,008	1,722	1,806
December ..	1,876	1,734	3,650	1,595	1,312	1,985	1,759	2,010	1,749	1,826

(*a*) Figures are comparable in the vertical columns but not directly comparable horizontally.
(*b*) Represents only such imported commodities as are included in the wholesale price index. This index does not measure changes in price of imports generally.

D. WAGES.

§ 2. Rates of Wages and Hours of Labour.

NOTE.—The nominal wage and hours figures are in course of revision to meet changes in industrial structure. The amounts shown should not be regarded as actual current averages but as an index of changes expressed in money and hour terms.

Weekly Rates of Wage, pp. 466 and 468. The following table shows for each State and Australia the weighted average nominal weekly rates of wage payable, and the index-numbers based thereon, for adult males and for adult females at 31st December, 1947 and 1948 :—

WAGE RATES OF ADULT MALES AND FEMALES.

(Weighted average nominal weekly rates payable for a full week's work and index-numbers of wage rates.)

(*a*) Weighted average for Australia. (*b*) Subject to revision.

§ 3. Basic Wages in Australia.

Current Commonwealth Basic Wage Rates, p. 480.—The basic weekly wage rates for adult males, fixed by the Commonwealth Court of Conciliation and Arbitration for each Capital City and the six capitals, operative at 1st June, 1949, were as follows :—Sydney, 127s. 0d. ; Melbourne, 125s. 0d. ; Brisbane, 119s. 0d. ; Adelaide, 121s. 0d. ; Perth, 120s. 0d. ; Hobart, 124s. 0d. ; Six Capitals, 124s. 0d. Female rates are generally 54 per cent. of male rates.

Current State Basic Wage Rates, p. 484.—The table below shows the current basic weekly wage rates declared by the various State tribunals, operative at 1st June, 1949:—

BASIC WEEKLY WAGE RATES FIXED BY STATE INDUSTRIAL TRIBUNALS.

State.	Basic Wage.		Date of Operation.	Family Unit (for Male Rate).
	Males.	Females.		
	£ *s.* *d.*	£ *s.* *d.*		
New South Wales . .	(*a*) 6 7 0	(*a*) 3 8 6	1.5.49	(*b*)

D. TAXES ON INCOME.

Effective Exemptions from Tax, p. 693.—For the income years 1948–49 and 1949–50 taxpayers are exempt from Social Services Contribution and/or Income Tax if their income does not exceed the amounts shown in the following table.

Taxpayer with—	Social Services Contribution. 1948–49 Income.	Social Services Contribution. 1949–50 Income.	Income Tax (Personal Exertion). 1948–49 Income.	Income Tax (Personal Exertion). 1949–50 Income.
	£	£	£	£
No dependants	104	104	350	500
Wife	200	200	501	660
Wife and one child	283	283	613	771
Wife and two children	317	317	669	827
Wife and three children	350	350	726	883
Wife and four children	400	400	783	939

Rates of Tax on Individuals, p. 693.—The following table shows the rates of income tax in respect of 1948–49 and 1949–50 incomes.

(*T = Taxable Income in Pounds.*)

Rates.	Personal Exertion.		Property.	
	Taxable Income.	Tax in Pence.	Taxable Income.	Tax in Pence.
1948–49 Income—	£351–£1,000	$.03T^2 - 3075$	£351– £500	$.06T^2 - 12T - 3150$
	£1,001–£2,000	$.02T^2 + 20T - 13{,}675$	£501–£1,000	$.03T^2 + 18T - 10{,}650$
	£2,001–£5,000	$.009T^2 + 64T - 57{,}675$	£1,001–£2,000	$.021T^2 + 36T - 19{,}650$
	£5,001–£9,000	$.001T^2 + 144T - 257{,}675$	£2,001–£5,000	$.007T^2 + 92T - 75{,}650$
	over £9,000	$162T - 338{,}675$	over £5,000	$162T - 250{,}650$
1949–50 Income—	£501–£1,000	$.024T^2 - 6T - 3{,}000$	£351– £500	$.005T^2 + 4.25T - 2{,}100$
	£1,001–£2,000	$.02T^2 + 2T - 7{,}000$	£501–£1,000	$.03T^2 - 2T - 5{,}225$
	£2,001–£5,000	$.01T^2 + 42T - 47{,}000$	£1,001–£2,000	$.022T^2 + 14T - 13{,}225$
	£5,001–£10,000	$.002T^2 + 102T - 247{,}000$	£2,001–£5,000	$.008T^2 + 70T - 69{,}225$
	over £10,000	$162T - 447{,}000$	£5,001–£10,000	$.0012T^2 + 138T - 239{,}225$
			over £10,000	$162T - 359{,}225$

For the income year 1948–49 the basic rate of Social Services Contribution for every £1 of income was 3 pence increasing uniformly by .06 pence for every £1 by which the income exceeded £100. The maximum basic rate was 1s. 6d. in the £1 which was reached at £350 and applied to all incomes over that amount. The concessional rate was the basic rate multiplied by the ratio of the excess of the contributable income over the sum of the concessional allowances to the lesser of the contributable income or £350.

For the income year 1949–50 the basic rate of Social Services Contribution for every £1 of income is 3 pence increasing uniformly by .0375 pence for every £1 by which the income exceeds £100. The maximum basic rate remains at 1s. 6d. in the £1, is reached at £500 and applies to all incomes over that amount. The concessional rate is—

> If the contributable income does not exceed the sum of the concessional allowances by more than £100—.03d. multiplied by the excess of the contributable income over the sum of the concessional allowances.
>
> If the contributable income exceeds the sum of the concessional allowances by more than £100 but by less than £500—the rate which would be the basic rate if the contributable income of the contributor were equal to the excess of the contributable income over the sum of the concessional allowances.
>
> In all other cases—1s. 6d.

Taxes on Sample Individual Incomes, p. 694.—The following tables show the Income Tax and Social Services Contribution payable by taxpayers with varying incomes and numbers of dependants on income derived in 1948–49 and in 1949–50 :—

CHAPTER XVI.—POPULATION.

§ 2. The Census.

Results of the Censuses, p. 701.—The following table shows the population of each State and Territory as recorded at the final count of the Census of 30th June, 1947 :—

POPULATION OF STATES : 1947.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

State or Territory.	30th June, 1947. (Final Count) Males.	Females.	Persons.
New South Wales	1,492,211	1,492,627	2,984,838
Victoria	1,013,867	1,040,834	2,054,701
Queensland	567,471	538,944	1,106,415
South Australia	320,031	326,042	646,073
Western Australia	258,076	244,404	502,480
Tasmania	129,244	127,834	257,078
Northern Territory	7,378	3,490	10,868
Australian Capital Territory	9,092	7,813	16,905
Australia	3,797,370	3,781,988	7,579,358

§ 3. Distribution and Fluctuation of Population.

Growth and Distribution, pp. 703–4, Mean Population, pp. 705–6.—The following table shows the latest population figures for each State and Territory :—

ESTIMATED POPULATION.(*a*)

TOTAL INCREASE.(*c*)									
Persons ..	44,650	21,408	14,138	12,513	11,704	13,916	355	698	119,382

(*a*) Excess of births over deaths, exclusive of all deaths of defence personnel prior to July, 1947, but inclusive of deaths of defence personnel in Australia from July, 1947 onwards. (*b*) Excess of births over deaths, as defined in note (*a*), per 1,000 of mean population revised in accordance with the final results of the 1947 Census. (*c*) Includes deaths of defence personnel, both in Australia and overseas, prior to July, 1947. Subsequently only deaths of defence personnel in Australia have been included. Interstate migration has not been taken into account until July, 1947.

§ 6. General Characteristics.

1. **General, p. 729.**—The information in the following paragraphs provides comparisons of the results of the Census of 30th June, 1947 with those of the Census of 30th June, 1933, or of earlier Censuses.

2. **Age Distribution.**—The age distribution of the population is obtained only at a Census. The following table shows the variation which took place in the age constitution of the population during the 14 years following the 1933 Census. Reference to the graph on page 713 will show regular wave-like movements in the curves depicting age constitution at various Censuses prior to 1947, owing to fluctuations in the birth-rate and in migration. The curve of age constitution for the 1921 Census showed definite troughs in the age-group 0 to 4 years owing to the decline in the birth-rate during the war years, and in the age-group 20 to 24 years owing to the decline in the birth-rate in the late 'nineties of last century and to the loss of young males during the 1914–18 War. At the 1933 Census these same troughs were still prominent, but owing to the lapse of time they then showed at the later ages of 12 to 16 years and 32 to 36 years. But for all ages below about 10 years the curve had been depressed to an extent which was even more marked than in 1921. This was due to a serious decline in the birth-rate, which was intensified in the years immediately prior to 1933 by the economic depression. The ages recorded at a Census are not free from error and are therefore subjected to a process of graduation, or smoothing, to eliminate the effects of the tendency to mis-statement at certain ages. These graduated results have been used in the graph on page 713, but not in the table hereunder, as graduated figures for the 1947 Census are not yet available. The figures shown in this table represent the numbers recorded in each age-group after distribution of unspecified ages over the population aged 15 years and upwards.

Of the 7,579,358 persons enumerated at the 1947 Census, 10.0 per cent. were under 5 years of age; 8.0 per cent. were 5 years of age and under 10 years; 7.1 per cent. from 10 to 14 years; 7.7 per cent. 15 to 19 years; and 34.4 per cent. were under age 21. At the 1933 Census 8.6 per cent. were under 5 years; 9.5 per cent. 5 to 9 years; 9.4 per cent. 10 to 14 years; 9.3 per cent. 15 to 19 years; and 38.6 per cent. under 21 years of age.

Owing mainly to the fall in the birth-rate, the numbers of young people in Australia between the ages of 5 to 19 years in 1947 shows a serious decline of 142,680 compared with the numbers in this age-group in 1933. The corresponding increase in this age-group from 1921 to 1933 was 277,154 persons. Although the decrease in the 5 to 19 years age-group in 1947 is offset by an increase of 191,422 persons in the age-group 0 to 4 years, the proportion of persons under 21 years of age in Australia has decreased from 38.6 per cent. in 1933 to 34.4 per cent. in 1947 whilst the proportion of persons aged 21 years and over has increased from 61.4 per cent. to 65.6 per cent. over the same period.

(*a*) Unspecified ages have been distributed over the population aged 15 years and upwards.

NOTE.—Minus sign (–) denotes decrease.

The next table shows the change which has been taking place in the age constitution of the population of Australia since 1871. Each successive Census except 1921 has revealed a larger percentage of the population 15 years of age and over than was recorded at the previous Census.

POPULATION : AGE DISTRIBUTION, AUSTRALIA, 1871 TO 1947.

3. **Conjugal Condition.**—Of the total population of Australia at the 1947 Census, 47.3 per cent. had never married ; 46.4 per cent. were married ; 5.6 per cent. widowed ; and 0.7 per cent. divorced. Since the 1933 Census the number never married had decreased by 2.4 per cent. ; those married increased by 35.2 per cent. ; the widowed by 28.4 per cent. ; and the divorced by 148 per cent.

From a demographic point of view the most important change in the conjugal condition of the population of Australia since 1933 was the decrease in the number of persons who had never married and the relative increase in the number of married persons. In 1947, 62.0 per cent. of all persons 15 years of age and over, who stated their conjugal condition, were married, compared with 54.2 per cent. in 1933. If the latter percentage had obtained in 1947 there would have been approximately 440,000 fewer married persons at 30th June, 1947.

The number of widowed females recorded in Australia in 1947 was 309,383, or nearly three times as many as the number of widowed males. This disparity is the result of two influences. The first is the greater longevity of females coupled with the usually younger age at marriage ; and the second is that a larger proportion of males cancel their widowhood by remarriage.

The number of divorced persons increased by 31,280 between 1933 and 1947 compared with an increase of 12,585 between 1921 and 1933. The numbers of divorced males and females at 30th June, 1933 in this table differ slightly from those shown on page 279 where the conjugal conditions of those for whom particulars were not given at the Census have been distributed proportionately among the various groups.

POPULATION : CONJUGAL CONDITION, AUSTRALIA, 1933 AND 1947.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

4. **Dependent Children under 16 years of age.**—At the 1947 Census 927,453 males and 66,418 females stated they had children under 16 years of age dependent on them at 30th June, 1947, the total number of dependent children under age 16 claimed being 1,962,791, of whom 1,853,314 or 94.4 per cent. were dependent on males and 109,477 or 5.6 per cent. were dependent on females. This represented an average of 2.00 for each male with dependent children and 1.65 for each female with dependent children.

Forty-three per cent. of the males with dependent children under 16 years of age had one dependent child; 32 per cent. two children; 15 per cent. three children; 6 per cent. four children; 2 per cent. five children; and 2 per cent. more than five children. Of the females with dependent children under 16 years of age, 60 per cent. had one dependent child; 25 per cent. two children; 9 per cent. three children; 4 per cent. four children; 1 per cent. five children; and 1 per cent. more than five children.

Compared with 1933, the number of children dependent on persons with one, two or three dependent children increased by 234,521, but this increase was largely offset by decreases in the number of children dependent on persons with four or more dependent children. Although persons with dependent children increased by 127,759, the number of children under 16 years dependent on such persons increased by only 42,932.

POPULATION : PERSONS WITH DEPENDENT CHILDREN UNDER SIXTEEN YEARS OF AGE, AUSTRALIA, 1933 AND 1947.

NOTE.—Minus sign (−) denotes decrease.

5. **Religion.**—At the 1921 Census 92,258 persons in Australia, or 1.7 per cent., gave no reply to this question, but in 1933 and again at the 1947 Census, when the public was informed there was no legal obligation to answer this question, 848,948 persons, or 12.8 per cent., and 824,824 or 10.9 per cent., respectively, gave no reply. Of males 11.7 per cent. and of females 10.0 per cent. did not state their religion in 1947.

Of those who stated their religion, the greatest numerical increase during the intercensal period between 1933 and 1947 was recorded by the Church of England, followed by the Roman Catholic and Catholic (so described), which it is thought may be grouped without serious error, as the latter term usually signifies Roman Catholic. Then followed Methodist, Presbyterian and Church of Christ in that order. Amongst the denominations with the largest number of adherents, the greatest proportional increases since 1933 were recorded by Methodists, 27.4 per cent.; Roman Catholic and Catholic combined, 21.8 per cent.; Church of England, 15.3 per cent.; and Presbyterian, 4.2 per cent.

In 1933 and again in 1947, 99 per cent. of those who stated their religion professed the Christian faith. Since the previous Census, the number who stated they were of non-Christian religion increased by 28 per cent., and those specifically stating they had no religion increased by 71 per cent.

POPULATION: RELIGION, AUSTRALIA, 1933 AND 1947.

6 **Birthplace.**—At 30th June, 1947, the Australian-born element of the population of Australia represented 90.2 per cent. as compared with 86.4 per cent. at the 1933 Census. The number of Australian-born increased by 1,108,605 or by 19.4 per cent. since 1933.

On the other hand the overseas-born population declined during the same period by 159,086 or by 17.6 per cent. The principal contribution to the decline of the overseas-born population was the decrease of approximately 171,000 in the number of persons born in the British Isles.

There was little change during the intercensal period in the number of persons of Asiatic, African or American birthplace, but persons born in these continents form a very small percentage of the population of Australia.

Of persons born outside Australia, 56 per cent. were males and 44 per cent. females.

7. **Period of Residence in Australia.**—The decline, until recently, in immigration into Australia is reflected in the figures in this table, which classifies the immigrant population of Australia according to period of residence in Australia. They show that, of persons born outside Australia who stated their period of residence, 5.7 per cent. had resided in Australia for a period of less than 5 years, 11.2 per cent. for less than 10 years. and 14.8 per cent. for less than 15 years, compared with 5.7, 25.5 and 39,5 per cent. respectively at the previous Census in 1933.

IMMIGRANT POPULATION : PERIOD OF RESIDENCE, AUSTRALIA, 1933 AND 1947.

NOTE.—Minus sign (—) denotes decrease.

8. **Nationality.**—The number of foreign nationals in Australia decreased since the 1933 Census by 36 per cent.—males by 40 per cent. and females by 18 per cent.—as compared with an increase of 15 per cent. in the number of British nationality. There was little change, however, in the proportion of foreign nationals relative to the total population, 99.5 per cent. of the population being British subjects, as compared with 99.1 per cent. at the previous Census. The principal foreign nationals in Australia were Italian, 7,172 ; Chinese, 4,858 ; Greek, 4,504 ; United States of America, 3,351 ; German. 2,361 ; Yugoslav, 2,096 ; and Dutch, 2,001.

The number of persons in Australia who were born in countries outside the British Empire totalled approximately 128,000, and of this number 38,653, or 30 per cent., were of foreign nationality at 30th June, 1947, the remainder being British subjects, mainly by naturalization.

POPULATION : NATIONALITY (i.e., ALLEGIANCE), AUSTRALIA, 1933 AND 1947.

NOTE.—Minus sign (—) denotes decrease.

9. **Race.**—The people of Australia may be classified into two groups with respect to racial characteristics, namely, non-indigenous and indigenous. The former group comprises the European and other races who have migrated to Australia and their descendants born in Australia, while the latter group consists of the full-blood aboriginal natives of Australia whose estimated number at 30th June, 1944 was about 47,000, but who are not included in the general population figures of Australia. The non-indigenous population of Australia is fundamentally British in race and nationality.

At the 30th June, 1947, 7,524,129 persons or 99.3 per cent. of the population were of full-blood European race and 0.7 per cent. of non-European and half-caste. Full blood non-Europeans decreased from 22,780 in 1933 to 21,495 in 1947, but the number of half-castes increased from 27,066 to 33,734 during the same period.

The principal full-blood non-Europeans in Australia were Chinese, 9,144 ; Polynesian, 5,332 ; Natives of India, 2,480 ; and Syrian, 1,675 ; while half-caste Australian aboriginals, who increased from 20,620 in 1933 to 27,179 in 1947, represented 80.6 per cent. of the total half-caste population.

POPULATION : RACE, AUSTRALIA, 1933 AND 1947.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

(*a*) Native of India. (*b*) Includes Maori, Fijian, Papuan, and Torres Strait Islanders.
NOTE.—Minus sign (—) denotes decrease.

10. **Industry.**—In the following table the male and female populations of Australia are classified according to the industry in which they are usually engaged. If the 124,439 persons (84,673 males and 39,766 females) for whom no particulars regarding industry were given on the Census schedules are included, the number of persons "in the work force" is 3,196,431, of whom 2,479,269 were males and 717,162 were females. It is believed that subsequent tabulations will furnish evidence to enable most, if not all, of the 124,439 persons in "Industry Not Stated" to be included in the work force. The remainder of the population, totalling 4,382,927 (1,318,101 males and 3,064,826 females), were classified as not being in the work force. The term "in the work force" includes persons of all ages who are employers, self-employed or working on their own account, wage and salary earners, unpaid helpers engaged in industry, and those who usually work for their living but who have lost their jobs.

Persons who do not earn their living by doing work for monetary reward, such as children, housewives, full-time students, retired persons, pensioners, and permanent inmates of institutions are regarded as not being in the work force.

On the average, 65 in every 100 of the male population and 19 in every 100 of the female population were in the work force, or in other words there were, in 1947, 3½ males to every female in the work force.

Of the males in the work force who stated their industry, those engaged in Manufacturing represented the largest proportion, namely 27.0 per cent., followed next in order by those in Primary Production, 19.8 per cent.; Commerce, 11.6 per cent.; Transport and Storage, 9.7 per cent.; Building and Construction 9.7 per cent.; and Public Authority (n.e.i.) and Professional Activities, 8.8 per cent.

As with the males, females in the work force who stated their industry were most largely engaged in Manufacturing, 27.2 per cent.; followed next in order by those in Public Authorities (n.e.i.) and Professional Activities, 20.6 per cent; Amusement, Hotels, Cafés, Personal Service, etc., 19.2 per cent.; and Commerce, 18.8 per cent.

POPULATION: NUMBER ENGAGED IN INDUSTRY, AUSTRALIA, 1947.

Grand Total	3,797,370	3,781,988	7,579,358

11. **Occupational Status.**—The term "occupational status" has been substituted for "grade of occupation" formerly in use, and it relates to the capacity in which persons are engaged in the various branches of industry.

The number of employers in Australia at 30th June, 1947 was 221,289 compared with 207,680 at the previous Census. Persons who were self-employed or working on their own account increased from 369,375 in 1933 to 387,137 in 1947. Of the males in the work force, 74.4 per cent. were employees receiving wages or salaries at 30th June, 1947, and the corresponding proportion of female employees receiving wages or salaries was 87.3 per cent.

Persons not at work, consisting of the unemployed and those not actively seeking a job at 30th June, 1947, amounted to 82,774, consisting of 66,009 males and 16,765 females.

At the Census of 30th June, 1947, 29,013 persons gave no answer to the question regarding occupational status, but, as with persons for whom no industry was stated, it is believed that subsequent tabulations will disclose that the majority, if not all, of these persons should be classified to the work force.

In 1933, wage-earners who were employed part-time were asked to indicate that fact on the Census Schedule in answer to the question regarding occupational status, and all those who so described themselves are included in the work force for that year. In 1947, however, persons working regularly, but for considerably less than normal working hours, were instructed on the Census Schedule to exclude themselves from the work force, unless their earnings from such work formed their principal means of livelihood.

POPULATION : OCCUPATIONAL STATUS, AUSTRALIA, 1933 AND 1947.

(EXCLUDING FULL-BLOOD ABORIGINALS.)

(*a*) Includes persons who were (1) unable to secure employment; (2) temporarily laid off from their jobs; and (3) not actively seeking work at the time of the Census on account of sickness or accident, industrial dispute, resting between jobs or for any other reason. (*b*) *See* last preceding paragraph above.

NOTE.—Minus sign (−) denotes decrease.

12. **Other General Characteristics.**—Questions regarding orphanhood, and the ability to read and write a foreign language, of persons who could not read and write English, were not asked on the schedules of the 1947 Census. Consequently, the latest Census data available concerning these questions are those of the 1933 Census, as published in previous issues of the Year Book.

Details of the causes and duration of unemployment of persons who stated that they were out of work at the time of the 1947 Census are not yet available.

§ 8. Oversea Migration.

Classes of Arrivals and Departures, p. 733.—Arrivals and departures during 1947 were :—Permanent new arrivals, 31,765 ; Australian residents returning from abroad, 18,305 ; temporary visitors arriving, 17,698 ; total arrivals, 67,768 : Australian residents departing permanently, 19,579 ; Australian residents departing temporarily, 18,764 ; temporary visitors departing, 18,814 ; total departures, 57,157. Permanent migration refers to persons, other than Australian troops and dependants, intending residence for a year or more—in Australia in the case of arrivals and abroad in the case of departures. Temporary migration refers to persons intending residence for shorter periods and, as from 1st July, 1947, Australian troops and dependants, irrespective of period of residence. For the six months ended June, 1947, all figures exclude troop movements.

CHAPTER XVII.—VITAL STATISTICS.

§ 1. Marriages. § 2. Fertility and Reproduction, and § 3. Mortality.

Numbers and Rates, pp. 742-3, 754–5, 767–8 and 772.—The following table shows totals and rates for marriages, births, deaths, and infant deaths for 1947 :—

MARRIAGES, BIRTHS, DEATHS AND INFANTILE DEATHS, 1947.

Particulars.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Marriages	30,172	20,437	10,999	6,668	5,282	2,584	124	191	76,457
Rate (*a*) ..	10.11	9.95	9.95	10.32	10.50	10.02	11.39	11.30	10.09
Births ..	69,398	47,366	28,358	16,317	12,874	7,140	276	655	182,384

§ 4. Wheat.

Survey of Legislation relating to Wheat Industry, p. 899.—(i) *Control during* 1914–18 *and* 1939–45 *Wars.* Attempts to stabilize the wheat industry in Australia have extended over a long period of years, but the only occasions on which it was subject to control occurred during the 1914–18 and 1939–45 Wars, and then only by reason of the constitutional powers held by the Commonwealth under war-time legislation.

In both wars serious dislocation of trade, mainly through shipping difficulties, caused large accumulations of wheat, which necessitated Governmental action to arrange for its storage and disposal, as well as the financing of sales and the reimbursement of growers.

In the 1914–18 War the Commonwealth, in conjunction with the States of New South Wales, Victoria, South Australia and Western Australia, established the Wheat Marketing Scheme which operated until 1921. During the 1939–45 War the Australian Wheat Board, created by the Commonwealth under National Security Regulations, was the sole authority for the marketing of wheat.

(ii) *Pool System.* After the termination of the Australian Wheat Marketing Scheme in 1921, the marketing of wheat during the 1921–22 harvest did not return wholly to the open market conditions which operated prior to 1914, but continued under a combination of open market selling and pools. Voluntary pools were established in New South Wales, Victoria and South Australia while a compulsory pool was created under State legislation in Western Australia. In the following season (1922–23) voluntary pools operated in all four States; Western Australia abandoning the compulsory method.

The following table shows the proportion of the marketable wheat which passed through the State pools in the four chief producing States at five-yearly intervals since the introduction of the pool system in 1921–22, as well as for the pre-war year 1938–39. It is indicative of the extent of the support which growers gave to the pools.

PERCENTAGE OF WHEAT RECEIVED BY VOLUNTARY POOLS IN THE FOUR CHIEF PRODUCING STATES.

Harvest.	N.S.W.	Victoria.	S. Aust.	W. Aust.
	%	%	%	%
1921–22	58	78	36	(*a*) 96
1925–26	2	14	22	36
1931–32	2	39	24	42
1935–36	(*b*)	5	3	18
1938–39	(*b*)	1	4	28

(*a*) Compulsory pool. (*b*) Pool did not operate in these years.

(iii) *Financial Assistance to Wheat Growers.* Prior to 1931–32 no financial assistance had been rendered by the Commonwealth to wheat growers, but when the price of wheat fell to less than 2s. 6d. per bushel by December, 1930, the position of growers became most difficult. To alleviate this, the Commonwealth Government assisted growers, either in the form of a bounty or relief, and amounts totalling £3,400,000 were distributed in 1931–32, £2,000,000 in 1932–33, £3,000,000 in 1933–34, £4,000,000 in 1934–35 and £2,000,000 in 1935–36. As prices improved, Commonwealth assistance was discontinued, but when prices again fell in 1938–39 it was resumed and continued until 1944–45, the amounts distributed being £1,800,000 in 1938–39, £2,500,000 in 1939–40, £2,500,000 in 1940–41, £1,700,000 in 1941–42, £2,200,000 in 1942–43, £4,300,000 in 1943–44 and £4,100,000 in 1944–45. In all, £33,500,000 was distributed to wheat growers by the Commonwealth between 1931–32 and 1944–45.

(iv) *Wheat Industry Assistance Act* 1938. The first attempt to stabilize the price of wheat in Australia occurred in 1938 when the Commonwealth enacted the Wheat Industry Assistance Act 1938 which supplemented legislation passed by each of the several States. The purpose of these Acts, which became effective in December, 1938, was to stabilize the price of wheat used for flour for home consumption at 5s. 2d. per bushel, bagged, f.o.r. Williamstown, Victoria, which approximates 4s. 8d. per bushel at country sidings. This price was to be maintained by millers paying a tax on flour used in Australia when the price of wheat fell below that level, or by a tax on wheat sold to wheat merchants should it exceed that level. Funds raised by the tax on flour were distributed to growers through the States and the amounts so distributed between 1938 and 1948 are shown in the table below.

The tax on wheat was not proclaimed and did not operate at any time. In December, 1947 the tax rate on flour became nil because of the rise in wheat prices.

FLOUR TAX RECEIPTS AND DISBURSEMENTS : AUSTRALIA.

Year ended November—	Gross Receipts Less Refunds and Expenses.	Less Special Payments under—		Amount paid for distribution to Growers.

1948	285,582	..	..	285,582

(a) Payments to eliminate marginal wheat areas. (b) Special grant to Tasmania.

(v) *Other Commonwealth Legislation.* Other legislation passed by the Commonwealth Government subsequent to the Wheat Industry Assistance Act 1938 included the Wheat Industry (War-time Control) Act 1939 which diverted the funds obtained from the flour tax to the Australian Wheat Board. Other Acts making provision for a tax on wheat were passed in 1940 but the tax did not operate and was repealed by legislation passed in 1944. Under the latter legislation, a guaranteed price of 4s. 0d. per bushel, bagged, at sidings, which was later raised to 4s. 1½d., was fixed for wheat acquired by the Commonwealth. In 1946 the Wheat Industry Assistance Act 1946 was passed, making provision for the elimination of additional marginal wheat areas.

This legislation was mainly machinery-like in character and was designed to assist the industry through the abnormal war-time period.

(vi) *Wheat Industry Stabilization Act* 1946. The Wheat Industry Stabilization Act passed by the Commonwealth Government in 1946 was the first legislative measure which attempted to establish a permanent wheat marketing organization on a nation-wide basis. This plan developed from the Premiers' Conference held in January of that year, at which it was agreed that joint action should be taken by all Australian Governments to give effect to the proposals agreed upon. All States, however, did not pass the complementary legislation necessary to give effect to this proposal, and consequently, in the absence of Commonwealth powers in respect of internal marketing, the 1946 Act did not function, except for the establishment of a stabilization fund into which tax contributions levied under the Wheat Export Charge Act 1946 and the Wheat Tax Act 1946 were paid.

(vii) *Modifications* (*July,* 1948) *of* 1946 *Plan.* A further attempt to establish a permanent wheat marketing authority in Australia was made in July, 1948, when the Commonwealth Minister for Commerce and Agriculture met State Ministers for Agriculture in a conference at which agreement was reached on certain modifications to the 1946 plan.

The principal amendment was that control of production was not required and that the State Governments would undertake the regulation of wheat growing in marginal areas. This modified plan was subsequently adopted by a majority of growers in the four main producing States in polls arranged by the respective State Governments. The results of these polls were as follows :—

RESULTS OF POLLS OF WHEAT GROWERS ON THE QUESTION OF ADOPTION OF THE COMMONWEALTH WHEAT STABILIZATION PLAN AS MODIFIED IN JULY, 1948.

State.	For.	Against.	In Favour
	No.	No.	%
New South Wales	8,951	6,360	58.5
Victoria	11,275	3,495	76.4
South Australia	5,729	4,090	58.3
Western Australia	3,957	2,426	61.9
Total	29,912	16,371	64.6

The requisite legislation was passed by Commonwealth and State Governments prior to the end of 1948, and for the first time in the history of the industry a peace-time plan for the internal and external marketing of wheat was established with one central marketing authority. The plan came into operation with the 1948–49 season and will continue for a period of five years up to the end of the 1952–53 season.

(viii) *Provisions of* 1948 *Plan.* The principal provisions of the plan embodied in the Commonwealth Wheat Industry Stabilization Act 1948 and Wheat Export Charge Act 1948 (which also provided for the repeal of the earlier Commonwealth legislation passed in 1946) are as follows :—

(1) The Commonwealth Government shall guarantee a price (6s. 3d. per bushel f.o.r., ports, bulk basis for the 1947–48 season) for wheat grown and delivered by wheat growers.

(2) The guaranteed price, which is based on ascertained costs for the 1947–48 season, shall vary according to an index of production costs for each season starting with the 1948–49 crop. (Following a review of costs for the 1948–49 season by the Wheat Cost of Production Committee, the guaranteed price has been increased to 6s. 8d. per bushel f.o.r., ports, bulk basis.)

(3) The guarantee shall apply to the wheat crops marketed through approved organizations for the period up to the end of the 1952–53 season.

(4) Approved organizations shall be the Australian Wheat Board and those organizations which are empowered by State Governments with authority to receive wheat and to market it as the agents for the Australian Wheat Board.

(5) The Commonwealth shall ensure the guaranteed price in respect of the export from any one season's crop, provided that this guarantee shall not apply to the quantity of export in excess of 100 million bushels.

(6) A Stabilization Fund shall be established by means of a tax on wheat exported to meet the guaranteed price above mentioned.

(7) The tax shall apply when the export price is higher than the guaranteed price, and shall be 50 per cent. of the difference between the two but shall not exceed 2s. 2d. per bushel.

(8) The tax shall apply to the 1947–48 and later wheat crops.

(9) The Commonwealth agrees that it will not hold an excessive amount in the Fund, and it will consider a refund of tax to the oldest contributing pool whenever the financial prospects of the Fund justify it. (Refunds of amounts contributed in respect of the 1945–46 and 1946–47 harvests have already been approved).

(ix) *Complementary State Acts* 1948. The respective State Wheat Industry Stabilization Acts 1948 are complementary to the Commonwealth Act and came into operation on 25th November, 1948, the date on which the Commonwealth Act received Royal assent. The principal provisions of the State Acts are—

(*a*) The Australian Wheat Board is afforded State statutory authority to act, as provided in the Commonwealth Act, in respect of—

- (i) The purchase or other acquisition, the sale or other disposal and the control of all matters relating to the handling, storage, treatment, shipment, etc., of wheat or wheat products;
- (ii) The licensing of any person, firm, company or State Authority to receive wheat on its behalf;
- (iii) The fixation of the home consumption price for wheat at the same level as the price guaranteed by the Commonwealth and determined as provided in the Commonwealth Act.
- (iv) Other matters specified.

(*b*) In Queensland and Western Australia the respective State Wheat Boards are empowered to act as agents of the Australian Wheat Board, are entitled to be licensed to receive wheat on behalf of the Australian Wheat Board, and each is empowered to nominate one of its members as a growers' representative to the Australian Wheat Board.

(*c*) In New South Wales a State Wheat Committee is established to nominate one of its members as a growers' representative to the Australian Wheat Board and to advise the State Minister on wheat matters. It may act as agent of the Australian Wheat Board. The New South Wales Act also empowers the State Minister to exercise control over wheat growing in specified marginal areas of the State.

(x) *The Australian Wheat Board and the Stabilization Fund.* The Australian Wheat Board, as reconstituted under the Commonwealth Wheat Industry Stabilization Act 1948, commenced to perform its functions under the Act on 18th December, 1948.

The provisions of the Commonwealth Wheat Stabilization Plan relating to the levy of a tax on wheat exported and the establishment of a Stabilization Fund have been implemented by the Commonwealth Government under legislation passed in 1946 in respect of the 1945–46, 1946–47 and 1947–48 harvests. Contributions to the Stabilization Fund have amounted to about £7,000,000 and £4,000,000 from the 1945–46 and 1946–47 harvests respectively, and are expected to reach approximately £15,000,000 from the 1947–48 harvest. The Commonwealth Wheat Tax (Repeal and Refund) Act 1948, which repealed the Wheat Tax Act 1946, provides for the refund to growers, through the Australian Wheat Board, of the amounts contributed to the fund from the 1945–46 and 1946–47 harvests, which are equivalent to approximately 1s. 1½d. per bushel and 10½d. per bushel, respectively. Refunds of contributions to the fund from the 1945–46 harvests were paid in December, 1948, and arrangements have been completed to refund to growers, early in 1949, amounts contributed for the 1946–47 harvest.

The Wheat Industry Stabilization Board operated throughout Australia under war-time Commonwealth legislation during each of the seasons 1941–42 to 1948–49. Under this legislation, provision was made for the registration of farms and licensing of areas by the Wheat Industry Stabilization Board. The area allotted to each grower was fixed in proportion to the average sown during the basic three year period, principally in the three years 1938–39 to 1940–41. Although licensing continued during the seasons 1945–46 to 1948–49, growers were permitted to plant without restriction. In Western Australia, growers' acreages during the seasons 1942–43 to 1944–45 were restricted to a maximum of two-thirds of their basic acreages. During 1945–46 no such restriction was imposed, but where growers voluntarily restricted the area sown to five-sixths or less of their basic acreage, compensation equal to one-sixth of their basic acreages was payable, subject to the qualification that half of the area licensed for wheat was cropped for grain.

The Wheat Industry Stabilization Board ceased to function in December, 1948, following the establishment of the post-war wheat stabilization plan under legislation passed by the Commonwealth and State Governments.

CHAPTER XXI.—FARMYARD, DAIRY AND BEE PRODUCTS.

Butter, Cheese, Pork, Bacon and Ham.—Particulars of the total amounts of butter and cheese (showing factory production by States and an estimate of factory and farm production for Australia), pork, bacon and ham produced in each State during 1947–48 are shown below :—

LIST OF SPECIAL ARTICLES AND MISCELLANEOUS MATTER CONTAINED IN PREVIOUS ISSUES.

This list refers to the special articles and other more or less important miscellaneous matters which appeared in previous issues of the Official Year Book, but which, owing to exigencies of space, are either not included, or included in abbreviated form only, in the present issue. The list is, in the main, restricted to articles, etc., to which references are not given in the various chapters of this issue.

The Roman figures indicate the number of the Official Year Book to which reference is made. In cases where matter was published in more than one previous issue, the volume and page for the last issue containing such matter are given.

	Official Year Book No.	Page.
